It is warranted perfectly healthful and effectual, and can be relied upon as being the cheapest and best method in the world for preserving fruits, &c. Full directions for using with each bottle. L. P. WORRALL,
General Agent, No. 91 Hudson St., New York City.

THE GREAT AMERICAN TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton
In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:
OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₩ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER $1,25, best $1,50 ₩ lb.

Coffees Roasted and Ground Daily.
Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

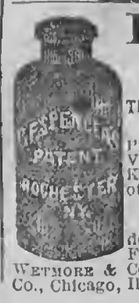
The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the Great American Tea Company.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to
GREAT AMERICAN TEA COMPANY,
31 & 33 Vesey Street.
Post-Office Box, 5643 New York city.



PRESERVE YOUR FRUIT.
SPENCER'S PATENT
Self-Sealing Fruit Jars.
The Most Reliable.—A Perfect Success.
☞ The Easiest to Open and Close. Will Produce the Greatest and Most Perfect Vacuum, without which Fruit will not Keep. Consult your interests and buy no other. COLEMAN & BARNES,

Ladies' Department.

Written for Moore's Rural New-Yorker.

AT CROQUET.

RALPH'S silver whistle is sounding, clear with the music of joy,
Calling laziness out of the langnor that drones on the summer breeze—
And glad faces like nature's own beauty, soft eyes that dare aught to annoy,
Seek loungingly laughing and smiling, the sward 'mid the whispering trees.
Shadowed by drooping willow and thick castanea leaves
That nestle in cool green edgings to the heart of the wooing day,
GOD'S heaven is peacefully brooding—a spirit that sorrow ne'er grieves,
Glinting sunshiny hopes through the branchlets that smile on our games of croquet.

The faces are moulded in softness, the eyes coquettishly bright,
Are the hearts more livingly haunted, JANIE, than yours and mine?—
Mine which treasures a golden summer GOD knows I can never forget,
When I drank those brimming goblets of love's rich fiery wine.
Yours would sink in oblivion's deepness the thoughts of something that's done—
A mocking demon's memories of days that have passed away,
Your face with its sparkling gladness is the mask you have dearly won—
—You said—? No, my green ball was clacking at merciless NELLIE'S croquet.

O JANIE, he never loved you—the heart that he gave for yours
Throbbed only with self's hard pulses, beat only for him, not you:
You were dazzled by dancing flashes that hid all the wiling lures—
You thought the polished marble to be life that was good and true.
But you found it colder than winter, aching only for soulless fame,
And freezing your best aspirations till you wrenched its falseness away:
Did you live in that flattering and feting of those so all-proud of his name?—
GOD help us! the world can't be driven as we drive the balls at croquet.

Ah, well: you were maddened with being all crushed to earth like this,
To remember the wealth you had bartered for the husks of an empty life:
The diamond that fettered your finger like a tell-tale lover's kiss
Seemed to sneer at your terrible heart-ache in that bitter, bitter strife,
Gleaming fiercely on him you had trusted with the holy truth of trust—
You are scarred with the searing story of that death-still summer day,
The withering, blighting summer, that bowed you low in the dust,—
Ah, to play with hearts earnest and loving is as easy as playing croquet.

Was the summer so blighting—so withering?—to *one* 't had been gladness and joy,
And treasured all sacredly precious were its dreams of a promised love:
They were only the idlest visions—they dazed but to bring me annoy—
'Twill have mattered little, it may be, when we greet one mother above.
O JANIE, there's some one up yonder, walking the beautiful street,
Yet so near in that infinite loving that holds us together for aye—
Let the soft breaths that whisper of heaven, of *her* pure life that there is so sweet,
Keep the soul strong that's guiding the mallet where the bridges o'erarch our croquet.

WM. SERGEANT LEE.

MEN AND WOMEN COMPANIONS.

WOMEN and men for the first time in history are really companions. Our traditions of the proper relations between them have descended from a time when their lives were apart, when they were separate in their thoughts because they were separate both in their amusements and in their serious occupations. The man spent his hours of leisure among men—all his friendships, all his intimacies were with men—with man alone did he converse on any serious subject: the wife was either a plaything or an upper servant.

All this among the educated classes is changed. Men no longer give up their spare time to violent outdoor exercises and boisterous convivialities with male associates; the two sexes really pass their time together; the women of the family are the man's habitual society—the wife is his chief associate, his most confidential friend, and often his most trusted councellor. Now, does a man wish to have for his nearest companion—linked so closely with himself, and whose wishes and preferences have so strong a claim upon him—one whose thoughts are alien from those which occupy his own mind, one who can give neither comfort, nor support, to his noblest feelings and purposes?

Is this close and almost exclusive companionship compatible with women being warned off all large subjects, taught that they ought not to care about what it is the man's duty to care for, and that to take part in any serious interests outside their households is stepping beyond their province? Is it good for a man to pass his life in close communion of thoughts and feelings with a person studiously kept inferior to himself—whose earthly interests are forcibly restrained within four walls—who is taught to cultivate as a grace of character ignorance and indifference about the most inspiring subjects, those among which his highest duties are cast? Does any one suppose that this can happen without detriment to his own character?

The time is come when women, if not raised to the level of men, men will be pulled down to theirs. The women of a man's family are either a stimulus and support to his highest aspirations, or a drag upon him. Men and women are really companions. If the women are frivolous, the men will be frivolous. If women care for personal interests and trifling amusements, men in general will care for litte else. The two sexes must rise and sink together.—*John Stuart Mills' Speech in British House of Commons.*

A SECOND EVANGELINE.

ON a steamer which recently passed up to Montana was a girl scarce eighteen, who goes to the distant land of gold to meet her affianced. Four years ago she met and loved a young student in a German University. Their trysting place might not have been at "Bingen on the Rhine," but 'twas at just as romantic a spot not many leagues distant. Her attachment was reciprocated, and troth was plighted. Three years since the "bridegroom" came to America, and sought his fortune amid the placers of Montana, shortly securing a lucrative position as superintendent of a successful mining company. A few weeks ago a brief message darted across two continents, and three thousand miles of ocean in a day, and found this beautiful, unsophisticated girl surrounded by all the endearments of a home of wealth and refinement. It told her that near the far off shores of the Pacific some one awaited her coming. A few days later and she was rocking on the waves of the broad Atlantic, and later still she disembarked in a strange land, the language and customs of whose people were new to her. She is now slowly and happily ascending the Missouri, confidant that her "bridegroom" is expecting her, having traveled alone from the banks of the Baltic to meet him. Suppose he should have died during her journey! What then?—*Western paper.*

WATCH MAKING.

TWENTY thousand Swiss women earn a comfortable living by watch making. They make the movements, and even mostly put them together. A few women are finishers. The English Woman's Review says:—"Geneva has refused to employ women, and totally lost the watch trade. None of the so-called Geneva watches are made there, but in Neufchatel, where women have always been employed."

Mr. Bennett of London, "states facts relative to the mental culture of both sexes deemed requisite in Switzerland to fit workers for watch-making, and refers to the salubrious dwellings of the operatives."

A traveler says:—"We see women at the head of some of the heaviest manufactories of Switzerland and France, in the watch and jewelry line." In England women are employed in one London establishment, and in several principal towns. Five hundred women are employed at Christ Church in making interior chains for chronometers.

American watches are made by machinery, while those imported are made by hand. The Waltham Watch Company employs two hundred artizans, of whom seventy-five are women.

Some Swiss women in Camden, New Jersey, make inside work for watches. In Boston women cut the teeth of chronometer and watch wheels, earning from $4 to $6 a week. Delicacy of touch, practice, and great care are needed.

A Waltham overseer says men earn double what women do, for they do more difficult work, are more thoughtful and contriving, more self-reliant and stronger; and beside it is the custom to pay women less for the same work.—*Employment for Women.*

ELOQUENT TO SOME PURPOSE.

THE Hartford Post cites as proof of Miss Clara Barton's influence as a lecturer, an incident which occurred in New Britain, Connecticut. It says:

"There is a soldier boy in New Britain who lost an arm in the government service. Since his return home he has struggled hard against wind and tide to support his family, but high prices involved him, and finally even the little property he owned was so mortgaged that there was danger of losing it. During one of Miss Barton's lectures at New Britain, he was presnt, and in the course of her touching appeals in behalf of the soldiers, telling of the hardships they endured, she suddenly turned upon the audience with the question: "Have you any returned soldiers among you, and do you show your gratitude by kindly caring for them?" The question went to the hearts of those who heard her. All eyes were soon fixed upon the maimed and needy soldier. A subscription was started, and enough money soon raised to clear off the mortgage and leave a nice balance besides. This is one of those touching incidents which prove the worth of Miss Barton's work.

TWO HEROIC GIRLS.

THE Newburg Journal gives the following statement about the conduct of two young ladies at the disastrous boiler explosion, recently, on the Newburg branch of the Erie railroad: "Two daughters of Mr. Merritt—one of the injured men—hearing the explosion, ran from the house to the scene of the accident, finding the three men, McBurney, Merritt and Sears, buried in the rubbish, and entirely senseless from the concussion and injuries received from the explosion. They extracted Merritt and McBurney, and carried them into the house, and returning to Dr. Sears' assistance, found a large iron balance wheel, weighing eight hundred pounds, lying directly across him, partially supported by rubbish, yet holding him securely as in a vice. The two girls raised the wheel, drew him out, and carried him into the house also, providing for the injured men's comfort with all the means at their command. When they had done this, one of them remained to take care of them, and the other mounted a horse and rode post haste for a physician."

Choice Miscellany.

IN STRAWBERRY TIME.

THE garden gate as we two passed through,
Swung slowly backward, then closed again;
Over our heads the sky's deep blue
Purer shone for the last night's rain,
And the milk-white clouds through the azure sailed,
And over the landscape cool shadows trailed.

Through checkered sunlight and shadow we went,
Hettie and I, that sweet June day,
When the odor of clover blooms was blent
With the fragrant scent of the new-mown hay;
And the voice of the bobolink sounded clear,
As he called to his mate from the meadow near.

Half shy, half wanton, the light wind played,
On the breezy uplands, with Hettie's curls,
That over her shoulders idly strayed.
And kissed the cheek of this queen of girls,
As we sauntered on by the path that led
To the meadows where grew the strawberries red,

Together we stopped in the tall green grass
That day when the June sun shone so fair;
But my thoughts were all of this village lass,
And not of the strawberries growing there:
Of her cheeks where the rose its blushes shed,
And her lips like the berries so ripe and red.

Soon her basket was filled to the brim.
When turning on me her great brown eyes,
From under her straw-hat's shadowy rim.
She darted a look of quick surprise;
For you might have counted the berries that lay
In the basket I carried that sweet June day.

"Hettie," I said, as I rose—and she
Withdrew her gaze in gentle alarm—
"One basket's enough for you and me;"
And lifting hers, laden, across my arm,
We sauntered back by the path that led
From the meadow where grew the strawberries red.

But long ere we reached the garden gate.
She and I, on our homeward way.
From her own sweet lips I had learned my fate,
Oh, happy the hour, and happy the day!
And happy my heart in its new-found bliss,
As I sealed each vow with a lover's kiss.

Ah! many a year since then has gone by;
But whenever the month of June draws near,
And the clouds grow whiter that cross the sky,
Or whenever the bobolink's voice I hear,
As the summer approaches her golden prime,
Comes the thought to me of that strawberry time.

[*Harper's Weekly.*

RAINY DAYS IN THE COUNTRY.

SOME sentimental city body writes thus poetically and descriptively of and about rain and its effects in the God-made country:

"When I go off into the country to stay awhile, I like, of all things, on pulling the bed-clothes about me and settling my head in the pillows for the night, to hear the rain drip from the eaves on the roof of the porch. The sound makes the sense of comfort and coziness full and complete. I lie and let flow through my mind unformed fancies of tall feathery brakes, pearly with rows of rain-drops, emptying their leafy buckets into my boot-tops; of drenched boughs in the woods, slapping their showers in my neck and face; of mill-dams carried off by rising floods; of bridges gone, and deluges working down between the singing shingles into the room:—but the effort, somehow, is after a time too great, and I sink to slumber among the murmurs of the rain as tranquilly as a child goes off, with its last plaything held tight in its little hand.

They have no real rainy days in the city. What are so styled are only dark days—dirty days—days of mud, and slosh, and soured tempers—days of soggy boots, saturated clothes, and spoiled hats. In the country, Nature makes nothing of showing you her face; and it is not lowery and scowling, either—it is tearful, more or less "blubbered," as Spencer would say, yet altogether placid and calm underneath. The rain is no more than a changing mood there, which she comes out of all the happier for having submitted to its brief obscuration.

But ah! it is so delicious, to the spirit that is at all sensitive, to hear the big drops pattering on the roof; the garret is the place to get true inspiration from the rain. What hidden realms of pleasure the boys and girls explore up there, rummaging the old place from end to end! Side-saddles and antique bonnets are dragged forth from their twilight domains, to do service once more for a generation undreamt of in the day of their original glory. Faded-out pamphlets, and books with half covers—perhaps a fragment of old Flavius Josephus, or the remnant of an odd volume of Colonial History, or, more likely, a pile of preserved almanacs, inlaid and overlaid with dust and diligently eaten of rats—fan the embers of the childish thought into a living flame, and the afternoon hours glide away as silently as the twilight owl sails off into the mystery of a deeper darkness. The Saturday afternoons in old garrets are well-nigh sacred, for the memories that are stored within them; and the mere mention of them along with the rain is enough to bring a lost man entirely to himself again.

Rainy days at home are apt, likewise, to put in the head a vagabondish wish for a thoughtful ramble over the domestic premises. To stand idly at the back-door and listen to the water rilling into the hogshead at the corner, is a good deal better than Casta Diva; and the melodies stick faster in the heart. Around the back buildings and under the sheds huddle the poultry, with drooping tails and drowned feet, watching the sprinkle of the rain and listening to its sounds, till they fall asleep on foot, at last. The house dog walks from the barn to the shed, and from the shed to the kitchen, occasionally throwing up a weather-wise eye at the clouds. The cows are gone under the barn for a while, and there they quietly ruminate and grow steamy. The horse looks cautiously out of his stall window, becomes disheartened with the prospect, and draws his long face in again.'

MERCANTILE MAXIMS.

THE way to get credit is to be punctual. The way to preserve it is not to use it much. Settle often; have short accounts. Trust to no man's appearance—it is deceptive—perhaps assumed for the purpose of obtaining credit. Beware of gaudy exterior. Rogues usually dress well. The rich are plain men. Trust him, if any one, who carries but little on his back. Never trust him who flies into a passion on being dunned; make him pay quickly, if there be any virtue in the law. Be satisfied, before you give a credit, that those you give it to are safe men to be trusted. Sell your goods at a small advance, and never misrepresent them, or those whom you once deceive will beware of you the second time. Deal uprightly with all men, and they will repose confidence in you, and soon become your permanent customers. Beware of him who is an office seeker. Men do not usually want an office where there is anything to do. A man's affairs are rather low when he seeks office for support. Trust no stranger. Your goods are better than doubtful charges. What is character worth, if you make it cheap, crediting all alike? Agree beforehand with every man about to do a job, and, if large, put it into writing. If any decline then, quit—or be cheated. Though you want a job ever so much, make all sure at the onset; and in cases at all doubtful make sure of a guarantee. Be not afraid to ask it, it is the best of responsibility: for, if offence be taken, you have escaped a loss.

TIME TO LIVE.

ONE great affliction of Americans in this generation is that GOD did not put more than sixty seconds into a minute; and that, in our haste to get a living we have not time to live. We have not time to eat, to sleep, to wash, to read Shakspeare, to play with our children, to get passably acquainted with our wives, or articulate our mother tongue. If we could but add to the national time as easily as we can to the national domain; if we could but have nine days in the week, or thirty-six hours in the day, would we not ——— what? Attend to some of these little neglected matters? Bah! As the German proverb saith, "Who believes it goes to heaven?" No. We should make a little more money, run a little more rapidly into consumption, build a few more mad-houses for the public convenience, and settle down a few years sooner into the tranquil retirement of a softening brain. Alas, that honored and sagacious fowl, the American eagle, will become even more bald than he is at present before he consents to screech over this continent the mild motto, in a dead and buried language, which President Wolsey gave to us boys when he sent us forth into the world—*Festina lente.—Independent.*

THE UNCHANGEABLE LAND.

IN the East things do not change. As Abraham pitched his tent in Bethel, so does an Arab sheik now set up his camp; as David built his palace on Mount Zion, so would a Turkish pasha now arrange his house. In every street may be seen the hairy children of Esau, squatting on the ground devouring a mess of lentils like that for which the rough hunter sold his birthright. Along every road plod the sons of Rachab, whose fathers, one thousand years ago, bound themselves and theirs to drink no wine, plant no tree, enter within no door, and their children have kept the oath; and at every khan are young men around the pan of parched corn dipping their morsel into the dish. Job's plow is still used, and the seed is still trodden into the ground by asses and kine. Olives are shaken from the bough as directed by Isaiah, and the grafting of trees is unchanged since the days of Saul. The Syrian house is still, as formerly, only a stone tent, as a temple was but a marble tent. What is seen now in Bethany may be taken as the exact house of Lazarus, where Mary listened and Martha toiled, or as the house of Simon, the leper, where the box of precious ointment was broken, and whence Judas set out to betray his master.—*Dickens' All the Year Round.*

HOW TO GROW OLD.—You will need to dress warmer. Your blood will circulate slower, and not so much on the surface of the body. You will chill easy, and have little power to resist the cold or the changes of the weather. Very few old people dress as they should. Keep this in mind. Keep active—not under a heavy burden of business or duties on you, but enough to employ your thoughts and strength—and yet you must not overdo; the old mill cannot grind as fast nor as long as it once could. Rest when you are weary, and make a business of resting. Don't try to be old nor young, but take all quietly as it comes.

BORES.—Old gentlemen who sit down in the editor's sanctum and read exchanges to him.

A young gentlemen fresh from college.

A man that reads his poetry to you.

Creditors of every description.

A man who wants to borrow money from you.

The man who reads copy over the compositor's shoulder.

The man who reads all the newspapers but never buys one.

THIS whole life is but one great school. From the cradle to the grave we are scholars. The voices of those we love, and the wisdom of past ages, and our experience, are our teachers. Afflictions give us discipline. The spirits of the departed saints whisper to us, "come up higher."

As flowers wear their spotless raiment and exhale their odor every day, so let your life, free from strain, ever give forth the fragrance of the love of God.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

WHEN LIFE'S TOIL IS O'ER.

BY T. R. BRADNACK.

"Two hands upon the breast, and labor is past"
Russian Proverb.

I.

Two *hands* across the bosom laid,
And all life's toil is o'er;
Two weary *feet*, their wandering stayed
Upon life's utmost shore;
Two *eyes*, closed for their last long sleep,
Their fountain sealed and dry;
Two *lips*, a solemn silence keep,—
Thus we in death shall lie.

II.

We, what our *hands* now find to do,
Should do it with our might;
Our *feet*, the way of life pursue—
"We walk by faith,—not sight."
Our *eye* be fixed, O CHRIST, for aye
On thee, in life—in death,
And may our *lips* Thy praise essay
With their expiring breath!

Cambria Parsonage. June, 1867.

Written for Moore's Rural New-Yorker.

JOY AFTER GRIEF.

"THUS ever in the steps of grief
Are sown the precious seeds of joy,
Each fount of Marah hath a leaf
Whose healing balm we may enjoy."

THAT joy and sorrow, pleasure and pain, are intermingled in every life is a truth acknowledged and proven by each individual history. Every human life enriched by years of experience, has felt, at times, the waters of Marah rising and burying in darkness their fairest hopes and treasures, and imparting its own bitterness to their sweetest pleasures until existence itself seemed a weary thing. Each heart must have its seasons of fasting—its sad Gethsemane.

These constant changes from light to darkness in the inner world are not accidental or the result of circumstances merely, but are necessary to the perfecting of a plan, the wisdom of which it becomes us not to question. We are so constituted, physically, mentally and spiritually that the full development of our powers requires these transitions, though we may not discern at the time the hand of Providence thus dealing with us. Sorrow and suffering are common to mankind, and are ordained of GOD for the working out of good in us. They are the agents employed for developing our character, for enlarging our powers, for subduing our passions, for purifying and refining the heart. With these holy ministries, for they are such rightly considered, the heart is pressed down and softened and its sweetest juices are pressed out and flow in deeds of love and kindness towards all, and then return to us bearing precious seeds of joy which find lodgment in our hearts and ripen into perfect fruit.

Without such influences those sympathies which lead us out of ourselves, and up step by step until we can almost take hold of the Divine hand, were never awakened to life and activity. A life solely of pleasure or contentment, with no thought of the morrow, or for others' weal or woe, is not *life at all*, as GOD designed when he bequeathed unto us these noble powers of heart and mind.

Those heavenly aspirations which lift us higher and still higher in the scale of gradation—those longings to be, to do, and to suffer if need be, for the right and good of mankind—those tender feelings gushing forth and embracing all the human family, rejoicing with them in joy, and sorrowing with those in tears, spring forth from, and are cultivated only in a heart rendered pliable and rich by the visitation of pain and grief.

LENA.

"NAE STRIFE UP HERE."

IT is related that an old Scotch elder had once a serious dispute with his minister at an elders' meeting. He said some hard things, and almost broke the minister's heart. Afterwards he went home, and the minister went home, too. The next morning the elder came down, and his wife said to him:

"Ye look sad, Jan; what is the matter with ye?"

"Ah!" he replied, "you would look sad, too, if you had such a dream as I have. I dreamed that I had been at the elders' meeting, and said some hard things, and grieved the minister; and when he went home I thought he died and went to heaven, and thought afterward I died, too, and went to heaven; and when I got to the gates of heaven, out came the minister and put out his hands to take me, saying: 'Come along, Jan, there's nae strife up here—I am happy to see ye.'"

The elder went to his minister directly to beg his pardon and found he was dead. The elder was so stricken with the blow that two weeks after he also departed: "And I should not wonder," said he who related the incident, "if he meet the minister at heaven's gate, and hear him say—'Come along, Jan, there's nae strife up here.'"—*Presbyter.*

SANCTIFIED AFFLICTION.—The blessings of sanctified affliction are not confined to the sufferer alone. From the east and from the west, from the north and from the south, shall arise witnesses to this truth. Many a mourner may learn with glad surprise, that the balm which soothed her sorrow, refreshed a fellow sufferer in some corner of the earth. The sun exhales the dew drop and carries it in a cloud to water some fainting, far-distant flower. The tear shed in silence by one suffering Christian, is refracted in the bow of promise that cheers another.—*Advocate and Guardian.*

Educational.

THE CORNELL UNIVERSITY.

We have examined, with care and much interest, the able "Report of the Committee on Organization," to the Trustees of this Institution, which gives the scope and ideal of their plan for its future management.

It will be remembered that Ezra Cornell of Ithaca, offered a gift of $500,000 to found this great school, if the State would make over to the Trustees the 1,000,000 acres of land granted by the General Government for Agricultural Colleges. His offer was accepted and he has more than redeemed his pledge, having given over $600,000, and spent most of his time also. A building one hundred and sixty-seven by sixty feet, and of fine proportions is erected, and a second is to be finished for the opening of the University, Oct. 1st, 1868. The full plan embraces five buildings on the large farm, near Ithaca, also given by Mr. Cornell.

This is *not* to be *merely* an Agricultural College, but the principle to serve as test and guide is "the absolute and essential importance of human development in its richest diversity." To reach toward this, it is proposed to have *special* courses of study in Agrienlture, Mechanics, Engineering, Commerce, Mining, Medicine, Law, Political Economy, History, &c., and a *general* course in Literature, Classics, &c., and give the students choice as to what course, or courses, they pursue. Thus the classics will not be ignored, but thoroughly taught to such as choose them: and besides a wide range of choice will be given among studies much needed for practical life, and of signal value as a means of finest mental discipline and best development.

The report well says that "the attempt to give mental discipline by studies which the mind does not desire is as unwise as the attempt to give physical nourishment by food which the body does not desire." German and French are taught, as well as the classic languages, and the wide and rich realm of Natural Laws, as touching the farm, the machine shop, the connection between labor and political economy, and other problems and pursuits of the age we live and work in, will be open to all who choose to enter in,—a realm too much neglected in what we call "education," and yet to add new glory and power to our schools and our lives as its riches are developed.

The University is to be intimately linked with our Common School system, as the State School Superintendent is, *ex-officio*, a Trustee, and the County School officials are to decide as to what scholars from the public schools shall have the *free scholarships* which are to be granted to some hundred and fifty or more of the graduates from these institutions. The terms of tuition are not fixed permanently, but are to be only $35 for the first year,—while students are allowed to make their own arrangements for board, and can perform such amount of labor to aid in defraying expenses as they prefer.

For the full carrying out of this great scheme forty-five Professors will be needed, and apparatus, libraries, land, &c., on ample scale. On the start there will be some fifteen Professors, and the increase will be made as fast as buildings and apparatus can be ready. Under the law by which it is governed it cannot be used any more than a Common School for denominational purposes, but will aim at that catholic impartiality in that respect which is the ideal of our public schools; and yet the effort will be to foster a development of life which "can only be normal and healthful in an atmosphere of love of truth, beauty and goodness, and adoration of the Center of truth, beauty and goodness."

After much discussion, in the State Senate and elsewhere, this unity of effort was decided on, as preferable to dividing this great land-grant among so many Colleges as to weaken its benefits, and make impossible great results. The choice of A. D. White of Syracuse, for President, is singularly fortunate, as he is a man of broad culture, earnest sympathy with popular education, and eminently fit, by experience and personal qualities, for a teacher. His leaving the Professorship of History in the Michigan State University, was much regretted by both teachers and students there, and the honorary degree of LL. D., has just been conferred on him by that Institution.

As there is ample room for this, among our other Colleges, and as its scope is different somewhat from theirs, let us hope it may prosper fraternally, fulfill its rich promise, and justify the hopes of Ezra Cornell, its sagacious and munificent friend.

Beautiful and True.—In an article in Frazier's Magazine this brief but beautiful extract occurs:—"Education does not commence with the alphabet. It begins with a mother's look—with a father's smile of approbation, or sign of reproof—with a sister's gentle pressure of the hand, or a brother's noble act of forbearance—with a handful of flowers in green and daisy meadows—with bird's nests admired but not touched—with creeping ants, and almost impossible emmets—with humming bees and glass bee-hives—with pleasant walks and shady lanes, and with thoughts directed in sweet and kindly tones and words to mature to acts of benevolence, to deeds of virtue, and to the source of all good,—to God himself."

Gift from Napoleon.—The Emperor Napoleon has presented to the University at South Bend, Indiana, a superb and powerful telescope, valued at 25,000 francs. It has inscribed upon it in French:—"Presented by his Imperial Majesty Napoleon III to the Catholic University of Notre Dame du Lac, Indiana, United States."

Wisconsin Normal Schools.—Work is to begin on a Normal School building at Oshkosh next winter, and another building is to be added to the Normal School now open at Platteville.

EDUCATION IN FRANCE.

Napoleon has set in operation a new system of popular education, which, if it goes on as it begins, will have results great and far-reaching for human freedom. Forty thousand teachers have opened 32,383 free night schools, to which come 823,000 adults, eager to learn, and mostly making rapid progress. In the year 10,000 new teachers have been added. At a competition examination last February of written compositions, 5,158 entered the lists, mostly mechanics or laborers, and there were 1,419 compositions in which the writing and spelling were faultless and the moral sense admirable. Of anxiety to learn and good results, a correspondent says:

"A little girl, for instance, ten years of age, brought her mother to the night school, and there taught herself to read. A sick workman wrote the exercises for the night school while confined to his bed, while another paid a friend to replace him at his factory during the school hour. In the South, where the passions are violent and consequently where quarrels are more frequent than in cooler Northern districts, the moral benefit derived from these night schools has been so great, that in one instance, where illness prevented the teacher from giving his lessons, a young curate volunteered to replace him—a service which necessitated a fatiguing journey on foot across a mountain and through a wood of considerable extent. He never could reach home before half-past eleven at night. During four months the young priest was punctual to his self-imposed task, for which he received no reward save the gratification of having continued the good work begun by one as poor as himself. At Creuzot drunkenness and quarreling are unknown in the foundries, where ten thousand workmen are employed;—a result attributed by the President of the Corps Legislatif to the night schools."

Various Topics.

CHILD-MURDER

"THE GANGES AT OUR CHRISTIAN DOORS!"

A Paris correspondent of one of the New York journals writes of the fearful mortality among infants sent into the country to nurse. It seems that of 20,000 of these helpless beings thus pushed away, 15,000 die yearly, and many others return tainted for life with scrofula and other diseases. It is even said that nurses who are known to "bring ill-luck to children" are sought for, and that those far away are preferred.

The French medical faculty say that if the population of their country has not increased since 1789, it is owing to this custom, which is only a kind of child-murder. This seems terrible heartlessness, yet possibly its like may exist nearer home.

The New York Board of Health has knowledge of more than thirty houses in that city wherein abortions are produced, as their sole business. Five deaths of infants in a day from one such house, filled with young and middle-aged women from all parts of the country, were reported. Being unable to obtain permits for the burial of these slaughtered innocents, it is said they often burn their remains in furnaces. It may be thought these poor mothers are outcasts from social life or victims of man's perfidy, seeking in anguish of heart thus to hide their shame. This is true of a part, no doubt, yet we should be startled to know how many married persons, in country and city, resort to such unnatural means of relief from the care of children.

Rev. Dr. Eddy, editor of the North-Western Christian Advocate at Chicago, has written on this subject with a plainness of speech, an earnestness of feeling and a purity of spirit, which show rare manhood and Christian courage. After speaking of the prevalence of "*fœticide*," "abortion" and "infanticide" among "respectable" people, in married life, he says:—"These two mighty levers of moral reform, the pulpit and the religious press must at once come to the rescue. Excessive modesty is incompetence, false delicacy a sin, and chaste, thorough discussion a bounden duty. The plain, vital truth of a delicate but inevitable subject, is far more pure than the uninstructed devices of the human heart. 'The truth shall make you free.'"

The extended American practice of criminal abortion, is a branch of *infanticide*, which horror many suppose confined to heathen nations. It may appear that a Ganges flows by our Christian doors. Dr. Reamy in the Ohio Medical Convention in 1860, said of abortions "we are becoming a nation of murderers." Dr. Stewart lamented "its frightful prevalence in wedlock." Dr. Storer said "nine-tenths of the abortions were in married life." Dr. Kyle said:—"Of thirty-seven cases of criminal abortion, I found thirty-four married and three unmarried. They occur most among those known as the *better class*, church members and those who pretend to be most polite, and virtuous, and religious." Dr. Stewart said, "people of high repute practice it."

A pamphlet from Boston, entitled "Serpents in the Dove's Nest," written by Rev. John Todd, D. D., is before us, on this subject, and thus the East and the West unite. The author, an eminent man, says, "an imperative sense of duty" impels him, and "letters from different sections of the country" urge him to write. The larger part of this little tract was first published in the *Congregationalist*, under the title of "Fashionable Murder" and he speaks of "a large pile of letters from men unknown, and from some in high places—East, West, North and South,"—almost all urging him to write more. Startling statements are made, which fully corroborate those quoted by Dr. Eddy, as for instance that of the wife of an eminent physician who says "not a week, and hardly a day passes but cases come to my knowledge."

A work by Dr. H. R. Storer,—"Why not? A Book for every Woman," to which the American Medical Association awarded a gold medal in 1865, is highly commended for general reading. Of its effects on mothers, he says, "Shattered constitutions, pale faces, feeble liver, internal diseases, remorse, shame, and sometimes madness, tell the fearful results. 'God requireth that which is past,' and never more surely than in this case." Should further facts be challenged, which there is no wish to give, it is suggested "that Paris with all her license, is not so guilty in this respect as is staid New England, at the present hour."

But enough. Here are terrible facts, earnest appeals, rebukes and warnings from men of high character, and animated by a truly Christian spirit. Surely there should be thought and light, bringing a blessed reform, in regard to a practice so debasing to all spiritual life, so revolting to all purity, and so terrible in its physical results,—for it should be known that abortion brings derangement of the system, makes wreck of health, and often incapacitates woman from ever enjoying the sweet pleasures of maternity. Thus do brutal passion, and false shame, and blind selfishness seal up the pure fountains of motherly love!

In this woman is "more sinned against than sinning," for she is too often, in marriage as well as out, the victim of man's selfish passion. Let there be light on the sanctity of marriage and parentage; less of passion and more of reverence for the sacred office of maternity, that children may only come as welcome blessings, never to be pushed out of "this living, breathing world," by bloody hands and foul hearts, leaving the parent's souls smirched by unnatural crime, even if cloaked in garments of respectability.

LORD MONCK, GOVERNOR-GENERAL OF THE DOMINION OF CANADA.

We give a portrait of Charles Stanley Monck, Governor-General of "The Dominion of Canada," who entered on his duties by taking the oath of office at Ottawa on the 1st of July. He is of Irish descent, the fourth Viscount of his title, and is descended from George Monck who dissolved Richard Cromwell's Parliament, and invited Charles II to return to England.

Lord Monck was chosen Governor of Canada in 1861, and is no stranger, of course, in the country. His course has been marked by energy and decision, and he has been an early and earnest worker for the Confederation of which he stands at the head, by appointment of Queen Victoria. Elsewhere on this page will be found an account of the "Dominion of Canada," with the names of the members of the Government.

THE DOMINION OF CANADA.

Our neighbors across the lake and river have, for some time, been trying to unite the different Canadian Provinces under one general head; and at last the Union has been effected in such way as bids fair to strengthen fraternity of feeling as well as facilitate the governmental affairs of the Canadas and adjacent regions. On the first of July "The Dominion of Canada" was inaugurated, embracing Upper Canada, (now called "Ontario,") Lower Canada, (now "Quebec,") New Brunswick and Nova Scotia. The door is open for all British North America to come into the "Dominion," when they wish. Newfoundland and Cape Breton are looking in that direction, and British Columbia, it is said, asks for admission.

The Dominion has a population of about 4,000,000, and an area of some 400,000 square miles, or ten times as wide as that of New York. In this broad realm there is fertile soil enough for a much larger population, and as they are nearly free of debt, and have the powerful aid of Great Britain, a growing railroad system, rich cities, and men of energy and capital, the future is rich in promise.

The day of inaugurating the new government was celebrated in cities and in the country with fit ceremonials and much enthusiasm. Lord Monck was sworn in at Ottawa, the seat of Government, as Governor-General.

It is understood that Sir N. F. Belleau will be Lieutenant-Governor of Quebec, Gens. Williams and Doyle will hold the same positions, provisionally, in Nova Scotia and New Brunswick, and Gen. Stisted is spoken of for Ontario, temporarily. Each Province will have its local legislature and the Parliament at Ottawa will have an Upper House of seventy-two members, chosen by the crown, and a House of Commons of one hundred and eighty-one elected by the people. We give the names of the members of the Upper House, or Senate, as given in the Queen's Proclamation in May.

For the Province of Ontario—John Hamilton, Roderick Matheson, John Ross, Samuel Mills, Benjamin Seymour, Walter Hamilton Dickson, James Shaw, Adam Johnson, Ferguson Blair, Alexander Campbell, David Christie, James Cox Atkins, David Reesor, Elijah Leonard, W. MacMaster, Asa Allworth Burnham, John Simson, James Skead, David Lewis Macpherson, George Crawford, Donald MacDonald, Oliver Rake, Billa Flint, Walter McCrea and George William Allen.

For the Province of Quebec—James Leslie, Asa Belknap Foster, Joseph Noel Bosse, Louis A. Olivier, Jacque Olivier Bureau, Charles Malhoit, Louis Renaud, Luc Lestellier de St. Just, Ulric Joseph Tessier, John Hamilton, Charles Cormier, Antoine Juchereau Duchesnay, David Edward Price, Elzear H. J. Duchesnay, Leandre Dumouchel, Louis Lacoste, Joseph E. Armand, Charles Wilson, William Henry Chaffers, Jean Baptiste Guevremont, James Ferrier, Sir Narcisse Fortunat Belleau, Knight. Thomas Ryan and John Sewell Sanborn.

For the Province of Nova Scotia—Edward Kenney, Jonathan McCully, Thomas D. Archibald, Robert B. Dickey, John H. Anderson, John Holmes, John W. Ritchie, Benjamin Weir, John Locke, Caleb R. Bill, John Bourinot and William Miller.

For the Province of New Brunswick—Amos Edwin Botsford, Edward Barron Chandler, John Robertson, Robert Leonard Hazen, William Hunter Odell, David Wark, William Henry Steeves, William Todd, John Ferguson, Robert Duncan Wilmot, Abner Reid McClelan and Peter Mitchell.

The Ministry has Mr. McDonald as Premier, Messrs. Cartier, Tilly, Galt, McDougall, Archibald, Blair, Campbell, Howland, Bell, Mitchell, Henby and Langervin, are the other members.

Success to the Dominion of Canada.

FACTS ABOUT NEWSPAPERS.

How many professional and political reputations and fortunes have men made and sustained by the friendly, though unrequited, pen of the editor? How many embryo towns and cities have been brought into notice and puffed into prosperity by the press? How many railroads, now in successful operation, would have foundered but for the "lever" that moves the world? In short, what branch of industry and activity has not been promoted, stimulated and defended by the press? And who has tendered it more than a miserable pittance for its service? The bazaars of fashion and the haunts of dissipation are thronged with an eager crowd, bearing papers in their palms, and the commodities thus vended are sold at enormous profits, though intrinsically worthless, and paid for with scrupulous punctuality, while the counting-room of the newspaper is the seat of Jewing, cheapening trade, orders and pennies. It is made a point of honor to liquidate a grog bill, but not of dishonor to repudiate a printer's bill.

Reading for the Young.

HOW THEY QUARRELED.

BY ALICE CARY.

To begin in things quite simple
Quarrels scarcely ever fail—
And they fell out, Dan and Dimple,
All about a horse's tail!

So that by and by the quarrel
Quite broke up and spoiled their play—
Danny said the tail was sorrel,
Dimple said that it was gray!

"*Gray!*" said Danny—"You are simple!
Just as gray as mother's shawl,"
"And that's red!" said saucy Dimple,
"You're a fool, and that is all!"

Then the sister and the brother—
As indeed they scarce could fail,
In such anger, struck each other—
All about the horse's tail!

"*Red!*" cried Dimple, speaking loudly,
"How you play at fast and loose!"
"Yes!" said Danny, still more proudly,
"When I'm playing with a goose!"

In between them came the mother—
"What is all this fuss about?"
Then the sister and the brother
Told the story, out and out.

And she answered, "I must label
Each of you a little dunce,
Since to look into the stable
Would have settled it at once!"

Forth ran Dan with Dimple after,
And full soon came hurrying back
Shouting, all agloe with laughter,
That the horse's tail was black!

So they both agreed to profit
By the lesson they had learned,
And to tell each other of it
Often as the fit returned.

THE KIND-HEARTED TANNER.

The following incident is so beautiful and touching that it should be read in every household in the country. It develops the true, active principle of kindness. How many an erring mortal, making his first step in crime, might be redeemed by the exercise of this sublime trait in the character of the kind-hearted Quaker.

William Savery, an eminent minister among the Quakers, was a tanner by trade. One night a quantity of hides were stolen from his tannery, and he had reason to believe that the thief was a quarrelsome, drunken neighbor by the name of John Smith. Next week the following advertisement appeared in the country newspaper:

"Whoever stole a quantity of hides on the fifth of this month is hereby informed that the owner has a sincere wish to be his friend. If poverty tempted him to this false step the owner will keep the whole transaction secret, and will gladly put him in the way of obtaining money by means more likely to bring him peace of mind!"

This singular advertisement attracted considerable attention, but the culprit alone knew who had made the kind offer. When he read it his heart melted within him, and he was filled with sorrow for what he had done. A few nights afterward, as the tanner's family were about retiring to rest, they heard a timid knock, and when the door was opened there stood John Smith with a load of hides on his shoulders. Without looking up he said:

"I have brought these back, Mr. Savery; where shall I put them?"

"Wait till I can get a lantern, and I will go to the barn with thee," he replied; "then thou wilt come in and tell me how this happened. We will see what can be done for thee."

As soon as they were gone out his wife prepared some hot coffee, and placed pies and meat on the table. When they returned from the barn she said, "Neighbor Smith, I thought some hot supper would be good for thee."

He turned his back toward her, and did not speak. After leaning against the fireplace in silence a few moments, he said in a choked voice, "It is the first time I ever stole anything, and I have felt very badly about it. I am sure I didn't once think that I should ever come to what I am; but I took to drinking, and then to quarreling. Since I began to go down hill everybody gives me a kick. You are the first man that has ever offered me a helping hand. My wife is sickly and my children starving. You have sent them many a meal. God bless you! but yet I stole the hides. But I tell you the truth when I say it is the first time I was ever a thief."

"Let it be the last, my friend," replied William Savery. "The secret lies between ourselves. Thou art still young, and it is in thy power to make up for lost time. Promise me that thou wilt not drink any intoxicating liquor for a year, and I will employ thee tomorrow on good wages. Thy little boy can pick up stones. But eat a bit now and drink some hot coffee; perhaps it will keep thee from craving anything stronger to-night. Doubtless thou wilt find it hard to abstain at first; but keep up a brave heart for the sake of thy wife and children, and it will soon become easy. When thou hast need of coffee tell Mary, and she will give it thee."

The poor fellow tried to eat and drink, but the food seemed to choke him. After vainly trying to compose his feelings, he bowed his head on the table and wept like a child. After a while he ate and drank, and his host parted with him for the night with the friendly words, "Try to do well, John, and thou wilt always find a friend in me." John entered his employ the next day, and remained with him many years, a sober, honest, and steady man. The secret of the theft was kept between them; but after John's death William Savery sometimes told the story to prove that evil might be overcome with good.

NEW HALF VOLUME!

A GOOD TIME TO SUBSCRIBE!

As the Second Half of Vol. XVIII of the RURAL NEW-YORKER commenced LAST WEEK.—July 6th.—*now is a favorable time to subscribe or renew.* Agents, and all earnest friends of the RURAL, will please note this, bearing in mind that every new subscription will tell in enabling us to make the paper more acceptable and valuable. And now that splendid crops are being vouchsafed farmers and planters in almost every section of the Union, we trust they will not forget the RURAL and other journals which seek the best interests of producers.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 13, 1867.

NEWS OF THE WEEK.

Uniform Commercial Exchanges.

GREAT efforts are now being made to secure uniformity in the methods by which commercial exchanges are effected in different nations. A uniform system of weights and measures is also important, and this seems in a fair way of accomplishment. The French cental or decimal system of *grammes* and *meters*, which commends itself to the common sense and convenience of the mercantile public, will soon be adopted. The Boards of Trade in this country did not generally adopt the system on the first of March, as was agreed upon, but the plan is by no means given up. The approaching national Commercial Convention to be held at Cleveland it is thought will act decisively in the matter.

The good sense of the commercial world demands that we get rid of the endless and irreconcilable variety of money systems—that there be a common unit in all international commercial exchanges. We have occasionally explained the commercial signification of existing quotations, &c., but as a general thing they are very little understood, and the quotations of prices abroad are Greek to the reader who has not made the subject a study. The Paris Exposition has brought the subject of uniformity of coinage, or of having a uniform unit of value, prominently before the public. A Board of Commissioners, composed chiefly of leading European financiers, is now in session in Paris for the purpose of solving this important question. Hon. S. B. RUGGLES, a Commissioner from this country is a member of the Board. At last accounts the Commissioners were endeavoring to fix upon a unit of value, and seem to be divided between the French five-franc piece and the American dollar. A majority of the Board it is said favor the five-franc piece, but the weight of outside opinion is decidedly in favor of the American dollar. We can see many reasons why the dollar should be adopted as the unit, and we trust such will be the final recommendation of the body who have the matter under consideration.

From Washington.

CONGRESS met the 3d, with 34 Senators and 120 Representatives present.

After passing a resolution, in the House, for a Committee of nine to see what should be done on Reconstruction, both Houses adjourned until the 5th.

Speaker Colfax says no new Standing Committees will be chosen in Congress. A short session, only acting on Reconstruction, seems probable. Some are for putting the South under martial law, and the Louisiana Bill (Shellaburghers) of last session has its friends.

Senator Wilson is expected to offer a bill, which will vacate all civil offices South, and empower commanding officers to appoint or order elections.

A Times' special says the majority of the Impeachment Committee may not be ready to report, but the minority will report for immediate action, unless there be an adjournment to October.

On the 1st inst., in the Surratt trial, Dr. McMillan, surgeon of the ship Peruvian, on which Surratt fled from Quebec to Liverpool, was called. The prisoner was visibly affected as the Doctor promptly identified him (Surratt) as the person to whom he was presented in a state-room on the steamer between Montreal and Quebec, and who was his fellow passenger during the trip. He then began to narrate in a clear, connected and candid manner, the various conversations the prisoner had with him. An account of one of Surratt's trips to Richmond was being related, when the counsel for the prisoner pretended to misunderstand a portion of the narrative, and sought to confuse the witness by repeating his statements in an entirely different form. This the witness corrected several times, when at last he resented it as an insult, and in an impulsive and very forcible manner accused the prisoner's counsel of insulting the Government witnesses, and warmly denounced such conduct as only worthy of cowards and sneaks. This, of course, took the counsel by surprise, and produced a decided sensation in the Court-room. The defence immediately appealed to the Court, who rebuked the witness for his language, and at the same time rebuked the counsel for badgering the witnesses. Dr. McMillan politely apologized to the Court, and then remarked that the counsel for the defence had insulted the witnesses for the prosecution by saying that they ought to be in the Penitentiary, and he believed himself as much a gentleman as either of them. The testimony was intensely interesting and very damaging to the prisoner.

A personal difficulty occurred between the two Bradleys, counsel for Surratt, and Judge Fisher, after adjournment of the Court on Tuesday, in reference to a ruling of the judge. Harsh language was used, and Bradley, senior, informed the judge that if he (Fisher) were not ill, he would thrash him. The judge replied that he did not claim immunity from the threatened castigation. Deputy Marshal Phillips interfered and prevented blows, and attempted to force the Judge into the Marshal's room, when young Bradley made his appearance. The judge turned and grappled with him. The parties were separated, and Judge Fisher was locked in the Marshal's room. Judge Fisher eventually went to his home in Georgetown. The affair created much excitement.

Agricultural College Land Scrip official returns show that Kansas has located 333,627 acres; Minnesota, 407,844 acres; Wisconsin, 593,906 acres; Nebraska, 277,866 acres. No State can locate over 1,000,000 acres.

The usual Treasury Statement for the month will not be made, as the fiscal year closed June 30th, and no statement will be made until the first of August. The decrease in yearly receipts is some $40,000,000.

The President has sent Congress all his correspondence with the Generals on Reconstruction. The House Committee agreed on a Reconstruction Bill, which they hoped to report on the 8th inst. A majority of the Judiciary Committee are said to be in favor of impeachment, Woodbridge of Vermont, having changed, and propose to report and ask action at an October session. The majority of Congress hope to adjourn by July 15th. The Secretary of the Treasury does not intend to make any suggestions on finance.

From the West.

A DISPATCH at St. Louis from Omaha, states that much alarm exists from Fort Yankton to Fort Randall. Some 200 Indians are coming down the Missouri River. Gen. Sherman left for Fort Hunter the 4th. He orders to follow up and clear out the Indians. Seven hundred peaceful Indians are in camp on the North Platte under the care of Government, but prospects for any peace with the majority seem faint. Indian depredations in Idaho still continue. On July 1st a regiment of cavalry and mounted infantry started for the mountains.

The steamer Montana left San Francisco for Panama the 29th ult., with $1,158,306 in specie for New York. Since January 1st, $20,805,000 have been shipped.

The Michigan Agricultural College has had land grants of 260,287 acres, and money from the State, $182,000. The graduates number eighteen, and students ninety-two—all that can be accepted with the present buildings.

The steamer Colorado sailed from San Francisco for Yokahomo and Hong Kong the 6th inst. with $860,000 and 505 passengers, including the Japanese Commissioners and suite. The 4th was celebrated in San Francisco with much enthusiasm.

Important Enterprise.

A COMPANY from Pennsylvania and elsewhere (some of this city) have bought the Marmora Iron Mines in Canada, forty miles from Lake Ontario. Their purchase covers 23,000 acres, and also the Cobourg and Peterboro' Railway, of which they have partly changed the route. The mine is on the bank of Crow Lake, and is simply a ledge fifty feet high, facing the water, the ore yielding sixty to seventy per cent. of fine iron.

An excursion party of our citizens and others visited the spot and were highly gratified. A furnace is talked of at Charlotte, on the lake shore, a few miles north of this city.

Latest from Europe.

THE Austrian Court at Vienna went into mourning for the Emperor Maximilian.

At London a grand exhibition to take place in Hyde Park the 4th inst., was postponed by the Government on account of Maximilian's death. Great indignation against the Mexican Government is felt in England and on the continent. In the British House of Commons Mr. Home announced that the riots at Birmingham were over; that he could not wonder the language of the anti-papist Murphy created trouble, and that the Catholic clergy, during and since the riot, had done well in wise and conciliatory measures. The right to vote by ballot, in a section of the Reform Bill, was rejected by 277 to 214.

Re-inforcements and arms from Greece have reached the Cretans. Omar Pasha was preparing for another assault on them.

LOSSES BY FIRE.—During May the aggregate losses in the United States, caused by fire, each involving a loss of at least $20,000, were $2,120,000. The aggregate losses during the year have been $16,528,000. From 1859 to 1864 inclusive, the average losses by fire in the United States were about $18,000,000 per annum, while in 1865 they rose to $48,000,000, and in 1866 to $100,000,000. It is supposed that $50,000,000 insurance was paid during the last year for incendiary fires.

FORMER ANNEXATIONS.—The recent purchase of Russian America is the sixth acquisition of territory since the formation of our Union. Louisiana and the Mississippi Valley were purchased from France in 1803 for $15,000,000; Florida from Spain in 1819, for $5,000,000; Texas was annexed in 1845; California, New Mexico and Utah were purchased from Mexico in 1848, for $15,000,000; and Arizona in 1854 for $10,000,000.

GREAT IRON AND STEEL WORKS.—In Troy, N. Y., several persons have formed a partnership under the firm of J. A. Griswold & Co., and with the mills, &c., now ready, and to be built, will have capacity to make annually 20,000 tons pig iron, 15,000 tons Bessamer steel, 35,000 tons of steel and iron rails, and 10,000 tons of merchant iron.

HEROISM IN COMMON LIFE.—A few days since, as a train of cars was approaching St. Hyacinthe, Canada, the engineer, Joseph Gairepy, saw a child about four years of age walking on the track. He endeavored to stop his train, but, being unable to do so, rushed out on the cow-catcher and seized the child as the engine was about to strike it. The little one was uninjured, but badly scared.

DETROIT VS. CHICAGO.—A Detroit Post correspondent thinks a railroad should be built to Grand Traverse Bay, crossing Michigan from Southeast to northwest,—from Saginaw, which is now linked to Detroit by rail,—and thus opening a rich country, drawing a great trade from Chicago to Detroit with the advantage of constant travel, while Chicago is cut off by ice a third of the year.

THE DOMINION OF CANADA.—The territory included in the new Kingdom of Canada has an area of about 400,000 square miles. The population is computed as follows:—Upper Canada, 1,303,923; Lower Canada, 1,220,514; New Brunswick, 252,049; Nova Scotia, 350,857; Newfoundland, 111,638; Prince Edward Island, 80,857. Total, 3,329,838.

THE INDIANS.—The Peace Commissioner thinks he can make peace with the Crow Indians, but the Cheyennes must be whipped before he can treat with them. On the 24th and 26th ult. the Sioux and Cheyennes attacked portions of Gen. Custer's command a few miles from Fort Sedgwick. The Indians were repulsed.

NEWS PARAGRAPHS.

THE cholera in the Brazilian camp, on the La Platte, took off nearly 700 men in four days. It prevails fearfully in Buenos Ayres,—in a number of the cities.

THE State Board of Commissioners on Normal Schools has accepted the proposition of citizens of Buffalo to raise $100,000 for a Normal School to be located on a site in that city donated by Jesse Ketchum.

THE Anniversary exercises of Alfred College (Alleghany Co.) were held the 1st inst., much to the satisfaction of the large audience and many students of that thriving school. E. P. Whipple of Boston, gave an address.

Two century plants are now in bloom near New Orleans, and are attracting considerable attention. They are about thirty-five feet in height, annd will remain in bloom about ten days longer.

THE leaves of geraniums are excellent for cuts, where the skin is rubbed off, and other wounds of the kind. One or two leaves must be bruised and applied to the part, and the wound will be cleatrized in a short time.

ACCORDING to a recent geological survey, it is ascertained that Illinois has a coal area of more than 18,000 acres, containing three strata of coal, altogether 16½ feet thick, and superior to English and Pennsylvania coal for smelting purposes.

AT New Orleans the city notes in large amount circulate for business, but not at the banks or brokers, save at heavy loss, which makes trouble. The Comptroller of the city refuses to pay officers appointed by Gov. Flanders. He bases this action on Stanberry's opinion.

THE report that Gen. Custer's cavalry had been overpowered by the Indians and that he had been killed, seems to have been erroneous. At least a dispatch received last week by the N. Y. Times says that his command was at the forks of the Republican River and ready for an offensive movement against the Indians.

NEW ENGLAND ship building is now much depressed from high prices, taxes, &c., and there are few contracts ahead. The British copy our finest models, and outbuild us on the Clyde. Not only this, but our carrying trade to foreign lands is passing into foreign ships. Surely, all this should be looked to.

A LETTER envelope manufacturing firm in Buffalo, has received an order from the Western Union Telegraph Company for 3,000,000 envelopes, which is about three-fifths of the amount required by the Company every year. The Merchants' Union Express Company are using envelopes at the rate of 6,000,000 annually.

A SOLUTION of copper in ammonia is said to be a solvent not only for lignine, and thus for vegetable fibers generally, but also for animal fibers, as wool and silk; forming elastic waterproof substances, and capable of so penetrating one kind of fiber with a solution of another as to unite certain of their qualities; for example, enabling cotton to receive and retain the same dies with woolen, and with a similar tendency.

THE Scientific American states that "the Emperor and Empress of France, and the whole Imperial Court, are now setting a good example, which will be followed by all Paris, and consequently by all the fashionable world, namely: to take an interest in scientific lectures and experiments." A portion of the time hitherto devoted to parties of pleasure is to be passed in the lecture room, where new inventions are exhibited, and their powers and uses explained in a familiar manner.

THE dials of the English Parliament clock are twenty-two feet in diameter, and the largest in the world. Every half-minute the point of the minute hand moves nearly seven inches. The clock will go eight and a half days, and strike for only seven and a half, so as to indicate by its silence any neglect in winding it up. The mere winding of each of the striking parts takes two hours. The pendulum is fifteen feet long; the wheels are of cast iron; the hour bell is eight feet high and nine feet in diameter, weighing fourteen or fifteen tons. The weight of the hammer exceeds four hundred pounds.

MEXICO.—Further particulars of the state trials and executions have been received. Maximilian, Mejia and Miramon were sentenced on the 14th ult. to be executed the 16th. Juarez suspended the executions for three days, and they were shot the 19th at 11 A. M. Colonels were sentenced to six years' imprisonment; officers of lower rank from two to five years. A number of officers of high grade are yet to be tried. The city of Mexico surrendered to the Liberals the 21st. Juarez is soon to convoke the Mexican Congress.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, July 9, 1867.

The large calls for money last week, incident to the July settlements, made rather a close market in this locality. There is still an active demand, but the supply is equal to the requirements. Money is abundant in New York, and rates on call, with Government collaterals 5@6 ₱ cent. Gold advanced at the close of last week. Sales at the New York board were made yesterday at 138¾. Public funds have advanced, particularly the gold bearing bonds. On Saturday the quotations were as follows:—The consolidated 5-20s of 1865-67, 107@107¼ ex-July coupon; the 1862s, 111¾; the May and Nov. 1864-65s, 108¼@108¾ ₱ cent., and the 10-40 years 5 ₱ cents, 102¾ ₱ cent. The 7.30 currency loans sold at 107@107¼ and accrued interest.

The market for railroad stocks is quite active, at an advance for several descriptions. There is said to be a combination of the leading railroads between New York and Chicago, to form a great Western route. Among other roads that have entered into the arrangement are the Hudson River and Harlem, the New York Central, Lake Shore Line, Cleveland and Toledo, and Michigan Southern. It is said that Mr. KEEP is to resign the Presidency of the New York Central to be succeeded by H. H. BAXTER. Although railway stocks have advanced, the earnings for June do not show increased figures. The freight traffic will be light, comparatively, until winter wheat begins to move.

WOOL.—Sales of wool in Western New York are on the increase, though very little is doing for the time of year. Buyers are paying 40@45c. In some portions of Michigan, last week, the market was quite active. The quotations are generally from 35@43c, though occasionally good lots are taken at a higher figure.

The sales in Boston last week foot up 650,000 lbs. at a range of 32½@65c for fleece, and 35@62c for the various grades of pulled. Holders of foreign wools are rather firmer in their demands in consequence of a recent advance in England, Belgium and Prussia. The Boston Bulletin of the 6th says:—"New wool, though rather late in the market, with very little competition among Western buyers, is now beginning to come forward from nearly all the wool-growing States, and in fair-sized lots. It is estimated that there are some 3,000 bales, or from one-half to three-fourths of a million pounds of the new crop of Western now on the way to this market: and, with a general disposition to sell at reasonable rates on the part of growers, it is probable that much larger consignments will speedily follow."

Special Notices.

STUMP MACHINE TRIALS.

MR. WILLIS has recently made two trials of his Stump Machine on the Ashley farm in the town of Greece with results entirely satisfactory to those who witnessed the operations. At a trial on the 6th instant he extracted eight stumps of various sizes in 24 minutes. He is manufacturing the machines in this city, and can supply all such as may wish to purchase. He would be glad to have his machine examined and tested by all such as may be in want of such an implement. Call on or address W. W. WILLIS, Exchange Hotel, Rochester, N. Y.

PARIS EXPOSITION.

ELIAS HOWE, JR.,
PRESIDENT OF THE
HOWE SEWING MACHINE COMPANY,
AWARDED A
GOLD MEDAL
AND CREATED A
Knight of the Legion of Honor by
THE EMPEROR NAPOLEON
FOR THE SEWING MACHINE, which puts "the HOWE" at the HEAD of all Sewing Machine Exhibitors.
THE HOWE SEWING MACHINE TRIUMPHANT!
The FIRST and BEST MACHINE in the WORLD.

Decayed Teeth are indicative of a disordered stomach. Acidity of the Stomach has a very deleterious effect on the teeth. COE'S DYSPEPSIA CURE neutralizes it immediately. It is the most powerful corrector for the stomach known.

All About Mowing and Reaping Machines.

FRAUD AND HUMBUG EXPOSED.

THERE has been, and is now, such an amount of misrepresentation in reference to the trial of Mowing and Reaping Machines at Auburn, N. Y., last July by a committee of the N. Y. S. Ag. Society, accompanied with such gross libels upon us and our machines, that "*Forbearance* has ceased to be a virtue" indeed.

Some unscrupulous manufacturers and their agents for their own selfish and greedy purposes have published in newspapers, pamphlets and circulars, what purports to be the Report, or *extracts* from the Report of the Committee. These publications are *false and garbled* and "*made up*" to suit eastern machines and cast odium upon others. They ALL claim having received *the first* premium or medal, leaving it *to be inferred* that there was but *one first premium*; whereas, in truth there were *Eleven Premiums and Medals*, awarded to as many different styles and makers of mowing machines, and would have been more if fair play and honor had been observed. These *garbled and false* publications make certain machines stand higher than others by taking the highest credit marks of *their* machines and the lowest ones of *ours*. Now by this rule we find in the COMMITTEE'S PUBLISHED REPORT, that DODGE'S PATENT MOWER AND REAPER, Ohio and Buckeye Patents combined, made by Dodge, Stevenson & Co., was THE LIGHTEST DRAFT MOWER at the trial; that it had THE LEAST SIDE DRAFT; that it was marked for quality of work two higher than Buckeye, and nearly double that of the Walter A. Wood Mowers on the most *difficult* piece of work during the trial, viz., Lodged Clover and Weeds in the Leach lot.

Here are the figures of the principal machines as published by the Committee. The No. 40 represents perfection:

Name of Machine,	Qual. work. Mow'g	Qual. work. Reap'g	Side draft.	Direct draft.
Columbian; Am. Ag. Works,	26	31	8¾	270
Walter A. Wood's Mower,	19	32	7½	247
Marsh; Wm. A. Halladay,	26	not giv'n	7½	272
Cayuga Chief,	30	28	6	291
Kirby; D. M. Osborne & Co.,	32	32	3	250
Buckeye; Adriance, Platt & Co	30	31	5	220
Dodge's Patent; Dodge, Stevenson & Co.,	37	37	2¾	213

Our machine *was awarded the preference* in Class 5 as a *Mower, Hand or Self-Raker, as preferred*, in the same machine, and the above clearly shows that it was entitled to it. HIRAM CURTIS of Albion, N. Y., who manufactures a machine he calls the Buckeye, did not have any machines at the trial, and for his gross libels upon us and our machines we have appealed to the courts for redress.

We have no objection to *fair competition*, be it ever so spirited, but when downright lying and malicious falsehoods are resorted to we shall defend ourselves in a proper manner against any and all such.

The immense popularity and sale of our machines has caused alarm amongst the *old concerns*, relying on reputations earned years ago; hence the fluttering, which is good evidence that *somebody is hurt*.

FARMERS! READ OUR ADVERTISEMENTS. YOU CAN RELY ON THEIR TRUTHFULNESS.

909-4t DODGE & STEVENSON M'F'G CO.
Auburn, N. Y., June 12, 1867.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THERE is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement*; that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines: that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 908-tf.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged*. If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *w. t.*—*Massachusetts Life Boat.*

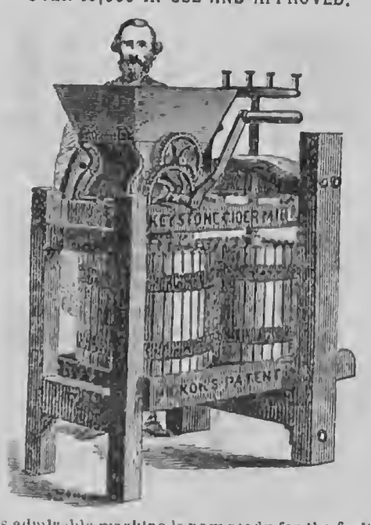
THE CHAMPION.
HICKOK'S PATENT PORTABLE.
KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.



This admirable machine is now ready for the fruit harvest of 1867, is made in the most perfect manner with either one or two cubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.

FOR SALE BY ALL RESPECTABLE DEALERS.

I also make two sizes of superior
PRESSES FOR BERRIES, &c., &c.

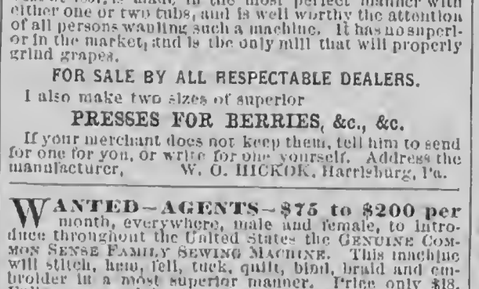
If your merchant does not keep them, tell him to send for one for you, or write for one yourself. Address the manufacturer, W. O. HICKOK, Harrisburg, Pa.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made.
Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 911-4t

THE HARRIS HOP PRESS, (ILLUS-trated and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that four fifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.

Messrs. RAMSEY & HANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.
BUCKINGHAM, WALSH & CO.,
911-9t Waterville, Oneida Co., N. Y.

WARNER'S SULKY REVOLVING RAKE.—It is almost universally admitted that for excellence of work the Revolving Rake is unequalled. Its great want has been an efficient sulky attachment. This, however, has been successfully met in the Warner Sulky Revolving Rake, an engraving of which is here presented



WORKING POSITION.

The advantage which the Warner Sulky Revolving Rake possesses over all others will be readily comprehended. It gathers the hay free from dust and sand, carries it clean, and in dumping closes the winrow or rick in good shape for tumbling and pitching. Its working is so simple and effective that a boy of 12 or 14 years of age can manage it with ease. The Warner Sulky Revolving Rake has been thoroughly tested, and won an enviable reputation; those who have used it are unanimous in pronouncing it the best Rake yet introduced. It has received the most flattering notice from the Press and Agricultural Societies. It has taken the First Premium at all State Fairs wherever exhibited.

THE McKAY SEWING MACHINE, the only machine in existence by which a sewed boot or shoe can be made. Adapted to all kinds, styles and sizes of boots and shoes. 200 pairs can be made with ease by one man, with one machine, in ten hours. These shoes take precedence of all others in the market, and are made substantially at the cost of pegging. In use by all the leading manufacturers. Machines, with competent men to set them in operation, furnished at one day's notice. For particulars of license apply to GORDON McKAY, Agent, 6 Bath street, Boston, Mass. 901-13t

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE Jr., the original Inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

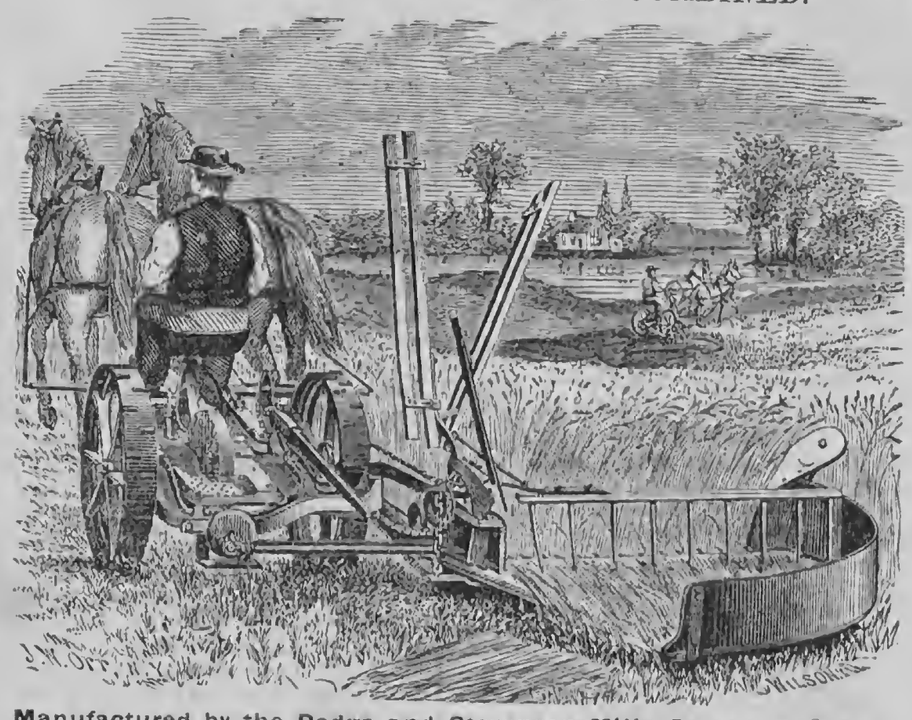
DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, post-paid free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Put'd Aug. 1863, Improvements Put'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-3 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

$20.00 AGENTS WANTED—$100. Male and female, to introduce our New Patent, Star Shuttle Sewing Machine. It is adapted for family use, and Tailoring. It makes a stitch alike on both sides. Price only Twenty Dollars. Extraordinary inducements to Agents. For full particulars, address

☞ Those who wish PRACTICAL INFORMATION on the subjects named above should send for the work, which is sent, post-paid, for 25 cents.
D. D. T. MOORE, Rochester, N. Y.

AN EMBER-PICTURE.

BY JAMES RUSSELL LOWELL.

How strange are the freaks of memory!
The lessons of life we forget,
While a trifle, a trick of color,
In the wonderful web is set,—

Set by some mordant of fancy,
And, despite the wear and tear
Of time, or distance or trouble
Insists on its right to be there.

A chance had brought us together;
Our talk was of matters of course;
We were nothing, one to the other,
But a short half-hour's resource.

We spoke of French acting and actors,
And their easy, natural way,—
Of the weather, for it was raining
As we drove home from the play.

We debated the social nothings
Men take such pains to discuss;
The thunderous rumor of battle
Were silence the while for us.

Arrived at her door we left her
With a drippingly hurried adieu,
And our wheels went crunching the gravel
Of the oak-darkened avenue.

As we drove away through the shadow,
The candle she held in the door
From rain-varnished tree-trunk to tree-trunk
Flashed fainter, and flashed no more,—

Flashed fainter and wholly faded
Before we had past the wood;
But the light of the face behind it
Went with me and staid for good.

The vision of scarce a moment,
And hardly marked at the time,
It comes unbidden to haunt me,
Like a scrap of a ballad-rhyme.

Had she beauty? Well, not what they call so,
You may find a thousand as fair,
And yet there's her face in my memory,
With no special right to be there.

And I sit sometimes in the twilight,
And call back to life in the coals
Old faces and hopes and fancies
Long buried—good rest to their souls!—

Her face shines out of the embers;
I see her holding the light,
And hear the crunch of the gravel
And the sweep of the rain that night.

'Tis a face that can never grow older,
That never can part with its gleam;
'Tis a gracious possession forever,
For what is it all but a dream?

[*Atlantic Monthly for July.*

The Story Teller.

Written for Moore's Rural New-Yorker.

EMILY MEADE.

CHAPTER I.

"ABOVE that dark romantic stream
Gray rocks and gloomy forests tower,
And o'er its sullen floods the dream
Of Lethe seems to lower."

AT the time when thousands were rushing to the shores of our Western Ocean in search of their golden treasures, two young men who had been reaping Fortune's golden harvest there, were walking, on a clear evening, along the bank of a narrow but rapid river. From its margins rose high and steep rocky walls, through which the current had by long and quiet patience worn itself a path. As the two friends walked on, listening to the rushing sound of the waters, and here and there catching a glimpse of them as the moonlight shimmer played restlessly on their uneasy surface, the taller and elder of the two spoke, apparently resuming a conversation which had been broken off.

"If I return to Philadelphia," said he, "all the objections would probably be removed. The golden bait would be greedily swallowed. But after spending two years of my life in exile, I hesitate some about offering up the remainder on a shrine where it was once rejected."

"Do not go;" replied the other, "if you do you may be drawn within an influence which you cannot resist any more than before."

"But, CHARLEY," said the first speaker, "that is my home, and my two years of absence have not made me indifferent to the attraction of familiar places, even if that of persons were entirely lost, which I am not quite ready to confess."

"So much the more need of your avoiding it," replied CHARLEY. "Pardon me if I speak too plainly, but I can see that you are drawn there by a desire to see how your new position will affect your friends, and it will end by drawing you again into the snare which you have only partially escaped. When I made you angry last night, I was only trying what ridicule could do to release you."

"You are treading on dangerous ground when you allude to that," said the other in a half earnest tone.

Little more was said by either until they reached a place where the bank jutted out a little over the stream, giving a good view of its dark course for some distance. A few stunted trees grew on this ledge, and here FELTON, the elder, turned to cut a walking-stick, while CHARLES stood at the edge to look over into the river. Suddenly FELTON was startled by a slight sliding noise, and, turning to look for the cause, saw that his friend was gone. He looked around wildly, and called loudly, bending over the precipice, which he now saw had slidden away at the edge, and the sickening conviction came over him that his friend had slipped in that brief moment into the silent depths of eternity. He called aloud, again and again, but there came no answer across the great gulf which he now felt to be fixed between them. He began to trace his way with rapid steps toward the settlement from which they had wandered, to procure aid; but he had not gone far when a new thought arrested his steps. They had had a foolish quarrel the evening before — the sarcasms to which CHARLES had alluded had aroused his anger—both had grown somewhat warm—and in the presence of others he had made a threat—not, indeed, intended as a menace of taking his life, but which might have been so understood. Their reconciliation had not been witnessed—they had gone out together, and CHARLES had met his death in a strange way. Would men believe that it had been purely accidental?

The genial, lively fellow had been a favorite with all the rougher natures among whom he had been thrown, while his more reserved and fastidious companion had gained the friendship of none of them. It was unlikely that the want of law would prevent them from avenging the death of their favorite. For awhile the conflict was strong—the love of life prompted him to fly—but another feeling, a sort of perverseness, common to melancholy natures, impelled him to go on, to take the worst that Fortune could inflict. He seemed to see in this gloomy hour the culmination of all his disappointments and all his misfortunes. All the doubt, despair and gloomy forebodings of his past life pointed to this event as their fulfillment. The whole of his existence was pressed into this hour; all the dark realities of the past—all the darker mystery of the future—were gathered into it, and illumined by it;—it was the hour of his life. In its dark face he saw the clear outlines of the vision that it seemed to him had haunted him from his earliest days, and hung a mocking specter among the misty clouds of his future. With such feelings he hastened on, determined that Fate should see no struggles of the victim in the fearful web which she had woven around him.

But soon other feelings began to prevail. Life, beautiful glowing life, rose before him,—its activity, its bustling scenes, all that he had at other times despised as empty conventionalities, put on a strange attractiveness, for they were life, and over against stood the unmoving stillness and the everlasting silence. Life conquered and he fled.

CHAPTER II.

"As drops of rain fall into some dark well,
And from below comes a scarce audible sound,
So fall our thoughts into the dark Hereafter,
And their mysterious echo reaches us."

In the outskirts of a small New England city the twilight was slowly drawing round a small frame dwelling, in the door of which sat a young girl, looking gray and gloomy in the uncertain light, and seemingly occupied with thoughts of the same cheerless hue. EMILY MEADE had made the same resolves hundreds of times before, and as many times had they been broken. It was one of those hours when our life stands unveiled before us, looking us in the eyes with the truth of reality, undeceived by the deceptive gauze of habit and the false glow which the customs of social life throw upon it. Those hours when we take our compass and resolutely reckon our latitude and longitude, our distance from the port, and our rate of sailing. But, alas! these hours are few and far between. We forget their sharp lessons, and allow ourselves to drift carelessly at the mercy of every current. We draw down the veil and only occasionally cast a hurried, sideward glance into those serious eyes, that hide in their silent depths the solemn record of our life's great mystery.

So EMILY felt it to be. With the sting of remorse and the strong indignation for past folly, came a keener sting—the conscious powerlessness to shake off the chains that habit had so closely riveted.

The gate in the dusty little dooryard now swung open to admit two persons—a gentleman and lady, the latter of whom, with her bright face and cheerful smile, looked like a sunbeam that had strayed back into the gray twilight of the evening. But the arrival seemed but to increase EMILY'S gloom, as she rose with a smile of rather equivocal welcome, and invited them to go in.

"No," said the lady, "we will sit down here with you. I never feel so much at home with you as when under this elm. If you were ever a dryad, EM, this tree was surely your abode. You are never so much yourself when you are out of sight of it. I have a prophetic feeling that it is going to be mixed up mysteriously with your life."

"Perhaps," said the young man, "when she gets disgusted with human society she will retire again to her sylvan abode, and show her benevolence by lending a grateful shade to us wretched mortals who were unworthy her companionship."

"If that were the case," said EMILY, "you and LINDA would have paid your respects to the tree to-night."

"Now EM," said LINDA, turning and looking earnestly into the face of her friend, "you are not going to be in one of your gloomy moods to-night, when we are feeling so happy. Come, GUS shall give you some of his good-nature, and I will supply you with charity. I feel uncommonly benevolent to-night."

"No," said GUS, "I begin to feel the mood sarcastic creeping on me, too. You must keep still, LINDA, and leave the conversation to us. We are terribly cutting when we are in this mood. Simple people, like you, can only tremble and be silent. But if you are good, I will teach you the *modus operandi* when you get a little older."

"Teach me now," said LINDA, not noticing in the growing darkness the gloom that was settling over the countenance of her friend. "I want to know how to sympathize with you in these terrible moods."

"Well, first then," said GUS, "correct me, EM, if I make any mistakes—first, you must turn your thoughts on yourself. Collect all the evidence of your graces, your abilities, your affection for your friends; all the self-denial you have practiced for them—all the instances in which you have overlooked or forgiven their faults—in short, take an inventory of your good qualities. The next step is to arraign your friends. Do not allow yourself to be misled by the remembrance of any little outside show of affection or kindness that they have hypocritically made—but bring forward all their unkind and slighting words and actions—and if these are not sufficient to inflame you, resolutely tear away the mask from their deceitful professions of affection and acts of superficial kindness. When your heart is sufficiently wrung by these feelings, extend them, which is very easy, from the narrow circle of your personal friends until they take in the whole of mankind. You then have the picture of yourself standing alone in the center of a cold and selfish world, isolated by your own superiority, and you have a spectacle to make the angels weep. Angel as you are, you weep, not for relief, but as the finishing touch to your picture of misery, and then you are ready to give the world its due."

"If all our friends were endowed with the delicacy shown by some of mine at this moment, it would need considerable exaggeration of their faults to harrow up the feelings to such a sublime pitch," said EMILY.

"There, now," said LINDA, "you are getting into one of your blind quarrels again. Strange that you always get fairly under way before I even find out that you have launched into them. Now, dear EM, forgive our levity, and tell us what cause of sorrow you have. Have you heard from CHARLEY yet?"

"No," was the reply, "and I must shake off my constitutional indolence, and try to take his place, as far as I can, in the family. I fear that CHARLEY will never return to us. But poverty has not even the consolation of mourning. Grief for the lost must be put aside for the coarser consideration of what is to be done for those that remain."

"If I could help you," said LINDA.

"No," she replied quickly, "that is impossible. And I am rather glad, or would be, were there not so sad a cause for it, that I am left to my own exertions. I have an idea that the Necessity that has been hanging over me with such a hard face so long, will prove a true friend, when I am at last forced to receive her."

"I should want her to introduce herself in a more civil way," said LINDA, "if I thought of receiving her company."

"People are not apt to be civil," said GUS, "when they know their entertainer has no choice."

"Now that is not true," said LINDA; "there are very few people whom a sense of having the advantage will not render courteous."

"There is your simple ignorance of the world again. But to return to the original question, what kind of a reception shall you give this future friend? With a shake of the hand or an embrace, after the manner of seamstresses, and other plain people, who are not ashamed of their friends, or like authors and magazine writers who hold her off with a distant bow, just enough to conciliate her, and not let the world know she is anything more than a very casual acquaintance?"

"Well, neither exactly, I think," she replied. "I have not the requisite industry and patience for the first—and as I do not feel that I have the vision and the faculty divine, I cannot think of the last. I see no alternative but to resort to that friend of the needy, the profession of schoolteaching."

"Oh, horror!" said LINDA, under her breath.

"The inevitable schoolma'am!" laughed GUS.

"If you can suggest anything better, I should be glad to have you. It does not strike me with much less horror than it does LINDA."

"Set up for an artist," said LINDA; "you know you and I took a lesson in drawing once."

"Did not the men selfishly monopolize all the light and easy employments, I, as well as many others, would have a larger assortment to choose from!"

"Hem!" said GUS, who was book-keeper in a large establishment in the city.

"GUS," said LINDA, suddenly, "where is that book you brought for EM to see?"

"Oh, yes, I had forgotten it," said he, and they entered the house to examine it.—[To be continued.

Wit and Humor.

IN the days of the famous Ethan Allen of Vermont, lawyers were scarce, and gentlemen who were not of the profession acted as counsel. Allen was often employed in this way, and on one occasion the opposing lawyer quoted Blackstone, whereupon old Ethan threw stones in this terrible fashion:—"I would have the young gentleman know that, with my logic and reasoning from the eternal fitness of things, I can upset his black-stones, his white-stones, his gravestones, and his brimstones."

A CLERGYMAN and one of his elderly parishioners were walking home from church one frosty day, when the old gentleman slipped and fell flat on his back. The minister, looking at him a moment, and being assured that he was not much hurt, said to him, "Friend, sinners stand on slippery places." The old gentleman looked up as if to assure himself of the fact, and said, "I see they do, but I can't."

A YOUNG man in Troy, N. Y., Mose Johnson, deeply enamored of a damsel named Anna Bread, recently got off the following:

"While belles their lovely graces spread,
And fops around them flutter,
I'll be content with Anna Bread,
And won't have any *but her*."

THE Portland Transcript says:—We heard an anecdote which amusingly illustrates John Bull's incapacity to appreciate anything that isn't English. The weather was foggy, and one of the sailors belonging to a Liverpool steamer in our harbor was overheard to say to one of his mates: "This is weather as is weather—*none of your blasted blue sky!*"

THE time is at hand when our ministers should remember this from Josh Billings:—"I always advise short sermons, especially on a hot Sunday. If a minister kant strike ile in boring forty minutes, he has either got a poor gimlet or else he is boring in the rong place."

A LAWYER, neither young nor handsome, when examining a young lady witness in court, desiring to perplex her, said:—"Miss, upon my word, you are very pretty." The young lady replied: "I would return the compliment, sir, were I not under oath."

A DARKEY preacher was telling how Adam was the first man created, and set against the fence to dry. An old brother who sometimes had lucid ideas interrupted him and said:—"If dat am true, who made de fence?" Pass around de sasser.

A YOUNG gentleman named Harry Turn recently married his cousin of the same name. When interrogated as to why he did so, he replied that it had always been a maxim of his that "one good turn deserves another," and he had acted accordingly.

A STORY is told of a boy who went into an oyster shop in Portland, Me., and said his folks wanted two quarts of oysters. "Solid?" asked the man. "Yes, I suppose so; ye ain't allowed to sell the liquor, are ye?"

THE late Daniel O'Connell once met a conceited literary friend, and exclaimed, "I saw a capital thing in your last pamphlet." "Did you?" eagerly replied his delighted listener, "what was it?" "A pound of butter!"

"As we two are one," said a witty brute to his wife, "when I beat you, I beat half of myself." "Well," said the wife, "then beat your own half."

Corner for the Young.

ILLUSTRATED REBUS.

☞ Answer in two weeks.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 30 letters.
My 4, 17, 22, 16, 25 is an anodyne.
My 13, 21, 10, 19, 1, 14 is a girl's name.
My 14, 13, 11, 9 28, 29, 24 is a pwerful nation.
My 12, 6, 29, 15 is part of a ship.
My 3, 14, 26, 9, 28, 2, 19, 27 are necessary in time of war.
My 7, 21, 24, 17, 18, 23, 9, 8, 5 is what fowls are.
My 20, 14, 25, 30 is an exclamation.
My whole is a Proverb of Solomon.

Montclair, N. J. MAY FOSTER.

ANSWERS TO ENIGMAS, &c., IN No. 909.

Answer to Miscellaneous Enigma:—Thou shalt not steal.

Answer to Geographical Enigma:—Columbus discovered America.

Answer to question:—18 and 12.

Answer to Anagrams of States:—North Carolina, Michigan, Wisconsin, Indiana, Tennessee, Pennsylvania.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Two First-Class Journals for $3.50!

MOORE'S RURAL NEW-YORKER,
(*The Leading Weekly of its Class—Price $3.00 a Year,*)
AND
THE MARYLAND FARMER,
(*A Standard Agricultural Monthly—Price $1.50,*)
BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that now is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals.

THE FARMER is ably conducted—published in superior style—magazine form, with colored cover,—and is justly attaining wide circulation and influence. Like the RURAL it seeks to promote the best interests of the Producing Classes of the whole country, leaving political and sectional discussions and disputes for party organs.

BELLS! BELLS!!
MENEELY'S WEST TROY BELL FOUNDERY,
ESTABLISED IN 1826.

Bells for Churches, Academies, Factories, &c., made of genuine Bell-metal, (Copper and Tin) mounted with Improved Patented Mountings, and warranted. Orders and inquiries addressed to the undersigned, will have prompt attention, and an illustrated catalogue sent free, upon application. E. A. & G. R. MENEELY, West Troy, N.Y.

GOOD AND CHEAP BOOKS FOR
Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the RURAL NEW-YORKER. We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Pomology (200 Illustrations)	3,00
American Sharp Shooter (Telescopic Rifle)	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	30
American Horticultural Annual	30
American Agricultural Annual	30
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	30
Architecture (Cummings & Miller,) 382 designs and 711 Illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored Illustrations	9,00
Bement's Poulterer's Companion (120) Illustrations.	2,00
Bommer's Method of Making Manure	25
Browne's Field Book of Manures	1,50
Brock's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	30
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50
Dadd's Modern Horse Doctor	1,50
Dadd's American Cattle Doctor	1,50
Darlington's Weeds and Useful Plants	1,75
Directions for Preserving Natural Flowers	1,50
Domestic Poultry Book, with over 100 Illustrations	50
Downing's Cottage Residences	2,50
Eastwood's Cranberry Culture	75
Everybody his own Lawyer	1,25
Farm Drainage, by H. F. French	1,50
Field's Pear Culture	1,25
Flint on Grasses	2,00
Flowers for the Parlor or Garden	3,00
Fruit Trees of America	1,50
Fuller's Illustrated Strawberry Culturist	20
Fuller's Forest Tree Culturist	1,50
Fuller's Small Fruits (beautifully Illustrated,)	1,50
Gardening for a Profit	1,50
Grape Culturist, by Andrew S. Fuller	1,50
Guenon on Milch Cows	75
Herbert's Hints to Horse-Keepers	1,75
Holley's Art of Saw Filing	75
Hop Culture	40
Hooper's Dog and Gun	50
Horse Training Made Easy, Jennings'	1,25
Indian Corn: Its Value, Culture and Uses	1,75
Jaques on Fruit and Fruit Trees	60
Jennings' Sheep, Swine and Poultry	1,50
Johnston's Agricultural Chemistry	1,75
Johnson's Elements Agricultural Chemistry	1,25
Kemps' Landscape Gardening	2,50
Kings' Text-Book, for Bee-Keepers, paper	40
Langstroth on the Hive and Honey Bee	2,00
Letters on Modern Agriculture	1,00
Liebig's great work on Agriculture	1,50
Liebig's Familiar Letters on Chemistry	30
Liebig's Agricultural Chemistry	1,00
Manual of Agriculture, by Emerson and Flint	1,25
Miles on Horse's Foot (cloth)	75
Miss Beecher's Receipt Book	1,50
Manual on Flax and Hemp Culture	25
Mayhew's Practical Book-Keeping (Single and Double Entry.)	90
Mayhew's Account Books (to go with the above.)	1,20
Mayhew's Key (to go with above.)	90
Modern Cookery, by Miss Acton and Mrs S J Hale	1,50
Monumental Designs, 150 plates and designs	10,00
Nature's Bee Book	25
Norton's Elements Scientific Agriculture	75
Onion Culture	30
Our Farm of Four Acres	30
Parsons on the Rose	1,25
Pedder's Land Measure	60
Phantom Flowers	1,50
Practical and Scientific Fruit Culture (Baker)	4,00
Practical Shepherd, Randall	2,00
Quimby's Mysteries of Bee-Keeping	1,50
Quincy on Soiling Cattle	1,25
Rabbit Fancier	30
Randall's Fine Wool Husbandry	1,00
Randall's Sheep Husbandry in the South	1,50
Richardson on the Dog	30
Rivers' Orchard Houses	50
Rivers' Miniature Fruit Garden	1,00
Rogers' Scientific Agriculture	1,00
Rural Homes (Wheeler)	1,50
Saunders on Poultry (Illustrated)	40
Schenck's Gardeners Text-Book	75
Scribner's Produce Tables	30
Scribner's Ready Reckner and Log Book	30
Silver's new Poultry Book (70 Illustrations)	50
Stewart's (John) Stable Book	1,50
The American House Carpenter (Hatfield's)	3,50
The Barn Yard, a Manual	1,00
The Boston Machinist (Fitzgerald)	75
The Farm, with Illustrations	1,00
The Fruits and Fruit Trees of America (Downing)	3,00
The Garden, a Manual	1,00
The House with Original Plans	1,50
The Farmer's Journal and Account Book	3,50
Thomas' Am. Fruit Culturist, (480 Illustrations,)	3,00
Thomas' Farm Implements	1,50
Ten Acres Enough	1,50
Todd's Young Farmers Manual and Work Shop	1,50
Ventilation in American Dwellings	1,50
Warder's Hedges and Evergreens	1,50
Wax Flowers, how to make them	1,50
Woodward's Graperies and Horticultural Buildings	1,50
Woodward's Country Homes	1,50
Woodward's Rural Architecture	1,00
Wool Grower & Stock Register, Vols. 1, 2, 5, 8, each	33
Young Housekeeper's and Dairy Maid's Directory	30
Youman's Hand Book Household Science	2,00
Youman's New Chemistry	2,00

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

STACKS AND STACKING.

IN the British Islands it is the rule to store hay and grain in stacks; storage in barns is the exception. In New England and the Middle States barn storage is mostly used, yet stacking is resorted to on nearly every farm when crops are abundant. In the Western States more produce is saved in stacks than under shingle roofs. Altogether the stack holds more farm produce than the mow, hence it is the most important subject of the two for farmers to consider and understand. In the British Islands where stacking has been practiced for centuries the work is so thoroughly understood and performed that the farmer's crops are rarely injured by wet or over-heating when finally secured. In this country millions of dollars are annually lost by farmers from imperfect or careless stacking—partly by over-heating of the bulk, but chiefly by reason of long-continued rains penetrating deeply towards the interior. This loss, though not always the result of sheer carelessness or ignorance, may be almost wholly avoided if the farmers will wisely and energetically so determine and act accordingly.

How avoid this loss in excessively wet seasons? Simply by good stacking; not by piling up the straw hurriedly, with scant help, and half finishing the top, trusting to good weather or early thrashing, as a safe-guard. Sufficient help is the first great essential the farmer should secure when he prepares to stack his crops. Then, if not a good stacker himself, let him secure the services of one who is; but he, at least, should understand the theory well so as to direct the work. One or more canvas stack covers should also be at hand to throw over partly built stacks in case a storm approaches, or to protect those nearly finished until time can be spared to complete them. The foundation is a matter of much importance, though when the thrashing is done before winter this need not be expensive. It should be sufficient to keep surface water from injuring the bottom. The English stack yards are frequently furnished with foundations built upon capped posts that prevent vermin from harboring underneath, or ascending to the stack.

But little skill is required to build the stack up to its widest bulge or spread. The material should be evenly placed and settled so there will be no leaning towards one side in the future, but when the stacker begins to "draw in," his best skill and care are needed. One rule bear always in mind. *Keep the middle hard and full, and do not tread near the edge.* It is desirable to have the outside layer bend its straws downward when the stack settles; so that penetrating rains will be met with continuous layers that tend to throw it outward. Having brought the top steadily and not bluntly to a peak, the finishing up of the latter requires close attention. Half cured timothy, or marsh meadow grass, put on in successive layers, are good finishers, and a net-work of twisted hay ropes should be thrown over and weighted lightly to aid in resisting high winds.

We have not mentioned thatching, as few will be induced to practice it, but the farmer who is dependent on stacking to secure his crops should learn this art. The top of a stack thatched half or two-thirds of the way down from the peak to the bulge would be safe, and with an assistant, and materials already prepared, as they might be in winter time and stored—an expert worker would effectually thatch a grain stack of five hundred bushels' capacity in three hours, so as to be perfectly safe against summer and autumn storms.

BOOK FARMING.

DOUBTLESS there are shallow books and foolish articles in newspapers about farming, just as there are foolish farmers; but as there are wise farmers so are there wise books and able articles on Agriculture, helping greatly to still broader wisdom, and still more skillful practice.

We are social beings and like to tell each other what we are about. A good farmer leans over the fence to rest and talk with his neighbor, and they tell each other the *what* and *how* of their crops. It's a cheery talk, and they learn mutually. This is a day of newspapers and books. One of these farmers thinks to himself some wet day, "I'll just write down how I raised that big crop of corn and send it to the newspaper"—and he does it. When it is in print it is only that talk over the fence dressed up a little for a larger audience, and a good many learn by it instead of one.

Some man, skilled in using words, and with more time and means, writes a book of his experience and experiment on some branch of farming. "Like produces like." If he is a sensible man it will be a sensible book—just a longer talk over the fence, made more systematic and fixed up to see good company and a good deal of it. Farmers think a good deal in these days, and with growing thought comes talk, writing, systematizing, scientific research, labor-saving and skillful work. A workman without thought is a blind giant striking and tugging in the dark; an intelligent workman is a trained *athlete*, whose every blow goes home, whose every motion is swiftly efficient to its end, and who wastes no power.

An oyster may think a little, in a slow faint way, but they don't have printing presses and telegraphs on the oyster beds. A man thinks broadly and swiftly, and must give and take of the fruits of work and thoughts with his fellows.

A farmer is close to Nature, and all her realm of wonderful laws, and subtle and persistent forces, and myriad facts or phenomena. He tends toward Natural Science, and begins to see that the farm and garden offer ample scope for the best culture of brain and the finest scientific education, and that the old notion that a dull boy might stay on the farm and a bright one go to College to fit for some "learned profession" was a mistake. *Right in the soil* is the place where the best education can be put to excellent use, and *pay* in wealth of life as well as wealth of purse. Thus books and journals on farming and its kindred fine arts of fruit growing and gardening grow naturally out of these *thinking times*, and are the means, indispensable as well as inevitable, by which we tell each other what we know.

The benefits of rotation of crops, crossing of breeds in stock, underdraining, keeping and increasing needed constituents in the soil to produce certain crops, and sundry other important matters, which are comprehension and application of Nature's Laws—Scientific Farming—are becoming well understood and well applied. Book farming has helped in all this, and will help more, and we shall comprehend and practice things dimly seen now—as for instance this matter of the protecting and equalizing influence of forests and groves on crops and climate. So let book farming—the record of experience, the interchange of thought—go on, only let sagacious common sense and clear insight rule.

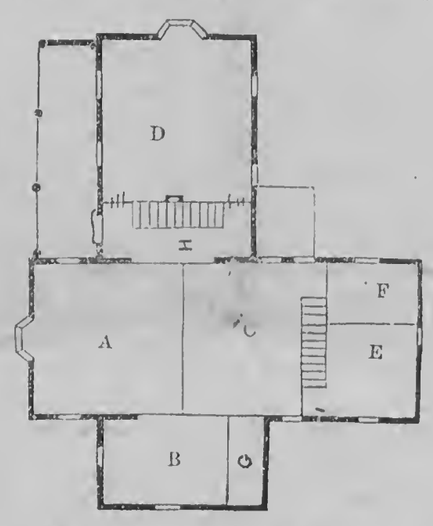
GROWING CLOVER SEED.

CLOVER SEED is frequently a very remunerative crop to the farmer, considering only the amount of trouble and labor required to produce it. But the practice of taking a crop of hay and then one of seed is exhaustive to the soil, especially when it is followed by immediate plowing for a grain crop. To sustain fertility under this system, heavy applications of barnyard manure are necessary. Still, we believe it is the common opinion of farmers that a clover seed crop is nearly clear gain at least; that it does not particularly diminish the productive capacity of the soil. But that honored farmer, JOHN JOHNSON of Geneva, says though he has grown large and many crops of clover seed, yet he could not have done so with profit had he not made more manure than farmers ordinarily do, wherewith to replace the elements which the seed had withdrawn.

We advise farmers to grow clover seed, both for home use and market, but not to regard it as a non-exhaustive crop. The field should receive a good dressing of manure, or, at least, be turned to pasture the succeeding year. At present, the season is one of good promise for this crop. Clover generally stands well; it is heavy and thick,—so the foundation for the seed crop is good; then the seasonable rains will start the second growth quickly. The best way to harvest clover seed is with a self-raking reaper, throwing it off in large gavels, presuming, of course, that the stalks are ripe and somewhat dry—then let it sun a few hours, and load with barley forks without raking or otherwise disturbing the gavels. This course saves wasting the seed by shelling, as occurs when it is frequently handled.

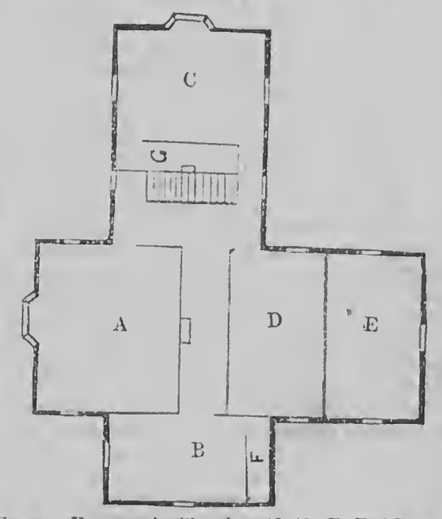
PLAN OF A RURAL COTTAGE.

ONE of our Western correspondents, H. R. SANDERS, sends us the accompanying plans and description of a farm house, or rural cottage,



FIRST FLOOR.—A, Parlor, 16x16; E, Bed Room, 21x9 B, Bed Room, 12x9; F, Pantry, 12x7; C, Kitchen, 16x12; G, Closet, 9x4; D, Living Room, 16x16; H, Hall, 16x8.

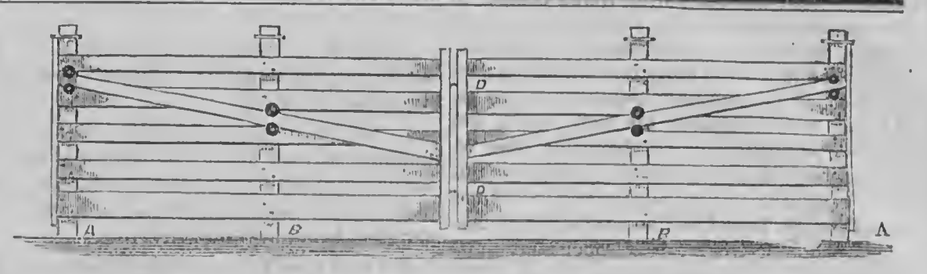
which has been found neat and convenient in Western sections of the country. It represents a cottage cheap enough to be within easy reach of men of moderate means, which consideration will attract the attention of many, and may give some a valuable hint. From the plans given of the first and second floors any competent mechanic can work out the proper elevation.



SECOND FLOOR.—A, Chamber, 16x16; E, Bed Room, 16x10; B, Bed Room, 12x9; F, Closet, 9x4; C, Bed Room, 16x12; G, Closet, 12x4; D, Library, 16x12; Hall, 16x8 and 16x5.

LATE MOWN MEADOWS.

IT frequently happens that meadows, mown late in the season, suffer severely from the scorching August sun. The roots of the grass become parched and frequently killed, affecting adversely the succeeding crop. In such cases it is recommended to give a liberal top-dressing of barnyard manure, if available, as a screen from the rays of the sun and to promote a quicker and more luxuriant growth of aftermath. It would be good policy to make special provision for such an application to lands designed for permanent meadows, as they would be certain to pay back many fold the cost incurred, by their increased and continually increasing productiveness. There can frequently be found in gutters by the roadside—in unoccupied nooks about the farm—mucky deposites, rich in fertilizers, which a little timely labor would scatter over the newly shorn meadow, shielding the surface from the effect of drouth, while imparting renewed vigor to the vegetation rising from it. Timely care and labor in this direction never fail to remunerate those by whom they are bestowed.



BENNETT'S "NO-PATENT" SELF-SHUTTING GATE.

ONE of our subscribers, J. O. A. BENNETT, Whiteside Co., Ill., sends us the following plan and description of a farm gate, which he has had in use over two years. Mr. B. has no patent for it, and gives it for free use to readers of the RURAL. He writes:—"The gates are made by morticing 2x4 hard wood scantling in five places to receive the boards 12 feet long. The top board should be two inches thick. Next take a 2x4, and rabbit both edges half an inch deep and one and a quarter inches wide. Bolt this bar, or track, to the gate, as represented, and the gate proper is done. (It may be made cheaper by nailing together lighter stuff if desirable.) The rollers may be made of wood, though iron ones are much preferable. There should be dowels, D, D, to fasten the gates when shut. The gates slide back from the center each way to the posts, B, B, and the fence should start from the posts, A, A. The gates will shut by their own weight, but to hold them open when desirable have hooks properly placed."

FLOORS FOR STABLES.

MANY of our readers may be interested in learning how to construct good stable floors, and we think the following remarks and advice sensible. We extract them from a communication to the Germantown Telegraph by J. WILKINSON, Baltimore:

Stone pavements, whether for stall floors for cattle or horses, for box stalls or calf pens, or for hog pens, should be set in coarse sand or gravel fully ten inches in depth. The stones need not be more than four or five inches in depth, and three to five inches in their cross section at the upper end is a good size. They should be set in the loose sand, at least three inches higher than the floor is to be when finished, and be rammed with a heavy shod rammer until the desired grade is established, having first given them a light dressing of gravel. When the ramming process is completed, the gravel and sand should be swept off and from between the stones to the depth of two inches; then prepare sharp sand by drying it quite dry by heating it in a large iron pan or an arch kettle; then mix coal tar one part and coal tar pitch two parts, heat it and stir it until it is as hot as it will bear to be and not ignite, and pour it with a ladle onto the pavement, until the interstices are nearly full, and immediately cover it with the hot, dry sand, which will settle into the hot pitch; then more should be added until no more will sink. Should any remain on the surface, it may be swept off after the pitch is cold. This will leave an excellent surface, free from holes or cavities, an invaluable characteristic in stable floors, and withal it is as durable as if it were constructed all of hard stone. The urine runs off rapidly, if it is laid with a proper dip to the point of discharge, which, of course, it should always have.

The most perfect horse stall floors that I have constructed of this material are arranged thus: Make the entire surface of the floor of each stall level at its margins, that is the surface of the floor on either side, and front and rear all perfectly level, giving it a slope of half an inch to the front on all sides towards the center. At this point I set a grating or lattice of cast iron, two feet by two feet four inches, in a cast iron frame. The grating fits loosely in the frame, and the top of it should be just level with the top of the frame. The frame, which is only four inches in depth, has no bottom; two bricks are firmly bedded at each corner on which the frame rests. The frame should be set before the paving, and a tile urine pipe laid, with a good fall, from the bottom of the tank formed by the frame, out of the stable. After the pavement is completed, the space in the frame should be well examined and its surface so shaped that it will represent a hopper, descending from all sides to the center, at which point the pipe is set, then give the entire space within the frame thus formed a coat of good cement mortar one inch in depth.

This forms a stall floor adapted to horses of either sex, and the bedding will keep comparatively clean and dry for weeks, without changing or removing to dry it. When it is desirable to cleanse the pits or tanks under the gratings, it is only necessary to dash a bucket or two of water into it.

PERIODICAL STORMS—SAVING HAY AND GRAIN.

THE agriculturist is well situated to observe Nature and her changes. His eye, of all others, should be able "to discern the face of the sky." The Chaldean Shepherds, watching the stars by night, became the earliest astronomers. The practical eye of the husbandman should be the best barometer. Close and accurate observation would enable him many times to save a crop, which, for want of it, is lost. Nature's operations are not conducted hap-hazard, but all her movements are regular and periodical. He may not be able to reduce all her phenomena to science, but he may carefully note them and their recurrence and govern himself accordingly.

Storms appear to have regular periods of seven days. We have noticed storms upon a certain day of the week for seven weeks in succession, varying but a few hours in their recurrence. Last winter it snowed, regularly, upon the same days of the week with very little variation. These periods usually last from four to seven weeks. In a dry time the sky will have the appearance of rain at the periods, but pass over without it. Sometimes the storm will commence twelve or twenty-four hours later, but seldom earlier. Who does not remember that when it rains the first Sunday it will generally rain every Sunday in the month? This sometimes lasts more than a month. There may be a storm almost continually for more than a week, but this seldom occurs. Having observed these seven day periods in storms, we have applied it practically thus: immediately on the cessation of the storm cut the grass or grain and secure it before the next storm. Knowing when it is likely to come have no grain or grass down to be injured by it.

We have succeeded by this rule through many seasons of catching weather to gather our grass and grain with very little injury, while others, not observing it, had their hay bleached and their grain grown, suffering much loss. This can now be more easily done since the introduction of mowing machines, horse rakes and forks, enabling the farmer to cut and secure eight to ten acres per day with a few hands. Great care should be used that hay does not get wet; avoid even the dew. If not put in cock, let it be raked into winrows. Grass should be exposed to the sun but three or four hours, and then, if too green, cured in cock. More hay is injured by too much than too little curing in the sun. Hay will bear to be put into the mow with some sap, but no water. Barn doors should be closed at night; currents of air injure the hay in mow. It comes out better from tight than open barns. Our brother farmers may not believe in this theory of storms, but if not, let them observe and refute it.

E. W. S.

MOWING IN THE MOON.—A ruralist writes the Cultivator that he has "proved by actual experiment that the easiest and safest way to destroy Canada Thistles is to mow them in the old of the moon in August. Once mowing often has the desired effect, but generally they will want to be mown the second year."

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

TEXAS.—NO. I.

We have within the last few months received a number of inquiries in regard to Texas, which we have not had time to answer; and recently an association, comprising several persons who propose to emigrate to that State, has addressed us interrogatories, full answers to which would embrace a description of the physical features and agriculture of the entire country.

It would require a volume to give the information thus asked for. Texas stretches through ten degrees of latitude, is considerably more than five times as large as the State of New York, and more than three and a-half times as large as all New England. Most of the noted kingdoms of Europe, like Great Britain, France, Spain, &c., do not approach it in extent. Vast regions of it are yet in a state of nature—the rest is thinly populated—and but small portions have been described, with any degree of minuteness, by competent and reliable observers. At best, then, we could give but a partial and superficial sketch; and our narrow limits compel us to confine ourselves to the most meager outlines. Those who have addressed us on the subject will find the best description which we have seen of all the different counties collectively, in the Texas Almanac for 1867, (8 vo. 360 pages,) published by and obtainable from W. Richardson & Co., Galveston, Texas. On this highly valuable work, on Olmstead's Journey Through Texas* and some similar publications, and on letters received from a large number of intelligent private correspondents in different parts of the State, we mainly rely for the accuracy of the statements which follow.

Geography.—The south-eastern side of Texas fronts on the Gulf of Mexico and thus opens its commerce of the world. It has a sufficiency of good harbors. Noble rivers leave few of its more fertile portions unprovided with accessible outlets to the sea, during periods of the year. Its level surface will allow railroads to be constructed over a great part of it by the easiest grades. A low plain from fifty to eighty miles wide, very slightly ascending towards the interior, belts the entire coast. From thence the surface rises and becomes first rolling and then hilly, until it reaches the high table-lands of the Llano Estacado. The seaport towns of Galveston and Lavaeca are respectively 10 and 24 feet above the level of the ocean. Houston, about 50 miles in a direct line from the coast, has an elevation of 60 feet; Columbus, between 80 and 90 miles from the coast, 250 feet; Gonzales, something over 100 miles from the coast, 270 feet; San Antonio, about 140 miles from the coast, 635 feet.† The Table Lands and the desert Llano Estacado (Staked Plain) usually rise from 2,000 to 2,500 feet. Some elevations in the northwest reach 5,000 feet.

Geology.—The lower and rolling lands are alluvial. The hilly region is cretaceous and abounds in excellent limestone for building. Beyond this, primitive rocks appear in many places. The great plains consist of stratified clay and cretaceous marls. On the verge of these plains are deposits of gypsum extending over an area of thousands of square miles. Coal beds exist in different localities. Iron ores are found in inexhaustible quantities on the Llano River, and they abound on tributaries of Red River in north-eastern Texas. Copper has been discovered in different places, and also specimens of the precious metals. The mineral regions of the State have been so little explored that the extent of its resources in this respect are but beginning to be known. Various salt springs have been found, and salt of good quality, produced by natural evaporation, can be obtained in immense if not inexhaustible quantities at the salt lagunes below Corpus Christi, and at the salt lake in Hidalgo county, forty miles from the Rio Grande.

Soils and Products.—In the north the rich, black soil is specially adapted to the production of wheat, yielding in ordinary seasons, and under the very imperfect cultivation it receives, an average of twenty-one bushels to the acre. It is of superior quality and very heavy—in occasional instances reaching seventy-two pounds to the bushel. The wheat region proper embraces about thirty counties, of which Dallas is the center.

The eastern counties, unlike the rest of the State, were covered by forests. The most northerly of these are highly adapted to a diversified husbandry, including all the productions of more northern regions; and they have been favorite places for settlement by an industrious class of farmers from Kentucky, Tennessee, and the northern parts of Mississippi and Alabama.

The south-eastern and central-southern counties are the most fertile in Texas, and include the best cotton growing region, of anything like an equal area, in the world. The cotton counties proper constitute about one-third of the State. A very large portion of the choicest lands have not yet been cultivated. This region also includes several millions of acres of sugar lands, often quite equal to those of Louisiana. Sugar has been produced to considerable extent near the mouths of the Brazos and Colorado.

The soil of Western Texas, exclusive of the barren region between the Nueces and Rio Grande, consists generally of black, calcareous loam, and its pasturages are probably unequaled by any other natural ones in the world. They afford feed for a boundless number of horses, cattle and sheep throughout the year. This portion of the State will be more particularly referred to in our next number.

We have thus far only alluded to staple commodities. Corn, wheat, oats, rye, barley, buckwheat, millet, sorghum, Irish potatoes, sweet potatoes, peas, beans, turnips, pumpkins, and garden vegetables of every kind produce remunerative, and some of them abundant, crops on all the good soils of the State,* and of many of them two crops might be taken in a season. Fruits can be grown in boundless profusion. Apples in Northern Texas are thought to be as good as those of the Northern States. Peaches, nectarines, apricots, plums, quinces, figs, raspberries, strawberries, &c., of choice quality, can be grown throughout the State. Wild grapes are found everywhere, and the cultivated varieties are easily acclimated. Their production may be increased to any extent. Horses, neat cattle, sheep and hogs require so little artificial feed that they can be raised at the most trifling expense. Tobacco and rice have been but little introduced, but there is no doubt that they can and will be cultivated in extensive regions, and will become most profitable crops. All in all, there is not, perhaps, an equal area of land on the globe which possesses greater natural fertility and a better adaptation to the production of the necessaries, comforts and luxuries of life and the profitable staples of commerce.

Climate.—As a sample of the climate, we give the mean temperature of every month in 1859, as observed by Prof. C. G. Forshy in Fayette county, on the Colorado, in latitude 30°:—Jan., 50°.57; Feb., 62.44; March, 61.50; April, 65.31; May, 75.61; June, 81.56; July, 84.76; Aug., 84.90; Sept., 79.42; Oct., 66.29; Nov., 63.92; Dec., 43; annual mean, 68.04. The range of temperature will be illustrated by the following extract from a letter in Texas Almanac, 1867, kept at Austin by J. Van Nostrand, A. M.:

	1862. high.	1862. low.	1863. high.	1863. low.	1864. high.	1864. low.	1865. high.	1865. low.
January	86	23	78	23	79	06	78	20
February	88	25	79	30	80	23	80	32
March	97	28	85	43	84	32	80	26
April	87	36	90	45	89	47	83	51
May	91	60	99	60	96	58	103	51
June	103	71	98	69	96	67	96	69
July	104	74	99	69	99	71	95	75
August	103	74	99	68	99	71	106	75
September	97	68	97	59	98	66	98	70
October	96	31	86	30	88	43	90	32
November	84	33	85	20	80	25	83	36
December	75	30	76	17	87	19	82	18

The annual amount of rain which fell, according to the same authority, was in 1858, 36.37 inches; in 1859, 30.24; in 1860, 29.61; in 1861, 28.69; in 1862, 23.17; in 1863, 33.85; in 1864, 25.03; in 1865, 38.40; mean average for eight years, 30.67 inches.

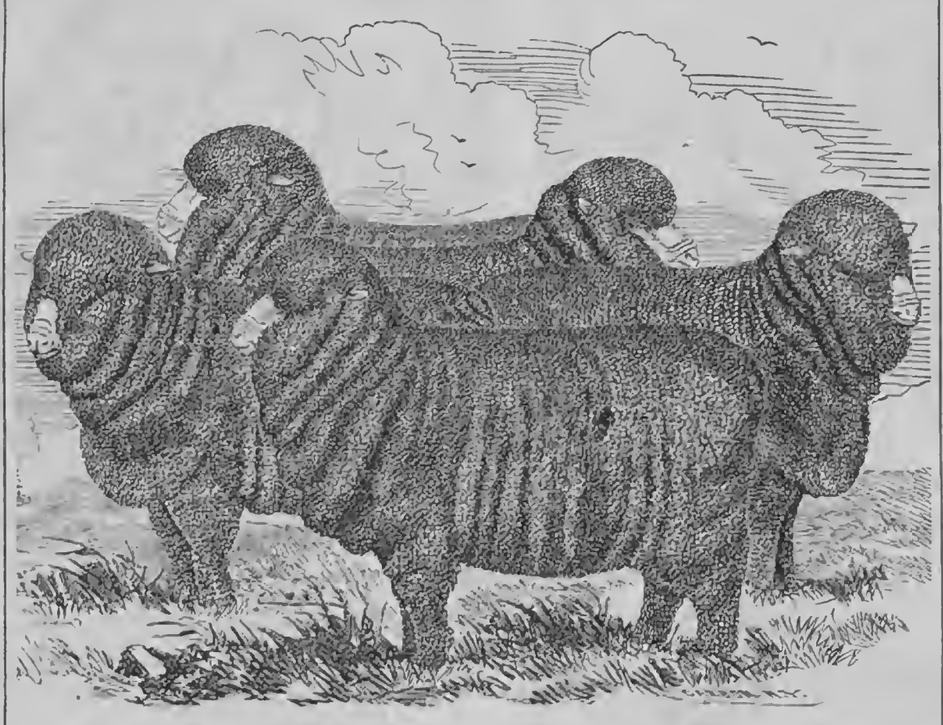
"In point of climate," says Olmstead, "Texas claims, with at least as much justice as any other State, to be called the Italy of America. The general average of temperature corresponds, and the skies are equally clear and glowing. The peculiarities over other climates of latitude, are found in its unwavering summer sea breeze and its winter northers. The first is a delightful alleviation of its summer heats, flowing in each day from the Gulf, as the sun's rays become oppressive, and extending remotely inland to the furtherest settlements, with the same trustworthy steadiness. It continues through the evening, and is described as having so great effect that, however oppressive the day may have been, the nights are always cool enough to demand a blanket and yield invigorating rest."

The severe northers occur from December to April, and usually occupy not over forty days. The rapid reduction of the temperature from 70 or 75 degrees to 30 or 40 degrees and the driving wind are keenly felt. When most cold and violent and accompanied with rain and sleet, they sometimes cause considerable destruction among domestic animals exposed to their full fury. These instances, however, are rare, and the shelter of a grove, or hill, or even a good farm wall, is sufficient to prevent such consequences. They are regarded as healthful and invigorating, and notwithstanding the sudden change of temperature accompanying them, do not cause, or even exasperate, pulmonary diseases. It is claimed that consumption does not originate in the region where they prevail.

* By B. F. Olmstead, favorably known in the North as a highly intelligent writer of books of travel in this and other countries, and well known to us personally as a candid and veracious man.

† We give the distances from the coast, not by roads or river courses, but direct, as measured by the scale of miles on the new map of Texas, published in the Texas Almanac for 1867.

* The barren lands bordering on the lower Rio Grande, and the Staked Plains in the north-west will not be taken into view in our account of the soils and products of Texas, or in any other parts of our description, unless they are specially mentioned.



MR. SHEPARD'S INFANTADO EWE TEGS.

Charles E. Shepard, Canandaigua, N. Y., writes us:—"My five ewe tegs, given in the above cut, were got by 'Prince' owned by N. E. Wheeler of Middlebury, Vt., out of Hammond ewes."

Condensed Correspondence, Items, &c.

Samples of Wool.—Dr. Theodore N. Davisson, Jeffersonton, Culpepper Co., Va., forwards us six samples of wool from ewes, and three from rams of pure Silesian blood—drawn from the flock of Wm. Chamberlain, Esq. of Red Hook, N. Y.; and also thirteen from grade Silesian ewes, generally of Mr. D's own breeding. The wool is of 11 mos. growth, and ranges from 1¾ to 2½ inches long. It belongs to the class of extra fine or broadcloth wools, and is of superior quality in every particular. The sample from one old stock ram (the size of Mr. Chamberlain's "Baron," and "Marshall,") cannot easily be equalled in general quality. What strikes us as remarkable is that the grade wool, in a majority of instances, is quite on a par with the full-blood; and we infer therefore that the cross was made between the Silesian and the old stock of extremely fine Virginia Merinos, similar to those grown extensively a few years since in the "Panhandle," and in the adjoining counties of Pennsylvania and Ohio—and which furnished what were known as the "Washington Co." wools. We should be glad to learn from Mr. Davisson whether our conjecture is correct, and if not how many crosses it has taken on coarse sheep to produce wool of such quality. The Silesian sheep meet the same want in manufacturing that was formerly met by the Saxons, while they are greatly larger, hardier and heavier fleeced. Broadcloth and various other manufactures need such wool, and it is not supplied by the heavy-fleeced American Merino. All who desire to see *all* branches of woolen manufactures flourish in our country, will be glad to see the Silesian sheep more extensively introduced. They will extend the range of our wool production without competing with the varieties already established.

J. Knapp, Prattsburgh, Steuben Co., N. Y., two samples. Two-year-old ram "Brigham Young," bred by Gen. O. F. Marshall & Son, got by their ram "Compact." Run out during summer and fall, in a flock of 175 ewes during most of winter, and received no extra care. Fleece of 11 mos. growth: weight 18 lbs.; carcass 80 lbs. Sample a little over 2 in. long, well filled with golden-tinted yolk; quality about that usually sought in American Merino rams. Ewe teg, got by preceding. 12 mos. old, run with 100 tegs, ordinary keeping, exposed to storms nearly two weeks before shearing; fleece 10 lbs. 10 ozs.; carcass 42 lbs.; sample nearly 2¾ in. long; quality and appearance similar to that of ram. Both sheep received first premiums at county Fair.

L. L. Noursé, Fillmore, Allegany Co., N. Y. Samples of washed wool from six-years-old ram, fleece 15¾ lbs; eleven-years-old ewe, fleece 7 lbs. 6 ozs.; ewe teg, fleece 4¾ lbs. Deficient in style, especially the ewe samples. [The samples were accompanied with a sensible communication on spring management, which was mislaid until too late for seasonable publication.

Wool Press.—James Rowcliff, Norwalk, Huron Co., Ohio, writes us that he thinks he has made an improvement in the wool press figured in the Practical Shepherd. He says:—"It is to cut out side of box (opposite that where the operator stands) between the legs, and attach it to the bottom with hinges, so as to open down level with the bottom, or close up as it was before being cut out—having both the stationary and sliding heads so arranged that when open each will project half its thickness inside the legs. These will form shoulders to prevent the hinged side closing too far in. This side is held in place while the fleece is being pressed by a spring latch. The advantages of this arrangement are that it allows the fleece after it is folded to be laid in the press without danger of being pulled apart in crowding it in. After the side is raised up and the fleece pressed and tied, the side can be instantly lowered, and forms a convenient table for the fleece while placing the strings for the second pressing, after it is tied both ways. By again lowering the side it comes out easy." Mr. R. encloses a cut, which, to our eye, does not explain the matter more clearly than his description.

Black Lambs.—J. B. Burr, Clarksburgh, Moniteau Co., Mo., asks:—"Do you think the sight of black sheep will cause ewes to mark their lambs black?" We do not think black sheep, or any other black animals or objects, will produce that effect. We consider the contrary belief a relic of superstition on a par with the idea that lambs must be castrated "when the sign is right," and a hundred other venerable traditions, of the same class, which yet linger in the minds of some even intelligent men. Sailors believe that whistling, or continuing to walk the deck crosswise, will bring on a gale. Ghosts yet appear in some regions. There are benighted spots where witches still cast the "evil eye" on their neighbor's flocks and herds, bringing murrain and other deadly diseases on them. It is useless to *reason* against such superstitions. Every man who entertains them has numberless facts drawn from his own imagined experience, to support his beliefs. Civilization, however, slowly sweeps them away. Not one now finds root in the popular mind, where hundreds did a century ago.

Are Wool Presses Condemned.—J. T. Norbury, Jackson, ——, writes:—"Are wool presses condemned? I am told that wool buyers' and wool growers' conventions have both condemned them, as injuring wool." This is a mistake. We believe that a buyers' convention in a Western State entertained a resolution disapproving of their use, but did not pass it. We have seen no action of that kind by any body of wool growers. It is undoubtedly true that a strong press can be made to squeeze wool together, especially if greasy, so tightly that after it has been tied for a considerable time—and especially if it has been piled in large masses—it becomes so compact and stuck together, that the difficulty of pulling it apart and properly sorting it for manufacturing is increased. And this excessive pressure gives fleeces a heavy, cloddy feeling which is unfavorable to their sale. This is all. It has no effect whatever on the texture, or manufacturing properties of the wool. Farmers neither can nor will give up a machine which saves so much time, and which saves the necessity of so many cut and bleeding fingers. All that is needed is that they use it properly.

Texas.—Our articles on Texas, commenced in this issue, will be concluded in our next. They carry us somewhat out of the strict limits of this department, but those proposing to emigrate to that State to engage in wool growing wish also to carry on other branches of husbandry, and in view of this fact and of others important to all emigrants, they have asked for that general kind of information which we have sought to epitomise for their benefit, hoping that it will not prove entirely uninteresting to our other readers.

Lawrenceburgh Woolen Mills, Iowa.—We have received a card of excellent samples of fancy Cassimeres from the Superintendent of this establishment. He writes us that he uses only the finest grades of wool, while those grown in the adjacent country are coarse ones. He wishes to encourag the introduction of the former, and sheep farmers in that region, wishing to embark in fine wool growing will do well to confer with him.

Rural Spirit of the Press.

Turnip Fly—Preventive.

The North British Agriculturist, alluding to the ravages of the turnip fly, remarks that: "Various methods have been suggested to prevent the attacks of the turnip fly when the plants are newly brairded. Steeping the seed in oil, and afterwards dusting the seed with sulphur preparatory to sowing, has been found to be of considerable service. There is, however, a still more certain method of prevention. Newly-slaked lime, strewn thinly along the rut made by the seed-coulter of the sowing-machine at the time of the brairding the plants, proves a protection. We have also found a mixture of lime and soot very effectual in protecting the young plants as they put out first leaves. When a small quantity of white turnip seed is sown in the hollows of the drills, the insects resort to the white turnip plants, preferring them to the Swede. This method of protecting the latter is more expensive than top-dressing the seed rows with lime previous to the brairding of the plants. After the rough leaves are formed, little damage is caused by the turnip fly, but other insects feed on the leaves, the black beetle being the most common. The most effectual means to combat all insects is to push forward the growth of the plants by manures applied at the time the seed is sown, and after the plants come up to stir the surface frequently, but without injury to the turnip plants."

Bees—Letting Them Alone.

The Iowa Homestead is pretty severe in its remarks on what is denominated "hive men," who for the sake of selling a beehive will perform operations in the division of swarms certain to result in their ruin. The advice of that paper is to let the bees alone till something is really needed to be done, and give a wide berth to the bee quacks who, it is charged, have destroyed more bees in Iowa, within the last five years, by dividing swarms, than the moth, severe winters and poor seasons combined.

Weevil and Other Insects—Seed Grain.

M. Gand, Agricultural Engineer of Belgium, gives his method for destroying the weevil and other insects on grain. His plan is to deposite the grain for seed in barrels fumigated with burning sulphur. Coarse threads or twine are drawn through melted brimstone, suspended in the barrels intended for the grain and burned there. The seed is then thrown into the casks amid the fume and covered up for a quarter of an hour, when the operation is completed and the seed ready for sowing.

Labor Force in Virginia.

The Southern Planter, Richmond, goes into a labored calculation of the effective farm force of the colored farming population in that State. The result is about one and a-half to each 177 acres of tillable land in the State. Assuming that the per cent. of white laborers there is about the same, we have, as a result, one laborer to each 59 acres of tillable land. It will require the prompt introduction of much farm machinery to develope the agricultural resources of that State with this small per cent. of laboring population.

Botts in Horses—Chloroform.

Dr. Gee of Florida, says that botts in horses can be dislodged by the use of chloroform. It is sometimes difficult to distinguish between an attack of colic and botts, but by the use of the above the question is soon settled. A tablespoonful of chloroform, screened by a couple of spoonfuls of any good mucilage, administered to the horse, will make the bott release his hold on the stomach even after having bored nearly through its covering.

The portion of the soil of France under cereal crops, for human consumption, is about one-fourth, while that of England is estimated at less than one-sixteenth.

Rural Notes and Items.

The Wheat Harvest was commenced in this region last week, and is now in the full tide of successful operation. As before stated the yield is a bountiful one, hereabouts, and we think the same is generally true of the crop throughout Western and Central New York. With favorable weather the golden grain will be mostly harvested in good order during this and next week, and find a ready market. In this region more white wheat is grown the present season than in any former one for many years, and will of course command a very remunerative price.

Crops &c., in Seneca.—Writing us under date of July 9, Mr. John Johnston of Seneca county, near Geneva, says:—"We have rainy weather for making hay, but good for making the corn and second growth of clover grow. The clover crop in this neighborhood was a heavy one, but I am disappointed in my timothy crop; it is not a large crop with me. Corn is going ahead finely, although small for the 9th of July. Wheat looks well, but I notice there is considerable midge. I don't think the crop in this immediate neighborhood will yield as much as last year owing to midge. We had none of them last year, and in this neighborhood, where the land was properly fed the crops of wheat and barley were very good. Wheat, barley and oats that were sown in season this year look well, but very few of either was sown on account of the incessant rains; one of the Faculty of Geneva College told me that 6¾ inches of rain fell in the month of May. If we have dry weather some wheat may be ready to cut in ten days. I have got a horse pitch fork rigged with railroad and car. Mine seems to be a complete success."

Horse Rake Wanted.—A subscriber at Elbridge, N. Y., (W. H. Redmond,) writes us "for information in regard to the best horse rake." He wants a wheel rake; "has been told that a rake is manufactured at Chicago, that is simple and easily operated." Does not know the address, and so asks us, &c. We do not know what firm, in Chicago or elsewhere, has such a rake for sale; but we *do know* it would pay the manufacturers of like implements to advertise in the Rural and other agricultural journals,—though, owing to the crowd of advertising upon our columns, we are not personally anxious to impress the fact upon their minds. [N. B.—See the advertisement of "Warner's Sulky Revolving Rake," in this paper.]

A Superior Farm for Sale.—As will be seen by reference to an advertisement in this paper, advanced age has induced Mr. John Johnston, the famous farmer so widely known as the father of tile-draining in America, to offer his splendid Homestead Farm for sale. The superiority of this farm, and its fine location on the east bank of the beautiful Seneca, only three miles from the charming village of Geneva, render it one of the most valuable and desirable rural estates in Western New York. Of course the offer of our venerable friend will attract the attention of those interested.

Tobacco Fair.—A tobacco fair was held at St. Louis recently, with a large attendance from the two Virginias, Tennessee, Kentucky, Illinois, Missouri and Connecticut. The premiums ranged from $60 to $400. The premiums were awarded to Missouri, Virginia, Kentucky and West Virginia. The first premium, a hogshead of bright wrappers, sold for $225 per 100 pounds, and the second premium of the same class for $207. Other hogsheads from $14.50 to $85.

Carrington's Drain Plow.—This plow was illustrated and described in a former volume of the Rural. Since then we have received many inquiries on the subject—the last from H. A. Coe, Theresa, N. Y., who says he has written to the inventor (J. Carrington, Avoca, N. Y.,) without answer; also to several dealers in implements, none of whom know where the plow can be procured. If it is obtainable, will some one tell us where and of whom?

Maryland Institute Fair.—The twentieth Annual Fair of the Maryland Institute for the promotion of the mechanic arts will be held in the Hall of the Institute, Baltimore, October 15th, 1867. The Hall will be open for the reception of goods on the 8th and close on the 10th for all competing articles—except in cases of those from a distance or such as may have been delayed by accidents on lines of transit.

Brush Drains.—The present and coming months comprise generally the best season for putting in farm drains. Where tile is deemed too expensive and stone are not available it is said that brush put into the ditch and well tramped down before filling in with earth, will answer a good purpose. The outlets should be secured by a few feet of compact stone wall.

Stump Pulling.—Mr. Willis will operate his famous stump machine on the farm of William Dutton, Waterloo, on Thursday, 18th inst., at 3 o'clock P. M. Mr. D. has purchased a machine, and so has Mr. Ashley of this city. Eight stumps were pulled on the farm of the latter in twenty-four minutes—one of them a pine five feet in diameter.

Canada Agricultural Societies.—The Canada Farmer publishes a list of Agricultural Societies, township, county and district, in what is familiarly known as Canada West. It numbers three hundred and twenty-nine. This is a respectable show for that section of the "New Dominion."

National Exhibition of Horses.—The officers of the "National Association for Improving the Breed of Horses," announce a Horse Show or Fair at Kalamazoo, Mich., on the 1st, 2d, 3d and 4th days of October, 1867. Cash premiums to the amount of $10.000 are offered by the Association.

Choice Seed Wheat.—Those of our readers wishing to procure small quantities of new and choice varieties of winter wheat are referred to the advertisement of Geo. A. Deitz in this paper. Mr. D. offers a rare opportunity to farmers desirous of testing new varieties.

Beet Sugar Manufacture.—The general tone of the Illinois press indicates the success of the effort to make beet sugar a leading feature in the agricultural operations of that State. Recently 15 tons of this sugar was sent to Chicago from the manufactory at Chatsworth.

High *vs.* Low Barns.—*Correction.*—In the Rural of July 6th, E. W. S., in an article on High *vs.* Low Barns, is made to say: "Roofs, when blown off, part at the side." It should read "part at the *ridge*."

Deferred.—Several valuable communications, in type for this number, are necessarily deferred.

HORTICULTURAL.

PEAR BLIGHT—BORER OR GIRDLER.

GREAT and anxious has been the inquiry, from all classes of cultivators of that delicious fruit, the pear, what is the blight? Why do the vigorous and apparently healthy trees die, some slowly, some suddenly? Is it an insect that stings; is it the sudden change from wet to dry, from scalding hot to cool; is it the sudden freezing of the late descending sap in fall; is it too much manure; is it an exhausted soil; is it want of shelter; change of climate from clearing away the forest, or is it the borer? Who knows what it is? The best answers that can be given are facts. Whoever knows a fact let him contribute it. Perhaps there has been too much speculation and too little critical examination of the facts.

Horticultural writers have given us two kinds of blight—the sun or insect blight and the frozen sap blight. There are, no doubt, many more cases of the former than of the latter. But that destructive enemy of the pear tree, the borer, has seldom been mentioned. The author of "My Farm of Edgewood" asserts that the borer does not attack the pear tree. The elder DOWNING says the same insects may affect the pear as the apple tree; but he evidently did not regard the borer as a dangerous enemy to the pear. Some half dozen other authors, examined, say nothing on the subject. The Gardeners' Monthly, for June, 1860, mentions a paper read before the British Pomological Society, by F. I. GRAHAM, on the ravages of the grub of *Zeuzera Æsculi* on young pear trees, and that it ate round the tree, under the bark and beyond the alburnum, and caused the whole tree to die. We have never seen any further description of this insect; but on a critical examination of a hundred trees, lately lost, as was supposed by blight, found them all injured by the apple tree borer (*saperda bivittata*) or mostly girdled by a grub as above described. This grub that works in the pear does not seem to go so deep as the borer in the apple tree, but several large and small ones examined did not appear to differ from the *saperda bivittata*, but as its habit is so different it may be a distinct insect.

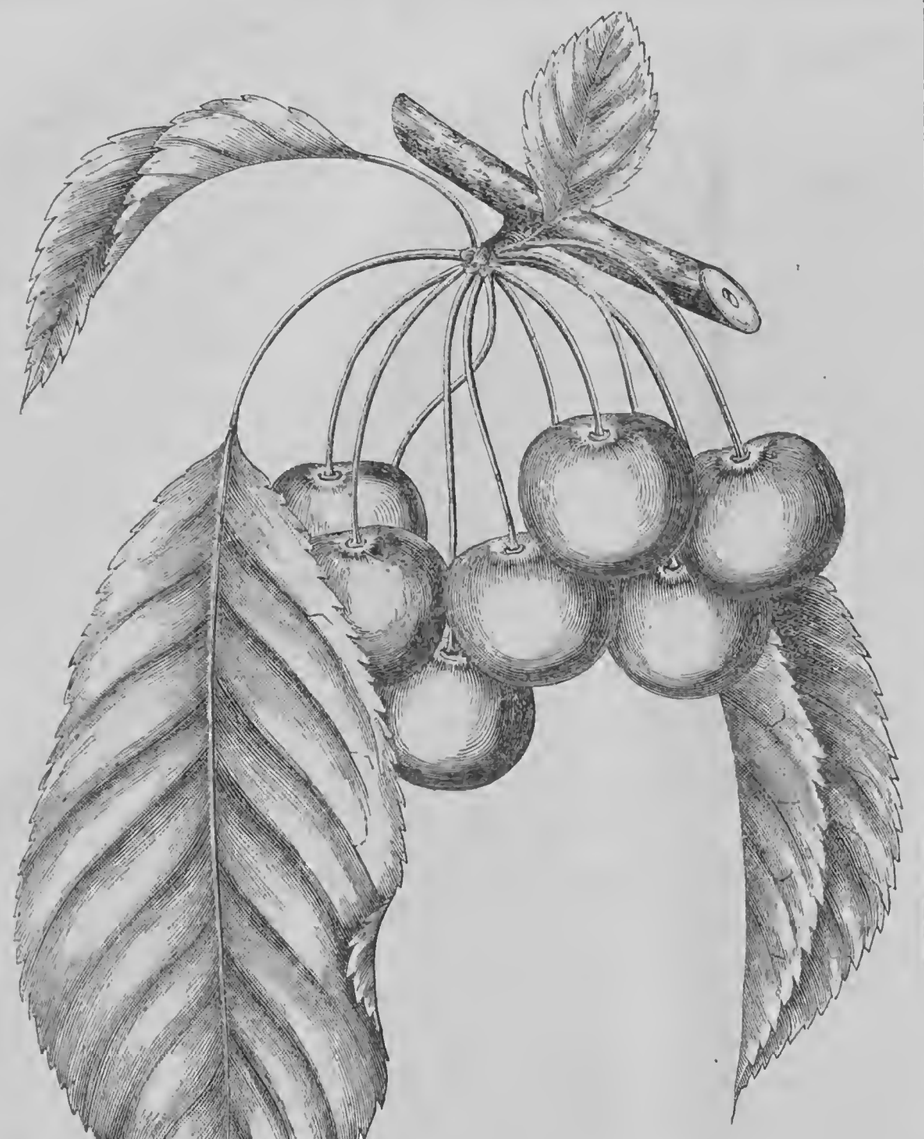
We were surprised, on examining several hundred trees seven years old, to find that every one having the appearance of disease or blight, had been injured by the borer or girdler. And the operations of this girdler are more covered and less observable in the pear than the common borer in the apple tree, as the slagg or debris is not so much thrown to the surface of the bark. The bark must be carefully scraped from just below the collar up a few inches above, and the color and appearance noted, when its presence will be marked by black, hard patches or strips of defective bark. The bark sometimes remains green over a portion of his track around the tree, but there is always some spot which will indicate his entrance or work. This girdler is much more destructive in the pear, than the *saperda bivittata* in the apple tree, as the latter works mostly up and down the tree, whereas the other by making a circuit of the tree cuts off the flow of sap. There is little doubt that the 250 trees we have lost heretofore, as was supposed by blight, were nearly all destroyed by the borer or girdler. A tree dying from this insect has the appearance of frozen sap-blight.

After this girdler makes the circuit of the tree it dies suddenly as if struck with a general blight. Judging from our experience, it is highly probable that a large proportion of the loss of pear trees by what is supposed to be blight is chargeable to this girdler. They work so covertly that where only a casual observation is made of the tree it would pass for blight. It would not have been discovered in our case had we not made a personal examination more thorough than our men had done.

The trees most injured have been Glout Morceau, Louise Bovene de Jersey, Vicar of Winkfield, Lawrence and Stevens' Genesee, both standard and dwarf, but all kinds have suffered to some exent. The soil is a stiff clay loam, well sheltered, with a drain three feet deep under each row of trees. The trees made a fine growth, bearing good crops for their age, till the fifth year, when some trees began to blight. Some 250 trees have been lost out of 800 trees set. We noticed when taken up, to be replaced by new trees, that the roots were sound and only the trunks had died, and some of the stumps were grafted and grew finely, but no discovery of this girdler was then made. Yet these hundred, lately lost by this borer, have precisely the same appearance and no doubt died from the same cause. It is to be hoped that pear cultivators will examine their trees and see if this girdler has not been stealing their life-blood in the name of blight. A critical examination of the visible facts connected with the growth and disease of pear trees may correct some of our speculative theories. S.

PROTECTION AGAINST RABBITS.

L. L. FAIRCHILD describes, in the Western Rural, a method of protecting fruit trees against the depredations of rabbits, which he has devised. It is worthy of attention. It is simply to take strip lath, such as is commonly sold in bundles, and tie it together with annealed wire so as to wrap it around each tree. Take two wires and double them; lay in one strip of lath and cross the wires over the edge, near each end; another strip, and cross the wires again, and so on, until it is made wide enough to wrap around the sized tree you wish. Fasten the ends with a twist. This makes a cheap, pliable protector that will wrap around the tree and may be secured by a wire or tarred string. The length of the strips must be made to correspond with the height the trees are branched. If a tree is crooked, and a space is left where mice may nest, a few kernels of corn, soaked in poison, dropped inside, will do the business for them. In the summer the protectors can be removed, flattened out and stored in a small space until again wanted. If carefully housed when not in use, they may last a lifetime. The first cost being only a cent or two, they may be made generally useful.



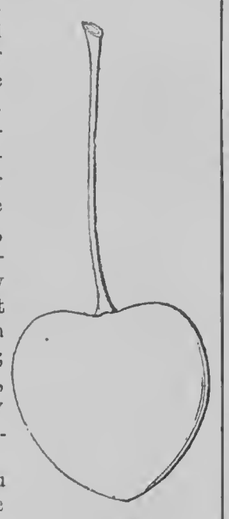
GOVERNOR WOOD.

SOME GOOD CHERRIES.

WHEN looking around among the cherries lately, we selected some well tested and valuable varieties for illustration. Our artist has made a faithful sketch of the cluster, with stem and leaves attached, and the two outlines are characteristic in shape and size.

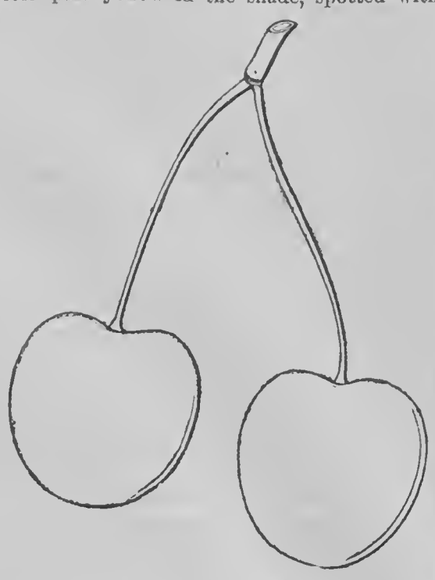
The Governor Wood was grown by Prof. KIRTLAND of Cleveland, and is one of the best of his numerous seedlings. The tree is vigorous and productive. The fruit is large; skin light yellow, marbled with bright red. The flesh is tender, juicy, rich and delicious. It ripens in the latter part of June.

The Elton originated in England in 1806, and is well known as one of the best of cherries in all repects. It is a cross-bred variety, raised from the Bigarreau or Graffion, and the White Heart for its male parent. The trees grow very vigorous, and are distinguished by the dark red color of the foot stalks of the leaves. The fruit is large, usually pointed, heart-shaped; color pale yellow on the shaded side, but matted and streaked with bright red on the reverse; flesh nearly tender, juicy, and with an exceedingly rich flavor. Season middle to last of June.



ELTON.

The Napoleon Bigarreau is one of the finest of the firm-fleshed cherries. It was introduced into this country from Holland. Color pale yellow in the shade, spotted with deep red, with a dark crimson cheek; flesh very firm, juicy, and finely flavored; stalk stout and short and set in a narrow cavity. It is a good and constant bearer. Season from first to middle of July.



NAPOLEON BIGARREAU.

FREAKS OF NATURE.

THE Gardener's Monthly, in an article on the influence of the graft on the stock, gives a figure of a pear tree made by grafting on a mountain ash some distance above the ground. In such instances, as is well known, all above the graft is pear wood, pear bark, pear shoots, leaves and fruit; and all below is mountain ash—the green bark on each part possessing the power of giving the finishing touch to the descending juices, and making pear wood in one case and mountain ash in the other. But in the case mentioned the pear juice appears to have passed unchanged some distance below, for seven inches down from the union, a clear and distinct pear shoot comes out from the mountain ash stock.

Nurserymen are familiar with the fact that different varieties of apples and other fruits, when worked on seedling stocks, modify the character of the roots. The Tallman Sweeting, for example, is always furnished with large, coarse shoots, and the Yellow Bell-flower a mass of small fibers—no matter what the character of the stocks may be. A communication in the same number of the Gardeners' Monthly contains a curious illustration of this principle. Paradise stocks which have small fibrous roots, were budded with the St. Lawrence, which has very few and strong ones. The St. Lawrence imparted to these Paradise roots its own peculiar large and strong branches. But there was one singular exception. One of these trees was furnished with the usual small Paradise roots, except that about two inches below the bud, a solitary St. Lawrence root had shot out and become fully equal in diamater to the trunk of the tree, and a broad and very distinct ridge extended from this root to the bud, showing plainly the connection between the two.

As already observed, the place of union is the line of separation between the two kinds. If a shoot spring out below the pear top on a quince bottom, that shoot will be quince. Rare exceptions may occur, as in the case cited from the Gardeners' Monthly. Some degree of influence extends below, as indicated by the fibers of the roots. But as a general rule for practice, the essential distinctive characters of every variety remain unchanged, no matter what the stock may be which it grows upon; all above will resemble the graft, and all below will be the unchanged stock. It is true that the fruit is sometimes thus modified in *quality*, but is never changed in its peculiar characteristics.—*Cultivator.*

Horticultural Notes and Queries

AN ELEMENTARY TREATISE ON AMERICAN GRAPE CULTURE AND WINE MAKING. By PETER B. MEAD. Illustrated with nearly 200 Engravings, drawn from Nature. [16 mo.—pp. 483.] New York: Harper & Brothers.

THE vine-growing interest of this country is deeply indebted to the few authors who have gathered, condensed and properly shaped the experience and knowledge of practical value to the American Vineyardist. Our cultivators stumbled on the highways of failure under European guidance, until pioneers boldly marched into new paths, and indicated the course to ultimate success through American experience with American varieties of grapes. Mr. MEAD'S work is elementary—such as, in the present state of vine culture with multitudes of beginners seeking eagerly for the simplest knowledge, is of the greatest practical value to the community. Bringing to his aid numerous and beautiful illustrations, he treats ably the subjects of climate, location, exposure, shelter, preparation of the soil, manures, laying out and planting the vineyard, propagation of vines, stakes and trellises, &c. A very prominent feature in his work are the chapters on pruning and training; the modes ordinarily practiced are described, and the Quenel, Guyot, Charnaux and Thomery systems are given in full. Then there are chapters on Varieties, Taste, as applied to Fruits, Diseases and Insects, and in the concluding chapters the art of Wine Making is briefly discussed.

In the chapter on varieties the author has committed a blunder which detracts seriously from the otherwise unqualified praise we should accord his work. No better specimen of special pleading can be found in the current horticultural advertising of the day than that the author makes for three comparatively untested grapes, namely, the Israella, Iona, and the "new seedling in the possession of Dr. GRANT." Neither good judgment nor hardly sincerity can be accorded to an author who, in a professed elementary work written for the use and instruction of the grape growers of a broad land like this, unqualifiedly places a new grape, which as yet has not furnished wine to moisten the lips of an unbiased tasting committee, at the head of the list as best adapted to all localities and purposes. Hardly would the majority of the vine-growers on the banks of the Hudson concede to it this position in its native locality,—much less will it be accepted by Southern and Western vineyardists. Let Mr. MEAD reflect that in the vine-growing districts of the Old World, where the experience of centuries has taught them some accurate knowledge of the culture, that not even they have discovered the *best* variety, and that soil and climate so modify the habits and productions of a vine that it may be the best in some localities and the poorest in others. Reading his chapter on varieties in the light of experience, we cannot assent to the author's assertion in his preface that he "indulges in no theorizing speculations and introduces nothing of doubtful verification." We are surprised, indeed, that, with the clear insight and breadth of view the author shows when discussing other topics, he should have permitted either friendship or pecuniary interest to betray him into the hands of Dr. GRANT, and cause him to sink the character of impartial judge to that of a time-serving advocate.

For sale by STEELE & AVERY.

A PROMISING SEEDLING STRAWBERRY.—The most promising seedling strawberry that has come under our notice this year is one originated by Messrs. ELLWANGER & BARRY of this city. Of thousands which they have grown and tested in past years this is the only one which they deem worthy of preservation. Its parent is the Triomphe de Gand, and six years experience with it, part of the time on a large scale, by the side of other standard varieties as a market fruit, has done much to decide its merits. We saw it in a field lately side by side with Wilson, Early Scarlet, Triomphe, Russell, and others, and its appearance there would place it ahead of those varieties for value as a market fruit, both on account of productiveness and hardiness. If it sustains its present character when disseminated it will prove a most valuable acquisition. We have high expectations of it, and shall make it more familiar to our readers in the future.

CULTURE OF CAULIFLOWERS.—S. N. H. writes:—"One step to their successful growth is good soil frequently stirred. Another is, that the ground should be highly fertilized with well decomposed manure. With so much accomplished, a rich harvest ought to be insured. But it is not then certain. In my experience, after successfully combating snails and insects, I noticed several plants in a drooping condition. Failing to discover the cause above earth, I dug them out and found grubs and worms at the bottom eating them up. With some aid, they emigrated at once, the plants were reset and frequently watered, and most of them are now growing finely."

SUCCESSION OF CROPS.—The crops that have matured in the garden, as salad, peas, early potatos, radishes—should be cleared away and the ground planted with other vegetables. Celery, cabbage, turnips and cucumbers are yet in order. Old strawberry beds should be turned over, the ground manured, and put to immediate use.

STRAWBERRY BEDS.—Old beds may be renewed by spading up the vines so as to leave them in rows three feet apart. Pulverize and enrich the cultivated strips, and train the runners over them so as to form fresh masses of plants for next year's bearing. This work should be done immediately.

RASPBERRIES AND BLACKBERRIES.—Pinch off the young shoots that have grown this season for next year's bearing. This throws the growth into the side branches, and ensures more fruit next year, besides stiffening the canes against the force of the wind.

TALL GROWING FLOWERS should be supported by being tied to short stakes thrust down near the stems so as to be mostly concealed by the foliage.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

TO PRESS CHICKEN.—Stew the chicken until the meat separates easily from the bones; put it in a pan with the gravy and a little butter between each layer of meat; put a press upon it. Ready for use in twenty-four hours.

TO VARNISH AUTUMN LEAVES.—Use common furniture varnish, rather thin.

TO CAN PIEPLANT.—Stew it tender in water; put it in a jug. Warranted to keep.

TO STIFFEN CANE BOTTOM CHAIRS.—Turn them up and with a sponge and strong soap suds soak them well, and they will be as stiff as new.

INQUIRIES.—1. How is horseradish cultivated, and how prepared for market?

2. How is a rookery made, and where is the most suitable place to put it.—MRS. L.

CURRANT JELLY.—Put your currants in a bell-metal kettle, and scald them well; when cool, press them through a sieve, getting out all the juice, (be careful not to allow any skin or seeds to pass through the sieve,) measure the juice, put it back in the kettle, and let it boil hard for five or six minutes, skimming it well; then add, while on the fire boiling, one pound of sifted loaf sugar to every pint of juice; stir it till dissolved, which will be in a few minutes; it *ought not to boil* after the sugar is in; all that is necessary is to have it well dissolved, and then it is done and ready to put in tumblers. It has a beautiful light color, and will keep for years.

SHELLING PEAS.—After picking the peas for dinner, I found it no small job to get them out of the pod; so, to facilitate matters, took the liberty to run them through the clothes wringer, stem end first. With one to turn, and one with nimble fingers to handle the pods, enough may be shelled in half an hour to feed a general training. Everybody ought to have a wringer and green peas; therefore everybody will try it, and charge the expense to—YORICK.

CHERRY BOUNCE.—To one pint of pie cherries add two pints of black cherries fully ripe; place these in a demijohn and cover with whisky; stand away until about Christmas, when, straining, add to 1 quart of juice 1 pound of sugar; stand away for some time to dissolve; then bottle off, and it will be fit for use.

HOW TO COOK VEGETABLE OYSTERS.—I would like a good recipe for cooking the vegetable oyster. Will some one of your subscribers answer? and oblige—S. F. C.

INQUIRY.—A RURAL friend does very much want a recipe for coloring red for carpet rags. Can you furnish one? and oblige—THE FRIEND.

New Advertisements.

THE GREAT EUROPEAN STRAWBERRY
DR. NICAISE.

Plants ready for delivery after August 15th, $1 each; $10 ₰ dozen. See illustration in Rural, page 215. Send your orders early. Packing free. MARK D. WILLSON, No. 195 North St., Rochester, N. Y. [912-3t

WANTED—An Agent in Each Town and County in the United States, to introduce

SPEAR'S PRESERVING SOLUTION.

LIBERAL INDUCEMENTS OFFERED!

This solution will preserve all kinds of Fruits, Tomatoes, Jellies, Cider, Milk, etc., without air-lighting and with or without sugar. It admits of keeping fruits, &c., in vessels of any size, and of using therefrom at intervals as wanted.

It will preserve milk sweet from 24 to 36 hours longer than it would naturally keep, causing it to furnish more cream in hot weather.

It is warranted perfectly healthful and effectual, and can be relied upon as being the cheapest and best method in the world for preserving fruits, &c. Full directions for using with each bottle. L. P. WORRALL,
General Agent, No. 9t Hudson St., New York City.

THE
GREAT AMERICAN
TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₰ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₰ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₰ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₰ lb.
GUNPOWDER $1,25, best $1,50 ₰ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

Ladies' Department.

BEAUTIFUL MAUDE.

Beautiful Maude, with the golden hair,
Twisted and plaited in meshes rare;
Catching the beams of the shimmering sun,
Like the halo around an anointed one.
Wearing her maidenly bloom like a rose
In the flush of its summer-beauty shows,
Oh! a moon in the heaven of all fair girls
Is beautiful Maude with the golden curls.

Beautiful Maude, with the tender eyes,
Wherein such fathomless pity lies
That, should she look at you, you must feel
Like as a worshiper, ready to kneel.
I have seen them so tender in time of need—
Sorrow to solace, hunger to feed—
That my eyes have bent down to the sufferer's prayer,
As if something purer than earth was there.

Beautiful Maude, with the exquisite voice,
Thrilling and low. As the woods rejoice
At its singers, singing on leafy thrones,
So might your heart throb to hear its tones.
The old people down in the village say
That she talks with the angels; and so they may,
For the melody of her soft voice seems
Like the melody heard but in heavenly dreams.

Beautiful Maude, with the hands so small,
As white and as soft as the snow-flakes fall;
Folded so meekly across her breast,
Like two little doves in their mother's nest;
And the pinky and delicate almond nails,
Like shells breathing yet of the Orient gales.
Oh, surely our Maude of the soft white hand
Is the brightest and best throughout all the land.

Beautiful Maude, with the beauty of youth,
The beauty of tenderness, hope and truth.
Walks not alone in the cooling shade
Of the beech-trees down in the silver glade.
No; and they tell, when the summer days
Faint in the bosom of autumn lays,
Our beautiful Maude, with the golden hair,
Will take other name, and go otherwhere.

Mercy go with her; shine in her eyes
With the lambent beams of Paradise:
Crown her with many a year of grace,
That shall into each other, like vines, interlace;
Over her pathway strew many a flower,
Blooming and fragrant, from joy's sweet bower;
Crown her with wreaths that shall tremble and shine
In the heart of her love, with a love divine.

Written for Moore's Rural New-Yorker.

COUNTRY SKETCHES—No. III.

Our sugar party was a success, if plenty of sugar and fun were to be desired. The neighboring young folks were all there. Robert and Mary seemed to play the part of host and hostess with becoming dignity. I thought Mary was a trifle too queenly but that could be easily excused considering it was her failing, and this was such a good opportunity to display her powers.

Susan flirted all the evening with a young city beau, a new arrival in town, and I noticed Robert's eyes held a displeased, uneasy look, as he glared at them; for a perfumed, conceited dandy was his abomination. Jane played the witch as usual; now here, now there, giving everybody a witty word or arch look. She was a general favorite, and every one looked pleased when it came their turn to enjoy her lively company.

Rufus and Bert were there too. Rufus enjoyed it in his own quiet way, quite unobserved, but not unobserving, I assure you. Those deep, dark eyes took in every little event, every look and word, with their exact influence and meaning. He could have given you a great deal better account of our party than I can, but he only talks and paints, never writes a word if he can help it. So I shall have to tell you in my own poor way and let it go so. Bert was in great glee over the kettles of bubbling sirup, and with watching the fun and frolic of the company until it grew late, his eyelids drooped heavily and he kept them open only between long winks, and at last he wished he hadn't come, but was safe at home snugly tucked up in his little trundle-bed.

The spring advanced rapidly; the work of the season hurried the farmers on to unceasing perseverence from day to day, the weather was fine for sowing early crops and the promise of seed-time and harvest seemed in prospect to be abundantly fulfilled. The old house resounded to the raps of busy hammers, tread of light feet, merry voices and ringing laughter of the gay young movers, and a "new atmosphere" seemed to float into the desolate, dingy rooms. They brightened as though struck by a gleam of sunshine, and after everything was arranged, though of the simplest kind, there was an air of cozy comfort that was irresistible. The open doors seemed to hold forth a silent invitation to all who might choose to enter. A proffered chair to rest in, and a kind word to cheer them, was the reception one would always meet there. The windows thrown high up gave the soft spring wind free circulation, and it drifted in a shower of sweet white petals from the boughs of the cherry tree.

Did you ever think how every home has a characteristic atmosphere? You but step inside the door of some houses and a chill strikes you. Others seem to hold warmth and light and geniality.

Bert came to live there and help his brother, as he had promised, and when they plowed the garden he and the girls monopolized a portion of it for flower beds. He was an industrious little fellow, and loved flowers better than most boys do; so they gave him one bed all to himself, and he hoed and raked and marked and sowed. He had little sticks all labeled and put along the edge of his bed, just like theirs, and watched eagerly to see the first little green spears point up through the dark mold.

Everything went on pretty smoothly in the housekeeping line. Susan got a bran-new recipe book, and there were a great many new wonders to be developed in cookery. Mary kept still and let the girls experiment. One day they had a wonderful pudding for dinner—at least it had a wonderful high-sounding French name. It was not made exactly like the potato pudding told of in the "Widow Bedott Papers," but it was decidedly *heavy*, "and when it's heavy it aint so light or good, you know," as Mrs. Mudlow said. Susan was the author of the pudding, and stood the raillery of the others pretty well, considering how it hurt. For if there is anything mortifying to a young cook it is to find her want of knowledge fully manifest by an evident failure.

Robert talked of asking in the young city gent to tea and having some of the pudding served for his especial benefit. After awhile the dinner was finished, and when Susan began to get over feeling provoked at her mistake and the sport that had been made at her expense, she began to consider whether there was not something to be learned outside of books, and whether it was not really worth while to learn how to make a real *good* pudding, and resolved to set about it and redeem her reputation. Next time she *would* ask Mary a few questions, and not toss up her head and say she could cook as well as anybody.

Erie.

Home, May, 1867.

FEMALE ECONOMY.

He is a mean man who accuses a woman of meanness, because her expenditures are carefully regulated, and her outlay watched with close and unremitting economy. To be sure, no husband and father ever reproaches wife or daughter with undue care in circumscribing her expenses, but, whether consistently or not, all men—save our more just selves, perhaps—charge the female character with containing a strong tendency to meanness and close-fistedness, qualities which no one tolerates in another than himself or those who may spend for him. You may remember that no tradesman fears the exactions of any male purchaser so much as he does a woman. Nobody, it is said, higgles so long about the half cent per pound on the price of mackerel, or has so keen an eye for "remnants." They are charged with being bargain hunters, and are supposed to be a very set of dragons in their desire to save a penny.

Now, one word for the ladies. Who sharpened their mercantile wits? Who taught them, in a hard school, the lesson of economy, and obliged them, willing or not, to keep their expenditures down to the lowest limit? Who? Why, these husbands and fathers. They—except in rare instances of female supremacy—rule over the treasury, wear the clothes of authority, and control every appropriation. With a close fist, they hand out little dribs of stamps, or, once in a while, a solitary, companionless, forlorn greenback, to the female members of their household. And they, driven by this stern necessity, obliged by higher authority to be economical, attempt to make fifty cents buy a dollar's worth.

Gentleman of justice, pause and ponder. When your wife trades your second-best coat to the Jew peddler for a pair of parlor ornaments, or sells your files of valuble papers at so much per pound, inquire with the severity that inward examination ought to have, how much you have given her for spending money this quarter. Upbraid her not for illiberality if you have forced her to it. Here we stand to plead her cause, and assert the reason, if not the propriety, of Female Economy.—*Ladies Repository.*

A LADY.

The New York Evening Gazette give a sketch of Mrs. Lucia Gilbert Calhoun, the brilliant letter-writer and fashion critic of the Tribune, who has come so quickly into high fame among our literary women. She is a native of Brookfield, Mass., her maiden name being Lucia Isabella Gilbert, and while a school-girl she married Henry Calhoun, recently deceased, for many years deputy-collector in the New York custom-house, and has ever since resided in that city. "She seems devoid of literary vanity or ambition, which, for a woman of society as she is, is not a little remarkable.

Brilliantly as she writes, (and to judge from her gorgeous coloring and dazzling efflorescence, we would rather think her a sister of Hafiz than a descendant of any Roundhead,) her personal friends say her private letters are much superior to her published efforts. Personally she is, in her early widowhood, little beyond her fifth lustrum; not handsome in the usually received sense, though her face is very expressive; her figure tall and lithe, and her carriage graceful and attractive. The glory of her face, her friends say, is her eyes, which, according to Harriet Prescott, 'are yellow, and the most beautiful I ever saw.'"

HOW TO DO IT.

A party of ladies and gentlemen were laughing over the supposed awkwardness attending a declaration of love, when a gentleman remarked that if ever he offered himself he would do it in a collected and business-like manner. "For instance," he continued, addressing a lady present, "Miss Smith, I have been two years looking for a wife. I am in the receipt of about three hundred a year, which is on the increase. Of all the ladies of my acquaintance I admire you the most; indeed, I love you, and would gladly make you my wife." "You flatter me by your preference," good humoredly replied Miss Smith, to the surprise of all present, "I refer you to my father." "Bravo!" exclaimed the gentlemen. "Well, I declare!" said the ladies, in a chorus. The lady and gentleman, good reader, were married soon after. Wasn't that a modest way of coming to the point, and a ladylike method of taking a man at his word?

Inquisitive people are the funnels of conversation; they do not take in anything for their own use, but merely to pass it to another.

Choice Miscellany.

A HARVEST SCENE.

Fair and fresh the winds are blowing,
Brightly shines the sun to-day
Over meadow, hill and woodland,—
On the newly gathered hay.

White and purple, green and golden,
Fleck the fields afar and near;
While the harvest hands are singing,
"We'll have well-filled barns this year."

Hear the winding brook that ripples
Thro' the meadow, copse and glen,
How it murmurs as if ans'ring
Back the joyful sounds of men.

Now in sunshine, now in shadow,
Winding out, and winding in,
Like a mirror it reflecteth,
All day long the harvest scene.

Length'ning shadows now from woodlands
Over brook and meadow creep,
While behind his gorgeous curtains,
Sinks the harvest sun to sleep.

Giving promise to the reapers,
After labor, rest shall come,—
Tired hands be calmly folded,
'Midst the sacred scenes of home.

Patiently the farmer waited—
Work'd and waited like a man,
Never doubting that the Master
Well would end what he began.

Now he hath the promised blessing,
Fruit for all his honest toil;
Never lord was half as happy
As this tiller of the soil.

TRAVEL.

Not alone in the cities, but in villages and quiet farm houses, are many who will travel, for rest and change and social enjoyment, in these warm weeks of mid-summer. Fathers and mothers will go far west to visit sons or daughters, see how they get along and keep the golden chain strong and bright; and those children, grown up and with *their* children prattling about them, will plan to get away for the season, and see the dear old homestead once more. These journeys are often long, and, if time allows, the travelers stop on the way, or turn aside to see places or scenery of special interest.

We boast of the iron bands that hold fast Nebraska to Maine, and bind the regions between by the same firm grasp; but the ties of sympathy, kindred, common literature, language, pursuits and ideas, subtle and invisible are yet stronger than iron, and without them the continuous rail would never have reached from the Atlantic to the Plains, and would not now be moving on toward the Pacific.

Think of it, you who may have a journey in view. What a broad realm, what varied wealth of beauty and grandeur. One is embarrassed, not knowing where to turn. Shall it be on the St. Lawrence, so broad and clear and swift, with its famed "thousand isles?" Shall it be to New England, through the rude mountains, along the brawling streams, past the sweet villages and lovely valleys of Western Massachusetts, and through the beautiful valley of the Connecticut, eastward, past lovely towns and great factories and green pastures to the rocky shore gnawed by the Atlantic's surges? Suppose some errand carry you to Pennsylvania. You will be surprised at every curve the cars sweep around, by some new scene—a bold mountain, a broad river, a noble forest.

Do you turn west? What sweep of prairie and plain!—what groves and forests and broad lakes. Suppose you turn aside to Lake Superior—an ocean amidst the continent—a thousand miles of steamboat journeying, across rivers and lakes until you reach the great mines and wondrous "pictured rocks," and look down into the transparent water, and breathe air bracing and pure as ether for the gods. At this season we should not go south; but there would be found another realm of varied wonders. We need not go to any fabulous distance. A few hours' ride by rail, will land us at Portage Falls, and we shall see the Genesee, so placid nearer the lake, rushing over rocks into dark chasms with solid walls of stone hundreds of feet high on either side. Or the great Niagara awaits our coming; or we can reach Lake George—that pure gem set in the dark hills—and so on to the majestic Adirondacks, or even the White Mountains. But it is useless to say more; we can only suggest, and the reader's thoughts will call up many a spot, seen or heard of, worth a long journey to see, and soon we are to catch sight, from the car windows, of the long ranges of the Rocky Mountains, their snowy peaks nobly grand against the pure sky.

It has been our lot to travel in twenty States, and we meet with constant surprises, new scenes so marvelous it seems strange they are unknown, on every journey. Travel is an education, placing us *en rapport* with men and Nature; our facilities of motion, our varied breadth of territory, our wide kinship of blood, and thought, and action, are all helping to rear up a race fit, let us hope, for broad views and wise work. Travel is a good tonic, too. Breathe new air and see new men and things, and you can "throw physic to the dogs," and wax hearty apace without it.

"I honor great power of thought—few perhaps more. I reverence a man of genius for wit, poetry, science or executive power to organize matter or men. But most spontaneously do I bow to a man of great justice. What delights of affection there are. Love is the great idealizer of man's life. There are many such in nature and in art. There is music, a sweet and common idealizer. But if I could have but one of the three gifts, intellectual, moral or affectional, I would take the latter."—*Selected.*

YOUNG MEN IN DIFFERENT COUNTRIES.

Edmound About in his book, "The Roman Question," makes the following comparison of young men of twenty-five in the different countries. After describing the education of young Roman nobles, he says, in this flashy way:—"One fine day they attain their twenty-fifth year. At this age an American has already tried his hand at a dozen different trades, made four fortunes and at least one bankruptcy, has gone through a couple of campaigns, had a law-suit, established a new religious sect, killed half a dozen men with his revolver, freed a negress and conquered an island. An Englishman has passed some stiff examinations, been attached to an embassy, founded a factory, converted a Catholic, gone round the world, and read the complete works of Walter Scott. A Frenchman has rhymed a tragedy, written for two newspapers, been wounded in three duels, twice attempted suicide, vexed fourteen husbands, and changed his politics nineteen times. A German has thrashed fifteen of his dearest friends, swallowed sixty hogsheads of beer and the philosophy of Hegel, sung eleven thousand couplets, compromised a tavern waiting maid, smoked a million pipes, and been mixed up with at least two revolutions. The Roman prince has done nothing, seen nothing, learned nothing, suffered nothing. His parents or guardians open a cloister gate, take out a young girl as inexperienced as himself, and the pair of innocents are bidden to kneel before a priest, who gives them permission to become parents of another generation of innocents like themselves."

A LITERARY TASTE.

To a young man away from home, friendless and forlorn in a great city, the hours of peril are those between sunset and bedtime; for the moon and stars see more evil in a single hour than the sun in his whole day's circuit. The poet's visions of evening are all compact of tender and soothing images. It brings the wanderer to his home, the child to its mother's arms, the ox to his stall, and the weary laborer to his rest. But to the gentle-hearted youth who is thrown upon the rocks of a pitiless city, and "stands homeless amid a thousand homes," the approach of evening brings with it an aching sense of loneliness and dissolution, which come down upon the spirit like darkness upon the earth. In this mood his best impulses become a snare to him and he is led astray because he is social, affectionate, sympathetic and warm-hearted. If there be a young man thus circumstanced, who may read these words, let me say to him that books are the friends of the friendless, and that a library is the home of the homeless. A taste for reading will always carry you to converse with men who will instruct you by their wisdom and charm you by their wit, who will soothe you when fretted, refresh you when weary, counsel you when perplexed and sympathize with you at all times. Evil spirits, in the middle ages, were exorcised and driven away by bell, book and candle; you want but two of those agents, the book and the candle.

TALENT AND TACT.

Talent is something, but tact is everything. Talent is serious, sober, grave and respectable; tact is all that, and more too. It is not a seventh sense, but it is the life of all the five. It is the open eye, the quick ear, the judging taste, the keen smell and the lively touch; it is the interpreter of all riddles—the surmounter of all difficulties—the remover of all obstacles. It is useful in all places and at all times; it is useful in solitude, for it shows a man his way into the world; it is useful in society, for it shows him his way through the world. Talent is power—tact is skill; talent is weight—tact is momentum; talent knows what to do—tact knows how to do it; talent makes a man respectable—tact will make him respected; talent is wealth—tact is ready money. For all the practical purposes of life tact carries it against talent—ten to one.

WIT AND WISDOM.

A thorn in the bush is worth two in the hand.

Woman is a delusion; but men will hug delusions.

The best capital to begin life with is a capital wife.

Question for Actors.—Can a man be said to work when he plays?

The richer a man makes his food, the poorer he makes his appetite!

How do we know that Pharaoh was a carpenter? Why he made Joseph a ruler.

"I'll be round this way in a minute," as the second hand said to the pendulum.

Ik Marvel says a country house without a porch is like a man without an eyebrow.

Wait for others to advance your interests, and you will wait until they are not worth advancing.

Emerson finely says:—"The poor are only they who feel poor, and poverty consists only in feeling poor."

Why is a man ascending Vesuvius like an Irishman trying to kiss a pretty girl? Because he wants to get at the crater's mouth.

The man that forgets a good deal that has happened, has a better memory than he who remembers a great deal that never happened.

Custom—A charter, incorporating all the incongruities of modern ignorance and superstition, gathered from all the precedents of the past.

"I can't find bread for my family," said a lazy fellow in company. "Nor I," replied an industrious miller; "I'm obliged to work for it."

It may seem paradoxical, but it is a fact, that while some aver that the rage for chignons is going down, the fashion seems to be "going up."

Sabbath Reading.

THE "SUMMER LAND."

BY BELL CLINTON.

"Over the river," the "Summer Land" lies,
Fadeless its blossoms unclouded its skies,
Towers shimmer not in the sun-ray's light,
Stars never glow—for there falleth no night.
O'er it God's glory transcendantly flows,
Bathing it ever in holy repose.

Ah! we get gleams of that glorious land,
When by the river's bank trembling we stand,
Watching the waves that unceasingly flow
Over the crossing where loved ones must go,
They see the beams of the heavenly light
Gilding its glittering columns of white.

They hear the songs, and the rustle of wings,
We—but the echo their ecstacy brings—
Why do we sorrow when happy they lie
Ready for angels to bear them on high?
Such treasures we need their sunlight to throw
Over our pathway while waiting below.

Are there no flowers in the bright Summer Land?
Aye, tenderly kept by our Father's hand,
Borne in his love from the chill light of Time,
Transplanted, they bloom in a heavenly clime,
—May we be welcomed at last to the band
Who, "sinless," are roaming the blest Summer Land.

BE HAPPY.

The only true way to be happy is, to take the drops of happiness as God gives them to us in our every-day life. It has been, perhaps, the same old routine, sunshine and shade, but of late more shade than sunshine. To-day, however, the clouds are breaking, there is a drop of happiness for us. Shall we take it heartily and thankfully? or shall we drive it away with bitter thoughts of the past, or what is still worse, dark forebodings of the future? If joy alone were given to us might we not forget the Giver, even undervalue the joy itself? 'Tis the contrast that gives life and beauty. What is the rose stripped of its thorns and green leaves? And even these are beautiful when partaking of the colors of the bud. So pleasures, pure, and rightly enjoyed, shed a bright halo over the dark days of sorrow and depression that come to every earnest, striving heart. The memory of them is like the fragrance of the rose, remaining long after its beauty has faded.

Yes! God means his children to be happy and has given us many beautiful things to make us so. And who should be happy if not His children who can trust their future wholly to Him, or why did He say, "If ye loved me ye would rejoice," and "In the world ye shall have tribulation, but be of good cheer." Then let us take these little drops of happiness, tenderly and sacredly, as gifts from our Heavenly Father, and when in after life we look back upon them, they will seem, as it were a sea of joy.

June 21, 1867. Red. Raymond.

BORROWED SERMONS.

Writing on Sunday, to a London paper, a correspondent says:

"This morning in one of the principal West End churches, I heard the incumbent deliver a very beautiful sermon which I recognized immediately as one of Dr. Arnold's early school sermons. There may have been some addition in the shape of mane and tail, but I am quite sure that all, or the greater part, was reproduced word for word from the printed volume. A few years ago, I heard, also in one of these West End churches, a sermon on Whitsunday, which I also recognized as a printed sermon published by me not long before. Now, I know, from many years' experience in London, in the country, and abroad, that it is, on the whole, more edifying to a congregation to listen to the wholesome doctrine of some master in Israel than to the original, perhaps, but necessarily mediocre, thoughts of average minds. If these recitations of many of the best passages in which our theological literature is so rich were more frequent, there would be less of the now increasing outcry against sermons; people would then sit to listen as they sit to listen to readings and recitations from Milton and Shakspeare. We should remember, however, that whenever Macready or Kean, or any celebrated master of eloquence, makes us sigh or weep by the mighty force of the words which he utters, he does not give us to understand at the same time, or even allow it to be implied, that these 'words of power' are the result of the speaker's own labor, or thought, or imagination. I would say, by all means, let us have good recitations or readings of religious prose or poetry in the churches, but let the congregation be told what it is they are about to receive."

Be Master.—It is not by regretting what is irreparable that true work is to be done, but by making the best of what we are. It is not by complaining that we have not the right tools, but by using well the tools we have. Where we are, and what we are, is God's providential arrangement; and the wise and manly way is to look our disadvantages in the face, and see what can be made of them. Life, like war, is a series of mistakes, and he is not the best Christian nor the best General who makes the fewest of false steps. Poor mediocrity may do that; but he is the best who wins the most splendid victories by the retrieval of mistakes. Forget mistakes; organize victory out of mistakes.

Would you touch a nettle without being stung by it? Take hold of it stoutly. Do the same to other annoyances, and few things will ever trouble you.

Biographical.

THE ARCHDUKE MAXIMILIAN.

FERDINAND MAXIMILIAN JOSEPH, Archduke of Austria, and sometime Emperor of Mexico, was born at Schonbrunn on the 6th of July, 1832. He was captured by Juarez, the Liberal President of Mexico, at Queretaro on the 20th of May and shot on the 19th of June by his captors. His father was Francis Charles Joseph, Archduke of Austria, and his mother Sophia Dorothea, daughter of Maximilian I, King of Bavaria. Upon the abdication of Ferdinand, Emperor of Austria, the Archduke renounced his claim to the succession in favor of his eldest son the present Emperor, the brother of the subject of this sketch. The abdicating Emperor, in giving up his throne, unequally divided his power, and gave an advantage to the Archduke Maximilian, to the detriment of his elder brother. Such was the origin of the constant, and at times very warm differences, which arose between the two.

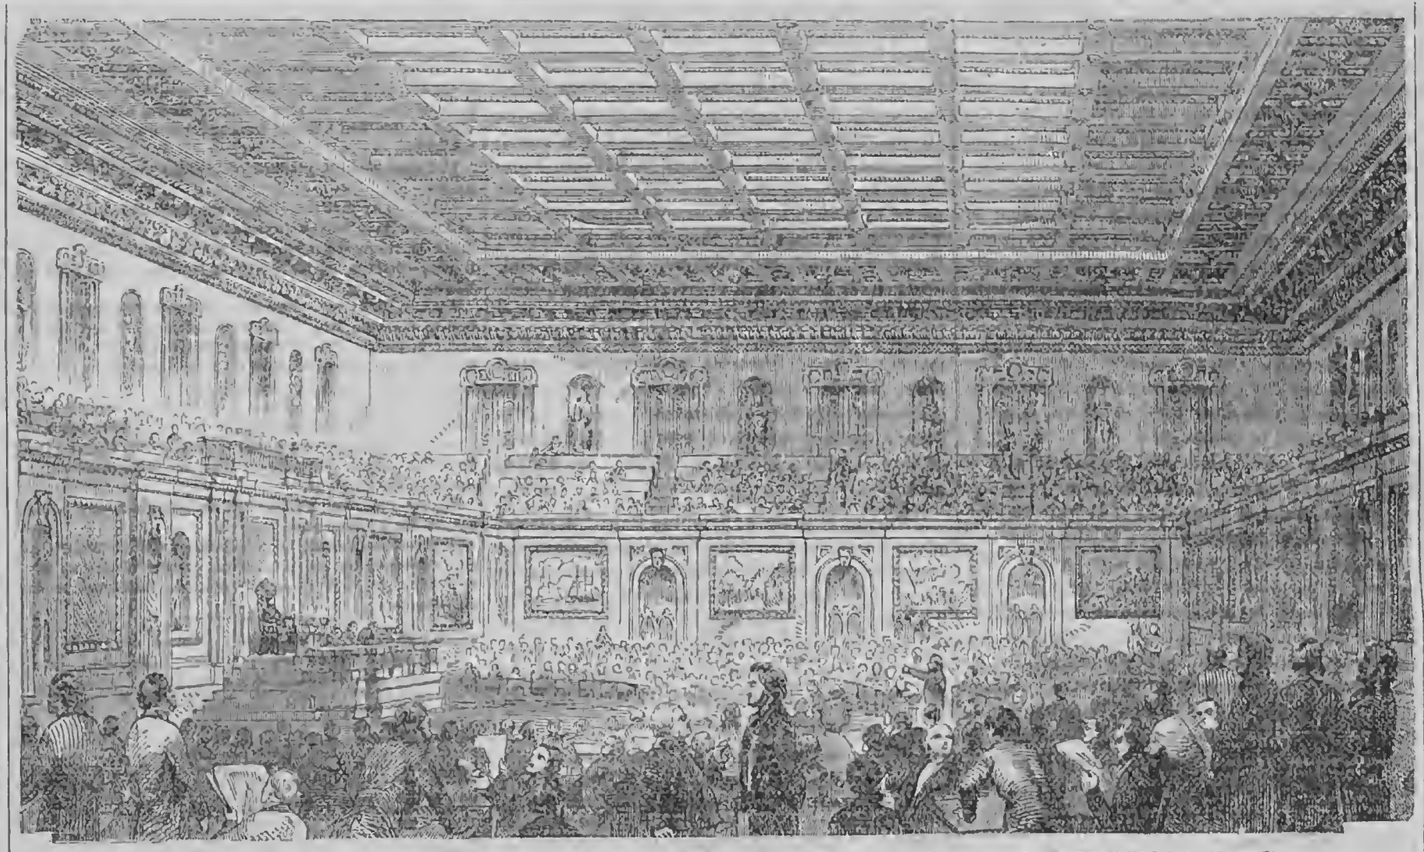
Maximilian received his education at Vienna, then, as now, one of the gayest and most dissolute capitals of Europe. He did not, however, indulge in the frivolities so common to the nobility of Austria, but appears to have spent a great part of his youth in study and travel. At an early age he went into the navy of the empire, and saw considerable service at sea, sailing about the Mediterranean, and visiting all the adjacent countries—Greece, Italy, Morocco, French, Algeria, Spain and Portugal. At the age of twenty-two he was placed at the head of what is termed by courtesy the Austrian marine, and with a squadron visited the coast of Syria and Palestine. He went also to the Red Sea, and took great interest in the works of the Suez canal, which were then just beginning. In 1856 he paid a visit to Paris, and spent a fortnight at St. Cloud with Louis Napoleon. The year following he was appointed Viceroy of Lombardy and Venice, and, in the exercise of the powers attached to the position, soon made himself quite a favorite among the Italians. This popularity was, however, displeasing to Francis Joseph, and in 1859 he was removed. He is said to have exhibited great courage and decided administrative abilities while Viceroy. It is related that he used to walk about the streets of Milan and Venice quite alone during the *fetes*, and among the crowd, and would never allow the police to be on the watch. One day, at Venice, when the Italian nobles had plotted to make a hostile demonstration against him on the Piaza St. Marco, he discomfited and quite converted them to his side by tucking his wife under his arm and coming among them unattended, and on foot, with a courage and frankness that disarmed every one. Another time, just after Orsini's attempt at Paris, his life was said to be also threatened, and his friends begged him not to expose himself; but he immediately ordered his carriage to go to the theater, taking with him Count Stromboli, to whom he said, laughing, "If I am to be blown up, it shall at least be in good company."

Maximilian remained idle after his removal from the governorship of the Lombardo-Venetian Kingdom until 1862, when Napoleon decided on making a catspaw of him in Mexico The crown of Mexico was offered to him by Napoleon in August, 1863, and the diplomats were put to work to arrange for his acceptance and occupancy of the throne. Nearly a year was occupied in this work, and it was not until the 10th of August, 1864, that he formally accepted the proffered crown. By the terms of the acceptance he made a conditional renunciation of the right of eventual succession to the throne of Austria, and an unconditional renunciation of his share of the family estates, amounting to 20,000,000 of florins. The condition reserved in the renunciation of the right to the succession was that such renunciation might be revoked, should Maximilian, finding his foothold in Mexico insecure, choose to resign within six years from the date of his acceptance of the crown.

The career of Maximilian as the so-called Emperor of Mexico is well known to the people of this country. His first official act was to offer terms to Juarez looking to the submission of the latter. These were rejected, and then followed the past years of war and bloodshed, with alternate success, and the present final defeat of the Imperialists. His efforts to attract emigration and to develop the resources of the country are well known, as are also his personal sacrifices for the success of his cause. That he failed was only a natural and expected result, but it is doubtful if he would have met the terrible fate to which Juarez assigned him had he not issued his famous order declaring the Republican President and his supporters bandits and outlaws. The entire responsibility of his death must rest upon Napoleon, who first induced him to take the proffered crown, and afterwards deserted him. Personally Maximilian had the reputation of being a most accomplished gentleman and scholar.

MAXIMILIAN—CLOSING SCENE.

MAXIMILIAN and his officers were tried by court martial, each one separate, and with counsel for defence. At the execution MAXIMILIAN spoke in a clear, firm manner, without bravado, and said when he was first waited upon at home by the deputation from Mexico, who came with credentials, offering him the government of the country, he refused. Subsequently the proposition was again presented, and he replied, that if convinced that the majority thought that it was to their interest to place him at the head of the Government, he might consent. Another deputation waited on him and brought additional testimonials. Upon advice from the powers of Europe, who advised him that there was no other course to pursue, he accepted the call. He denied that the court martial which tried him had a right to do so. His was a case of good faith. The nations of the world had pledged their good faith to him. He never would have done the act had it not been for the good of Mexico. Finally, he hoped his death would stop the effusion of blood in the country.



NEW HALL OF HOUSE OF REPRESENTATIVES, WASHINGTON, D. C.

THIS noble room is in the south wing of the Capitol and is one hundred and thirty-nine feet long, (east and west,) ninety-three feet wide, and about thirty-six feet high. Galleries are around the four sides, and an ample space is reserved for reporters over the speaker's desk, from which there is open entrance to a large room fitted up for the ubiquitous newspaper men, and a telegaph office from whence messages can flash to the remotest end of the land.

These galleries will seat 1,200 people. The three hundred desks on the floor for members are ranged in semi-circles. Light comes down from the ample skylights above and there are no side windows, as passage-ways, and rooms surround the Hall on every side,—Committee Rooms, Post-Office, &c. The stairways of our native marble—veined Tennessee, *verde antique*, and Vermont,—are rich and noble, and the frescoed pictures very fine. These great stairways lead to corridors from whence the galleries are reached. The carved and gilded ornaments, the pictures and fine coloring of this Hall, which is hardly equalled by any legislative hall in the world, cannot be justly described in our brief space. Underneath the galleries are cloak-rooms and a barber's shop, for the use of members only, and the hidden nook where liquor can be had is *not* there. Noble statuary adorns the passage-ways around the Hall.

Various Topics.

CO-OPERATIVE INDUSTRY.

As the capacity and intelligence of laborers increase, the rights of labor and the relations of labor and capital become, inevitably, matters of more thorough and frequent discussion; sometimes in good faith and fair spirit, sometimes incited, for selfish purposes, by reckless demagogues. Of late, "labor strikes" have been frequent in this country and England, often disastrous to workmen and injurious to employers, and surely not the best mode of settling differences. Eight-hour laws have been passed in several States, our own among the number, yet so framed as to have no marked or immediate results. With increased wisdom and a higher standard of manhood and habits on the part of laborers whatever of injustice or overwork may have been in any case imposed on them must cease by the growth of their moral power.

Without such wisdom, or if cursed and degraded by dissolute habits—which make many a working man his own worst enemy—fewer hours of work would, too often, be but an opening for more dissipation, and the just claims of the employer would be rudely spurned. The problem is mutual justice and mutual respect and help, and the justice, manly conduct and self-respect of the workmen must solve that problem.

In England, co-operative associations are numerous, in which laborers and capitalists, or laborers alone, unite, and the profits are divided between stockholders and workmen by mutual agreement.

In this country there are quite a number of similar associations. In Troy the iron moulders have begun such a move, with good results, so far. In Chicago a manufacturing company have agreed with some forty workmen for a similar plan. In Cincinnati a large firm of furniture makers begin co-operation with a large force of their best men, and we hear of other like movements, which will be watched with interest by all thoughtful persons. Industry, skill, mutual confidence and justice must exist for success, and without these qualities "eight hour" laws are of small moment, and "strikes" but the blows of blind giants smiting down each other oftener than their real or fancied enemies.

CLIMATE OF RUSSIAN AMERICA.

AN article on meteorology, prepared by Professor Henry of the Smithsonian Institute, for the United States Patent Office Report for 1865, contains the following paragraph illustrative of the climate of Northwestern America:

"In the North-Pacific Ocean, on the western side of our continent, the great circle of water passes up along the coast of Japan, recrosses the ocean in the region of the Aleutian Islands, mingles with the littal current outward through Behring's Strait, and thence down along the northwest coast of North America. In this long circuit, the northwestern portion of it is much more cooled than the similar portion of the whirl of the Atlantic. It therefore modifies the temperature of the northwestern coast, and produces a remarkable uniformity along the whole extent, from Sitka to the southern extremity of California. It is an interesting fact, which we have just derived from Captain Rogers, that an offshoot from the great whirl of the Pacific, analogous to that which impinges on the coast of Norway, enters along the eastern side of Behring's Strait, while a cold current passes out on the western side, thus producing almost as marked a difference in the character of the vegetation on the two shores of the strait as between that of Iceland and Labrador."

RELATIVE VALUE OF DISINFECTANTS.

IN Mr. Cooke's report to her Majesty's Commissioners upon the value of disinfectants, some important experiments, which bear upon sanitary science, are recorded. One of them, showing the relative value of chloride of lime and carbolic acid as disinfectants, deserves serious attention. Some meat was hung up in the air, and the odor of putrefaction was strong. It was then divided into two pieces; one was soaked for half an hour in chloride of lime solution, and then washed and hung up again; the offensive smell had entirely gone. The other piece of meat was soaked in a solution of carbolic acid, containing one per cent. of the acid; it was then dried and hung up. The surface of the meat was whitened, but the offensive odor was not removed, though it was masked by the carbolic acid. In two days' time the bad odor had entirely gone, and was replaced by a pure but faint smell of carbolic acid. In a few weeks' time the piece of meat was examined again. The one deodorized by the chloride of lime now smelled as offensively as it did at first, while the piece treated with carbolic acid had simply dried up, and had none of that offensive odor. Even after a month's exposure no change had taken place. This shows us that while chloride of lime merely removes the smell of decomposing matter—in fact, is a deodorizer—carbolic acid actually prevents decomposition, and is, therefore, in an eminent degree, antiseptic.

QUICKSILVER.

DURING the past year, the toal production of the various quicksilver mines of the world was about 85,534 flasks, of which the old Almaden of Spain and the Idrian mines of Austria supplied 39,625, while the remainder came from California. But the enormous capacity which our Pacific quicksilver mines have already attained has, up to the present time, tended rather to depress than to stimulate the trade in that metal. With last year's production, the accumulated stock of all the different markets of the world is approximately 120,000 flasks. For many years the Spanish mines controlled the whole market, but so energetically have the California deposits been worked, especially the New Almaden, which surpassed its ancient namesake by nearly three thousand flasks last year, that the market is much more independent than it used to be. The Peruvian mines are dilapidated and almost abandoned; the Austrian are limited in capacity and furnish ores of a low grade, and the Spanish Almaden, so long the arbiter of price, is rich in ore, but poor in administrative vigor.

SLEEPING-CARS.

THE sleeping-cars on the principal railroads in the United States are a monopoly, the profits of which are enjoyed by a few patentees, who have formed themselves into a corporation and buy up all the patents, and the railroad companies are prevented from running cars of this kind themselves. The bargain made between the patentees and railroad companies is that the patentees shall furnish the cars, and keep the upholstery and bedding in repair, while the railroad company is to furnish the motive power and keep the car in repair. A sleeping-car costs about $5,000, and its annual expense for attendants and incidentals is about $2,000. The average receipts are said to be $30 a day for each car, or $9,000 annually—a yearly profit, when the expense is deducted, of $7,000 upon the original investment of $5,000. On some of the great railroads, however, the profits frequently reach 300 per cent. per annum.

THE pleasure of doing good is the only one that never wears out.

EXCELLENCE OF WISE ECONOMY.

A WESTERN man, now visiting at the East, thus writes of the cost of living in the two sections:—"I have been surprised to learn, while in New England, that the cost of living is really less here than in the West, from whence bread and meat is transported to supply New England. Flour is only a trifle higher per barrel in Portland than it is in Chicago, and potatoes and all vegetables are considerable cheaper. Only four articles cost more here than in Chicago—bread, meat, butter and lard; all else which is needed in a family costs less. Rents here and in Boston, and in the manufacturing towns of New England generally, are nearly one-half less than in Chicago and the small towns of the West. Wood and coal are no higher, while clothing, furniture, dry goods, boots and shoes are from 10 to 20 per cent. cheaper."

We can say from a tolerably wide experience, that at a hotel in Boston or any New England city, your fare at table, your room and all, is better than at a hotel of the same cost in western cities,—far better than in the South.

The people in Massachusetts, as a rule, live far better, with the same means and in the same social position, than those in other parts of the country. Surely, this living pleasantly on moderate means is excellent and most desirable. How is it? Not meanness, for these people are generous in case of need, and do not stint themselves.

It is wise care, saving waste, and making the most of things—a rational economy whereby much is saved to be freely used for best and truest ends, in-doors and out; in housekeeping and business it is indispensable to the highest culture, and is greatly needed in place of the foolish pride and wasteful carelessness of which so much is seen.

THE CRIME OF ASSASSINATION.

A NEW YORK contemporary, referring to the failure of the recent effort to take the Czar's life, says it is the last of a remarkable series of failures. True it is, in former times assassinations were more successful. Henry IV and Louis XV of France, Henry III, Gustavus III, Gustavus the Great, the Dukes of Guise and Berri of France, Buckingham of England, Murray of Scotland, and other rulers and ministers, have fallen, to whom may be added our own President Lincoln. But of late not one in twenty of regicide plots have succeeded. The attempt against Bismarck, against the King of Prussia, two attempts against Louis Philippe, and two against Louis Napoleon, are among a number of failures so large of late that the Czar may have had the fact in his mind when he remarked, after his last escape, to Napoleon, "Our destinies are in the hands of Providence;" a truth, however, not more applicable to sovereigns than other men. The advance of Christian civilization has no doubt exerted great influence in increasing the repugnance with which assassination is looked upon in modern times, and, combined with the sturdy and ingenuous character of our own people, has made it in this country the most abhorred of crimes.

ANCIENT RELIC.—The Albany correspondent of the Syracuse Journal says:—"In my rambles the other day I discovered an ancient relic in the shape of a quondam house, now grocery, built in the year 1710. It is said to be the oldest building in Albany. It is located on North Pearl street, and is built in true Dutch Style, with gable end on the street. It was of old the residence of the Lansings—and before Albany was, this was a trading post. Age seems not at all to have impaired the strength of its walls, built of Holland brick, and I dare say it will yet outlive many a wooden structure of modern growth."

Reading for the Young.

OBEDIENCE.

BY PHEBE CAREY.

If you're told to do a thing,
And mean to do it really,
Never let it be by halves;
Do it fully, freely!

Do not make a poor excuse,
Waiting, weak, unsteady;
All obedience worth the name
Must be prompt and ready.

When father calls, though pleasant be
The play you are pursuing,
Do not say, "I'll come when I
Have finished what I'm doing."

When 'tis said "You've ate enough,"
Don't reply, "O mother
Let me have just one cake more,
I won't ask another!"

If you're told to learn a task,
And you should begin it,
Do not tell your teacher, "Yes,
I'm coming in a minute!"

Something waits, and you should now
Begin and go right through it;
Don't think, if it's put off a day,
You will not mind to do it.

ORIGIN AND SEALS OF THE STATES

NUMBER EIGHT.

SEAL OF KENTUCKY.

THE famed DANIEL BOONE was the pioneer of Kentucky in 1775, and the Indian troubles were so severe as to give it the name of "the dark and bloody hunting ground." Until 1790 it was part of Virginia, and was made a State in 1792. Eastern Kentucky, near Virginia, is quite mountainous; the center of the State is varied in surface, rich, beautiful and productive. Along the Ohio its natural wealth is quite equal to that on the northern side of the river. The whole State is rich in resources, and has much wealth of the farm. Corn, wheat, tobacco and fruits thrive. Tobacco is a great staple; the warehouses in Louisville for its sale are immense. Salt is found abundantly, and iron and coal also. Manufactures are becoming large. Mammoth cave, and others in the limestone regions, are curiosities, from their great extent of miles beneath the earth, and their grand beauty.

Its area is 42,000 square miles. Its population in 1860, 1,155,684. The Seal explains itself.

SEAL OF TENNESSEE.

The building of Fort Loudon, in East Tennessee, in 1757, commenced the settlement of this region, which was met by many obstacles and struggled against Indian troubles for more than twenty years. Originally this was a part of North Carolina, but became a separate territory in 1790, and was made a State in 1796. The Cumberland Mountains divide the State into East and West Tennessee, and make much of its territory rough and rocky. But the valleys are rich, and large plains among the hills are also productive. The climate is healthy, the air in the hill regions pure, the products embrace, not only the cotton of the South, but corn as well, which is produced in great quantities. Iron ore abounds in the hills, and the veined marble is very beautiful. The Tennessee River gives steamboat navigation, and the Cumberland also to a limited extent.

The natural advantages of this State are great. Its area is 40,000 square miles. Its population in 1860, 1,109,801. Its Seal has the steamboat, the plow and the grain sheaf—fitly emblematic of its occupations.

SEAL OF MISSOURI.

Missouri was admitted into the Union in 1820. Its southern and south-western parts are somewhat flat near the Mississippi, and rolling, even mountainous and rocky, farther west, but with much good soil. The great Missouri River flows through the center, on its way from the distant Rocky Mountains to the Mississippi. Along its banks and northward is rich land, rolling prairies and plains. Settlers are now rapidly going to this State attracted by its great advantages. Within eighty miles of St. Louis are vast beds of lead, marble, coal, and the famed Iron Mountain with its supply ample for the world's use for centuries. Of late tin has been discovered.

A branch from St. Louis westward is rapidly going on to join the great Pacific Railroad for California. The area of the State is 60,000 square miles; its population in 1860, 1,142,012. The great bears and stars and Indians on the Seal tell of ruder days, and the Latin motto—"Let the safety of the people be the supreme law," points to a fast-coming higher civilization.

MOORE'S RURAL NEW-YORKER,
(The Leading Weekly of its Class—Price $3.00 a Year,)
AND
THE MARYLAND FARMER,
(A Standard Agricultural Monthly—Price $1.50,)
BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that NOW is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year *(when ordered together)* for only $3.50.

Address either
D. D. T. MOORE, Rochester, N. Y.
Or **S. S. MILLS & CO., Baltimore, Md.**

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 20, 1867.

NEWS OF THE WEEK.

From Washington.

A COMMITTEE to investigate thoroughly all matters bearing on the assassination of President Lincoln, to sit during recess, has been chosen, consisting of Butler, Shellabarger, Julian, Ward and Kendall.

A Committee to investigate and put on record the treatment of Union prisoners in rebel prisons during the war, was also chosen.

The Impeachment Committee have a minority report ready on impeachment.

It seems probable no adjournment can be had until the 20th.

A resolution by Mr. Robinson of New York, was passed, ordering the Committee on Foreign Affairs to report if any American citizens had been arrested, tried, convicted, or sentenced in Great Britain or Ireland, for words or acts done, in the United States.

The mover and Mr. Fernando Wood, alleged that there was no security for Americans in Ireland, and stated that Col. Nagle, a Federal officer, is now a prisoner there. The motion was amended so as also to refer to Col Nagle's case specially.

Gov. Flanders of Louisiana is in Washington to see about repairing the Mississippi levees and on Reconstruction affairs.

A large delegation of Unionists, white and black, from Alabama and North Carolina, urge on Congress the necessity of abolishing the State Governments in the South.

A bill introduced by Mr. Holman passed the House unanimously, that widows, minor children or parents of any soldier who died after honorable discharge, shall be entitled to additional bounty.

The Surratt trial still continues, his counsel now seeking to invalidate the testimony of witnesses for the prosecution.

A Reconstruction Bill passed the Senate by 31 to 6, and the House by 111 to 23, on the 13th. It was made up by a Committee of Conference from both Houses. It declares that the true meaning and intent of the act of March last was, that the then existing Governments in Virginia, North Carolina, South Carolina, Georgia, Mississippi, Alabama, Louisiana, Florida, Texas and Arkansas were not legal State Governments, and if continued were to be under control of the military commanders, and of Congress. Each district commander may remove any civil or military State officer at his discretion, subject to the disapproval of the General commanding our army, and appoint some person or detail some officer to perform the duties of the place vacated. The commanding General of the United States is invested with all powers of removal, suspension, appointment and details granted to district commanders. All acts of commanders already done, in the removal or appointment of civil officers of their districts are confirmed, subject to removal or disapproval hereafter, and all disloyal persons using their official power to obstruct order, &c., must be removed. Boards of Registration are to examine into the past acts of persons claiming to register and to vote, and, if disloyal, not to register them, keeping record of the reasons for their refusal to do so. No person, on account of race or color, to be disqualified as member of a Board of Registration. The true intent of the oath prescribed in the act of last March is declared to be that no person who has held any legislative, executive or judicial office in any rebel State, whether he has taken an oath to support the United States Constitution or not, or whether he held any office at the beginning of the rebellion or not, who has given aid and comfort, or engaged in rebellion, can vote, and this includes all State officers. The time of registration is extended to October 1st, and such changes to be made in lists by additions or striking off as may be necessary, public notice being given when the examination is to be made. All members of the Registration Boards shall take the same oath United States officers take. No district commander, Registration Board, or persons acting under them, shall be bound in their action in any opinion of any civil officer of the United States. The commanding General can remove or fill vacancies in Boards of Registration. A resolution has passed the House to meet again Nov. 10th. The Impeachment Report will not probably be made till next session.

The President has sent to the Senate a list of former nominees for offices, not acted on, and nominations for vacancies, among which are George Bancroft, Minister to Berlin; H. J. Raymond, Minister to Vienna; Horace Capron of Ill., Commissioner of Agriculture.

The House has refused to order printed the evidence taken in the impeachment case.

From Canada.

TORONTO, July 9.—Major-General Sisted, C. B., was sworn in as Lieut.-Governor of Ontario yesterday. Hon. Vice-Chancellors Mowatt and Spragg administered the oath of office, and the ceremony was conducted with much pomp and circumstance.

It is rumored that some of the Fenian convicts who are now undergoing a sentence of twenty years' penal servitude in the Provincial Penitentiary, will be pardoned in honor of the union of the Provinces. Among those to whom royal clemency will be extended is Rev. J. Mc Mahon and four others.

The Herald's Ottawa special says:—The Ministers have all gone to their respective constituencies to look after their elections, and the writs are about to be issued.

In Ontario and Nova Scotia the Reform ticket will be largely returned. In the latter Province Mr. Howe declared lately that if it were not for the presence of regular troops in the citadel of Halifax, he, together with his sons, would head an armed party and proceed to the border to offer resistance to the Confederate authorities. In the east of Ontario and west of Quebec the Conservative ticket will be returned generally. The Federal Government will cost the country in salaries $115,000 per annum, including the salary of the Governor-General. If Ministers are to receive $8,000 per annum instead of $5,000, the cost will be increased $30,000.

From the West.

FROM San Francisco east, work on the Pacific Railroad is pushed, and 16,000 men are grading. A tunnel 1,658 feet long will be done in August, and the track laid over the mountains in November next. Large orders come east for cars and locomotives.

Indian troubles on the plains in Kansas and beyond, still continue, but it is thought the rumor that the Osages were on the war path arose from their going out for their yearly buffalo hunt. Soldiers from Fort Laramie being refused whisky at Rafferty Ranch, destroyed and burned $60,000 of property. The affair is to be investigated. Gen. Meagher, Acting Governor of Montana, fell from the steamer Thompson at Fort Benton, and was drowned.

Extensive coal mines have been discovered on the line of the Kansas Pacific Railroad.

Horrible Turkish Cruelties.

THE Candians have addressed a protest to foreign Consuls against the barbarities of Omar Pasha. They say—"Furious at not having succeeded, he revenges himself on women and children. He has ravished and burned Acondena, Episcopi, and a score of villages. He destroys churches, mills and crops. At Drania one hundred women and children were found slain. Ladies were killed at Acondena. At Quarissi he put out the eyes of two brothers in presence of their wives, and then killed them. In the attempt to escape such tortures nearly a thousand women, children and old men, who had fled to the mountains, perished from exposure and privation."

From Mexico.

PRESIDENT JUAREZ and Cabinet left San Luis the 1st inst. for the city of Mexico, and were to be met with great ceremony.

Officers and men of the Imperial army lately landed at Mobile, are to be transported from New Orleans to New York; Austria pays the cost.

The N. Y. Herald's Vera Cruz correspondent says a general sack of the city by the foreign troops, when it was known they were to evacuate, was only prevented by the efforts of the American and British Ministers, and the presence of their men-of-war in the harbor.

Santa Anna is still in prison, and refused food for three days. So says the Herald's Havana correspondent.

The N. Y. Commercial says there is reason to believe, from news lately received, that Santa Anna will procure his liberation by ransom.

Latest European News.

THE Sultan of Turkey reached London the 12th inst., and was met with much ceremony and enthusiasm. Buckingham Palace will be his home. He visits Vienna on his way to Turkey.

A conspiracy against the life of Queen Isabella of Spain, has been discovered, and two thousand persons arrested.

Joseph of Austria, visits Paris in September. The Austrian Government joins France, Prussia, Italy and Russia, in urging the Sultan to investigate the troubles on the island of Candia.

In the British House of Lords, Earl Derby denounced Maximilian's death. By a recent postal treaty between Great Britain and the United States, ocean letter postage will be six pence (twelve cents) instead of twenty-four cents. Charges on books, packets and patterns of merchandise, are to be not less than three cents in the United Kingdom, and six cents in the United States, for each four ounces. It begins Jan. 1st.

FROM THE SOUTH.—From Ellis' Cliffs, twenty-two miles below Natchez, a telegram says the army worm is two months earlier than usual, threatening the destruction of cotton on overflowed lands. Registration at New Orleans, under Sheridan's orders, goes on with little animation. Louisiana, so far as heard from, registers 39,428 whites, and 74,116 blacks. Gen. Sickles postponed registration until Congress acts on the matter.

FROM ALBANY.—The Constitutional Convention has under discussion important matters,—canals, suffrage, &c.,—but as yet reach no decision. On the 12th, a recess of ten minutes was taken to pay respects to Mayor Hoffman of New York, and another recess to greet Chief Justice Chase. Both gentlemen had the privileges of the floor extended to them.

Paris Exposition—American Art.

A CORRESPONDENT writes:—"In sculpture, Chicago presents a bust of Lincoln, the only marble out of the nine that constitute the entire collection, not accredited to New York; but the strong bronze statue of Lauret Thompson's modeling, much admired, is owned in Milford, Pennsylvania. Among the owners of the pictures exposed by America, are James McHenry, the railway man; Marshall O. Roberts; R. L. Stuart; Fletcher Harper, the publisher; Sir Henry Bulwer; A. T. Stewart, the dry goods king; Gen. Dix (whose artist son, by the way, has a very tolerable picture on view;) R. Hoe, the press maker; Parrott, the gun maker; the Central Park, and the Century Club. Among the purchasers of paintings and statuary here is R. McCreary, the coal merchant, who has just ordered, of Rogers, the sculptor, a 'Nydia,' for $2,000, gold.

"Harriet Hosmer's 'Sleeping Fawn' is placed at the very entrance of the American Department of Art at the Paris Exposition. It is so placed that the sun, when there is any, falls softly upon it, and seems to light up the sleeping face with the real gratified look of pleasurable repose. Even the tinted veins in the sleeper's hand show out plain in the marble."

Orphans of Soldiers and Sailors.

IN our paper of to-day will be found the announcement of the Riverside Institute of Burlington county, N. J., for Soldiers' and Sailors' Orphans. This liberal and splendid enterprise commends itself to an intelligent and humane public. From the Philadelphia Evening Telegraph we glean the following facts in relation to the institution. It is founded for the purpose of gratuitously educating the sons of deceased Soldiers and Seamen of the United States, and was incorporated on the 8th of April last. In order to raise funds for the maintenance of the Institution, the Washington Library Company, chartered by the State of Pennsylvania, organized itself and perfected a plan which has received the endorsement of the highest legal authority of this State and New Jersey. Their plan of action is to sell certificates of membership at $1 each. Five series of fine steel-plate engravings have been issued, one of which will be given to every subscriber, in addition to a present which is also ensured, (there being no exceptions,) and which will be awarded on the 25th day of September next, at the Academy of Music or at the Institute. The presents to be awarded consist of Forty Thousand, Ten Thousand, Five Thousand, and two of Twenty-five Hundred Dollars, all in greenbacks, together with real estate, horses, pianos, melodeons, sewing machines, gold watches, camel's hair, lace and Cashmere shawls, dress patterns, silver ware, and an endless variety of other goods of great value. Every purchaser will, in addition to the engraving which he receives, also receive some one of the presents announced for distribution. All moneys received will be at once paid over to George A. Cooke & Co., bankers, No. 33 South Third street, who have been induced to act as receivers, from the simple fact that it has been fully shown to their satisfaction that the whole net proceeds are to be devoted to the Riverside Institute, and the hundreds of orphans who are now knocking at its doors for admission, and who are denied this blessing on account of the want of funds. This reason has also induced the Commissioner of Internal Revenue to exempt the affair from all tax of any kind whatever. The object is a noble one, and the present plan was only adopted after mature deliberation and consultation with the highest legal authority. In no other way can the Company raise so large a sum as will be required. And when a fair equivalent for the same is offered, it is to be hoped that this Institution will soon be in working order.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, July 16, 1867.

THE money market in Western New York exhibits no new feature. The wool dealers are now using considerable currency, the trade having been active for the last few days. Money continues easy in New York, and rates of interest low. Several heavy failures in the dry goods trade created some excitement last week. Most of the suspended houses had been heavy importers. There were also some small failures in Boston, and before the summer is over others will doubtless go by the board; but no great panic can ensue. Money is so abundant, and likely to continue easy, that all really sound houses will find no difficulty. The recent failures, as a matter of course, cause money lenders to scrutinize paper offered pretty closely.

Sterling exchange is high, and has reached a point that induces large shipments of specie. Drafts on England were sold in New York yesterday at 110¾. The shipment of specie on Saturday was large, and for the week something over $1,000,000 was shipped from New York to Europe. About ten millions were shipped for the six months ending July 1st.

The stock of bullion in the Bank of England, as shown by the returns of June 26th, is over twenty-two millions pounds sterling, or nearly $110,000,000. The history of the bank does not show so large an amount on hand at any one time. There is also an unusual amount of specie in the Bank of France. There is a large surplus of idle capital both in England and the continent.

The decrease in the internal revenue collections in New York city for 1866, as compared with 1865, amounts to $6,500,000. The revenue returns of the past year have disappointed the Secretary of the Treasury. It is estimated that the tax that ought to have been paid on whisky alone would have amounted to over a hundred millions,—the sum actually collected is about thirty millions.

WOOL.—The wool market last week, in this section, was very active, particularly the last three or four days of the week. Farmers all at once seemed to come to the conclusion to sell, and buyers in this and adjoining counties have been exceedingly busy. Very little wool is brought to the city from first hands, the trade having changed very much in this respect in the last few years. Our city dealers now purchase mainly at some railroad station in the country. The rush of wool has rather frightened some small dealers, and they begin to fear that growers have a better knowledge of the prospective market than they have. Prices paid are a little lower than a week since. Some large dealers declined to pay above 43c. for the best clips, on Friday and Saturday. The range is now 38@43c.

The rush to sell commenced some days earlier in Michigan than in this section, and the amount of wool marketed in that State last week was very large. At Ionia, to the 9th, sales 305,000 lbs., at a range of 35@45c., with an occasional sale as high as 50c. Battle Creek, 9th, sales 130,000 lbs., at 35@46c. Jackson, 9th, sales 150,000 lbs., at 45@48c.—average 45¾c. Lansing, 10th, sales 150,000 lbs., at a range of 38@41c.—average price 41½c. In Ohio sales are increasing.

In Boston the wool market seems to be considerably unsettled, and is in a sort of transition state. The stock is light, very little of this season's clip having reached that point. Sales for the week foot up 625,000 lbs., at a range of 30@61c. for fleece. Some part of the heavy purchases of last week will very soon reach Boston. The receipts at that point thus far have mostly been stray lots of last year's clip.

The Ohio clip of wool this year is set down by J. H. Klippart, Secretary of the State Agricultural Society, at 9,170,466 lbs., the number of sheep being 3,058,089. The yield in 1866 was 8,699,416 lbs., and the number of sheep 2,847,073.

The annual wool product of Indiana is valued at $6,000,000.

WHEAT AND FLOUR.—Prices are unsettled, and for the last week have varied considerably. In the speculative markets there are now very few sales for future delivery,—there is too good a show for the coming crop of wheat.

WHEAT HARVEST.—The wheat harvest in some localities in Western New York was commenced last week, and a large breadth will be cut this week. We hear no serious complaints of rust or midge, and it is anticipated the yield will be very large.

In Ohio, Illinois and Indiana the winter wheat is harvested and is generally a good crop. In Central and Southern Michigan the wheat is mostly cut, and the Detroit Post of the 12th says:—"The accounts concerning the crop are glorious."

FLAX.—The new crop of flax in Illinois is now being cut, and is a heavy one.

HOPS.—The growing crop is looking well in this State, and generally at the West—but careful observers say there is a great increase of vermin, which may prove disastrous.

A SPLENDID FARM FOR SALE.—AS I am near four-score years of age, I offer my Homestead for sale, containing about 106 acres. It lays on the east bank of the Seneca Lake, 3 miles from Geneva, and one of the best roads in the country. The farm is so well known I give no description. Those wishing such a farm will come and view it. JOHN JOHNSTON. July 9, 1867. near Geneva, N. Y.

RIVERVIEW MILITARY ACADEMY, POUGHKEEPSIE, N. Y.—Location healthy; Scenery unequalled; Building convenient; Teachers highly educated, earnest, working men; System of Order unsurpassed. A wide awake thorough-going School for boys wishing to be trained for Business, for College, or for West Point or the Naval Academy. For circulars address OTIS BISBEE, A. M., Principal and Proprietor. 913-3t

FOR SALE—A GOOD FARM OF 242 acres in Illinois, 48 miles from Chicago; 1½ miles from a station on the Chicago & Milwaukee Railroad. There is a good house of eight rooms; new barn 30 by 80 feet; good tenant house and an orchard. Sixty-five acres of the land is covered with valuable timber. Living stream of water; two good wells; churches and school near by. The soil is rich and deep. Price, $40 ₩ acre. Address JOHN PEARSON, Tremont House Chicago, Illinois.

BOOKHOLDER, WRITING DESK IN-VALIDE' TEA-TABLE AND LADIES' WORK-STAND COMBINED.—We have made several improvements in this article lately and added to it a *Lamp Supporter*. It is now the most complete invention in the market.

We shall publish in a few weeks, to be issued monthly thereafter, a small paper, in the interest of Inventors and patents, containing a list of valuable inventions recently patented, information how to obtain patents, hints to inventors, notes, editorials, &c. Price 50 cents per annum in advance. We solicit subscriptions. JOHN CONNACHER & CO., Manufacturers, 208 Broadway, N. Y.

PRINCE & COS. AUTOMATIC ORGANS AND MELODEONS. Forty thousand are now in use BUFFALO, N.Y. CHICAGO, ILL.

NORTH WESTERN FARMER. This is a Monthly Magazine of 24 (3 column) pages, illustrated and bound in tinted covers. It is devoted to the interests of the Farmer, the Fruit Grower, the Gardener, and the Housekeeper. It is the largest Farm Journal (save one) in America and the finest in its appearance. It was established 18 months ago and already has a very large circulation. This is purely due to its being very cheap, but mainly because it meets a great public demand. Terms, only $1.00 a year.

Those who send within a month shall have the Farmer to the close of the year, with all the back numbers to January, for 75 cents. Address T. A. BLAND, Lock Box 124, Indianapolis, Ind.

DYSPEPSIA AND FITS.—A Sure Cure for these distressing complaints is now made known FITS—in a Treatise on Foreign and Native Herbal FITS—preparations, published by DR. O. PHELPS FITS—BROWN. The prescription was discovered by FITS—him in such a providential manner that he can- FITS—not conscientiously refuse to make it known, as FITS—it has cured everybody who has used it, never FITS—having failed in a single case. It is equally sure FITS—in cases of Fits as of Dyspepsia; and the ingre- FITS—dients may be obtained from any druggist. SENT FREE to all on receipt of five cents to pre- FITS—pay postage, etc. Address DR. O. PHELPS FITS—BROWN, No. 19 Grand Street, Jersey City, FITS—New Jersey.

ATTENTION FRUIT GROWERS!—The *Seneca Black-Cap*—a very large, fruitful and hardy Raspberry, and 7 *or 8 days later than the Doolittle*, will be in fruit on the premises of Mr. WIGHT, 1¾ miles west of Waterloo—and the *Red Flavored Seedling Black Raspberry* on the premises of H. H. DOOLITTLE, Oaks Corners, this season.

Having a large stock of plants growing and believing these berries eminently worthy of public favor, we invite fruit growers, dealers, &c., to come and see for themselves,—and we will name Friday, 26th inst., when both will be in their prime, (the Seneca Black-Cap, continuing 2 weeks longer,) and on that day we will have conveyances to and from the cars at first morning trains at Waterloo, so that visitors can reach both places and return the same day. DOOLITTLE & WIGHT.

$40 A DAY TO AGENTS.—Lloyd's Great Double Map of Europe and AMERICA combined, mounted and varnished, with ribbon binding, finished to-day, shows ten million names of cities, towns, villages, railway stations, rivers, mountains, lakes, &c.; cost $100,000, yet sells at $4, worth $50. Each map, 20 square feet, occupying the space of but one on the wall, with double faced rollers and reverses, by which each map can be thrown front. Every house in the land wants a copy. Printed instructions how to canvass well furnished our agents. Ladies do as well as men. Send money for sample and see the map first, if not sold taken back on demand. Wholesale agents, with capital, for Western States, California, Texas, New Orleans, Canada, South America, West Indies and New England States, could get $10 a copy for this map.
J. T. LLOYD,
23 Cortlandt Street, New York.

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.
W. H. MANN & BRO., Normal, Ills.
P. S.—Agents Wanted. 911-13t

912-6t A. B. GATES & CO., Philadelphia, Pa.

THE CHAMPION.
HICKOK'S PATENT PORTABLE.
KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.
This admirable machine is now ready for the fruit harvest of 1867, is made in the most perfect manner with either one or two tubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.
FOR SALE BY ALL RESPECTABLE DEALERS.
I also make two sizes of superior
PRESSES FOR BERRIES, &c., &c.
If your merchant does not keep them, tell him to send for one for you, or write for one yourself. Address the manufacturer, W. O. HICKOK, Harrisburg, Pa.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 911-4t

WHISKERS.—Dr. Lamontes Corrollia will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Samples sent for 10cts. Address REEVES & CO., 78 Nassau St., New York.

GENTLEMEN!—IF YOU WANT A LUXU-riant growth of beard in five weeks, use the Italian Compound. *Satisfaction guaranteed or money refunded* Price, by mail, closely sealed, 50 cents.
906-13t RUSSELL & CO., Watertown, N. Y.

Special Notices.

Save your Doctor's Bills. Coe's Dyspepsia Cure will save the expense of a Doctor very many times if kept on hand ready for immediate use. In the summer Season, for Cholera Morbus, Pain in the Stomach, Diarrhœa, &c., it is a sure and certain remedy.

PARIS EXPOSITION.

ELIAS HOWE, JR.,
PRESIDENT OF THE
HOWE SEWING MACHINE COMPANY,
AWARDED A
GOLD MEDAL
AND CREATED A
Knight of the Legion of Honor by
THE EMPEROR NAPOLEON
For the Sewing Machine, which puts "the HOWE" at the head of all Sewing Machine Exhibitors.

THE HOWE SEWING MACHINE TRIUMPHANT!
The FIRST and BEST MACHINE in the WORLD.

DODGE'S PATENT REAPER AND MOWER
CAUTION!

The public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only Dodge Machine is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a Great Improvement on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement;* that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the Dodge Machine is all that is claimed for it; being a Handsomer, Better Made, and more reliable Mower, hand or Self-Raking Reaper, than can be found in the market.
See Advertisement. 908-tf.

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"The New Webster is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it get the best; that Dictionary is Noah Webster's—*the great work unabridged.* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*

Sold by all Booksellers. 1912 4t

WARNER'S SULKY REVOLVING RAKE.—It is almost universally admitted that for excellence of work the Revolving Rake is unequalled. Its great want has been an efficient sulky attachment. This, however, has been successfully met in the Warner Sulky Revolving Rake, an engraving of which is here presented

WORKING POSITION.

The advantage which the Warner Sulky Revolving Rake possesses over all others will be readily comprehended. It gathers the hay free from dust and sand, carries it clean, and in dumping closes the windrow or rick in good shape for tumbling and pitching. Its working is so simple and effective that a boy of 12 or 14 years of age can manage it with ease. The Warner Sulky Revolving Rake has been thoroughly tested, and won an enviable reputation; those who have used it are unanimous in pronouncing it the best Rake yet introduced. It has received the most flattering notice from the Press and Agricultural Societies. It has taken the First Premium at all State Fairs wherever exhibited.

☞ AGENTS WANTED—To whom a liberal discount will be made. 911-tf

THE HARRIS HOP PRESS, (ILLUSTRATED and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that fourfifths of the hops grown in the United States are baled with this press. It is staple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.

Messrs. Ramsey & Hansen of Kilbourn City, Wis., and F. S. Wykoff of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.

BUCKINGHAM, WALSH & CO.,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly forty years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 33 West Larned St., Detroit, Mich., represented by Wm. Sanborn, and general agencies as follows:—J. D. Easter, Chicago, Ills., Richard Cromwell, Baltimore, Md., Jones & Hewlett, Stockton, Cal., and Wm. Lyne, San Francisco, Cal.
899-tf GLEN & HALL, Rochester, N. Y.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are
WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. Howe, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

SEND FOR CIRCULAR.
THE HOWE MACHINE COMPANY,
699 BROADWAY, Corner Fourth Street, N. Y.

$20.00 AGENTS WANTED—$100. Male and female, to introduce our New Patent, Star Shuttle Sewing Machine. It is adapted for family use, and Tailoring. It makes a stitch alike on both sides. Price only Twenty Dollars. Extraordinary inducements to Agents. For full particulars, address
905-13t W. G. WILSON & CO., Cleveland, Ohio.

WANTED—A GOOD EXPERIENCED Canvasser in every county in the U. S. To such, male or female, will guarantee $300 per month. Apply at once to C. RICH & CO., Poughkeepsie, N. Y. 901-tf

THE McKAY SEWING MACHINE, the only machine in existence by which a sewed boot or shoe can be made. Adapted to all kinds, styles and sizes of boots and shoes. 200 pairs can be made with ease by one man, with one machine, in ten hours. These shoes take precedence of all others in the market, and are made substantially at the cost of pegging. In use by all the leading manufacturers. Machines, with competent men to set them in operation, furnished at one day's notice. For particulars of license apply to GORDON McKAY, Agent, 6 Bath street, Boston, Mass. 901-13t

6,000 AGENTS WANTED—TO SELL 6 new inventions, of great value to families; all pay great profits. Send 15 cts. and get 80 pages, or 25 cts. and get 80 pages and a sample gratis.
903-13t EPHRAIM BROWN, Lowell, Mass.

FOR SALE—The best Farm in Monroe county, situated in the town of Wheatland, four miles west of Scottsville, belonging to the estate of the late Hon. Elisha Harmon, consisting of about 400 acres. A splendid residence with tenant house, barns, &c., in first rate condition on the premises. A portion of the premises will be sold separately if desired. Terms to suit the purchaser. For particulars, inquire of Milford Harmon at Medina, Oscar Folsom at Buffalo, or
903-tf F. A. MACOMBER, Rochester, N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. Large 12mo,—454 pages, illustrated. Price $2—sent post-paid.
Address D. D. T. MOORE, Rochester, N. Y.

THE GATE AT LAST—Curtiss' Patent Improved Sliding and Self-Shutting Yard and Farm Gate. Simplest, cheapest, best. Never stands open; shuts by its own weight.
☞ Territory to sell and Agents wanted in every portion of the United States. Address
895-tf GEO. G. CURTISS, Rochester, N. Y.

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf Drs. BABCOCK & SON, 700 Broadway, N. Y.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the cover, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (25 bbl.,) $14; No. 3, (½ bbl.,) $12; No. 1, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

Manufacturers of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising
"Star" Cotton Gins and Condensers,
"Star" Railway Powers, (Emery Patent,)
"Star" Lever Powers, "Star" Threshers & Cleaners,
Threshers and Separators, Circular and Dragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c.

OUR "STAR" THRESHER AND CLEANER
as now made by us, unites more valuable features and possesses qualities far more superior than were ever before combined in such a machine. Comparatively small,—compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw,* so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be threshed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.

We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power. With regard to

OUR RAILWAY POWER,
we may say that everywhere the "Emery Power" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as

THE "STAR" RAILWAY POWER,
it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c.

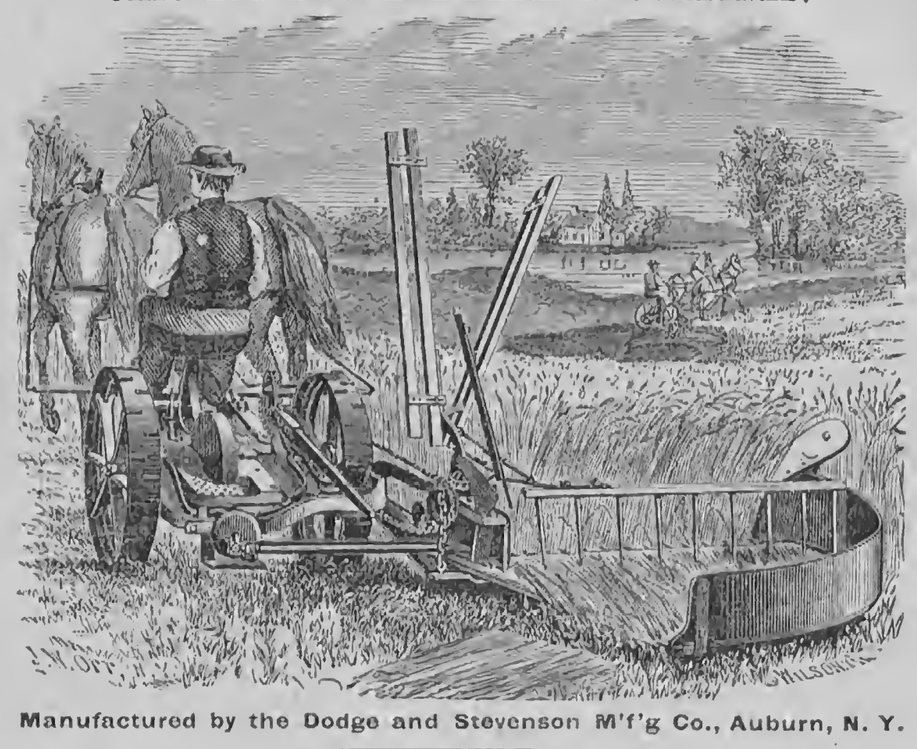
OUR "STAR" LEVER POWER,
though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.

Our extensive works are under the immediate Superintendence of Mr. WM. B. EMERY, (Survivor of Emery Brothers,) which fact, from his long personal experience in the Manufacture of Agricultural Machines, gives additional guarantees of the superior character of the machines made by this Company, and confident, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Dealers and others, assuring such that all orders with which we may be favored shall be executed with the utmost promptness and fidelity.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge,* on application, and all information cheerfully furnished.

Agents, both Traveling and Local,
are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 913

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,
place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag't Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some Great Improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.
J. RAPALJE, Agent, No. 17 South St, Paul St., Rochester, N. Y.

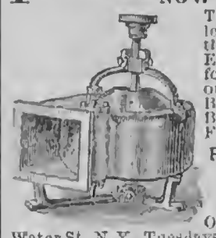
THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candles, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 907-tf

NEW PATENT AGENCY—DRAWING AND PROCURING OF WOOD IN ALL ITS BRANCHES BY GEO. GRAUENBERGER, No. 60 Arcade Rochester, N. Y.

☞ Sole Agent for C. KUDER'S PATENT "CLOTHES STICK," and A. S. ATKINS' Patent Improved Weather Strip. Several other valuable Patents for sale.

SPANISH MERINO SHEEP—To those coming East, this coming season for *pure blooded sheep*, we would say that we shall have a few Ewes and Rams to sell at fair figures. BAKER & HARRIGAN, Comstock's Landing, Washington Co., N. Y., on Rensselaer & Saratoga Railroad. 907-4teo.

PRESSURE TURBINE WATER WHEEL NOW READY.



The best Wheel in market, using less water and selling for less than any other first-class Wheel. Every Wheel warranted. Send for a descriptive Circular. Also, our Improved Brick Machine and Brick Machinery, Engines and Boilers, Cane Mills, Portable Forges, and all other machinery.
PEEKSKILL MANUFACTURING COMPANY,
Peekskill, N. Y.
D. L. SEYMOUR will be at the Office of Packard & Hill, No. 105 Water St., N. Y., Tuesdays, Thursdays, and Fridays, from 11 to 1 o'clock, to receive specifications and make contracts for Machinery and Castings of all kinds. 1893-13teo

TO FARMERS & FRUIT GROWERS.
HUTCHINSON'S
CIDER AND WINE MILL
Has been recently improved so as to grind nearly one-half easier than ever before and mashes the pumace finer. *It is the mill you want.* Send for Illustrated Catalogue. Address GEO. E. HUTCHINSON,
911-6teo 83 Merwin Street, Cleveland, Ohio.
Also manufacturer of Cast and Wrought Iron Screws, Presses, Grinders, Road Scrapers, Feed Cutters, &c., &c.

CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

SORGO HAND BOOK.
Our Eighth Annual Sorgo Hand Book,
Giving the most reliable information on Manufacturing Sorgum Syrup, the result of 10 years personal experience, with full description of the celebrated **Cook Evaporator & Victor Cane Mill**—Also, description of the **Eureka Cider** and **Grape Mill**, sent free to all applicants. BLYMYER, DAY & CO., Mansfield, O.

50 MAKE YOUR OWN SOAP PER-CENT. SAVED BY
USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the steagth of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 13 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 893-39t

CHARLES W. IDELL,
COMMISSION DEALER
IN FRUITS AND PRODUCE,
West Street, foot of Dey, New York.

Farmers' Produce of all kinds, Pork, Poultry, Butter Eggs, Game, Furs, Flax, Hops, Beans, &c. Maple Sugar and Syrup, Green, Dried and Canned Fruits.

In the Fruit Season, particular attention paid to the sale of all kinds of Domestic Fruits, such as Apples, Pears, Peaches, Grapes, Strawberries, Raspberries, Whortleberries, Cranberries, Cherries, &c., &c.
[Established 1818.] ☞ Consignments solicited.

$18.00 A DAY.—Agents Wanted, Male and female, to introduce a new article of household utility. Only Five Dollars Capital required. Particulars free. Address W. A. HENDERSON & CO., Cleveland, Ohio. 905-13t

MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., S. W. corner St. Paul St. and Fayette St., Baltimore, Md.

PRECEPT AND PRACTICE.

BY C. H. WEBB.

The world is rife with nobler thought
Than trembles on the tongue;
The world is full of melody,
Unwritten and unsung.
The music of a march is sweet—
But action is sublime;
And each may live a nobler verse
Than e'er was told in rhyme.

Sweep from my sight these foolish books,
They vex my weary brain,
And I will sit at Nature's feet—
Her open page the plain—
And read a pleasant roundelay
In every blade that grows;
A lyric in the lily's leaf,
An epic in the rose!

Let tinklings of the tongue or pen
To love-sick girls belong—
The music of a well-spent life
Is sweeter far than song.
It likes me not, this waste of words—
Our world were not so dead,
If maids and men would cease to write,
And live their verse instead!

The Story Teller.

Written for Moore's Rural New-Yorker.

EMILY MEADE.

[Concluded from page 228, last number.]

CHAPTER III.

"Here was a form of life and light,
That seen became a part of sight,
And rose where'r I turned my eye,
The morning star of memory."

AFTER leaving Em, and while going homeward, the thoughts of LINDA and Gus naturally turned upon their friend and her affairs. She and LINDA had been thrown together at school, and LINDA'S cheerful temper and ever fresh contentment had drawn the admiration and friendship of the restless child of disappointment and uneasiness. LINDA united with some simplicity a delicate and sympathetic nature, which entered, as if by instinct, into feelings it did not fully understand. It was this unquestioning sympathy that EMILY wanted. When she felt in the mood, she could tell her thoughts with perfect freedom, feeling sure that they would be received with no argument and no criticism, but with keen and kindly appreciation. And when she chose to be reserved, she could be so without being considered harsh or sullen, and be met with the same kindly confidence.

On her part, LINDA, perhaps, found in her friend's uneasy and shifting moods the stimulus and variety which her own sunny, even temper did not afford. Unselfish and self-forgetting, she could find almost a second existence in the life of her friend. Brought up herself in abundance, poverty took on, in her eye, a romantic interest, which EMILY'S character and habits justified and increased. Had she been able to comprehend its coarser realities, EMILY might have found it, at times, disagreeable. As it was, so far from feeling the difference in their situations painfully, she almost escaped from the unpleasant realities when in the society of her friend, from her very inability to appreciate them.

"GUS," said LINDA, "what do you think of Em's plan?"

"I think it is nothing but a plan, and will never be anything more.

"Why, Gus, she will carry it out if she has resolved to."

"You are mistaken about her resolution. She has not half as much of it as you have; she does not think alike two hours in succession. The resolution of to-day will be rejected and thrown away to-morrow for some new chimera."

"You are prejudiced against her, and you are always trying to find weak points in her character.

"No, I am not; but you are mistaken in that particular. You ascribe firmness to her because she has frankness, or bluntness, a quality we generally think is united with resolution—chiefly, I suppose, from a notion that Providence compensates in one direction for what he withholds in another."

"You are unkind and unjust, and all you can say cannot shake my faith in her."

"Well, perhaps I am somewhat unjust. I confess that I spoke more strongly than I really feel, because I do not like to see you worshiping at a shrine unworthy your homage."

Perhaps Gus was a little jealous of this voluntary homage, and he, perhaps, knew of another shrine where he would rather have seen its incense ascending, for he was not lacking in that not least common of human failings, vanity.

"But," he added, "I perhaps understand some of her qualities better because they partially correspond with my own."

"That looks very likely," laughed LINDA.

"It may not to you," he answered, in a slightly offended tone, "but it is nevertheless true that the warp of our minds is similar though the woof may be different. I have thought so from almost the first that I knew her, and I do not doubt she will tell you the same."

"Well, I regret my want of the sagacity to perceive it," she said, a little piqued. "But if you are so much alike, why are you always quarreling?"

"That arises from an antagonism which you cannot understand, any more than you can the similarity," he replied, after some hesitation.

"No, but in earnest, now, tell me why it is that you are so often at variance."

"You must ask her," was the reply.

They had now reached LINDA'S home, one of the finest houses in one of the pleasantest streets in the city, and with an air of some disappointment at the last answer, she bade him good-night and hastily entered.

GUSTAVUS ADOLPHUS GRAHAM had been an early friend of CHARLES MEADE, the brother of EMILY, and by that friendship had been thrown for a number of years into the society of his sister. This companionship might have resulted as such accidental friendships often do—the more likely that—as Gus had observed, they were in some respects similar, and they understood each other better than other people understood them. Indeed, everything seemed to be tending that way, until the introduction of LINDA into the circle changed the views of the young gentleman, who was by nature rather fickle. Her beauty, fine manners, wealth and high station had outweighed the attractions by which he now considered himself to have been boyishly entrapped. He had a lively temper, good abilities and fine personal appearance—was not endowed with great resolution or much steadiness of purpose, though a great deal of earnestness in the pursuit of his purposes, while they lasted, gave him the appearance of having much more stability than he really possessed. Kind and impulsively generous, more from satisfaction with himself than benevolence toward others, he was yet lacking in depth of feeling, and had not that delicate generosity toward the feelings of others, which indicates the truly noble. With the characteristic of a weak and vacillating nature, he attempted to justify the fickleness of his fancy, and fortify himself against any return of his former feelings, by reasoning, and was continually seeking causes for doing what he had already done. And from this wish had arisen the "antagonism" of which he and LINDA had been speaking.

EMILY had noticed the change which had come over him from his first acquaintance with her friend. She saw, too, the cause of his change of manner toward her, and while she despised it and at times held the one who could cherish such feelings in supreme contempt, yet she could not at once shake off the affections which had been growing up for years, strengthening with every interview, and weaving themselves into the thoughts and emotions of her life. She felt that she had faculties which might make her superior to him, but she also felt powerless to rise. Natural indolence prevented her from accomplishing it for herself by a strong effort, and want of other companionship deterred her from gaining it in an easier way. And so her conceiving helpless resolutions but made her contempt of her position the stronger, but could not change it.

CHAPTER IV.

"Welcome light
Dawns from the east, but dawns to disappear,
And mocks me with a sky that ripens not
Into a steady morning."

Gus' predictions with regard to EMILY'S plans did not prove correct. A few weeks saw her installed as mistress of the "stone school-house" at a place some distance from her home,—a situation sufficiently disagreeable to her, for she disliked nothing more than authority in all its forms. When exercised over herself she was free to laugh at it, but when it became necessary to take the scepter into her own hands, support it with her own dignity, and make it the principal part of the character by which she was known to others, it became simply disagreeable. A school has too much the character of an absolute monarchy to be agreeable to strictly republican ideas. Condemnation and sentence, though just, come more unpleasantly from the lips of a single potentate, than when passing through a score of hands of inferior rank. However EMILY'S sentiments in this respect were not the result of her political principles, but simply a natural dislike of the forms of petty authority.

But these unpleasant circumstances were partially softened by the romantic beauty of the place where her court was held. They had not, as usually in such places, chosen the highest, driest, sandiest and sunniest spot for the schoolhouse, but had built it near the bank of a small river that ran through the place. A little above it was a considerable waterfall; the banks were high, and rocky paths led down to the water. Hardy birches and evergreens grew along the edge of the bank, and in the crevices of the precipitate rocks, scrubby bushes held a precarious and uneasy footing, like stunted poverty in the cracks and crevices of the social world; while here and there the nightshade thrust up its malicious-looking blossoms among its more honest neighbors. Just trees enough had been cut away to make room for the building, and the survivors served as an agreeable shade in summer and a useful protection against the wind in winter. This site had been chosen chiefly on account of its uselessness for agricultural purposes.

This gorge was a favorite resort for the embryo geologists of the region,—and often, in the long, drowsy summer afternoons, the suppressed hum of the school-room would be broken into by the sharp click of a hammer in the hands of some scientific youngster, who considered himself at least half a century in advance of the age. In some secluded spot around the banks, generally at a halting place in one of the paths where a fragment of rock furnished a secure seat, EMILY was in the habit of passing the noon-time. As she was seated here one day enjoying the dreamy quiet of the scene, and listlessly watching the spray rising from the waterfall, she heard footsteps at no great distance, and soon saw, emerging slowly from a clump of trees, through which wound one of the many little paths, a gentleman whom she did not know. She had only time to notice a pair of gray eyes that looked out with a kind of dreamy melancholy from a somewhat pale countenance, when, seeing her, he retired, but soon returned, and with some little show of irresolution and hesitation addressed to her some remark about the place.

A little conversation followed, from which she gathered nothing to satisfy her curiosity concerning him. He talked indifferently well on indifferent subjects, but said nothing of himself. She walked down to her accustomed seat the next day with some hesitation,—but it was her accustomed seat, and why should she avoid it on this day more than any other? So she went,—slightly wondering if her meditations would be disturbed to-day. It was not long before she heard the step again, and wished herself anywhere but on the big stone, at the landing-place in the path by the bank of the river, behind the stone school-house. But it was too late to retreat. The stranger seemed glad to find her there again, was more lively than before—spoke more of himself and gave his name as FELTON.

Many such casual interviews led to a quite intimate acquaintance, which was suddenly terminated in this wise. While walking one day, or rather evening, for the day was just fading into night, along the bank of the river, they came to a place where the bank was high and slightly projecting. From this he started back with a slight shudder. EMILY asked what was the matter.

"Nothing," he replied, "only this reminded me forcibly of a similar place, connected with unpleasant memories!"

"How unpleasant?" she asked, not knowing exactly what else to say.

"Dangerous to myself, and fatal to a friend."

"Where was it?"

"In California."

"California! have you been there? Did you know my brother, CHARLES MEADE?" she asked, eagerly.

"Do you know all the people in your own State?"

"You did not know him then?" she said, with a disappointed air.

At this moment a suspicion came into her mind that he knew something of her brother's death. CHARLEY had occasionally mentioned in his letters a friend by the name of FELTON. This man had been in California and had never mentioned it, though he had heard her speak of her brother, and now he evaded her questions about him. She could not inquire further. He did not reply to her last inquiry, and she hastened homeward, nothing being said by either until they arrived there.

The next day EMILY received the following letter:

"EMILY:—As I am about to retire to where it is beyond the reach of probability that you will ever encounter me again, and where, also, I may perhaps be able to lose remembrance of self, after such remembrance shall have become more painful than ever by what I am about to write; having thus entrenched myself, I venture to lay before you the cause of my unhappiness.

"When, more than two years ago, I left Philadelphia, my residence until that time, I left, a rejected suitor, with a boyish resolve to revenge myself by making the alliance desirable to her who had rejected it, and then put it beyond her reach. I threw up the study of my profession, and started for California. Here I met your brother. What attracted him to me I do not know, for I was too much absorbed in the contemplation of my misery and too much affected by boyish misanthropy to be agreeable to any one. But it so happened that he liked me, and in spite of my hedgehog policy—for I had determined to be alone in my misfortune—gained my friendship, and we were afterward constantly together. I told him why I was there, and though I believe he considered the cause a foolish one, he was too kind not to pity the real unhappiness which he saw I felt.

"For nearly two years we traveled, worked, talked and thought together. He often tried to overcome my lingering preference, sometimes by argument, but oftener by banter. Attacks of the latter kind were sometimes annoying to me, as his ready wit was too much for my slow replies. I believe he made these attacks in all kindness and disinterestedness, mistaken though he was as to their effect.

"Five months ago, we were working at a place where there were many others engaged, with whom your brother, it is almost needless to say, was a favorite, for he instantly became one, into whatever society he fell. One evening as we, together with others, were seated around the fire, he gave me a witty aside, relating to my disappointment. This led to an altercation, which was witnessed by our companions, by whom I was universally considered a sullen and ill-natured fellow, and, of course, their whole sympathy was with him.

"The following day CHARLEY made the apologies which I should have made, and in the evening we walked out together. While standing on a ledge similar to the one where I stood with you at our last meeting, but vastly higher and more dangerous, your brother, while my back was turned, fell, with a sliding fragment of rock, from the bank. He uttered no cry. I looked around and he was gone. I started back for help, but—could I give myself up to die the death of a murderer? for such would surely have been my fate. I left the State, and a sort of wayward caprice drew me to his home. I need not say that his sister's attractions have done for me what all his argument and banter could not do. But it has substituted a stronger and more hopeless passion. You will brand me as a murderer or a coward, and as such I shall remain in your remembrance. I accept the punishment of my cowardice, or the infliction of my evil fortunes, it matters not which.

"J. T. FELTON."

CHAPTER V.

"Thou shalt hear the Never, never! whispered by
the phantom years."

EMILY could not but censure him for deserting her brother, without stopping to find some way down the rocks to see if life might not remain, and endeavoring to restore him or to recover his lifeless body. But she did not doubt the truth of the story, and regretted the hasty self-condemnation which had led to his sudden departure. She felt, with some reproach of conscience for the thought, that one loss was illy compensated by another. Yet she would not have recalled him if she could, after such a leave-taking—and she tried to reconcile herself to her lonely lot. She held the letter over the flame of the light, and as it parched and shrivcled with the fierce heat she accepted it as an emblem of her blasted and withered life.

For some time EMILY toiled on in her school, with no hope and no ambition beyond it. Her yesterdays, to-days and to-morrows were all alike—a routine in the outer, a blank in the inner life. Even her occasional visits home only served to deepen her gloom, by reminding her more forcibly of her loss. During one of these visits she one day received a letter with the distant postmark and familiar superscription of her brother. She opened it eagerly. The few lingering hopes, which had been defeated by her failing to hear from him, were realized. His fall had been intercepted by a lower ledge, which projected from the bank midway from the upper one to the stream. He had been stunned and badly injured, but was found by his companions the following day. A long illness had ensued. He had not wished his friends to know of his danger till it was over,—was now sufficiently recovered for the journey home, and would soon be with them.

CHARLEY came, and with him life and animation to the sorrowful household. The old light came back to EMILY'S eyes, and the old playfulness to her conversation. All was not lost. Here was still some stimulus to exertion, and she tried to be satisfied and accept the other trial as a needful balance. She had present happiness in the society of her brother—she could indulge in thoughts of the lost one with no reproaches of conscience and no self-contempt, and this was all her inactive nature required.

But CHARLEY would not lose his friend in this way. After many unsuccessful efforts he at last found him in a dusty corner of the metropolis, sunk deep in law-books and melancholy, and bore him back in triumph.

"Well," said EMILY, as they were seated at her favorite resort, the door-step, the evening after the arrival, "the pleasantest place in the house is out of it, after all."

"It is so, with every house," said CHARLEY, "as FELTON and I have found in our out-door life. We have learned to turn up our noses at roofs and look down on floors."

"And to descend precipices safely without the aid of stairs," said FELTON.

Corner for the Young.

For Moore's Rural New-Yorker.

GRAMMATICAL ENIGMA.

I AM composed of 18 letters.
My 4, 9, 11 is an interjection.
My 5, 6, 10, 12, 14 is a preposition.
My 4, 12, 8 is a pronoun.
My 15, 13, 11 is a verb.
My 13, 6, 7 is a conjunction.
My 14, 3, 15, 9 is a noun.
My 12, 6, 3, 5, 17, 4 is an adverb.
My 2, 4, 16 is a pronoun.
My 15, 12, 9, 6 is a participle.
My 17, 8, 9, 16, 1 is an adjective.
My whole is the name of a beautiful piece of poetry.
East Lansing, N. Y. NELLIE.
☞ Answer in two weeks.

PROBLEM.

A PERSON bought a heifer calf. How many cattle would he have in 20 years, supposing each one to have a heifer calf when 3 years old, and one each year after that, all to be heifers?
Washington, O. ROLAND S. FRAME.
☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 909.

Answer to Illustrated Rebus:—Aching teeth are incendiary tenants.

Answer to Miscellaneous Enigma:—He that loveth pleasure shall be a poor man.

Answer to Anagram:

When the clouds come sweeping onward,
And with darkness shroud the sky,
Then some cheering ray of sunlight
Forms the rainbow bright on high.

So when sorrow gathers o'er us
And its gloom bids joy depart,
Some bright hope that's sent to cheer us
Forms the rainbow of the heart.

Answer to Mathematical Problem:—81 acres and 31 3-10 rods.

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

THE
WASHINGTON LIBRARY COMPANY
Is chartered by the State of Pennsylvania, and Organized in aid of the
RIVERSIDE INSTITUTE
FOR
Soldiers' and Sailors' Orphans,
Incorporated by the State of N. J., April 8, 1867.

THE RIVERSIDE INSTITUTE,

Situate at Riverside, Burlington County, New Jersey, is founded for the purpose of gratuitously educating the sons of deceased Soldiers and Seamen of the United States.

The Board of Trustees consists of the following well-known citizens of Pennsylvania and New Jersey:—HON. WM. B. MANN, District Attorney, Philadelphia, Pa; HON. LEWIS R. BROOMALL, Ex-Chief Coiner U. S. Mint, and Recorder of Deeds, Philadelphia, Pa.; HON. JAMES M. SCOVEL, New Jersey; HON. W. W. WARE, New Jersey; HENRY GORMAN, Esq., Agent Adams' Express, Philadelphia, Pa.; J. E. COE, Esq., of Joy, Coe & Co., Philadelphia.

TREASURY DEPARTMENT, Washington, April 18, 1867.—Office of Internal Revenue:—Having received satisfactory evidence that the proceeds of the enterprise conducted by the "Washington Library Company" will be devoted to charitable uses, permission is hereby granted to said Company to conduct such enterprise exempt from all charge, whether from special tax or other duty.
E. A. ROLLINS, Commissioner.

The Washington Library Company,

In order that the benevolent object set forth in this circular may be successfully accomplished, have issued five series of

FINE STEEL-PLATE ENGRAVINGS,

which are put on subscription at prices much below their retail value.

CERTIFICATES OF STOCK IN THE WASHINGTON LIBRARY COMPANY

will be issued, stamped with the seal of the Company, and signed by the Secretary. (None others genuine.)

Any person sending us ONE DOLLAR, or paying the same to our local Agents, will receive immediately a fine Steel Plate Engraving, at choice from the following list, and One Certificate of Stock, insuring One Present in our published schedule.

ONE DOLLAR ENGRAVINGS.

No. 1—"My Child! My Child!" No. 2—"They're Saved! They're Saved!" No. 3—"Old Seventy-Six; or, the Early Days of the Revolution!"

Any person paying TWO DOLLARS will receive either of the following fine Steel Plates, at choice, and Two Certificates of Stock, thus becoming entitled to Two Presents.

TWO-DOLLAR ENGRAVINGS.

No. 1—"Washington's Courtship." No. 2—"Washington's Last Interview with his Mother."

THREE DOLLAR ENGRAVINGS.

Any person paying THREE DOLLARS will receive the beautiful Steel Plate of

"HOME FROM THE WAR,"

and Three Certificates of Stock, becoming entitled to Three Presents.

FOUR DOLLAR ENGRAVINGS.

Any person paying FOUR DOLLARS shall receive the large and beautiful Steel Plate of

"THE PERILS OF OUR FOREFATHERS,"

and Four Certificates of Stock, entitling them to Four Presents.

FIVE DOLLAR ENGRAVINGS.

Any person who pays FIVE DOLLARS shall receive the large and splendid Steel Plate of

"THE MARRIAGE OF POCAHONTAS,"

And Five Certificates of Stock, entitling them to Five Presents.

The Engravings and Certificates will be delivered to each subscriber at our Local Agencies, or sent by mail, post-paid, or express, as may be ordered.

The Washington Library Company
WILL AWARD
THREE HUNDRED THOUSAND DOLLARS IN PRESENTS TO THE SHAREHOLDERS,
On Wednesday, Sept. 25, 1867, at Philadelphia, Pa., or at the Institute, Riverside, N. J.

SCHEDULE OF PRESENTS.

1 Cash Present	$40,000
1 Cash Present	20,000
1 Cash Present	10,000
1 Cash Present	5,000
2 Cash Presents of $2,500 each	5,000
1 Handsome Country Residence, Stable, Grounds, &c., Germantown, Philadelphia	18,000
1 Double Residence, three-story brick, Camden, N. J.	15,000
1 Coal Depot, Offices, Sheds, Ground, with business established, No. 1314 Washington Avenue, Philadelphia	15,000
1 Country Residence, Riverside, N. J., with the Ground, Fruits, &c.	10,000
1 Three-story Cottage, Lot, &c.	5,000
5 Valuable Building Lots, Riverside, $200 each	5,000
1 Elegant Turnout Family Carriage, Harness, Span of Horses, &c., complete	5,000
10 Valuable Building Lots, Riverside, $300 each	3,000
1 Beautiful Silver-gray Horse, 15½ hands high, sired by the celebrated imported Arabian Horse "Caliph;" also, a light Road Wagon, weight 140 pounds, with set of superior Single Harness, &c., making a first-class establishment	5,000
20 Pianos, $300 each	10,000
20 Melodeons, $225 each	4,500

10 Family Sewing Machines, $100 each	1,000
50 Fine Gold Watches, $200 each	10,000
100 Oil Paintings, by leading artists—aggregate value	10,000
3 Camel's Hair Shawls, $1,000 each	3,000
2 Camel's Hair Shawls, $3,000 each	6,000
3 Handsome Lace Shawls, $250 each	750
10 Cashmere Shawls, $50 each	500
20 Silk Dress Patterns, $75 each	1,500
50 City Building Lots, $175 each	8,750
The remainder will consist of Silverware, Musical Boxes, Opera Glasses, Pocket Bibles, and different articles of ornament and use, amounting to	82,000
Total	$300,000

All the properties given clear of incumbrance.

HOW TO OBTAIN SHARES AND ENGRAVINGS.

Send orders to us by mail, enclosing from $1 to $20, either by Post-Office orders or in a registered letter, at our risk. Larger amounts should be sent by draft or express.

10 shares with Engravings	$ 9,50
25 shares with Engravings	23,50
50 shares with Engravings	46,50
75 shares with Engravings	69,00
100 shares with Engravings	90,00

Local AGENTS WANTED throughout the United States.

The Association have appointed as Receivers, Messrs. GEORGE A. COOKE & CO., whose well known integrity and business experience will be a sufficient guarantee that the money intrusted to them will be promptly applied to the purpose stated.

PHILADELPHIA, PA., May 20, 1867.
To the Officers and Members of the Washington Library Co., N. S. REED, Secretary:

GENTLEMEN:—On receipt of your favor of the 15th inst., notifying us of our appointment as Receivers for your Company, we took the liberty to submit a copy of your Charter, with a plan of your enterprise, to the highest legal authority of the State, and having received his favorable opinion in regard to its legality, and sympathizing with the the benevolent object of your Association, viz: the education and maintenance of the orphan children of our soldiers and sailors at the Riverside Institute, we have concluded to accept the trust, and to use our best efforts to promote so worthy an object.

Respectfully, yours, &c., GEO. A. COOKE & CO.

Address all letters and orders to

MOORE'S RURAL NEW-YORKER

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS

VOL. XVIII. NO. 30.} ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, JULY 27, 1867. {WHOLE NO. 914.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

ABOUT WEEDS.—No. I.

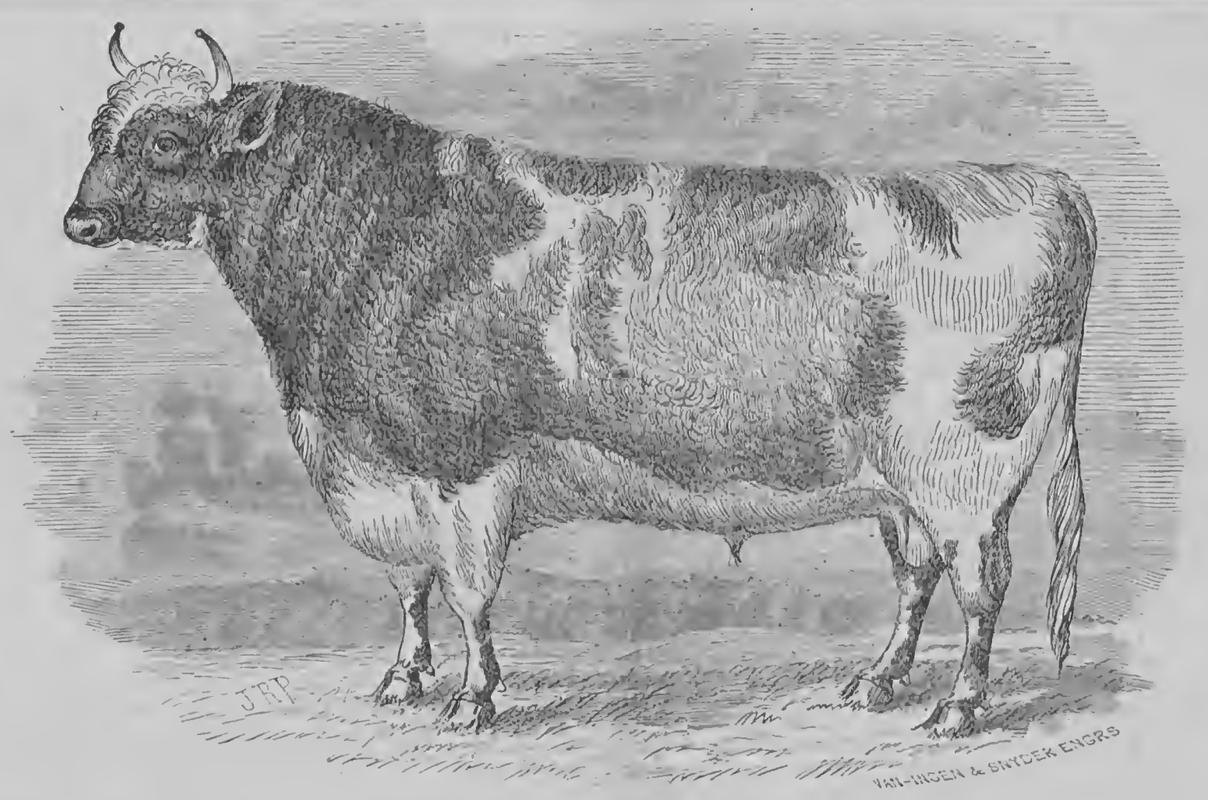
WHAT ARE WEEDS?

IF we should put this question seriously to any farmer in the land he would doubtless think we were asking for information which should be obvious to every person of ordinary understanding, for so numerous and widespread are noxious weeds that we may safely assert that no farm can be shown, which has been cultivated for a period of twenty years, now entirely free from the presence of this pest. Yet who has given an accurate definition of the term "weed." WEBSTER defines it as "any plant that is useless or troublesome," but it is obvious that many useless plants would not be recognized by farmers as weeds, and of all plants it may be said that they are troublesome. The phrase "noxious plants," although far from being accurate, is frequently used as a synonym for "weeds;" and expressiveness has been claimed for the term "plants out of place." But without continuing these remarks further, we will proceed to treat the subject of "Plants, the growth of which is injurious to the farmer's interests."

HOW WEEDS SPREAD.

When land is first brought under cultivation it is found nearly free from weeds, unless in proximity to older settled regions, whence seed has been deposited on the new lands, where they only await favorable circumstances to spring into life. Most of our weeds are of foreign origin; they spread and increase with civilization. Few are indigenous to our soil. Hence it is a matter of importance for farmers to understand what avenues of approach they must guard to check the advance of the enemy. Weeds are almost invariably transferred from one locality to another by carrying the seed, but many kinds, after they are once established, increase rapidly from their roots. Along the courses of rivulets and rivers the roots of some weeds, as alders, couch grass and the Canada thistle, may be carried considerable distances by freshets, and deposited on the fields when the floods subside. Seeds spread in the same way. Straw and hay used for packing merchandise and nursery trees, which are sent long distances and throughout the whole country, often contain the seeds of weeds, and the mischief resulting from carelessness in this respect is frightful. Birds carry seeds from one farm to another very readily, and frequently to considerable distances, and weeds are also introduced by animals—as many of the hard-shelled seeds will grow readily when voided in their excrements. Seeds are carried from one farm to another by thrashing machines, and the downy bloom of the thistle and milkweed float in the air through miles of space. Once established on the farm and nearly every operation of the husbandman facilitates their spread; when he plows and harrows the creeping roots of perennial weeds are scattered; when he gathers the straw and hay from his fields to the barn and transfers the manure from thence to other portions of his farm the vital seeds of weeds go with it; stock carry the seeds as they roam from one pasture to another; and birds rest on the fences and straightway the corners are filled with weeds. Grain, and grass seed, frequently contain the germs of weeds, and no farmer can take too much care in scrutinizing seed not grown on his own premises.

The means by which weeds are spread are indeed innumerable; they avail themselves of all modes of transportation. They ride in the steamboat and the rail-car, and journey in the emigrant's wagon across the virgin prairie towards the setting sun, and the winds and waters spread them abroad.



AYRSHIRE BULL "HAROLD,"

IMPORTED AND OWNED BY H. K. PETERS OF SOUTHBORO', MASSACHUSETTS.

CORN FOR SEED.

THOUGH rather unseasonable, it may not be amiss to place on record an experiment of a correspondent of the "Working Farmer," with reference to seed corn. It has been generally assumed that the central section of an ear of corn contains kernels more fully developed than those on either of the extremities, hence preferable for planting. To determine whether this assumption was correct or the reverse, selections were made of a given number of kernels from the butt, the center and the tip of half a dozen ears and weighed on the scales of an apothecary. The result was that the grains from the tip were considerably lighter than those from the central section of the cobs, and these again lighter than those from the butt. As the germinating power of the kernel naturally depends on its solidity the conclusion is naturally and logically in favor of the butt section for seed. There may be more in this than is generally supposed, and it should induce a thorough test, especially when the comparison can be so readily and cheaply made.

HORSES AT FAIRS.—DUTIES OF JUDGES.

IN a late number of the Canada Farmer there was a timely and judicious article by WILLIAM HARDY, on the duty devolving on Committees of Examination at Fairs—especially with reference to competing stud horses. He assumes, from many years' experience, that much injury is done to the business of stock raising of this description, by the incompetency or partiality of those chosen to pass upon the merits of competing animals at Fairs. Owing to this, many breeders have withdrawn from exhibitions who would otherwise have participated in them.

To obviate all chance of favoritism, as far as possible, it is proposed to have the competing horses brought upon the ground completely covered, with nothing to indicate breed or ownership. Select the judges from known and competent horsemen, from three to five in number. Supply each with a note-book, and let them proceed singly to examine the limbs of the animals. Begin with the nigh fore-leg and examine the hoof carefully; if perfect note it so; if otherwise state the defect, and proceed thus entirely around the horse with an examination of each hoof and limb. When each member has thus made a separate examination let them come together and compare notes, when, if they are competent judges, there will most likely be a closely approximating, if not entire unanimity, in their estimates of the condition and character of the parts examined. If the report is unfavorable let the animal be removed without being uncovered, but if the reverse, take off the hood and proceed as before with an examination of the head, eyes and neck. This done, compare notes again. If these agree and are favorable, the presumption is fair that the animal is a good one and deserving of a premium or certificate of character as the case may be. The animal may then be entirely undressed, and thus viewed or examined as before. It would be rather surprising should not this closing inquest equal in unanimity of opinion that arrived at with reference to the several parts.

This is rather an elaborate process, but it seems eminently judicious, and more likely to render justice to competing stock than the careless and superficial examinations which too often mark the proceedings of judges at Fairs.

ATMOSPHERIC PLANT FOOD—AMMONIA, GREEN CROPS.

DAVID DICKSON of Sparta, Ga., a planter, as masterly and successful as he is intelligent, writes to the Southern Cultivator that "land may be improved and eventually made rich under a system of proper culture, by atmospheric agencies alone." His experience is, that the better the soil, the better drained it is, and the deeper plowed, the more rapidly the land can be improved. Mr. LAWES' English experiments fully prove the truth of this theory; he raised 15 bushels of wheat to the acre year after year by a good and deep tillage without any manure. But on an acre of the same conditioned land, by the addition of 200 pounds of the sulphate of ammonia alone, he got 30 bushels of wheat. Mr. DICKSON is a strong advocate of Peruvian guano for plantation crops. It takes about 300 pounds of guano to supply the ammonia of the 200 pounds of sulphate; yet the phosphoric acid, soda, &c., of the guano is not supplied by the sulphate of ammonia.

The best evidence that the Agriculture of the Cotton States is at this time in the high road to permanent improvement, is the present great increase in grass growing, and the leguminous green crops, cow peas, red, yellow, and crimson clover, &c. One planter who has made successful experiments with Bermuda grass and the clovers, avers that "grass growing is to be the salvation of Georgia. His programme is, 1st, grass; 2d, cattle; 3d, manure; 4th, everything that any other country produces, and all the cotton required by a hemisphere." He pastures on Bermuda grass from March until Christmas; but the biennial yellow clover it seems makes good pasture in February, and the crimson clover, *trifolium incarnatum*, an annual, makes still better pasturage and hay. Although the leguminous plants do not stand the dry hot weather of a Southern summer like Bermuda and Guinea grass, they are invaluable both in early spring and in the late fall months to early winter. *

PLOWS—THEIR WOODWORK AND POINTS.

A PLOW-MAKER sends the RURAL the following facts and suggestions for farmers:

FORMERLY all the manufacturers of plows painted their woodwork, but the tricksters in the trade put in such miserable timber that now all our best made plows are simply oiled and varnished. This the honest mechanic has to do to clear himself of suspicion, though he knows it is not a sufficient protection to the woodwork. Every farmer should give his new plow a good coat of paint before he uses it.

If farmers will take the advice of one that is interested, they will never buy a plow at a shop or of an agent who cannot supply them with points, landsides, &c., (with which to wear out the plow,) that are not all *ground smooth and bright*. It costs the manufacturer about five cents to grind a point well, and it would cost a farmer twenty-five cents before that same point would wear smooth while plowing. I wish every farmer who has to use rough points would, when he gets the next new one, keep account of the time lost to himself and team while scraping and scouring the same. He need not count horseflesh or patience anything. It is a good idea (and a great many do it) to grind them on a hand-stone at home; but, then, there is so little fun turning grindstone that it never gets well done. Like FRANKLIN'S story of the men grinding the surface of a new forged axe, the man who turns will after a little while, when his wind gets short, like the point better if it is only ground "speckled." This matter of ground castings is of some consequence, for farmers will more than average to buy as many dollars' worth of points, &c., after they have got a new plow, and before it is worn out, as the plow itself cost. A farmer will ultimately save at least five dollars by purchasing at the right place.

POTATO BEETLE—REMEDY.

THE Prairie Famer recently contained a communication in which the writer stated that he had been entirely successful in excluding the bug from his potato fields by covering the rows several inches deep with straw immediately after planting. His crop was not disturbed by the bug, while the fields of his neighbors, upon which no straw was used, were completely destroyed. He reasons upon the subject thus:—"The young bugs come to perfection in the ground. After hatching and living a week or so on the potato tops, they fall off on the mellow soil and bore smooth, round, perpendicular holes in the ground to the depth of several inches, and remain several days undergoing their transformation, and then come out to lay their eggs by scores, and thus go on multiplying indefinitely. Straw seems to prevent their entrance into the ground, and it seems well worth a trial. The straw would at least pay as manure, and assist in keeping down weeds—and in a dry season is of great value as a mulch."

AGRICULTURE IN MISSISSIPPI.

EDS. RURAL:—Hoping a letter from Mississippi, telling something of the productions of the State, manner of cultivating, &c., may interest some of your numerous readers living in the far North and East, or the distant West, I send this about the north-eastern portion of the State. A great part is sandy and broken, with an abundance of pine, suitable for lumber; and though this branch of industry is just commencing to be developed, the region comprising the agricultural portion of the State is extensive. The soil on the best lands is a black loam, which is usually underlaid with a pale red clay usually six to ten feet in thickness, Beneath that is a strata of what geologists term *indurated marl*, (white as rotten limestone,) of a pale blue color when first dug out in its moist state below the surface, but which bleaches and crumbles to powder by exposure to atmospheric action. This marl is supposed to be marine deposits, as there are mixed with it quantities of shells bearing a close analogy to various sea shells. In many places there is no intermediate strata of clay between the top soil and the marl. This marl has proved a powerful fertilizer when applied to soil that has sand. Our forest growth embraces many species of the oak, hickory, walnut, sycamore, gums, poplars, cotton woods, honey locust, mulberry, and many others which are useful, as well as many trees and shrubs suitable for ornament.

The soil is productive, growing ordinarily from one thousand to seventeen hundred lbs. of seed cotton per acre, and from forty to fifty bushels of corn. The *modus operandi* of corn raising here is thus: For early planting the ground is plowed into ridges, from three to four feet in width; high beds are preferable. The beds are then opened with a small plow—sometimes checked off. If three feet each way—one to two stalks left in a hill, usually one; if four feet, two stalks in the hill. It is usual to plow early corn three times. Late corn, planted from 15th May to 15th June, is usually planted in the water furrow, and if covered very deep is often as good as that planted the 10th of March. The fodder is usually stripped from the stalk, and the corn left until it matures. Late corn is plowed twice only. Year before last, and last year, very good corn was made here, planted in the latter part of July. The different grasses do well here—clover finely—though little attention is given to such things. My sheep and some brood mares keep fat through winter on corn and winter grass. Wheat, oats and rye do finely, though never raised for market. All vegetables flourish here without the trouble of hot-houses. Apples, pears and peaches, equal to any I ever saw in the Atlantic States; blackberries and strawberries grow spontaneously. The wild strawberry is not so large, but delicious; cultivation improves the size. Some Illinoisans living here say our strawberries are equal to those grown in Central Illinois.

Our climate is healthy—no very great extremes of heat and cold. I do not remember the thermometer to have gone above 98°. We have some severe freezes in winter—enough to save ice for the summer. The Mobile & Ohio Railroad runs through our county, and twenty miles south enters the prairies—which are, perhaps, the most fertile lands in the Southwest, the only trouble for small farmers being the scarcity of wood and water.

The life or the property of a New England farmer would be as safe here as at his own home. Ex-Union and rebel soldiers live here in perfect harmony. Doubtless our climate and soil have advantages over the Northern and Eastern States. All that is wanted is more of the energy and industry of your farmers. The former properly holder of the South is yet the man of industry. In the South are a large class of ignorant and vicious, who usually inhabit mountainous or piny districts, and have no habits of industry. In the war they were neither friends of the Union nor of secession, but would rob a Union man as quick as a secessionist. They are, in nearly every instance, the recipients of charity from the North. Could measures be adopted to make them and the many idle negroes of the South work, the cry of famine would never reach the homes of the industrious farmers of the North. Men who work here acquire property very rapidly. The climate is not enervating. White men can do more out-door work here than in Rhode Island, as the seasons are so much longer. C. F. KOHLHEIM.

Lee Co., Miss.

Sheep Husbandry.

EDITED BY HENRY S RANDALL, LL. D.

TEXAS.—No. 2.

HEALTH.—As in all new, warm and highly fertile countries, the low, rich river bottoms—especially those of Southern Texas, which are covered with a boundless profusion of semi-tropical vegetation—are not healthy to unacclimated persons. The higher lands between these rivers are usually considered healthy where judicious dispositions are made by the emigrant; but the Northern emigrant runs some risk of undergoing a "seasoning" course of chills and fever. The hilly regions of the West are as free from malaria as any other new countries we ever heard of—far more so, we judge, than were large portions of Ohio, Illinois and Michigan when first settled. We have known of hundreds of people from the Northern, Middle and Western States who have emigrated to the Sheep region presently to be described, and we scarcely remember of hearing of one who incurred any disease in the process of acclimation. Great numbers of invalids, especially of consumptive invalids from the older Southern States, resort to the region around San Antonio for the improvement of their health. The native Mexicans used to tell a story in regard to its healthfulness which has a regular *Yankee* smack to it. They said some travelers approaching San Antonio met three disconsolate looking persons who were hastening away from the city. They asked them what was the matter and where they were going. The three disconsolate looking persons replied that they had met with reverses, that they wished to die, and were going to some place where people *could* die!

Yellow fever is imported into the coast towns, as it is imported into New York and Philadelphia, but it does not originate in them. Its ravages, as would be expected in such a climate, are sometimes severe, but it does not penetrate into the hilly region any more than it penetrates into the interior of New York or Pennsylvania.

TIMES OF PLANTING AND HARVESTING.—Plowing can be done in every month in the year—an immense advantage over northern regions in economising labor. It is carried on in January and February for the field crops. Early garden vegetables are planted in January. In February the prairies are green; corn is mostly planted; oats, peas, etc., are sown. In March fresh pasturage is quite abundant, the lamb-drop takes place, about half the cotton is planted. In April the remainder of the cotton is planted, sheep are shorn; potatoes, peas, and wild berries appear in market early in the month. In May the small fruits are harvested; apricots ripen towards its close. In June early corn is ready for harvesting; peaches ripen. In July cotton ripens, but in the average of seasons the main crop does not open freely until the first of August. In the cotton districts, its picking, preparation for market and hauling consume the rest of the season until about the close of November. December is a plowing, clearing and picking up month.

The above statements refer to average seasons in the central latitudes of the State, and to the ordinary farm culture of the main crops. Some of them might be grown earlier, and many would ripen if not put into the ground until months later. Most garden vegetables can be planted throughout the season, so as to afford a constant repetition of them for the table.

WOOL PRODUCTION.—As all the inquiries we have received point particularly, and some of them exclusively, to this husbandry, we shall give some additional details in respect to the facilities for carrying it on in Texas. Sheep can be grown highly profitably, for domestic uses, on the moderately elevated, dry, *sound* lands of all parts of the State. But the sheep region proper—that where the pasturage is best adapted to them, both in summer and winter, where they can, in respect to health, be most safely herded in great flocks, and where, accordingly, the land being equally cheap, wool can be most cheaply grown for exportation—lies in Western Texas. It is bounded on the east and west by the Guadaloupe and the Neuces, and so far as now known, on the north by the Colorado, say from Bastrop upwards.

South of San Antonio this region is generally level, descending with a moderate slope to the coast. It contains some excellent sheep pasturages as low down as the second tier of counties from the Gulf—and in one of these (Live Oak) is now located our friend, JOHN MCKENZIE, one of the best flock masters in Texas.

But the hilly country, commencing five or six miles north of San Antonio, is regarded par excellence as *the* sheep region. The hills further towards the north become more abrupt, with narrower valleys between, until large river bottoms are reached. The present center of its sheep husbandry is Kendall county, appropriately named after GEORGE WILKINS KENDALL, who first practically demonstrated the special adaptation of the country to that husbandry on a large scale, and whose racy and able writings on the subject have attracted thither emigrants from all parts of the United States and Europe. Mr. KENDALL has exhibited the rare merit of showing both sides of the medal—of stating drawbacks as well as advantages, failures as well as successes—and it is this candor which has given such a wide influence to his writings.

We have not space, nor is it now necessary to describe the whole area of the sheep region as we have bounded it; and we shall confine our attention to a group of about a dozen counties lying around Kendall. The soil is generally good, dry and sound. Streams are quite abundant, and they are generally as clear as crystal—the water pure and wholesome. Springs are frequent, and oftentimes of extraordinary volume. There is much valuable timber on the larger water-courses, and groves of post-oak, affording mast for innumerable hogs, abound on the bottoms. The hills are usually mostly bare of vegetation except grass. The last consists of varieties of the mesquit, probably the finest natural grass for sheep in the world, and quite equal to the white clover of the North. It is short, fine, exceedingly palatable and nutritious, withstands drouths well, and springs up like magic after every shower. It is not killed entirely down by the short winter, and with sufficient range (which is everywhere attainable) entirely subsists flocks throughout the year, so that no artificial food is provided for them.* The hilly regions are destitute of fencing timber, and the sheep are herded by shepherds and dogs. New lands, in the less thickly settled neighborhoods, can be obtained from one to two dollars per acre. It is only necessary for the emigrant to secure a homestead, including enough land to raise his domestic supply of grain and vegetables. His sheep, horses, cattle and hogs can be pastured on the outlying ranges without his buying the land or paying rent to anybody. Indeed a single man may hire his board, and keep large flocks and herds without owning or hiring an acre! This state of things will continue in portions of the sheep region beyond the lives of the present generation.

Sheep as a general thing are uncommonly healthy, and are in better condition the year round than ordinarily kept flocks in the North. Lambs obtain an earlier maturity. They are subject to scab, as must always be the case in an unfenced country, whose scattering sheep are liable to spread it from flock to flock. But in escaping the foot-rot of the North the advantage still remains in their favor, for the former is the most easily and cheaply extirpated disease of the two in large flocks. It requires but two or three dippings, at short intervals, in a strong decoction of tobacco to effect a thorough cure. With a proper dipping vat, holding half a dozen sheep at a time, the process can be rapidly performed, and it requires no experience or skillful manipulation. Every flock-master can raise sufficient tobacco as easily as an equal patch of corn. The principal cost of growing wool, besides first purchase of flock, is resolved then into the cost of herding, of salt, of shearing, and of getting it to market.

The cost of commencing a flock is comparatively small. The price of common sheep in Texas, several grades better than the old Mexican sheep, is not now, as appears by the statements of writers in the Texas Almanac for 1867, higher than the cost of the common sheep in the North. These should be graded up by the use of Merino rams. To make the improvement rapid and uniform the rams *should be of perfect purity of blood*, and those every way good enough for the purpose, and having reliable pedigrees, can be purchased in New York and elsewhere, in lots of five or ten, for one hundred dollars apiece. Those wishing to take out a few pure blood ewes of equal quality, as a nursery to raise rams from, can obtain them at the same prices.

Sheep husbandry in Texas has some drawbacks. The Indians are somewhat troublesome in the frontier counties, though they make their thieving excursions after horses and cattle rather than sheep, because the latter cannot be driven off fast enough to escape pursuit. There is little doubt that these pests will be so far subdued or driven back, before the present Indian war closes, that they will occasion no further inconvenience.

We have alluded to the northers. They do not, at worst, compare with the wild winter storms of the Northern States, in which the temperature often sinks thirty or forty degrees lower. As already stated, animals are easily protected from them. The shelter of a dense grove, or escarped hill, ordinarily renders even young lambs safe from such of them as occur in the yeaning season; though, as in the North, untimely storms of extraordinary severity sometimes occasion considerable loss. On the whole, we believe that the present per centage of increase in lambs is quite as great as in any part of the North, with all the artificial and costly shelter provided in the latter—and that with the rudest sheds the advantage would be in favor of the former.

The drouths to which the sheep region of Texas is exposed constitute the greatest natural drawback on its advantages. These in occasional years are severe, but they have never in a single instance compared in intensity or duration with those which periodically visit the great sheep growing countries of Australia and the Cape of Good Hope. We know of no years in which they have destroyed the grass sufficiently to cause the actual starvation of sheep. In the severest Texas drouth within our recollection Mr. KENDALL carried through a number of thousand sheep without any material loss and without their becoming poor and weak. We watched the struggle with keen interest, for he kept us apprized of the state of things every week. There was alarm, additional trouble, and nothing more. The trouble consisted in driving the sheep further out daily after feed, but this, if we remember aright, in no case exceeded four or five miles from their daily starting point, and we think they returned to their pens at night—making the greatest distance traversed in going and coming eight or ten miles—not half the distance which sheep are ordinarily driven every day in summer to procure their food in a great portion of Australia, and not in the aggregate to be compared with the annual migrations of the sheep of Spain after pasturage.

The only other drawback which we know of is distance from market. BOERNE, the capital of Kendall county, is 30 miles north of San Antonio, and the latter is 150 miles by the road from Port Lavacca, 30 of which are by railroad. San Antonio, the principal city of Western Texas, already contains 15,000 inhabitants, and is growing and increasing in business with great rapidity. It is impossible to suppose, therefore, that it will not soon be connected with the sea coast by railroad, and this must at no distant day be intercepted by railroads which will connect it with the other cities of Texas and with New Orleans.

Were we disposed to wander from a cold profit and loss account and paint an arcadian scene, we should add a good many other touches to our picture of this region—its beautiful scenery, its crystal rivers stocked with fish, its forests abounding in deer, wild turkeys, and other game, its abundance of wild fruits, and that coincidence of climate and soil which renders life most agreeable, and its necessaries and comforts most easily attainable. But we will close with a remark of our accomplished and widely traveled friend, Mr. OLMSTEAD. Speaking of Western Texas generally he says:—"Of the genial portion (i. e. exclusive of 'the barren wastes bordering the Rio Grande.') I have already spoken with unfeigned enthusiasm. For sunny beauty of scenery and luxuriance of soil it stands quite unsurpassed in my experience, and I believe no region of equal extent in the world can show equal attractions. It has certainly left such pictures in memory as bring it first to mind as a field for emigration, when any motive suggests a change of my own residence."

ERRATA.—In the preceding number the initials of Mr. OLMSTEAD's name are given as B. F. His name is FREDERICK LAW OLMSTEAD. We are made to say that the severe northers annually "occupy not over forty days." It should be "not much over forty days."

* We are of opinion, however, that it would be better economy in the long run, and give a greater *feeling* of security, as well as actual security, to the flock-master, to provide a small supply of hay or other fodder, to be fed out occasionally in severe storms, especially if they occur during the lambing season, when the young animals cannot be dropped or follow out their dams with safety on the open range. A few stacks of hay placed near the folds, would cost but little, and if not used would remain good several years if properly thatched.

MR. BARTON'S INFANTADO EWE "VICTORIA."

F. D. BARTON, Vergennes, Vt., commenced his flock two or three years since, with some of the choicest animals bred by WM. R. SANFORD of Orwell, Vt. The particular pedigree of "Victoria" has not been forwarded to us.

IMPORTS OF WOOL UNDER THE TARIFF.

AN Ohio correspondent writes us:—"You say the wool tariff is shutting off importations of foreign wool. What are the figures?" The wool tariff did not become a law until *March*, 1867. The following table gives the imports, at New York, for the first six months of that and the preceding year:

	No. of Bales.	Weight, lbs.	Entered Value.
England	7,496	3,686,365	$607,012
Argentine Republic	6,220	4,312,494	670,152
France	3,346	1,251,311	164,509
Africa	24	98,330	17,918
Brazil	1,120	738,639	118,633
New Grenada	14	2,181	279
Dutch West Indies	6	2,270	217
Mexico	1,717	1,390,107	229,653
Russia	4,135	1,515,359	309,187
British East Indies	100	33,600	5,475
British Australia	1,193	467,025	101,572
Total	25,522	12,998,681	$2,333,907
Same time, 1866	44,477	28,476,950	4,011,431

THE N. E. FARMER ON THE SITUATION.

WE are much gratified to see that the old, solid New England Farmer, so ably conducted by Gov. BROWN and his associates, quotes with approbation the letter of Hon. Mr. GRINNELL of Iowa, and from our own accompanying remarks, recently published in this paper, in regard to the wool clip of 1867, the causes of the present situation, and the future prospects of wool husbandry under the workings of the present tariff. The substantial wool growers of the country will be glad to learn that Gov. BROWN affords no "aid or comfort" to our croakers and weak-kneed alarmists.

Dairy Department.

MILK FEVER IN COWS.—IS THERE NO REMEDY?

FROM the recent dissemination of veterinary information by means of the Agricultural Press and the issue of several highly extolled works on Diseases of Cattle, I had supposed that common diseases, or at least attacks which are incident to cattle, were generally recognized by those interested in dairy farming—especially by those extensively engaged in that department of Agriculture. A recent case which occurred under the observation of the writer, served to dispel the illusion that dairy farmers inform themselves, to any extent, on the subject. A cow, in first rate condition, calved and recovered apparently so as to be feeding properly, until about twenty-four hours after. She then refused food or warm drink and rapidly assumed a feverish condition. In a few hours she became violently irritated by pain, ceased to evacuate, laid down in the stable and never rose again. Half a pound of salts was administered four hours after the sickness appeared, but without any effect. She died just twenty-four hours after exhibiting the first symptoms. The calf was her fourth or fifth one, and continues strong and healthy. No veterinarian being within reach, none was consulted. Two experienced dairy farmers, however, were called to give advice, one of whom recommended the salts. The other bled her *in the tail*, and *bored her horns*, not hoping, however, to do any good thereby.

Now my object is to urge on dairy farmers, and, indeed, on all intelligent ruralists who may, even incidentally, be brought in contact with farm animals, to observe and study, if need be, the diseases incident to them,—those at least which are well understood and described in all reliable rural papers, and standard veterinary works. Having very little to do with the care of cattle, and having quite enough in my own department of business to attend to, I have heretofore read but little on this subject. I found, however, in the valuable volumes of the RURAL several cases described of this very disease, but without any information which could be of benefit. One of these states that water, too soon given, is an evil, but an experienced veterinarian to whom I pointed out the articles, declared water to be harmless in the case. The cases quoted in the RURAL he states were clearly "milk" or "puerperal fever," as was the recent case above described. This I presume is a common disease in the animal as in the human subject; yet why can any man owning a large dairy of cows afford to be ignorant of the symptoms and the hopelessness of a remedy. Is there no probable remedial measures to be resorted to as our veterinary friend asserts? S.

Philadelphia, July, 1867.

REMARKS.—In the RURAL, May 13, 1865, was stated a case of milk fever precisely like that recited by "S.," but with a result entirely different. In the first case the animal was treated to a solution of saltpetre—a piece the size of a pea being dissolved in water—and poured down the throat of the cow by means of a long necked bottle; was vigorously rubbed all over with wisps of straw and covered over with a thick quilt to draw the internal heat to the surface. The rubbing was repeated several times. Warm gruel made of bran and flour mixed was poured down her throat, as she could not eat anything of herself. The rubbing and external warmth were kept up; a second dose of dissolved saltpeter was given twenty-four hours after the first; the bran and flour mixture doses were repeated while some young tender grass was put into her mouth. The result was that with four days' treatment the cow recovered her feet and got well soon after.

This may be called an exceptional case, since cows, thus attacked, rarely recover, so far as our information extends. There are remedies prescribed in JENNINGS' work on cattle and their diseases; also, in YOUATT & MARTIN; but to recite them here would add little to what is given above, and we therefore omit them. The fact that certain cases of milk sickness have been successfully treated should stimulate the efforts of others whose dairy stock may be thus afflicted.—ED.

DAIRY ITEMS.

Soiling Dairy Stock.—L. E. H., Warsaw, N. Y., asks if we know of any considerable dairying establishment, in the Genesee country, where the system of soiling the cows is exclusively practiced. We have no personal knowledge of any institution of this character. That this mode of keeping cows is entirely feasible has been abundantly proved, there is no doubt; nor is there any risk in saying that sixty acres of good arable land, in Genesee, will supply ample food for twenty-five or thirty cows, and a corresponding number of the porcine persuasion, if desirable. It ought also to supply the aliment for a team, and will do so if properly managed. Well cultivated, and with crops suitably diversified, an acre and a half of good land will supply the food for a cow, on the soiling principle, for a year, with something to spare. But to do this nothing must be allowed to go to waste. By saving all the manure which the stock on such a quantity of land would produce, and a judicious application of it, those sixty acres would be kept in good heart while the sun shines and water runs.

Cleanliness—Butter Making.—Cleanliness is essential in all the departments of dairying, but especially important in the manufacture of butter. This implies a clean udder in the cow before drawing the milk therefrom; clean hands on the part of the milker, and well scoured and sweet vessels for the reception of the fluid drawn from the cows. Vessels made of wood, except in the winter season, are not the best for the reception of milk or cream, if intended to remain long in them. In making butter, cleanliness and care are indispensable to the production of an article such as butter should be for domestic purposes. If the milk is drawn from a dirty udder with foul hands; put into soured or unclean vessels, the cream, from such milk, cannot be converted into butter fit to be eaten. Of all the elements entering into the economy of the table, dirty and ill-worked butter is the most nauseous and disgusting. Therefore, we repeat, be cleanly in all your operations in the production of butter.

Rancid Butter.—We have seen butter, left open to the air, rendered offensively rancid in a few days by such exposure. When this change occurs it is customary to throw the mass into the receptacle for soap grease. This is an unnecessarily wasteful practice, since the butter can be restored to an eatable condition with little trouble and expense. The process of restoration is as follows:—To a pint of water add thirty drops (about half a teaspoonful) of liquor of chrolide of lime. Wash in this two and a half pounds of rancid butter. When every particle of the butter has come in contact with the water, let it stand an hour or two; then wash the butter well in pure water. The butter is then left without any odor, and has the sweetness of fresh butter. These preparations of lime have nothing injurious in them.

Cheese Making—Cheshire.—It seems that the cheese makers of that famous English district called Cheshire are taking steps towards the introduction of the factory system of cheese-making there. A meeting has been held, with a view to the change proposed, at which the reasons for the movement were given. Among these was the difficulty encountered by small farmers in obtaining the necessary help, male and female, to carry on their dairy operations—difficulties which factories, centrally located, would readily obviate. The American system was discussed, and a committee appointed to effect an organization on the plan pursued in this country.

Cheese Making—Canada.—An exchange says: Cheese making is carried on to a greater extent than is generally supposed in Eastern Canada. Forty-one hundred and thirty cows supply milk for the making of 7,235 pounds of cheese daily. In the county of Missisquoi there are five factories, in Broome four, and besides those mentioned there are only four other cheese factories in Lower Canada—one in Melbourne, one in Stanstead, one in Compton, and one at South Stukely.

Preservation of Milk.—A Mr. LUSSAC has proved, by experiments, that milk, placed in a vessel from which the air is excluded, will keep perfectly sweet for months. The air should be exhausted, and the vessel be sealed up till its stores are wanted for use.

Rural Notes and Items.

HAYING AND HARVESTING.—The weather has been cool but pleasant during the past week—very favorable for haying and harvesting. The grass crop is mostly secured—a good yield, especially on new meadows. The wheat harvest is progressing finely in this region, little or no loss having thus far resulted from shelling through over-ripeness. Many who fearfully anticipated a "wet harvest," have been agreeably disappointed. Our reports of the harvest in adjoining States and the West, are generally favorable, and we congratulate grain growers upon their possessions and prospects.

AMERICAN INSTITUTE FAIR.—The Managers of the American Institute announce that its Thirty-Seventh Annual Exhibition will open in the Armory Building of the Twenty-second Regiment on Fourteenth street, New York, near Sixth Avenue, on Tuesday, the 12th day of September and close on the 26th day of October. Inventors, artists, manufacturers, proprietors of labor-saving machines and those engaged in agricultural and horticultural pursuits are invited to send the best specimens of their several productions. The articles will be classified under seven general heads, each embracing seven groups or sub-divisions. The general divisions will embrace: Fine Arts and Education; Dwellings and their Furnishings; Dress and Handicraft; Chemistry and Mineralogy; Agriculture and Horticulture. Goods received from the 4th to the 11th of September.

GEYELIN'S POULTRY BREEDING.—This is a portion of the title of a small volume on poultry raising commercially considered, with a commendatory preface by CHARLES L. FLINT, Secretary of the Massachusetts State Board of Agriculture. It treats of natural and artificial hatching, rearing and fattening of poultry and also gives directions and illustrations essential to such a poultry establishment as is deemed essential to success in poultry breeding on an extended scale. A perusal of its pages cannot fail of interesting all who pay attention to poultry and their products. A. WILLIAMS & Co., Boston, publishers.

CROPS, &C., IN EASTERN OHIO.—A subscriber, writing us from Harrison Co., Ohio, July 12, says: "We are now in the midst of our harvest. I am now on the farm I have lived on forty years, and never have seen so large a crop of grass. Wheat but little sown, but uniformly excellent. Oats and barley are good. Corn—large amount planted; a little late, but promises finely. Fruit not abundant. But our business here is that of wool growing. Harrison, for its area, is No. 1 in the State of Ohio for quantity and quality of sheep. But here, where land is $100 per acre, we never can live at 38 cents per pound for wool."

TAXING DOG.—Among the 16,000 articles subject to taxation under the existing tariff there is not one more legitimately taxed than would be the dogs if included in the list. It is assumed that there are in the United States fully seven millions of dogs, which if rated properly would produce as many millions of dollars to the Treasury. Such an impost, it is argued, would improve the breed of dogs, as no person would keep a poor one if compelled to pay a good round tax on the animal. A dollar impost in addition to that of the State would be very likely to produce a general *rid* if nothing else.

BRINKERHOFF'S CORN-SHELLER, SEPARATOR AND CLEANER—a cut and advertisement of which will be found on our last page—is one of the few patent machines about which there is no humbug. This sheller was described and commended in the RURAL of Jan. 12th, last, after we had examined and tested it, and we can safely reiterate all then said in its favor. Hence we believe no one will be cheated in purchasing the machine, or the right to manufacture and sell the same.

THE PLASTIC SLATE for roofing and other purposes, advertised in this paper, we believe to be worthy the attention of the public. As a roofing material this slate is rapidly increasing in favor at the East, and is evidently destined to become a popular institution all over the country. Our readers will learn more of its merits ere long—as soon as we have space for special notices and advertisements on the subject.

THE TURF, FIELD AND FARM—Has just commenced its fifth volume, enlarged and improved. With its extensive correspondence, progressive spirit, and elevated course relative to turf matters, this ably conducted journal merits the success it is achieving. Published weekly by S. D. BRUCE & H. MILLARD, New York, at $5 per annum.

A STUMP MACHINE AMONG OLD APPLE TREES.—Last Tuesday Mr. WILLIS used his Stump Machine in pulling apple trees on the premises of Mr. WM. PURCELL, Lake avenue, this city. The trees were quite large, but thirteen were taken out easily in about an hour. To spectators the operation was highly satisfactory.

INTERESTING TO ADVERTISERS.—*Evans' Advertiser's Hand-Book* is the title of a neat 40-page pamphlet recently issued by Mr. T. C. EVANS, Advertising Agent, 129 Washington-st., Boston, Mass. It purports to contain "a complete list of the Religious, Agricultural and Literary Publications in the United States and British Provinces, together with valuable suggestions to advertisers." The contents are quite interesting, many of the suggestions being most truthful, timely and wise,—showing that Mr. EVANS understands the important science of advertising. For example, here is a paragraph which very clearly shows the great superiority of such a journal as the RURAL NEW-YORKER, as an advertising medium, compared with ordinary newspapers:

"While receiving advertisements for all the leading newspapers of a political and business character in the country, he yet designs to continue the specialty, which he originated, of advertising in RELIGIOUS, AGRICULTURAL AND LITERARY JOURNALS. A moment' reflection will convince the reader of the VAST SUPERIORITY of this class of papers as advertising media. They circulate almost exclusively among those who are able to buy and will buy the best of everything; who encourage improvements in science, art, and articles of practical value. Their very character carries a weight of recommendation with it that no mere political or commercial paper can possess. With them advertising is not the main source of revenue, and they therefore are able to discriminate between announcements of valuable and worthless goods, selecting only those which will do no discredit to their columns. So that an advertisement of any article in papers of this class is a virtual endorsement of the claims which it sets up by the conductors of the journal in which it appears. These papers are preserved for weeks, often for years; read and re-read by multitudes besides the original subscriber or purchaser, while journals which are occupied with a mere record of the events of the day, with politics and business, are ordinarily cast aside and speedily destroyed. Thus the advertiser in Religious, Rural, Literary and Family Journals has the two-fold advantage of a circulation largely increased beyond its original limits, and of what is still more important, the probability that his announcement will remain a long time before the eyes of those whose attention he wishes to attract."

HORTICULTURAL.

BERRIES IN THE NEW YORK MARKET.

For the last three or four years the berry crop has been quite light throughout the country,—consequently it has paid some growers a very handsome profit, they having realized more for a half crop than they formerly did for a full one. Hence the profits of the crop, as reported by the press and dealers in plants, have induced many persons to engage in the business, and this year I presume there were ten acres in berries to one last year, though owing to repeated heavy rains, which damaged the berries, they have at times been sold very low. I send you a sketch, which I have prepared during the berry season, giving some of the various fluctuations and the causes.

The first berries that we received this season was on May 9th, from Norfolk, Va. It was one chest, containing 48 quarts, and sold for $2 per quart. The second arrival from the same place sold from 75 cts. to $1 per quart. The third lot was received on the 17th, and sold from 50 cts. to 60 cts. per quart. Of course, each arrival being larger than the preceding one, prices fell in proportion. The Baltimore berries now began to arrive quite freely, and prices fell accordingly. On the morning of June 10th the train that brought the berries (Adams Express) was, from some unknown cause, delayed beyond the market hour, and the result was a general stick among the dealers. Had the berries arrived on time, a good article would have brought from 30 to 40 cts. per quart; but instead of these prices the wagoners loaded them for from 10 to 15 cts. per quart. This delay was a sad blow to the owners of the berries. Delaware berries were now in market to compete with the Baltimore berries. Being the first pickings, and in better order than the Baltimores, they took the lead in prices, the best selling readily at 60 cts. per qt. Some very large, handsome berries, called Perry's Seedlings, sold for $1.50 per quart, but I did not see these and consequently cannot describe them. On the 5th prices ranged at about 50 cts. per quart; on the 6th, from 30 to 40 cts. A few berries more came in from Monmouth Co., N. J., and also from Burlington Co., N. J., and sold for 20 cts. per third quart basket. The quantity now arriving is about as large as we have generally received at any time during the season for the last three years, and prices for good, hard berries hold firm.

On Saturday, June 8th, we received another of those sudden reverses of the trade that are so very unpleasant to dealers and unprofitable to the owners of the fruit. At 4 A. M. berries were in demand at 40 to 50 cts. per quart, but as the various trains arrived the quantity increased, and at noon large quantities could be bought at 15 cts. per quart. Such a flood of fruit was poured in among us as many of us had never witnessed before, and we thought never would again,—but we have been sadly disappointed. Every part of our country was represented where this fruit was grown. If I mistake not, Adams' Express Co. had six car loads of Southern berries, averaging 6,000 quarts each, and these were but a trifle compared with the whole. Some of the dealers kept their hardest berries over Sunday for Monday market, and as the weather was cool, they did well by so doing. During the week ending June 15th, we experienced a repetition of Saturday's arrival, only more so; and I think we must have received on some days four thousand bushels of berries; prices were very low. The next week they sold at about the same figures, say from 10 to 20 cts. per quart; small baskets, four to the quart, from 2 to 4 cts. On Sunday, the 16th, a general rain storm set in, the air being very warm and muggy, and on Monday the effect of it was plainly to be seen in the berries,—for such a mass of rotten berries was never seen in our market. Although early in the morning many of them sold at a good price, when the purchasers came to examine them they were found to be in such a poor condition that they were returned to the dealers, and by them thrown in the river. All through this week the effects of the storm were to be seen on the berries, and meny thousand quarts could be bought from 6 to 8 cts. This state of the market continued until Saturday morning, which is our great market morning, when berries went up with a jump. The cause of this rise was that the former low prices did not pay the expenses on the berries, consequently many growers did not pick them; and the arrivals being quite light, and the demand very large, prices went up to 20 cts. per quart boxes, and 6 cts. per basket for the one-fourth quarts.

On Tuesday of the next week, Mr. Knox sent the New-Yorkers a specimen of his Jucunda, or 700, and they were noble specimens of fruit. What Barnum's fat boy is to babies, or his giantess to common-sized women, so were these monsters to the berry tribe. Only think of 16 berries filling a pint cup! He sent several cases of the No. 1 in pint cups, which sold from 35 to 40 cts. per pint, and some of the 2d quality in quarts. These prices would have been nothing to boast of in other seasons,—but in this year of plenty they did well. It takes Knox to show up a fine berry, and I hope that those persons who purchase plants from them may live to see such grown on their vines. The sales continued about a medium price until the close of the season,—which is about July 3d, unless for a few berries grown in the interior of this State, which continue a few days later.

Varieties.—I presume some growers would like to hear the result of the different varieties that were sent to market, and the condition they arrived in,—for this is one of the most important items to a grower. I have made close and constant observation on this point all through the season, so far as my business would permit, and I think that the Wilson is preeminently ahead of all others for transportation purposes, and to growers living in Delaware or other distant parts, is about the only berry worth planting. I received from one person in Delaware, part of his crop of Wilsons, grown on less than one-third of an acre, 1,238 quarts, which sold for $454.87. The balance, 622 quarts, he canned for his customers. They were very fine, and packed better than any I have seen this season. I will describe his plan for the benefit of those who would like to follow it. After picking in the patch they are taken into a cool room, each basket turned out on a table, all soft and green ones removed, and the baskets filled rounding full; the top berries are all turned with the hulls down, which gives them a very handsome appearance. The berries are so neatly and firmly packed in the baskets that scarcely one berry moves during the trip from Delaware. While speaking of the Wilsons, I will give you the result of another patch. Mr. Kearney, residing near New Brunswick, N. J., informs me that he had one piece planted in berries 80 yards long and 16 wide, from which he picked 4,000 pints that returned him $407.

Some of the berries received from Delaware were of a nondescript character that were not worth sending to market. Although the growers were at as much expense to send, and the same amount of labor required to grow them, they did not realize more than one-half the amount of money for their crops. From what I saw of the Jucunda, I think it will bear transportation well. The Agriculturist is also a good traveler, if not picked too ripe. I sold a few of the Ida; *they* were quite an inferior berry, although that may not be their general character. I sold a few of the Metcalf's Early; and if they were a fair sample, I do not want any more of them to sell. They were a small, soft, pale berry. A few of Barnes' Mammoth came to market, but being very busy I did not see them. I am informed by the dealer who sold them that they are a first-quality market berry,—that is, a firm, good berry to carry, and a good bearer.

There were many other varieties, but their character is too well known to speak of. I will just throw out this hint to purchasers of plants—that it is a very good idea for them to consult some good dealer in fruits in regard to the character of those berries that they may think of planting, and not depend entirely on those who have plants to sell.

Packages.—Of all the varieties of packages, and their name is legion, that are sent to our city, Beecher's Pints take the lead. Cook's are equally as good, but the prices are against them. Beecher should get up a half-pint cup for raspberries, which would drive all the splint baskets out of the market.

Now and Then.

New York, July 15, 1867.

SETTING STRAWBERRY PLANTS.

It is not generally known that in setting strawberry plants, especially in a dry time, it is of the utmost importance to bury the whole of the runner which leads from the parent plant. If this reaches damp ground, the newly set plant receives nearly the same amount of umbilical support by its means that it did before its removal.

If you want fruit next season, don't wait till the last of August or September, but set your plants at once, and let them be getting established. Late set plants not only amount to but little for next year's fruiting, but stand a very poor chance to survive the winter. Yet I have planted late with excellent success, as far as withstanding the winter is concerned, simply by using the runner in this way. They are more sure even when set before a root has been formed, than with a good supply of root only, without sufficient time to establish themselves before cold weather. In taking a plant up, if the next younger is not sufficiently rooted to suit you, remove its runner from the plant you take up and bury the end of it so as to nourish the younger plant a while longer before its removal. In this way you can commence a bed as soon as you have a few plants large enough to set, and without waiting for rainy weather, continue planting from time to time as fast as your plants are sufficiently large. Of course you should not, as a general rule, remove plants until they have formed a good supply of roots. Recollect that the sooner well rooted plants are set, the more fruit you will have next season.

Jonas Doolittle.

THE CATAWISSA RASPBERRY.

This remarkable variety of the raspberry family needs a little attention at this season of the year, in order to secure an abundant crop in its second or autumn stage of fruiting. Drive a stake about four feet long in each hill, and remove all the canes that have started up from the bottom, of this year's growth, except about four. Put a string around those left and draw the string until the canes are compressed around the stake so that each cane will be from ten to fifteen inches from the stake. Unless they are staked up, we find that the canes spread about too much and bend down to the ground. The hills need thinning out each year, so as not to become too bushy. In the fall or early spring we cut all the hill back within 10 or 15 inches of the ground, and in this way two regular crops are grown of delicious fruit, the last of which is very abundant during the month of October.

Lima, N. Y., July. Chs. D. Copeland.

HORTICULTURAL GLEANINGS.

Bugs on Vines—Killing.—J. Miller, Somerville, informs the Massachusetts Ploughman that bugs are easily killed on vines by sprinkling arsenic over the leaves while they are damp in the morning or evening. He uses a small pepper box for the purpose. The sprinkling is quickly done and so are the bugs—sure.

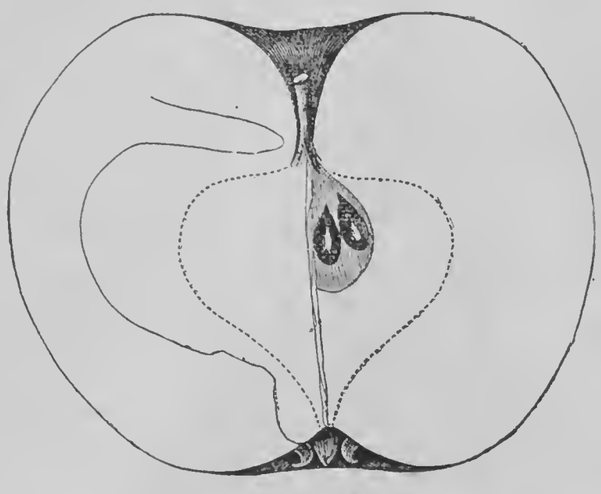
Wonderful Cherry Tree.—In 1817 John Ansfachs removed from Berks Co., Pa., to Reading township, Perry Co., Ohio, carrying with him some cherry stones. One of these, of the Black Heart variety, was planted, and has grown to be a tree of mammoth proportions. It is now 80 feet in height, and 4 feet and 1 inch in diameter. The largest limb is 42 feet in length.

Propagating Soft Maples.—The Iowa Homestead recently published a communication on timber-growing on the prairies. The writer thinks the soft maple as good as anything, as it is a nice tree and grows rapidly. He raises from seed, and says the trees are as easily grown as corn. Produced young ones last year from seed from six inches to four feet in length, and sold them last spring at $5 per thousand.

Peach Leaves Poisonous.—The Carolina Times mentions a case where a friend threw a branch of a wilted peach tree to a cow, the leaves of which she ate with avidity. This was in the evening. The following morning she was found dead in the stable. Another cow also ate a portion of the leaves, and came near dying too. Eaten in a fresh state, these leaves are not dangerous, neither are those of the sorghum plant, but in a wilted state both are dangerous food for stock. Why this is so is a question for solution.

NEW APPLES.

Camack Sweet.—This newly introduced sort is said to have originated in North Carolina or Georgia. The trees cultivated in the Northern States are yet too young for us to judge of their characteristics, but they appear to be healthy and vigorous.

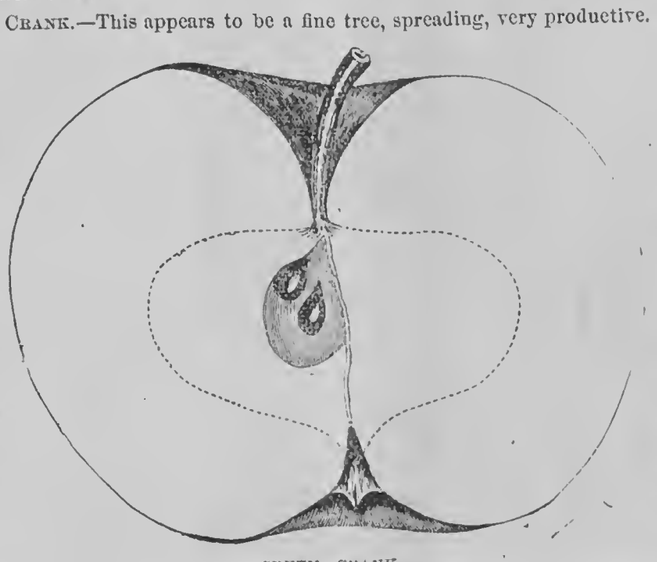


CAMACK SWEET.

Fruit, medium to large, flat, regular; surface, smooth, greenish white, rarely blushed with red; basin, broad, shallow, and regular, or wavy; eye, medium, open; cavity, deep, acute; stem, rather long; flesh, yellowish, firm, rather tough, but juicy, rich and sweet.

This variety keeps well, lasting until May. But has not as yet been sufficiently tested in the North.

Green Crank—Yellow Crank.—This appears to be a fine tree, spreading, very productive. This, it is supposed by some, will be a good substitute for the Rhode Island Greening, which has proved quite unsatisfactory in most orchards south of latitude 42 degrees.



GREEN CRANK.

I have received this southern apple from Kentucky, Tennessee, and also from Georgia, but have not yet fruited it.

Tree, moderately thrifty; shoots, brown; foliage, small; fruit, medium to large, flattened, somewhat conical, regular; surface, green to yellow, sometimes bronzed; dots, small, grey; basin, medium, regular; eye, medium, closed; cavity, wide, deep, acute, brown; stem, medium, green, thick; core, wide, medium, closed, not clasping the eye; seeds, numerous, plump, short, dark; flesh, yellow, firm, fine-grained, juicy; flavor, sub-acid, aromatic, rich. Quality, good to very good. Use, table or kitchen. Season, December to March.—*Warder.*

Horticultural Notes and Queries.

Lake Shore Grape Growers' Association.—The summer meeting of this Association will be held on Tuesday, the 27th of August, at the village of North East, Pa., situated fifteen miles east of Erie, about midway between Buffalo and Cleveland, on the Lake Shore Railroad. A free lunch will be provided about noon on the grounds of the Grape and Wine Company, one mile north of the village; and the afternoon will be spent in visiting the vineyards, of which there are over one hundred acres in the vicinity, and some acres of cutting beds, which will be of interest to propagators of vines. A public meeting will be held in the evening for discussion on Grapes and Grape culture. Wednesday morning some of the Executive Committee, and such of the members of the Association and visitors as choose, will form an excursion party for a trip to Cleveland, Sandusky, Put-In-Bay and Catawba Island, occupying two or three days. Persons desiring to join this party are requested to notify the Secretary, M. B. Bateham, Painesville, Ohio, as early as convenient and to state whether they would prefer to go by steamboat from Cleveland to Put-In-Bay, or by railroad to Sandusky, and thence by steamboat—the expense being about the same. All persons interested in grape growing are invited to attend.

A Valuable Cherry Tree.—A farmer named Palmer, residing in North Webster, recently sold the cherries picked from a single tree—Napoleon Bigarreau—to parties in this city for the sum of $51.52. About one-eighth of the yield of the tree was reserved for or applied to home uses. These included would have made the sum nearly $58,—a pretty good return from a single cherry tree in one season.

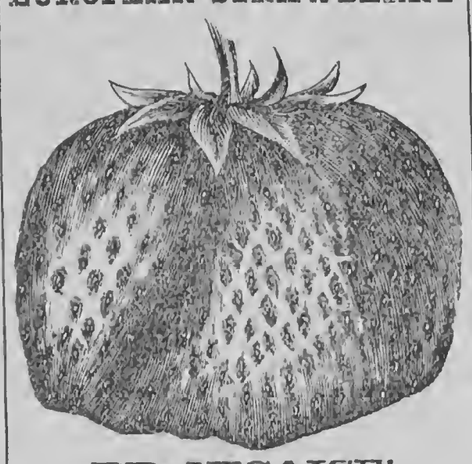
Apricots Well Sold.—A commission fruit dealer in New York (Mr. C. W. Idell.) writes:—"I have just sold one bushel of apricots from Delaware, put up in the American Basket Co. quart baskets, for $32. Do you think that will pay the grower?"

Strawberries Shipped from St. Joseph, Mich.—A correspondent informs us that 9,118 bushels of strawberries have been shipped from St. Joseph to Chicago during the past season. They netted about nine cents per quart.

New Advertisements.

FRUIT PICKER.—RICHARDS & LINCOLN'S Fruit Picker. Will pick all kinds of fruit, and *deliver it in the basket* with great rapidity, as perfect as when hanging on the tree. No climbing to be done, nor ladders needed. Weighs 2¼ lbs. Single machines sent by express for $2.00. Special inducements to agents. Address L. RICHARDS, Patentee and Proprietor, Varysburg, Wyoming Co., N. Y.

THE GREAT
EUROPEAN STRAWBERRY



DR. NICAISE!

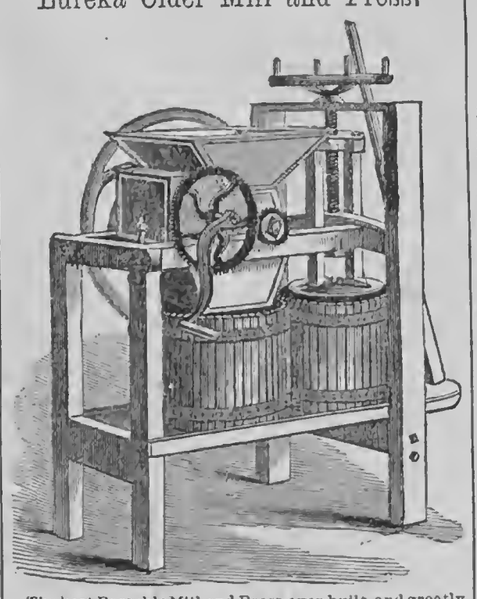
Said to be the LARGEST BERRY known, plants are hardy, vigorous growers, and productive. Fruit of this variety from plants set in September last was exhibited at the Western New York Fruit Growers' Convention held in Rochester on the 27th of last June, which weighed 1¼ ounces and measured 6¾ inches in circumference.

This variety we have imported at a great expense, and will have a fine stock to offer our customers in August and September.

The following are extracts from European Catalogues: "*It is of enormous size, the berries weighing over 1¼ ounces, (nine to the pound,) and early, of a bright red color, very glossy, the flesh white, and of fine quality.*"

This sort has the best characteristics of any we have ever introduced. Orders must be sent in EARLY, as they will only be filled in rotation. ☞ We will furnish plants postage paid, at the following rates:—$1 ₰ plant; $10 ₰ dozen; $75 ₰ 100. Address FROST & CO.,
914 4t *Genesee Valley Nurseries, Rochester, N. Y.*

Eureka Cider Mill and Press.



The best Portable Mill and Press ever built, and greatly improved for 1867. It has repeatedly taken the First Premium at State Fairs over all others, and is warranted in every respect. It does not simply *crush* or *cut* the apple, but *crushes* and *rasps*, so that at trials the pomace from this mill has yielded one quart more cider from a bushel of apples than other mills. It is a

A NEW GRAPE.—SALEM.—The Subscriber now offers for sale for the first time the above grape, No. 33 of his hybrids, named SALEM, from the place of its origin.

This grape has been withheld from sale or exhibition for various reasons, until a stock of plants could be obtained. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape; being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and highly-flavored fruit.

This grape is a hybrid between the native and Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for sale. E. S. ROGERS, Salem, Mass.

Notice.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

The undersigned now offers for sale this Autumn, the above valuable Vine, in quantity, one and two year old plants, suitable for vineyard purposes. The demand for it will be large, and those wishing to secure them would do well to send in their orders early. Price List and engraving will be sent in August, on application to
J. L. WARING, Sole Proprietor "Salem" Vine,
Amenia, Dutchess Co., N. Y.

NAPOLEON, III.

THE BEST STRAWBERRY FOR AMATEUR CULTURE.—Fruit very large, handsome, and of high, aromatic flavor; plant very vigorous, hardy and exceedingly productive.

"One of the most distinct fruits we know, and one of the best in many respects."—*Thos. Meehan, Editor Gardeners' Monthly.*

"A strong and vigorous grower, productive; promises to be an acquisition."—*A. S. Fuller, author of "Small Fruit Culturist."*

Descriptive Circular mailed to applicants. Price, by mail, postage free, $3 ₰ dozen.

THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₰ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₰ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₰ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
YOUNG HYSON (Green,) 50c., 50c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₰ lb.
GUNPOWDER $1,25, best $1,50 ₰ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the Great American Tea Company.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

Ladies' Department.

SLEEP, BABY, SLEEP.

BY ELLA ELLWOOD.

Sleep, baby, sleep!
The sobbing wind moans sad and low,
As if it voiced some human woe;
Clouds gather thick and fast o'erhead,
And autumn leaves are withered, dead;
All nature breathes a tale of grief
In wind, and cloud and falling leaf;
The night is dark; I sigh and wait;
The hours are long; he comes so late!
Sleep, baby, sleep!

Sleep, baby, sleep!
Rest now that little gold-crowned head
Upon this dainty, white-robed bed;
Close soft those tender-lidded eyes
That gleam with light from Paradise;
Thy baby look I may not meet,
So anxiously my heart doth beat.
He does not come; the hours wax late;
In gloom and loneliness I wait.
Sleep, baby, sleep!

Sleep, baby, sleep!
Close clasped I hold thee, darling child;
Why start with terror, sudden, wild?
Hear'st thou the distant booming gun?
Know'st thou the battle has begun?
O wifely heart, oppressed with care,
Seek refuge now in God, in prayer;
Sleep sweet, my bird, while clouds droop low,
And requiem bells toll sad and slow.
Sleep, baby, sleep!

Wake, baby, wake!
Lift up thy graceful, dainty head;
Thy father bends above thy bed;
At last my heart has found sweet rest,
Quick throbbing 'gainst a manly breast.
His clasp is folding mother, child;
What care I though the wind moan wild?
The tempest now I heed no more,
My heart's wild storm of anguish o'er.
Wake, baby, wake!

[St. Louis Democrat.

HOUSEHOLD CONVENIENCES.

In this warm weather it is well to use all care to lighten toil in the house, as well as out of doors. Every well-managed farm has its improved implements, and its barn planned for ease of work as well as comfort of stock. The era of improved implements for cooking, washing, &c., is not yet reached—only the begining. It will come in time, however, and meanwhile much can be done. The best stove possible, the most airy kitchen, with blinds or curtains to keep out the sun's blaze, water plenty and at hand, the best washing machines and churns, dry wood in plenty, and a little lift for any heavy work from some strong man, are among "woman's rights," to be had equally with all these "fixings" for farm work. And help too for the ceaseless housework, in due proportion to help for the farm-work. Mutual thoughtfulness and kindness will keep these ends even, and thus husband and wife help "bear one another's burthens."

Woman has a finer and more susceptible organization than man. In the one the nerves preponderate, in the other the coarser muscles. Under the impulse of nerve-force woman can do things which surprise herself, but the reaction is severe and trying, prostrating the energies in a way that surprises and even vexes men who do not understand this. Buoyed up by wifely and motherly love, wondrous indeed is woman's endurance; but it is well to remember that ceaseless watches at night, and constant duties by day, are too much to be long sustained. Ask for your fair share of all helps in your work, not exactingly, but only fairly. Self-saerifice is beautiful at times, but I am weary of women, (or men either,) always giving up their own comfort, their own much needed conveniences, and having other branches of the family reap all benefits. It is not self-justice, and that is a valuable quality, quite consistent with the most devoted kindness in hours of need.

So far then as means fairly allow, have kitchen and appendages keep pace in convenience with hay-mow and nice stables and patent reapers. That's fair; and "fair play is a jewel." All these outward helps with a spirit of thoughtful affection on all sides, and all goes smoothly.

There's a good deal of busy and trying housework in a farm house, but there are pleasant compensations. In the long summer afternoons, with the work done until night comes, and the quiet rooms, and pure air, fragrant with the sweet breath of roses, how pleasant the rest! No fashionable calls, no din and dirt of city streets, but the green grass, and pleasant shade-trees, and broad fields, and blue sky, and that delightful companionship of dutcous daughters in the dewy freshness of their young maidenhood, so precious to the mother. All fresh and simply tasteful, with sewing, and books, and the murmur of cheery talk, musical as the ripple of a brook, and intervals of silence when the soul takes in these quiet influences of Nature's summer-time, and grows rich by what it feeds on.

It is no marvel that so much of the noblest womanhood comes from these farm-houses, for there is work, self-help, simple tastes, tinged with Nature's delicate hues, and time for some quiet thought, and the healthful growth of the soul.

AN ELOPEMENT "HEADED."—An Ohio paper tells a novel love story. A young couple planned an elopement, the girl deseending from her room upon the traditional ladder, but at the gate they were met by the father of the girl and a minister, by whom the young couple were escorted to the parlor, where to their surprise they found all their relatives collected for the marriage ceremony, which took place at once. It was a neat paternal freak.

A HOME SCENE.

Our engraving gives the artist's ideal of "Sweet Home,"—the family, bound together by the golden ties of love, and keeping thus the one spot bright and pure.

DO-NOTHING YOUNG LADIES.

At a recent sociable gathering, a young lady informed me that she never sewed! What do you suppose was the nature of my reflections on hearing the declaration? I said to myself, either that girl speaks falsely, or she is very lazy. Never sews? Who then, I queried, made your dresses and cloaks, your skirts and bows? Who repairs the rips in your pretty gaiter boots, and darns the holes in your stockings? Is it your aged mother or your more industrious sister? Or do you hire all your sewing done? Should this last supposition be the case, may you never marry; and the chances are you never will. Not one young man in a hundred can afford to marry a woman who habitually neglects household duties.

Young man, if it should ever be your fortune to hear a woman declare that she never sews, beware! Shun her as you would the chills and fever. Be insane enough to make such a one your wife, and, before the honey-moon is over, the horrors of buttonless shirts and hose full of holes will be upon you; your fair lady's sewing will be done by others, while she mopes in idleness or riots in fashionable dissipation. Then you may well bid farewell to all your dreams of domestic felicity; they would fade as summer flowers at the touch of frost. I have heard ladies, educated and intelligent ladies, declare with actual pride their ignorance of the art of cooking. They "could not make a cup of coffee to save their lives;" and, as to their making a loaf of good bread, or cooking a simple dinner, that was out of their power. Poor, miserable unfortunates!

Doubtless mothers are much to blame for thus neglecting the education of their daughters; but surely there is no sensible girl who could not, by the exercise of a little energy, perfect herself in this most useful branch of domestic knowledge. False pride, in every case is the only barrier in the way. It is not considered "genteel"—how I do abominate that word!—to do anything useful, and a fashionable miss would consider herself disgraced should she be seen with her hands in the dough, or caught in the act of sweeping a room. If a young lady of the present day can thumb the piano, make use of a few French phrases, dance, flirt and do nothing generally, her education is accomplished—she is considered "finished."—*Home Journal.*

AMERICAN WOMEN.—M. de Toqueville, speaking of American women, says:—"As for myself I do not hesitate to avow that, although the women of the United States are confined within the narrow circle of domestic life, and their situation is in some respects, one of extreme dependence, I have nowhere seen women occupying a loftier position; and if I were asked, now I am drawing to a close of this work, in which I have spoken of so many things done by the Americans, to what the singular prosperity and growing strength of that people ought to be attributed, I should reply—*to the superiority of her women.*"

BLESS THE BABY.—Lord Granville, Chancellor of the University of London, remarked on a recent public occasion that he had been charged by a Bishop in the House of Lords with incompetence to discuss the subject of education, on the ground that he had no children. "A recent circumstance," he gravely added, "has put me in a better position; but I cannot say that it has changed a single view I ever held on the subject of education." That was a neat use to put a baby to.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

ON THE LAKE.

BY REB. RAYMOND.

Wafted on by gentle winds,
Resting on the billows,
Rowing listless near the shore
Underneath the willows.

Drifting outward from the shore,
And from care and sorrow.
Leaving these, it may be so,
Till the coming morrow.

Sweet the music of the oar
Playing with the water;
Nearer seems the distant shore:
Fast recedes the other.

Calmly rests the longing heart,
Soothed by murmuring waters,
And the cool and fragant breeze,
Borne by zephyr's daughters.

Till the soul is lifted up,
From this world of sorrow;
Thankful for this life to-day.
Trusting for the morrow.

So may we our frail bark guide
Down life's stormy river.
And with loved ones by our side
Anchor in the Harbor.

June 13th, 1867.

Written for Moore's Rural New-Yorker.

"RUN AWAY FROM HOME."

"A BRIGHT, intelligent lad, between the ages of eight and nine years, arrived here one day last week on his way east, with the intention of leaving home and friends forever." This paragraph in a newspaper came under my notice and led me to reflect what the state of affairs could be in that home, to induce this *young* lad to forsake all that *should* be dear, for a life, perhaps, of wretchedness and despair. What can be the influence that father or mother exert, or what are the pleasures presented to that youth to make home attractive and happy? God forgive those who turn their household altar into a place of strife! Is that father a frequenter of the bar-room—bringing ruin and poverty to his family? or is that mother a lover of the frivolity of fashion and society—devoting her mind and heart to that, rather than a lover of her children, and of those sweet and sacred duties which God hath decreed should be hers! Sad, indeed, will be that mother's or father's heart, when, on the last day they are called to give an account of their stewardship. Think of this, parents. Perform faithfully your duties to those whom God has intrusted to your care. Go to your Bible and to your own hearts, and there you will find them plainly written.' Make your homes pleasant places of amusement and instruction, rather than of dread to your children—and we will have fewer crimes of every description to record. Our bar-rooms will be deserted. The allurements of the gaming table will cease to be attractive, and our houses of correction and jails will become tenantless and fall to decay; and each young man and woman grow up to be *useful, honorable* members of society. Could the feeble efforts of my pen avail anything towards the establishment of this feeling in the hearts of all parents, and the suppression of the *existing* and *growing* evils resulting from the thoughtlessness now too prevalent, gladly would I devote my life to this important end. Just think for a moment what might be the lot of this young and susceptible lad, wandering away among strangers, friendless and alone, without a cent in his pocket, and knowing not where next to obtain even so much as a crust of bread, or where to lay his aching head. Imagine your feelings, reader, were this one of your own children, and you will then understand the propriety of being ever watchful of those dear ones who are intrusted to you for instruction in this life and the life beyond the grave.

Conneaut, Ohio, July, 1867. W. J. BIGGAR.

WHICH DO YOU PREFER?

DR. JOHNSON, after speaking of various spectacles of human suffering, and of the sighs and groans by which the afflicted seek relief, once remarked, "The laugh of a merry and careless sinner is worse than all."

Madame Guyon was imprisoned for loving the truth more than the glitter of courts; when put in a dungeon she was blessed with the presence of Christ and delightful views of heaven, and she triumphantly sang,

"Strong are the walls around me
That hold me night and day;
But they who thus have bound me
Cannot keep God away:
My very dungeon walls are dear,
Because the Lord I love is here.

"They know who thus oppress me
'Tis hard to be alone;
But know not One can bless me
Who comes through bars and stone;
He makes my dungeon's darkness bright,
And fills my bosom with delight."

Not long after the death of Madame Guyon, Madame de Pompadour was made mistress of Versailles by that voluptuous old monarch, Louis XIV. Alluding to the popular dissatisfaction at her imprudent conduct, and to the revolution which she saw approaching, she used to remark, "*Apres nous, le deluge*"—after us the deluge. During her life the French court was the scene of unexampled gaiety and dissipation. She died in misery, trembling at the wrath of the people and the judgment of God.

"My whole life," she said, in a gloomy hour, "has been a continual death."

Which appears the most enviable situation, Madame Guyon, feeding on angel's food in her dungeon, or Madame de Pompadour, trifling with the most important concerns in the most splendid court of Europe?

STORIES OF EMINENT ENGLISH JUDGES.

They tell a capital story of ex-Chief Baron Pollock; that one who wished him to resign waited on him and hinted at it, and suggested it for his own sake, entirely with a view to the prolongation of his valued life, and so forth. The old man rose and said with his grim, dry gravity, "Will you dance with me?" The guest stood aghast as the Lord Chief Baron, who prides himself particularly upon his legs, began to caper about with a certain youth-like vivacity. Seeing his visitor standing surprised, he capered up to him and said: "Well, if you won't dance with me, will you box with me?" And with that he squared up to him, and half in jest, half in earnest, fairly boxed him out of the room. The old Chief Baron had no more visitors anxiously inquiring after his health, and courteously suggesting retirement.

A queer scene took place in the English Court of Chancery between Lord Campbell and an eminent lawyer—a Queen's counsel. In an action brought to recover for damages done to a carriage, the learned counsel repeatedly called the vehicle in question a broug-ham, whereupon Lord Campbell, with considerable pomposity, observed: "*Broom* is the the more usual pronunciation; a carriage of the kind you mean is generally and not incorrectly called a *broom*—that pronunciation is open to no grave objection, and it has the advantage of saving the time consumed by uttering an extra syllable." Half an hour later in the same trial, Lord Campbell, alluding to a similar action given, said: "In that case, the carriage which had sustained injury was an *omnibus*—." "Pardon me, my Lord," interposed the Queen's counsel with such promptitude that his lordship was startled into silence, "a carriage of the kind to which you draw attention is usually termed a *buss*; that pronunciation is open to no grave objection, and has the great advantage of saving the time consumed by uttering the two extra syllables." The interruption was followed by a roar of laughter in which Lord Campbell joined more heartily than any one else.

BORROWED BOOKS.

The practice of writing mottoes on the fly-leaves of books that are liable to be lent, may be classed by some among the eccentricities; but the following specimens in the New York Observer should, from their suggestiveness, commend themselves for that purpose:

This very excellent stanza, relating to the returning of borrowed books, is from the pen of the late Joseph P. Engles, Esq., of Philadelphia, a gentleman of good judgment, strict principles and rare literary acquirements. These lines come with good grace from the pen of Mr. Engles, who always practiced whatever he preached.

"This book belongs to Mr. ——.

If thou art borrowed by a friend,
Right welcome shall he be
To read, to study, not to lend,
But to return to me;
Not that imparted knowledge doth
Diminish Learning's store,
But books, I find, if often lent,
Return to me no more.

Read slowly; pause frequently; think seriously; keep cleanly; return duly, with the corners of the leaves not turned down."

In ancient times there were but "three Graces;" the accomplished women of our day have ten times that number.

Sabbath Reading.

UP HILL.

Up hill—but up to light,
As recompense for all the wayside toils,
In climbing out of night
To win from struggling life immortal spoils.

Up hill—but up to peace,
The land forever tranquil and serene,
Where tears and sorrows cease,
And no dark wave of troubling care is seen.

Up hill—but up to bliss,
To be forever free from stains of sin,
When Earth's last good-night kiss
Becomes the seal of Heaven's glad welcome in!

Up hill—but up to life—
A life which never wearies nor grows old,
Unvexed by care and strife;
Immortal in the shining upper fold.

Up hill—but to my home,
To father and the dear ones of my love?
A stranger here I roam,
But still press up to that high home above?

ABOUT SELECTING MINISTERS.

In the recent Boston correspondence of the Springfield Republican, we find this suggestive paragraph:

The magnet does not attract steel so strongly as one human quality attracts another of its kind. The mere silent presence of a good man or woman, draws to the surface and concentrates all the health that is in us. And the bad, weak, or narrow minded man works us an equal amount of harm. Do not we know persons who transform us into poets and saints? and others the sight of whom exasperates us, who make us say and do things for which we despise ourselves directly they are gone? Do churches consider this truth sufficiently in selecting their ministers? They look for earnest workers, brilliant speakers; but it is high-mindedness and purity of heart that open the doors of Heaven. Not by his talent, but his goodness, does the true man regulate our souls like watches that had gone wrongly, undo the undoing of weaker brethren, and put us once more in full sympathy with the church and its beneficent work. Reverend Bellamy Stokes there are; Dr. Holmes is sketching them with only too light strokes. I think their day of reckoning has come, though I have heard of a woman who stopped her subscription to the Atlantic Monthly "because she would not see the clergy so abused." But there are good, earnest, honest men left in the church, devoted, magnanimous, true. Not long ago a society near Boston raised the salary of their pastor from $1,200 to $2,000, and he expressed much satisfaction at the change. Lately, he being a fine preacher and a ripe scholar, and ministers scarce, the society voted another increase of salary which he declined. It had been difficult, he said, to live upon $1,200, but the present salary supplied all his needs, and there were persons in the parish who could not afford to pay their proportion of three thousand dollars. What man in any other calling would be capable of such renunciation?

EXTRAORDINARY ANSWERS.

A PUPIL of Abbe Sicord gave the following extraordinary answers:

"What is gratitude?"

"Gratitude is the memory of the heart."

"What is hope?"

"Hope is the blossom of happiness."

"What is the difference between hope and desire?"

"Desire is a tree in leaf, hope is a tree in flower, enjoyment is a tree in fruit."

"What is eternity?"

"A day without yesterday or to-morrow—a line that has no end."

"What is God?"

"The necessary being, the son of eternity, the merchant of nature, the eyes of justice, the watch-maker of the universe, and the soul of the world."

THE STILL SMALL VOICE.

There is lasting significance in that vision of the Hebrew prophet, wherein God came, not in the whirlwind or the earthquake, but in the still, small voice. Its truth comes home to us in the busy life of to-day as it fell on the soul of that Hebrew in the quietude of the Orient.

It is not in the whirlwind of some great excitement, not in the earthquake of some mighty upheaval, but in the still waiting of the soul for truth, that we hear the Divine Voice. Once heard and reverently listened to, it makes us strong when the whirlwind comes, firm amid the earthquake's shock, while Church and State may reel and totter, steadfast for the right and serene amid wildest commotions.

WESLEY'S LAST PEN.—The last pen possessed by Wesley is in the possession of a lady at York, and the following lines are by the talented James Everett:

No more the fowl shall wing the air,
Or to its evening haunts repair—
Its snow-white plume renew;
Nor Wesley more shall walk with men,
Whose well-trained hand employed the pen
That here attracts the view;

But *thoughts* inscribed upon the page,
Shall live with men from age to age,
Though "finis" ends the line;
And these the erring steps shall guide
When scribes and pens are laid aside
And like the stars shall shine.

MISSIONARIES in Japan report that gradual but rapid changes have been going on from the beginning in that country, and circumstances indicate that the whole land is about to be thrown open to Christian effort.

The Reviewer.

CYCLOPÆDIA OF BIBLICAL, THEOLOGICAL AND ECCLESIASTICAL LITERATURE: Prepared by Rev. JOHN McCLINTOCK, D. D., and JAMES STRONG, S. T. D., Vol. 1, A, B. New York: Harper & Brothers.

THIS solid book of 900 pages, with its 61 illustrations is but the beginning of a work that may comprise some dozen such volumes. It is to be not only a work of reference and description on the Bible, but on Historical, Doctrinal and Practical Theology, and no work ever published so thoroughly covers this broad ground. These able men, with their company of able contributors, have been busy for years, and this is but the first fruits of their diligence. DARROW & KEMPSHALL sole agents.

THE COLLEGE, THE MARKET, AND THE COURT; Or, Woman's relation to Education, Labor and Law. By Mrs. CAROLINE H. DALL. Boston: Lee & Shepard.

FIVE hundred fair pages, by an accomplished woman, of high character, earnest yet genial spirit, and most faithful in research. "The Christian Demand and Public Opinion," "Death or Dishonor," "The Opening of the Gates," "English and American Law," are titles of some chapters, and give a glimpse of the erudite information, as well as the purpose of this book. In these days of thought and inquiry touching the subjects it treats of, it will be of special value and interest, and the style and spirit of the work will command respect. Its price is $2.50, free of postage.

COLLEGE LIFE: Its Theory and Practice. By STEPHEN OLIN, D. D. BENCH AND BAR: Their Wit, Asperity and Amenities. By L. J. BIGELOW. New York: Harper & Brothers.

DR. OLIN is an able and veteran educator, and his views must be of value. The "Bench and Bar" will furnish choice entertainment of a special kind, and is dedicated to ROSCOE CONKLING. Sold by STEELE & AVERY.

A PAINTER'S CAMP. By PHILIP G. HAMERTON. In Three Parts, England, Scotland, France. Boston: Roberts Brothers

A CHARMING and instructive book,—scenes and persons, as seen by an artist's eye, and felt by an artist's soul, full of all harmony and sweet humanity. Read and learn from this *useful* book. Sold by DARROW & KEMPSHALL.

SHAKINGS AND ETCHINGS FROM THE NAVAL ACADEMY. By PARK BENJAMIN, Midshipman. Boston: Lee & Shepard.

A PORTFOLIO of some fifty sketches, illustrative of life in the Naval school, designed and engraved with signal skill, and great humor. Sold by DARROW & KEMPSHALL.

HOLMES' PATRIOTIC SONGS. By S. N. HOLMES of Syracuse. Dedicated to "the fallen heroes" of our late war.

A PAMLHLET "for coming campaigns," embracing wit, patriotism and genius, and the words adapted to the best popular music.

SERPENTS IN THE DOVE'S NEST. By Rev. J. TODD, D. D. Boston: Lee & Shepard.

A PAMPHLET of two chapters; "Fashionable Murder," and "The Cloud with a Dark Lining;" treats on the too prevalent crimes of infanticide and criminal abortion. Sold by DARROW & KEMPSHALL.

LITTLE BROTHER, and Other Stories. By FITZ HUGH LUDLOW. STORIES AND SKETCHES. By our best authors. Boston: Lee & Shepard.

THE first, a charming book, not only for young folks, but for older folks who can *feel young*. The second, a collection of choice matter from best sources.

THACKERAY'S LECTURES. New York: Harper & Brothers.

IN this fine book of 500 pages, are the famed lectures of this great author on, "The English Humorists," and "The Four Georges." They need no commendation. Sold by STEELE & AVERY.

AMY DENBROOK. Published by J. O'Kane, 126 Nassau St., New York.

THIS "life drama" is a story of a woman's inner and outer life, and is above the ordinary range of stories,—with more and better thought and more fitly expressed.

BARNABY RUDGE, AND SKETCHES BY "BOZ." New York: Hurd & Houghton.

HERE are 600 pages of fair print, fitly Illustrated,—a well known story, and the humorous "sketches" by DICKENS, for only $1.50. Sold by DEWEY.

LAST CHRONICLE OF BURSET. New York: Harper & Brothers.

A STORY by ANTHONY TROLLOPE, whose name is warranty of interest and ability. Its 400 broad pages have fit illustrations. Sold by STEELE & AVERY.

ROMANCE OF THE GREEN SEAL. By Mrs C. A. WARFIELD. WHO WAS HE? By Mrs. M. V. VICTOR. New York: Beadle & Co.

Two pamphlet stories from these publishers who give so much in compact form for the public wants.

NICHOLAS NICKLEBY. Boston: Ticknor & Fields.

ANOTHER of DICKENS' stories, too well known and excellent to need comment, in the diamond edition of that firm. Illustrated, $1.75; plain, $1.50. Sold at all our book stores.

THE BANKRUPT LAW. New York: Harper & Bros.

THIS late and important "Act to establish a uniform System of Bankruptcy," with the orders and forms, is published in a pamphlet of 80 pages. It must be of signal value. Sold by STEELE & AVERY.

CURIOUS MYTHS OF THE MIDDLE AGES. By S. B. GOULD. Boston: Roberts Brothers.

A COLLECTION of quaint old stories illustrative of life in bygone days. Sold by STEELE & AVERY.

LOUISA OF PRUSSIA AND HER TIMES. New York: Appleton & Co.

ONE of LOUISA MUHLBACH'S historical novels, always of value and interest. Sold by ADAMS & ELLIS.

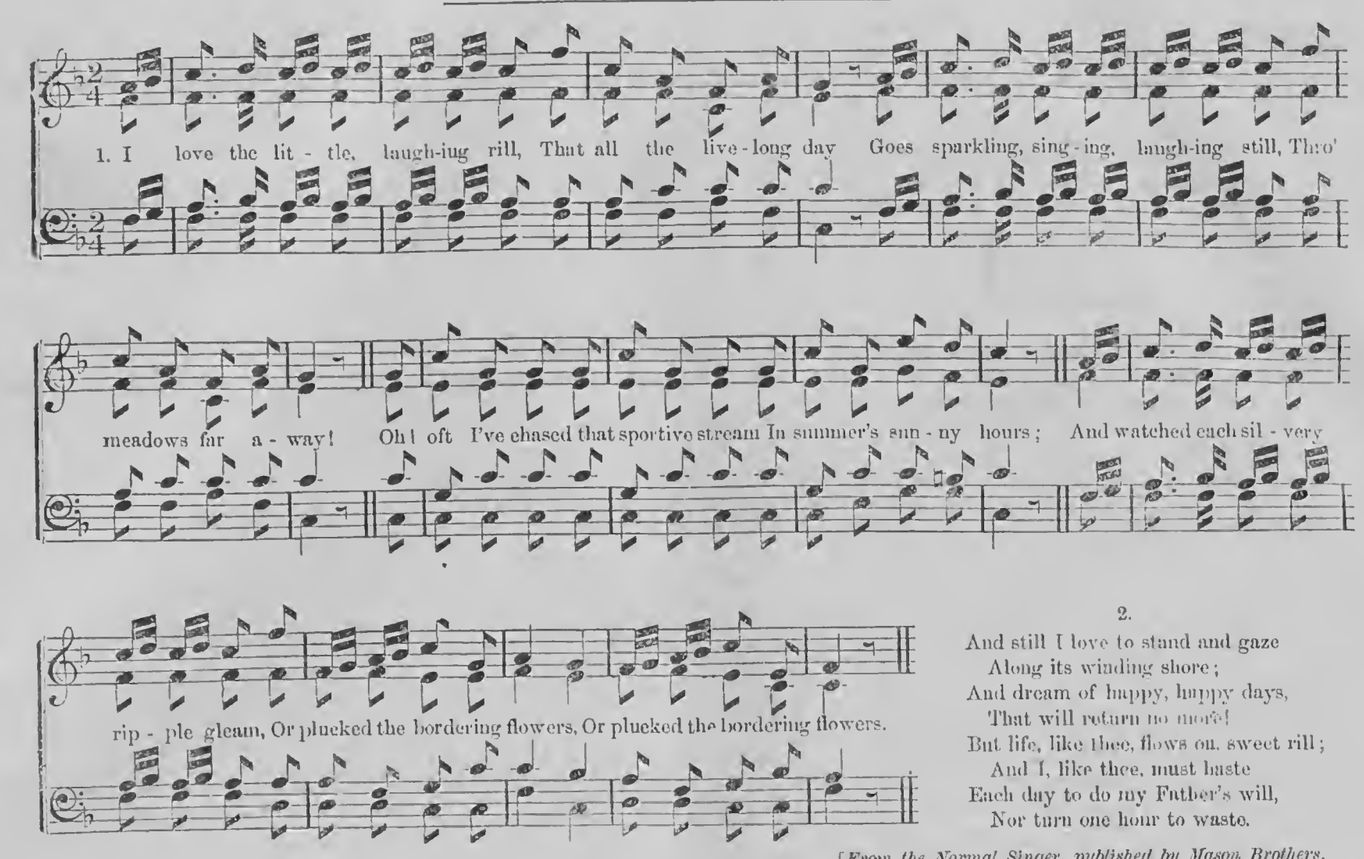
JESSICA'S FIRST PRAYER. Boston; Henry Hoyt.

AN attractive volume, the first of the Sunday School Series of juvenile religious works.

RAYMOND'S HEROINE. NORA AND ARCHIBALD LEE. Mr. WYNYARD'S WARD. Three of "Harper's Select Novels,"—from STEELE & AVERY.

MARTIN CHUZZLEWIT. One of DICKENS' stories in the clear type of Hurd & Houghton's. Globe edition. Sold by ADAMS & ELLIS.

I LOVE THE LITTLE LAUGHING RILL.



2.

And still I love to stand and gaze
Along its winding shore;
And dream of happy, happy days,
That will return no more!
But life, like thee, flows on, sweet rill;
And I, like thee, must haste
Each day to do my Father's will,
Nor turn one hour to waste.

[*From the Normal Singer, published by Mason Brothers.*

Various Topics.

OUR EXCHANGE LIST.

IT'S a rainy day; welcome to the thirsty earth and welcomed by all,—even if it does spoil some hay. Rain gives the farmer a little rest, although nobody need rust, on a good farm, if it does rain. But, rain or shine, hot or cold, the RURAL must go right on, and its weekly issue must come out. If our good readers pity us a little, we beg them to reserve the larger share of their condolence for the workers on these daily papers in a stone's throw of us; for the constant and prompt work, the remorseless demand of each day, the vigilance not only from "early dawn to latest eve" but far into the silent night, which they must be ever ready for. But we don't ask pity.

This is a working world, and work is no curse but a blessing, unless it be too severe. These nerves and muscles, these vital currents constant in their flow, these pulsing brains, these thoughts that *will* stir, were not made for inertia but for action, and it is a rich privilege to be able to do something for the common weal, to carry our share of the world's burthen, to carve out a better future for ourselves and others. So let us all put heart, and hand, and brain, to our share of the world's work and do it. "Shirks and cheats, get out of the way. No counterfeit coin wanted here," is the word of mother Nature.

But we wander, for here lie our exchanges untouched, and our work is to see them all. On the table beside our desk are forty newspapers,—not "forty save one," like the stripes of the old punishment, but with from one to a score to carry. What a curious mingling of varied thought, what a kaleidescope of current events, what a daily revelation of the world's trade and piety, and science, and policy, and benevolence and meanness! Reconstructed and unreconstructed, radical and conservative, orthodox and heterodox, all together, peaceful as the lion and the lamb in their millenial slumbers,—more so than some of their readers, it may be.

Here's the Corpus Christi Advertiser, its name giving one a glimpse of life in the South-west, and going back to old Spain for its Catholic beginning. Here are four columns of *fac similes* of brands on cattle, "advertised at four dollars a year." Triangles, crosses, pot-hooks, initials, and things indescribable, such as herdsmen burn onto the flanks of their cattle on Texan prairies. We seem to hear the bellowing of herds and clash of horns, and to get a sniff of pure air from the broad plains.

Here is a New Orleans journal, one side French, the other English. How vital that old blood of "la belle France" must be, to keep its musical language, its graceful manners, its *suave* courtliness so long in this Anglo-Saxon land. Next comes a handsome sheet from Portland, Me., bringing a cool breeze from the White Mountains, and a faint perfume of the great pine woods. Its broad columns have news and advertisements, and radical politics in abundance. There must have been vitality in the very ashes of that city, for it has risen into a richer life than ever. Surely the next sheet is from Alabama, with its positive motto, "Our Rights we will Maintain," and its first word calling some radical convention "a trumped up farce." The largest liberty surely. But no matter—in the long pull the truth wins, wherever it may be. Here comes from Chicago a great sheet packed with the spirit of the North-west. The broad lake, the narrow and dirty river crowded with masts, the elevators, the city built up like JONAH'S gourd, but not to wither like it, and the great prairies beyond with the pulsing energy of their inhabitants rise in vision. Here is a great blanket sheet from St. Louis sending the thoughts still farther. Full of power and talent too these Western sheets are,—there are giants in that land, surely.

Next comes a South Carolina paper, just beginning to see the great future possible for the old Commonwealth, under the new order of things. Then we find the sea-board journals with marks of mighty commerce, and broad plans, and keen device for mastery in politics, as well as trade, mirrored forth on their ample pages; Journals of Science, Agriculture and Religion; Magazines, not only from "Gotham" and "the hub," but from over the Atlantic. Sheets from San Francisco almost big enough to spread across the Continent and overshadow that prodigous bird, the American Eagle, and country journals, from the Penobscot to the Sabine, as well as fair sheets from our Canadian neighbors. These country papers, are some of them *excellent*, and when they are they thrive; for, if you make a newspaper *worth having* people will have it. Some editor's havn't found this out, and so lazily grumble, whereat people turn up their honest noses and depart. We've just begun to tell about our exchange list, but space is precious, and patience hath limits, and we forbear. From all these we clip and select, and abbreviate, and if you think it's play, *just try it—that's all.* But mind, we don't grumble, good readers. We work for you, and you for us, helping each other. So let's put in, on both sides, and do our best.

GREAT SIGHTS OF THE WORLD.

MR. GREELEY writes from Niagara Falls to to the New York Independent, of some of the great sights of the world which he has witnessed:

"Of the grand sights I have enjoyed—Rome from the dome of St. Peter's—Italy from the southern brow of Mount Cenis—the Alps from the valley of Lake Como—Mont Blanc and her glaciers from Chamouny—Niagara—and the Yosemite—I judge the last named the most unique and stupendous. It is a partially wooded gorge, 100 to 300 feet wide, and 3,000 to 4,000 feet deep, between almost perpendicular walls of gray granite, and here and there a dark yellow pine rooted in a crevice of either wall, and clinging with a desperate tenacity to its dizzy elevation. The isolation of the Yosemite—the absolute wildness of its sylvan solitudes, many miles from human settlement or cultivation—its cascade 2,000 feet high, though the stream which makes this leap has worn a channel in the hard bed rock to a depth of 1,000 feet—render it the grandest marvel that ever met my gaze. Next to Yosemite, I judge that Niagara has more distinct and diverse attributes of sublimity than any other. Its volume is so vast that its height is dwarfed when measured by the eye alone. You do not believe that it can be 150 feet from the surface below the fall till you have given your apprehension time to expand and adjust itself to the grand proportions of the scene."

A REVENUE LESSON FROM ENGLAND.

THE British revenue is nearly $350,000,000 in gold, and is drawn from a few sources—customs, $120,000,000; excise, $100,000,000, (spirits and malt liquors;) stamps, $50,000,000; property and income tax, $30,000,000; post-office, nearly $25,000,000, and a few miscellaneous items make up the remainder. The constant effort is to diminish the number of these items of taxation, and to have no tax or duty of which any one can reasonably complain. The necessaries of life are scarcely taxed at all directly. Food, clothing, reading, are untaxed. Rents are a little increased by the property and income taxes, no doubt, but rents are not extravagantly high.

Our government could wisely take a lesson from the sagacious financial ministers of England in simplifying and lessening the number of taxes. One great principle they keep in view, which we need to see more clearly, and thus help our home industry: *Avoid taxing the useful processes by which wealth is gained*, but tax luxuries *and wealth when acquired.*

THE NEWSPAPER.—De Tocqueville, in his work on America, says:—"A newspaper can drop the same thought into a thousands minds at the same moment. A newspaper is an adviser who does not require to be sought. Newspapers, therefore, become more necessary in proportion as men become more equal individuals and more to be feared. To suppose that they only served to protect freedom would be to diminish their importance; they maintain civilization."

THE BONES OF BULL RUN.

A CORRESPONDENT of the Cincinnati Commercial, writing of a visit to the battle-field of Bull Run, says:

"The first sight that greeted my eyes at Manassas Junction was a forcible reminder of the war. Two huge piles of bones—horse bones, cattle bones, and, said to say, human bones intermingling, lay whitening right in front of the hotel. They are picked up off the battle-field by the owner of the soil, and carted here for shipment by the cars to be ground into fertilizers at some mill at Baltimore. The price here is a "penny a pound," one of Fairbanks' platform scales standing ready at the railroad track to weigh the deliveries, and several tons of bones have been shipped. One man, with a girl to help him, collected in two days, bones enough to come to $16. My landlord, a Pennsylvania Dutchman, named Varner, brought out a long powerful looking bone from behind the bar, saying, 'Here, now, is some poor fellow's thigh bone.' The sight was not one to inspire cheerful reflections. In another great heap were piled masses of camp kettles, broken musket barrels, wheel tires, solid shot and broken shells, fragments of swords, bits of wagon gear, old rusty fire-locks and the like. This, too, is for the market, the last relics of the huge debris of destruction, of which every battle is the fruitful parent.

THE LOWER ORDERS IN FRANCE.

THE Abbe Mulbois has recently published a work in Paris, which thus describes the lower classes of the French people:

"At first sight the French people—the lower orders—are a real mystery; an inconceivable medley of weakness and of courage, of goodness and ill-will, of delicacy and rudeness, of generosity and egotism, of seriousness and frivolity. It may be said that they possess two natures; one endowed with good sense, which is generous, feeling and contrite; the other unreflecting, which raves and drinks, curses and swears. On one side they are frivolous, vain, weak, scornful, skeptical, credulous, headstrong. In their frivolity they jeer at everything—at what is frivolous and what is serious, at what is profane and what is sacred. Their weakness under temptation is lamentable; they have no restraint over themselves. But, above all, their credulity is unbounded. This is their weak, their bad side; the source of one portion of our evils. But I hasten to say that if there is evil in the French people, there is also good, much good. They are witty, frank, logical, generous, amiable and above all, they have hearts. This is undeniable; and we should never despair of a man who has a heart; for there is always something in him to fall back upon. When all else is lost to this people their heart survives, for it is the last thing which dies within them."

A COTTON RIVAL.—RAMIE.

SOME of the Southern journals mention a possible rival to the cotton plant in one of Japanese origin, called Ramie, and grown to some extent in Mexico. A few roots were sent to a gentleman in Louisiana last spring, who is testing them with a view of comparing their product with that of the Southern staple. The Ramie is said to resemble, in structure and growth, the common nettle; is hardier than cotton; can be cultivated at much less expense; will produce three crops in a season in a climate as genial as that of the Gulf States; does not require replanting oftener than once in six or seven years; is more productive and of stronger fiber than the cotton plant, is cultivated as readily as the sugar cane, and is exempt from the many casualties incident to the cultivation of the plant it is expected to rival. Experiment may demonstrate what is here assumed, but we confess to little faith in this cotton substitute come whence it may. Should the experiment, however, prove a success, the advantages likely to flow from its introduction, can scarcely be overestimated.

A YOUNG man, with a pair of fast horses, soon gallops through a fortune.

Reading for the Young.

BRUCE AND THE SPIDER.

SOME six hundred years ago, when England and Scotland were separate kingdoms and often at war, ROBERT BRUCE was rightful heir, by inheritance, of the Scottish throne, but EDWARD I, of England claimed it as heir also, and put BRUCE to sore trouble for a while, as he had great armies and much wealth and power. BRUCE, after some hard defeats, was forced to find shelter in the hut of a poor but faithful friend; lying on his humble bed and thinking of his difficulties, he saw a spider swinging from a beam overhead, and thus trying to reach its web which stretched across to another beam, and fasten a thread to it.

With singular interest he watched its perseverance under difficulties, and the thought flashed into his mind, "I may learn a lesson." Six times he saw the spider try and fail, and the thought came "I, too, have tried six times, and failed." Every motion of the spider was now closely scanned. It made another effort, with added care, swinging to and fro to gain the needed impulse, *and at last succeeded, touched the web, and made fast its thread.*

The King resolved to try again, rose from his bed, after a sound sleep, with strong heart, rallied his friends, drove EDWARD from the kingdom, was crowned himself with fit ceremony, and left a goodly name when his kingly course was run.

What think you, boys and girls; will you try again?

HARRY'S SERMON.

"EDDIE," said Harry, "let's play at going to church; and I'll be the minister, and preach you a sermon."

"Well," said Eddie, "and I'll be the people."

So they went up stairs together. Harry set an old fire screen up in front of him, by way of a pulpit, and thus began:

"My text is a very short and easy one—'Be kind.' There are some little texts in the Bible on purpose for little children; and this is one of them. These are the heads of my sermon:

"Firstly—Be kind to father, and don't make a noise when he has a headache. I don't believe you know what a headache is, but I do. I had one once, and I didn't want to hear any one speak a word.

"Secondly—Be kind to mother, and don't make her tell you to do a thing more than once. It is very tiresome to say, It is time for you to go to bed, half a dozen times over.

"Thirdly—Be kind to baby."

"You have left out 'Be kind to Harry,'" broke in Eddie, forgetting that he was the people."

"Yes," said Harry, "I don't mean to mention my own name in my sermons. I was saying—be kind to my little Minnie; and let her have your red soldier to play with, when she wants it.

"Fourthly—Be kind to Jane, and don't scream and kick when she washes and dresses you."

Here Eddie looked a little ashamed and said: "But she pulled my hair with the comb."

"People mustn't talk in church," said Harry.

"Fifthly—Be kind to kittie, and do what will make her purr, and don't do what will make her scratch and squall."

"Isn't the sermon nearly done?" asked Eddie; "I want to sing," and without waiting for Harry to finish his discourse, or to give out a hymn, he began to sing; and so Harry had to stop; but it was a very good sermon after all.

THE CHAMELEON AND PORCUPINE.

A FABLE.

A CHAMELEON once met a porcupine, and complained that he had taken great pains to make friends with everybody, but, strange to say, he had entirely failed, and could not now be sure that he had a friend in the world.

"And by what means" said the porcupine, "have you sought to make friends?"

"By flattery," said the chameleon. "I have adapted myself to all I met; humored the follies and foibles of every one. In order to make people believe that I like them I have imitated their manners, as if I considered them models of perfection. So far have I gone in this that it has become a habit with me, and now my very skin takes the hue and complexion of the thing that happens to be nearest. Yet all this has been in vain, for everybody calls me a turn-coat, and I am generally considered selfish, hypocritical, and base."

"And no doubt you deserve all this," said the porcupine. "I have taken a different course, but I must confess that I have as few friends as you. I adopted the rule to resent every injury, nay, every encroachment upon my dignity. I would allow no one even to touch me without sticking into him one or more of my sharp quills. I determined to take care of number one; and the result has been, that while I have vindicated my rights, I have created a universal dislike. I am called old Touch-me-not, and if I am not as much despised, I am even more disliked than you, Sir Chameleon."

OUR SUNLIGHT.—Mrs. Hemans, in her last days, when among the mountain scenery of Wicklow during a storm, was struck by an effect in the hills, produced by a rainbow diving down into a gloomy pass, which it seemed really to flood with its glowing colors. "I could not help thinking," said the dying poetess, "that it was like our religion, piercing and carrying brightness into the depths of sorrow and the tomb." All the rest of the scene around that one illuminated spot was wrapped in the profoundest darkness.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 27, 1867.

NEWS OF THE WEEK.

From Washington.

THE President sent his veto of the late Reconstruction Bill to the House the 19th. A debate took place. Gov. Boutwell reviewed it severely, and urged the House to examine the charges against the President, and, if there be cause, impeach him without delay. The bill was passed over the veto by 100 to 22 in the House, and 30 to 6 in the Senate.

In the House, Mr. Judd offered a resolution to the effect that a beautiful stone, sent by the people of Rome to the President, with an inscription to commemorate the virtues of Abraham Lincoln had laid in the rubbish in the cellar of the White House since it came, a year ago, and that the President be requested to send it to the Capitol to be put in some fit place. Adopted.

The Committee on the Assassination of President Lincoln, by motion of Gen. Butler, were authorized to appoint a sub-committee.

Resolutions in favor of the brave Cretans passed the House unanimously; they were offered by Mr. Broomall of Pennsylvania.

On motion of Mr. Julian, the Secretary of War was instructed to inform the House what swamp lands granted States lately in rebellion were undisposed of.

A Herald dispatch says that Mr. Abbott, a brother of the Historian, has opened a proposal to some Congressmen for the annexation of Mexico, said to be approved by Juarez and others.

The defense in Surratt's trial are seeking to show that Surratt was at Montreal, in Vermont, and Canandaigua, so near the time of the murder that he could not have reached Washington. Canadian witnesses testify that he was in Montreal the day of the murder.

The House Judiciary Committee submitted the testimony on impeachment of several hundred pages, but as the hour for adjournment came as they were ready for a report, the testimony is not to be published.

Mr. Capron of Illinois, was nominated for Commissioner of Agriculture.

At 3 P. M., Saturday, the 20th, both Houses adjourned to Nov. 21st.

From the South.

GEN. SICKLES has written a letter to a merchant in Charleston, S. C., in reply to inquiries made by certain foreigners and Northern capitalists, in which he says: — "That all advance of money, subsistence, implements, fertilizers, loaned, used or required for the purpose of aiding agricultural purposes, wages for labor performed in the production of crops, shall be a lien on the 'forty-three' crop, and payment of the amount due for such wages shall be enforced by the like remedies provided to secure advances of money and other means for the cultivation of the soil." The local civil law formerly gave the landlord of leased lands a superior lien. The remedy by distress for rent is abolished, thus removing the lien of the landlord, which has hitherto been paramount.

The Tribune's Raleigh, N. C., special of July 18th, says the Provost Court for the counties of Cumberland, Harnett, Richmond and others in North Carolina, established by Gen. Sickles, of which W. H. Porter is Chief Justice, has convened in Fayetteville. The most important case for trial is that of Jasper Williams, a colored man, who is under arrest, charged with persistently uttering incendiary speeches and inciting riot, and this charge is said to be preferred by a number of colored citizens.

Emerson Etheridge, Conservative candidate for Governor of Tennessee, has begun his series of meetings to close the campaign in East Tennessee. He has refused to divide time with Maynard, at Madisonville. The latter held an adjourned meeting after Etheridge closed.

A Times special says: — Letters from persons in New Orleans who have the confidence of Gen. Sheridan, state that he will soon issue an order removing the entire body of office holders in Texas, except a few who hold positions of minor importance, and who are considered good Union men. Judge Paschal will probably be appointed Governor in place of the present incumbent.

The freight on provisions carried free by the Nashville Railroad to the suffering poor of the South this season, is $11,676. Included in this is $10,000 worth of freight given to the Southwestern Relief Committee.

It is said there are 2,000 Loyal Leagues with 200,000 voting members, in the South.

Gen. R. E. Lee is chosen President of the Covington and Ohio Railroad in Virginia, and his son Chief Engineer.

Outrages in Texas are frequent. A colored church at Sterling was assaulted and two men and a woman killed.

From Canada.

THE Hon. Mr. Chanveau has succeeded in forming an administration. The following are the names of the ministers: — Mr. Chanveau, Premier, Secretary and Registrar; Mr. Dunkin, Treasurer; Mr. Quinet, Attorney-General; Mr. Archambault, Commissioner of Public Works; Mr. Beauben, Commissioner of Crown Lands; Mr. De Boucherville, Speaker of the Legislative Council; Mr. Irvine, Solicitor-General. After being sworn in, the ministers paid their respects to Lord Monck. Their salaries are stated to be $3,000 to each, except the Premier, who has $4,000, and the Solicitor-General $1,000.

Lord Monck on the 17th, received a deputation and address on the International Railroad, but his reply was not very encouraging.

TORONTO, July 17. — The following members of the Government of Ontario were sworn in last night. Hon. J. S. Macdonald, Attorney-General; Hon. John Carling, Commissioner of Agricultural and Public Works, and Mr. Stephen Richards, Commissioner of the Crown Lands. Mr. R. Dalton will be clerk of the Executive Committee.

MONTREAL, July 18.—Messrs. Cartier and Galt have prayed Her Majesty to be allowed to decline the title of Companion of Bath. The Minerve gives at length the reason why Cartier as representative of the French and Galt of the Protestant population of Lower Canada, expected the same rank as McDonald. Cartier also feels aggrieved at being placed on the list after McDougall and Howland.

Canada, at the Paris Exposition, carried off three gold, thirteen silver and twenty-four bronze medals, besides forty-three honorable mentions.

From the West.

THE re-union of the Alumni of the Indiana State University at Bloomington, was full of interest, and the commencement exercises at the same time were successful.

The Missouri River, in the late rise, cut off the greatest bend between Omaha and St. Louis, near Peru, saving eighteen miles of navigation. The river transferred a large tract of land from the Nebraska to the Iowa side.

The great tabernacle for the Saints at Salt Lake City is now finished. It is two hundred and fifty feet wide, and furnishes comfortable sitting room for ten thousand persons.

Railroad men in California have decided to cover the cuts in the mountains to prevent their being filled up with snow in winter. According to the design adopted, the roofing will have a double support of stout timbers at the eaves and the peaked top, so as to be strong enough to sustain the weight of many tons of snow.

Indian depredations still continue. A train of seceding Mormons are on their way eastward across the plains.

Foreign Intelligence.

THE Empress Eugenie visited Victoria at Windsor Castle on Sunday, the 21st. A request was made by the British Government that the House of Lords for the present express no opinion on the execution of Maximilian. A great naval review was held at Spithead in honor of the Sultan, the squadron mounting 1,100 guns. A thousand vessels were filled with spectators. Efforts are being made for the release of General Nagle, one of the captured Fenians, and an American officer.

Six Fenian rioters have been sentenced to prison at Dublin. There is great want of food in County Mayo and Connemara, Ireland.

Garabaldi announced at Florence to a great meeting that he had come to release Rome from Papal tyranny. Advices from Florence say the Garibaldians menace the city of Nitebo. William of Prussia is to send an envoy to this country to make a new postal treaty. News from Vienna says Arch-Duchess Sophia, mother to the Emperor and Maximilian, shows signs of insanity. Kossuth is a candidate for the Hungarian Parliament.

Wm. L. Garrison was the guest of the city of Edinburgh the 19th.

Berazouki is imprisoned for life for the attempt to kill the Czar.

Napoleon is still buying army horses, and there is great activity in the military workshops. These facts create uneasiness in financial circles at Frankfort, and apprehensions of war with France are expressed.

IMPORTANT JEWISH CONVENTION.—A Convention of Jews has been in session at Philadelphia, nearly every synagogue in the United States being represented. It was resolved to co-operate in the removal of the Jews of the Turkish provinces and the Barbary States to Palestine, and to encourage the development of agriculture and the arts there. A paper read by Rev. Mr. Lesser claimed that the Fallachian tribes of Abyssinia and the people of the interior of China are the lineal descendants of the lost tribes. Their manners, customs and forms of prayer show this to be the case. As efforts are making to convert them to Christianity, a messenger is about to be sent out by the Universal Israelitish Alliance of Paris to counteract the movement.

IRON.—The great iron quarries of Lake Superior are situated just back of Marquette, where, until recently, all the ore has reached navigation. A letter from that place says: — "Four piers for the shipment of ore jut out into the deep waters of the bay and from them, were shipped last year 200,000 tons, the probability being that this amount will be increased at least one-third this year. Of pig iron 18,000 tons found its way to market from this port during the last twelve months. The next twelve months will probably see that amount more than doubled."

FROM ALBANY.—The Constitutional Convention has voted 78 to 29, against referring colored suffrage separately to the people. G. W. Curtis made an able speech for woman's suffrage the 18th. The Committee on the Legislature have reported in favor of 33 Senators, to be chosen from eight districts, New York choosing five, and to serve four years. The Assembly to have 139 members, chosen from counties, for one year. All to be paid $1,000 each, yearly.

SOUTH AMERICA. — The revolution in Peru is ended; the officers have surrendered and been pardoned by Congress. The President of Bolivia is reported to have disgracefully ceded to Brazil by a late treaty the whole territory on the right side of the Paraguay.

MR. J. A. WHIPPLE of Boston has the largest establishment, and is one of the most successful photographers in the United States.—*Springfield Republican.*

MASSACHUSETTS AGRICULTURAL COLLEGE.—Five buildings are now in the course of erection at Amherst, to be occupied as the Massachusetts Agricultural College, and are expected to cost about $75,000, of which $30,000 will be expended for the dormitory, $10,000 for the laboratory, $3,000 for the club house, and $20,000 for the botanical cabinet and plant house. The number of applications for admission makes it necessary to provide temporary arrangements in addition to those first contemplated.

MEXICO AND THE WEST INDIES.—Gen. Marquez is said to be hiding in the city of Mexico. The death of Santa Anna is confirmed. A letter from Gen. Prim to the Spanish revolutionists, says he first proposed French intervention in Mexico. General Salnave is elected President of Hayti.

THE Albany and Susquehannah Railroad is open, southwest, 120 miles to Bainbridge, and passes through a rich and healthful country heretofore quite aside from railroads.

An American Knight of the Legion of Honor.

AMONG the many who have been the recipients of medals and honors at the Exhibition at Paris, none stand so high on the list as the celebrated inventor and manufacturer of sewing machines, Elias Howe, Jr. The Emperor, who shows great tact and discrimination in these matters, has made Mr. Howe a Knight of the Legion of Honor, and the jury on sewing machines, who had the task of testing and awarding prizes for excellence, unanimously decided that Mr. Howe was not only entitled to great honors as the inventor of the sewing machine, but that he carried off the palm as a manufacturer as well, and to him was awarded accordingly the first of the only two gold medals assigned to this class. The numbers who have called on Mr. Howe at his office, No. 64 Regent Street, to offer their congratulations, prove that many besides the Emperor and the jury acknowledge the justice of the claim.—*The Courier, London, England.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, July 23, 1867.

MONEY at all the great commercial points in the country is easy, and at the East there is a good deal of idle capital. This will very soon be actively employed to move the crops. The New York Commercial Advertiser of Saturday notices the financial condition thus:—"The week closes with extreme ease in money, but without the reduction in the rate of interest generally anticipated a few days ago. The banks generally hold large surpluses, but appear disposed to have a certain balance remain idle rather than reduce the rate of interest. Money is offered freely at 4 per cent. on Governments and 5 per cent. on stocks. The transactions in the way of discount are very limited. Prime paper is wanted, but very scarce, and is current at 6@7 per cent."

The shipment of specie from New York on Saturday was $1,155,000.

The amount of July interest paid to the 20th was $11,000,000.

Gold is firm. Sales yesterday at 139¾. The Sub-Treasury has recently been a free seller, which served to keep down prices in the face of large exports.

Stocks are rather active. New York Central on Saturday touched 107¾; Erie, 71¼.

It is reported that gold has recently been discovered in Ohio. At Sherbrook, Nova Scotia, five thousand ounces were taken out in 1866. It is expected, with improved machinery, that the yield will be larger this year.

There was a sale of 20,000 tons of Pittston coal in New York last week. The prices for egg, stove and chestnut were as follows:

5,000 tons Egg	$4 30@4 60
9,000 tons Stove	4 70@4 77½
2,000 tons Chestnut	3 80@3 95

The general Commercial Convention, which was expected to meet at Cleveland about the middle of July, has been adjourned to August 6th. Several important measures bearing upon the trade and commerce of the country will be brought forward for discussion. There will doubtless be some expression in regard to the effect of the repeal of the Reciprocity Treaty.

The boot and shoe trade at the East is quite active. Dealers are filling large orders for the West and South. Prices have somewhat advanced.

Petroleum, after a long season of great dullness, is beginning to be active, and prices are better. There is an improvement in the European markets, which has created a brisk shipping demand. The stock on hand has been much reduced in the last few months.

WHEAT AND FLOUR.—Old wheat is very scarce. Small lots of new from the South are arriving in New York and Boston, and command very high prices. Choice brands of flour are very scarce, and consequently continue to command high prices.

WOOL.—The sales of wool last week in this section were less than the week previous. Buyers dropped down a little in prices offered, and farmers generally are indisposed to sell at a reduction. We still quote at 38@43c., though few sales are made at the outside figure.

The sales in Boston last week amounted to 700,000 lbs., at a range of 30@70c. for fleece. The Eastern commission houses report liberal receipts of the new clip, making a good assortment for manufacturers' selection. The Boston Bulletin of the 20th says:

All grades of wool are lower; but the decline has been most marked in the finer qualities. Hence buyers are taking hold of these with considerable *vim*, and several large manufacturing establishments have lately come into the market for 50,000, 70,000 and 100,000 lb. lots. The coarse grades of Western are relatively scarce and firm, since these have not yet begun to arrive in any quantity. Pulled wools are very dull and unsaleable, with flannel and knit goods manufacturers slacking up on the production.

Rochester Wholesale Prices Current.

Special Notices.

THE ONLY GOLD MEDAL

Awarded to AMERICAN SEWING MACHINES at the Paris Exposition of 1867, was given to the Machines manufactured by this Company, of which ELIAS HOWE, JR., is President.

THE HOWE MACHINE CO.
914-4t 699 BROADWAY, N. Y.

J. KEECH'S
NEW SEEDLING STRAWBERRIES.

THE following is the report of a committee of good reliable citizens, selected as the best judges of Strawberries in the community, and on which the public can rely as being their honest convictions, viz:

By request of J. KEECH of Waterloo, N. Y., we called upon him and examined his Seedling Strawberries, known as Genls. Grant, Meade, Sherman and Sheridan, grown and treated under the same circumstances as eleven other varieties, the most popular of the day, the result being as follows:

We have no hesitation in saying with full confidence to the public, that so far as we are capable of judging, these four seedlings far excel any Strawberries we have seen, taking into consideration all of the important qualities which constitute a good Strawberry. Dated June 26th, 1867.

C. W. COOKE,	SIDNEY WARNER,
O. S. PATTERSON,	L. MORGAN,
MONT. WEAVER,	G. L. YOST,
J. T. DEDEL,	H. E. SMITH,

OFFICIAL.
PARIS EXPOSITION, 1867.

ADVICES just received by mail enable us to announce positively that the only gold medal for American sewing machines was awarded to ELIAS HOWE, JR., as the manufacturer of the best sewing machine that was exhibited. There were eighty-two different machines in competition for the prize, and Mr. HOWE received the additional award of the Cross of the Legion of Honor, as manufacturer and inventor. The exact wording of the award is as follows:

HOWE MACHINE.	WHEELER & WILSON.
"Co-operateur Elias Howe, Jr., promoteur de la machine a coudre. *Medaille d'or.*	"Wheeler & Wilson pour la machine a boutonniere. *Medaille d'or.*

The official list of those who were made Knights of the Legion of Honor, as published in the Paris papers, reads thus: "MONS. ELIAS HOWE, Jr., *fabricant de machines a coudre, exposant;*" which translated into English, reads: "Mr. ELIAS HOWE, Jr., maker of sewing machines, exhibiting."

From this it will be seen that the medal awarded to Wheeler & Wilson was for a "Buttonhole Machine," *and not for the Sewing Machine.*

Dyspepsia. The scourge of the race, the most aggravating of all diseases known, and hardest to cure yields immediately to the influence of COE'S DYSPEPSIA CURE. It is certainly the most wonderful remedy ever discovered for Indigestion, and any disorder of the Stomach or Bowels.

GOLD MEDAL THRASHING MACHINE.

PERSONS intending to purchase a Thrashing Machine will do well to send for Circulars and Judge's Report of the Machine awarded TWO GOLD MEDALS at the Great National Trial, Auburn, July, 1866, manufactured by R. & M. HARDER, Cobleskill, N. Y. See their advertisement in Rural of last week.

PARIS EXPOSITION.

ELIAS HOWE, JR.,
PRESIDENT OF THE
HOWE SEWING MACHINE COMPANY,
AWARDED A
GOLD MEDAL
AND CREATED A
Knight of the Legion of Honor by
THE EMPEROR NAPOLEON
FOR THE SEWING MACHINE, which puts "the HOWE" at the HEAD of all Sewing Machine Exhibitors.

THE HOWE SEWING MACHINE TRIUMPHANT!
The FIRST and BEST MACHINE in the WORLD.

DODGE'S PATENT REAPER AND MOWER
CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement;* that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that Improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market.
See Advertisement. 908-tf.

NEW YORK.

W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR

ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustible, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged.* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the walls of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*

In one vol. of 1,840 Royal Quarto Pages.
Published by G. & C. MERRIAM, Springfield, Mass.
Sold by all Booksellers. [912-4t

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 911-tf

WHISKERS.—Dr. Lamontes Corrollin will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

GENTLEMEN!—IF YOU WANT A LUXURIANT growth of beard in five weeks, use the Italian Compound. *Satisfaction guaranteed or money refunded.* Price, by mail, closely sealed, 50 cents.
906-13t RUSSELL & CO., Watertown, N. Y.

WARNER'S SULKY REVOLVING RAKE.—It is almost universally admitted that for excellence of work the Revolving Rake is unequalled. Its great want has been an efficient sulky attachment. This, however, has been successfully met in the Warner Sulky Revolving Rake, an engraving of which is here presented

WORKING POSITION.

The advantage which the Warner Sulky Revolving Rake possesses over all others will be readily comprehended. It gathers the hay free from dust and sand, carries it clean, and in dumping closes the winrow or rick in good shape for tumbling and pitching. Its working is so simple and effective that a boy of 12 or 14 years of age can manage it with ease. The Warner Sulky Revolving Rake has been thoroughly tested, and won an enviable reputation; those who have used it are unanimous in pronouncing it the best Rake yet introduced. It has received the most flattering notice from the Press and Agricultural Societies. It has taken the First Premium at all State Fairs wherever exhibited.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original Inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch Invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (⅜ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

SHEEP AND WOOL ARE GREAT AND paying institutions. MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

HORACE L. EMERY. H. HERBERT EMERY.

ALBANY AGRICULTURAL WORKS,
HAMILTON STREET, CORNER LIBERTY AND UNION STREETS, ALBANY, NEW YORK.
HORACE L. EMERY & SON, PROPRIETORS AND MANAGERS.

These works were originally projected and established by the present Senior proprietor, in 1847, '48 and '49, and have, almost without interruption, since then been conducted by him—and for seven years (1855 to 1862) under the firm name of EMERY BROTHERS, with his two Junior Brothers, WM. B. & ENO. W., (the latter recently deceased.)

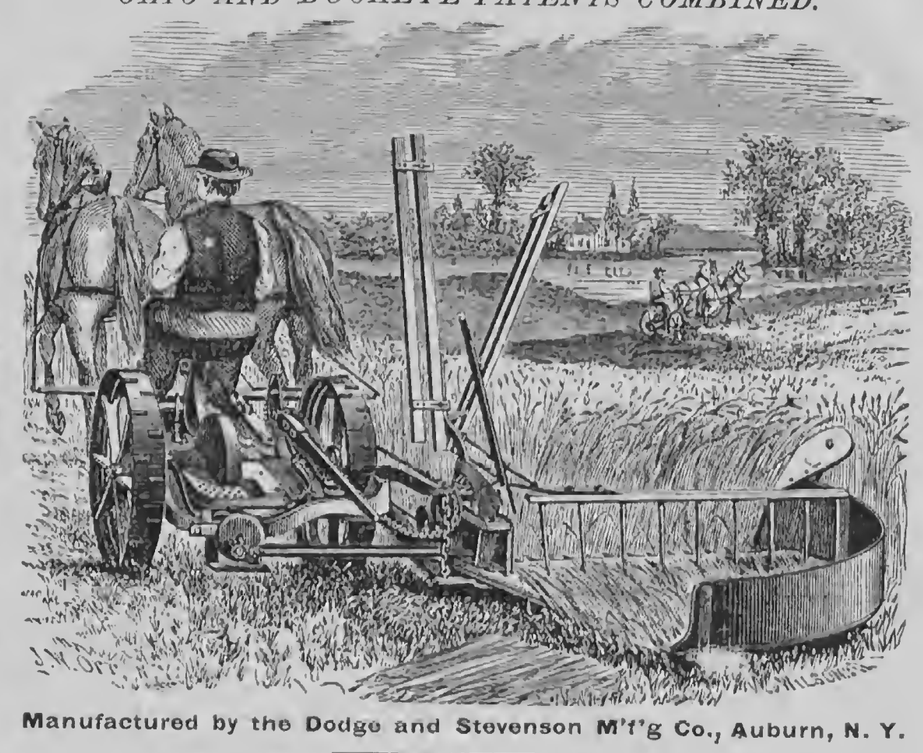
In 1861 the present firm became the sole proprietors and managers of these extensive works and business, together with the large and complete assortment of patterns and working machinery, the accumulations of nearly twenty years, and have continued the same in all its branches for their own account and interest. They have also made and added several new and valuable improvements and articles to the previous extensive assortment of labor-saving Machines, for the Plantation, Farm and Work Shop, and have largely increased their facilities for manufacturing with greater rapidity and saving in cost, thus enabling them to afford better terms to purchasers than heretofore. The Senior member of the firm was the pioneer of this business in this City, and has been the designer and patentee of all the leading and successful Machines which have given these

ALBANY AGRICULTURAL WORKS

and their Manufactures their well earned, and deserved world-wide reputation and demand. As other parties in this City have recently commenced the manufacture of agricultural machines, and are using similar illustrations, descriptions, representations, and in other ways are endeavoring to lead the public to suppose that these ALBANY AGRICULTURAL WORKS have ceased to exist, or have been reorganized under a new name and management, the attention of the public is respectfully called to facts herein stated; and a continuance of that patronage heretofore so long and liberally enjoyed by these Works, is solicited by the Proprietors.

☞ Descriptive, Illustrated and Price Catalogues and Circulars furnished gratis, by Mail or otherwise, on application. Selling Agents wanted in all sections of the country, where none are already established, to whom liberal commissions will be allowed. Address, with special care to avoid delays, &c.,
HORACE L. EMERY & SON, Albany Agricultural Works, Lock Drawer, No. 193, Albany, N. Y.

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

OUR UNKNOWN DEAD.

BY J. WALTER SPINDLER.

UNKNOWN! what a terrible name!
Oh, was there no mark that would tell
Who died, when those heroes of fame
Still battling for Liberty fell?
Ah no! we but know they have gone,
Have perished for Union and Right;
We number their graves and pass on,
But their names are enshrouded in night.
O! heroes, who quailed not in fear at the wrath
Of battle, how sad to be nameless in death!

Search, friends of the sleeping! In vain
Ye gaze on each headboard and stone;
Ye know they are free from all pain,
Ye know that a dear one is gone.
Be proud, O thou sorrowing heart!
Joy mother, thy son was thus slain;
Tho' his story no tongue may impart,
He cannot have perished in vain.
O, know that the glory our army has won
Belongs with the rest to the buried *unknown!*

Tho' their names are enshrouded in night,
Their arms in the battle were strong;
They, too, in the thickest of fight,
Wiped out our deep national wrong.
Oh! mourn them, who sleep in those graves,
Tho' "nameless" marks headboard and stone;
Oh! mourn them the noblest of braves,
Tho' hist'ry records them *unknown*.
Tho' fate may their names to oblivion condemn,
Oh let not *forgotten* be written of them!

McLean, Ill., June, 1867.

The Story Teller.

Written for Moore's Rural New-Yorker.

A SOUTHERN SKETCH.

IT was a beautiful early May morning that I took my seat in the cars at Macon for Atlanta.

To a Northerner the spring at the South is most delicious. She comes so early and stays so long that you forget the disagreeable rains and cold, unpleasant days even of a Southern winter. Like a gay maiden she puts on her adornments, that her lovers may see her in her most attractive dress, (Aint that rather fine?) The South in the spring is the land of flowers. Nature seems to scatter them with the profusion of a prodigal. Only a few days before I had attended the anniversary for decorating the graves of the Confederate dead, who were buried in the beautiful cemetery of that town. There are some seven or eight hundred graves, and each had a wreath of beautiful flowers. Many had elaborate crosses and wreaths, and all had been placed there by the female worshipers of the "lost cause."

As I walked among the decorated graves, the afternoon the ceremony had taken place, I could not help thinking that if the departed spirits of those soldiers, who fell in the late war, whether Rebel or Union, could know how fervently their memories are cherished in female hearts, it would add a thrill of delight, even though they might then be in bliss. The undying affection of woman is confined to no section, bounded by no locality.

About a mile out of town the train usually makes a stop to take on passengers. Here my friend met me with a couple of baskets of strawberries, large, fresh and most tempting. He prided himself upon his garden, that richly justified judicious care, and demonstrated what might be done under the genial skies of the South by a little industry. My mouth waters at the thought of the nice fruit which he is daily eating from his garden—those luscious peaches and figs, to say nothing of the endless varieties of berries, which are found in such profusion upon his table at any meal. My regrets are somewhat mitigated by the thought that he and his family are worthy of the feast.

I placed my baskets on the seat beside me. It was rather tantalizing, but as I had been bountifully supplied with a full feed of strawberries and cream only the evening before, I concluded appetite could afford to wait a little while; so, tucking the paper that covered them carefully down all round the top of the basket, I turned and began to look about the car to see who my fellow passengers were. It was in the ladie's car, which on many roads I found the only comfortable one, and albeit I had no lady with me, I did have a little piece of paper that procured a seat whenever I found it desirable.

There were few persons in the car, perhaps not more than half a dozen ladies. At present, people are too poor to travel except on urgent business. The contrast between the Northern and Southern roads in this particular is very marked. Few trains, however, that did not have many colored persons, and sometimes they were nearly equal to the whites in numbers. The colored travel is already an important item in the receipts of Southern roads.

I had casually noticed a young lady who came into the car while yet in the depot. There was a freedom and gracefulness in her motions that at the time gave me a favorable opinion, but as she was taking leave of friends and I was busy looking at the motley crowd which stood on the platform, I gave her no further thought. She was not handsome at first sight, yet there was such an easy, self-reliant way in her manners and conversation that you would not call her homely or plain looking—and unconsciously one could not help feeling attracted towards her. I made up my mind she was worth a study. My experience had generally been that there is an ungracious kind of way with Southern woman which makes it unpleasant for a Northern man to make any attempts at even casual conversation; they allow their prejudices to mar sadly their otherwise pleasant social qualities. My observation all over the South has convinced me that social and real friendly reconstruction must begin with the women and clergy. They remain sullen and vindictive. I was talking with a bachelor friend on this subject the other day. Said he:

"It will all come right as soon as the ministers have some good living and the women get fine clothes and fashionable jewelry."

The old heathen! Just as though ministers could be mollified with a nice piece of fresh beef, like a bull dog, or lovely women bought by fine clothes or fashionable jewelry! He ought to be put through a "course of sprouts" by some of those lovely Southern termigants.

I took the paper carefully off one of the baskets. The strawberries did look tempting. There were no small ones, none smaller than a lump of chalk, and some a good deal larger. Indeed, I never saw a nicer basket of berries. I thought I could venture on an introduction with these; so taking up the basket I walked to the seat where the young lady was sitting. I held the basket toward her and said, "Can a Yankee tempt you with fruit this morning?"

Putting on a very demure look she answered: "The old serpent could have done it with poorer looking ones than those, but then he was not as obnoxious as the Yankee. But you don't look like a Yankee;" and she made room for me on the seat by her side. I held out the basket to her and passed it to her companion in the next seat.

"I should not have taken you for a Yankee; would you, ELIZA?" turning to her companion.

"Oh, no," said Miss ELIZA, "I took him for a planter, and I reckon he's only funning now."

"But I am a regular, full-blooded Yankee, and no mistake."

"May be you are like the young gentleman I met yesterday. He said he was a Yankee, but came away before they got so mean."

Said I, "I am not only a Yankee, but a radical at that, and did all I could to whip your balky horses back into the traces again."

"Well," said she, picking up a handful, "these berries are not Yankee any way, though I'm not sure but I wish they were, for we could get rid of them so easy."

"But, my dear," said I, "did you really admire that young man after he made that speech?"

She looked me full in the face a moment, and then, her countenance expressing a look of contempt, said—

"I laughed at his remark, but if it had been made by a Southern man, of the South, I should have despised him. Nothing seems so mean to me in man or woman as to deny or speak disparagingly of one's country or parentage."

"Give me your hand," said I; "upon that subject we most cordially agree."

We shook hands heartily. She picked up one of the largest and finest berries, held it up and eyed it as a connoisseur does his wine, and slowly biting off a part of it, she said:

"It seems to me the tempter had a most thorough knowledge of the female heart. It is so easily won through fruits and flowers, that it never suspects evil to lurk in them—unless a Yankee presents them," turning to me her smiling face and gently bowing.

"But why blame us Yankees so much? It was not our fault that you had us amongst you."

"You beggared us: you took everything but our lands, and I suspect you will soon take them. Why shouldn't we hate you?"

"But who's to blame?"

"Well, suppose we are, which of course nobody, at least no lady, admits, does that help the matter any? Does anybody ever like to blame themselves for the results of their folly? You say we women are vindictive, and that the men would not be so bad if it were not for us. Ever since that old coward, ADAM, tried to sneak out of a bad scrape by putting the blame on poor mother EVE, you men always find an excuse for your short comings by putting all the blame on us poor helpless women. You ought to be ashamed of yourselves, both North and South."

"That shows we acknowledge your power."

"It shows you are a great set of cowards, from old ADAM down."

"But you can't change the result; why not accept the situation and make the most of it?"

"You cannot realize what a change has come to us women. We always had plenty of household servants at their call; now we have to do our own work or put up with the insolence of our former slaves, and no power to punish. I do think our people would have put up with everything else if you had only left them the power of enforcing discipline from the negroes. However, when they become used to the changed order of things there will be much less regret and repining, though I don't promise that our women will like you Yankees any better."

"Still they can be kind, I find, even to a Yankee."

"Oh, yes, kind words and strawberries will sometimes do wonders. But then, perhaps, I am not a proper sample of our Southern women, for I feel that there is good to come out of this great calamity. Our family, before the war, were what is called wealthy; we had slaves, and money at interest, and all the comforts and luxuries usually incident to such a situation. They are all gone now, except our devastated fields, and my father is old and infirm, and I fully realize what poverty is; but I assure you that no consideration would induce me to wish the former state of things back."

"What, not the forced labor of the slave?"

"No not the forced labor of the slave. To tell the truth, there was always something unpleasant to me in the results of slavery. I never liked to see any human being so completely in the power of another as the slave was in that of the master. If all masters could have been as kind to their people as our family were, it might have seemed better; but there were often harsh and unkind masters and mistresses in our place, and there was no help for the poor slave."

"But then you had laws."

"What do laws amount to when public opinion does not sanction their enforcement? Luckily the change has not found me unprepared. It almost seems to me like a special Providence. I was always something of a romp; the woods and fields used to have more attraction for me than novels. They used to tell me that I should be such a coarse girl that nobody would ever like me, and I should be an old maid. Galloping over the fields and through the country on a favorite horse, I never thought much about likes or dislikes; I felt too free and happy to trouble my mind about either. Oh, isn't it nice, though, to ride forth on a mild, balmy morning, feeling as free as the air you breathe, and almost as buoyant."

"I can imagine nothing finer than such a ride on one of these delightful spring mornings."

"One day a change came over me. We had been entertaining quite a number of my mates just after the war broke out. We thought it was only to be a gala day for our boys. Girl-like, they had been picking out their husbands from among the gallant fellows that had just joined a regiment which marched to the war, and was to annihilate you 'cowardly Yankees.' So, when they came home with their easily won laurels, they were to be rewarded by the fair hands of belles. One was going to marry a colonel, another a handsome major, and the others picked out gay and gallant captains. Each got her intended selected, but left nobody for me."

"Where were the lieutenants?"

"You don't think lieutenants were anybodys then, I hope! 'What's to become of me?' said I to them. 'Oh, you are to be an old maid, you know, and shall come and live with us when we get married. Here's seven of us, and that will make not quite two months apiece, and we shall all be so delighted to have Auntie JOE with us.' We had our girlish fun, but when I went to my room that night, something came sad and heavy to my heart. I felt those girls were sure to marry, for they were lovely and pleasant companions, and I could not see how any young man could help loving them, and then what was to prevent my becoming an old maid."

"There would be young gentlemen left after they got married, would there not?"

"Yes, but I had no thought that way. When I looked at them and at myself in the glass, I could not help thinking if I were a man I know very quick who I shouldn't take. I made up my mind that they might get their husbands,—I would make myself independent of that sometimes scarce and always troublesome incumbrance."

I smiled.

"Now, don't say sour grapes. Heaps of my friends have got married since that day, but none of them say a word about my being an old maid. Poor things; I imagine they find it different from what it was when then could lie in bed all day, read novels and have a servant to fan them and keep off the flies. I felt that we were beyond the fear of want; still, I thought I was leading an aimless, useless life, which no person, rich or poor, had any right to do, so I fitted up a room and went to keeping school. I liked it, for I was learning, as well as teaching others; I did it for amusement however, and of course my school brought me no profit. In less than two years the crash came. Our money had been absorbed by the Confederate Government, and our stock eaten up or carried off by the army, and our slaves set free."

"But then you had the Confederate Government bonds."

"Yes, and I think it's one of the meanest of the many mean things you Yankees did to make us repudiate those bonds, when we have to help you pay yours. What I began for pleasure I kept on for a living, and continued my school to the close of the war. When the war was over I began to think I should like to see some new clothes. A woman gets tired of seeing the same dress every day for two years. So I took the money I had earned in my school and came up to Macon, and 'went shopping' for the first time in two years. When I put on my new dress, and bonnet, and shoes and stockings, and other little 'fixins' of female adornment, and took a good long look at myself in the glass, you may well believe I was as proud as any girl could be in Georgia. For the first time I realized the full luxury of feeling I was independent. No money would hire me to go back to the listless, aimless girl I was before the war. After a little time thousands will feel as I do. If you Yankees will only give us peace and rest, and an opportunity to recuperate our wasted fortunes, I will be almost willing to—"

"Take a Yankee husband?"

"That would be going from the sublime to the ridiculous."

Just then the cars stopped and the conductor called out the place.

"I leave here," said she, rising, "but I would like to know who the gentlemen is that has been so frank and kind. Please give me this basket, and write your name on it, for I want to tell my people that I have had a live Yankee for a companion, and found him a gentleman. I am quite sure, after all, that if both parties knew each other better, we should all like each other much better than I fear we do now."

I wrote my name and address on the basket and gave it to her, at the same time handing my pencil and note-book to her. She gave me her address; I accompanied her to the platform, shook hands cordially, and left her going through that performance which always seems to me a great waste of the raw material—two young ladies kissing each other. T. C. P.

July, 1867.

WIT AND HUMOR.

"A quotation from the poets":—
Do you like *pork?* If not, you shall have mutton.
Do you *like* pork? If not, you are a glutton.
Do *you* like pork? I did not ask your brother.
Do you like pork? Pray say without more bother.

"WHAT did you used to do, mamma, before you were married?" asked a cherubic four years' old. "Well, my dear, I had a very good time." "A good time!" he exclaimed, indignantly—"what, without me!"

A LADY took her little boy to church for the first time. Upon hearing the organ he was on his feet instanter. "Sit down," said the mother. "I won't," he shouted, "I want to see the monkey."

"How came such a greasy mess in the oven?" said a fidgety old spinster to her maid-of-all-work. "Why," replied the girl, "the candles fell into the water, and I put them in the oven to dry."

"WHAT brought you to prison, my colored friend?" "Two constables, sah." "Yes, but I mean, had intemperance anything to do with it?" "Yes, sah, dey was bofe of 'em drunk."

JOSH BILLINGS says:—"I never bet any stamps on the man who iz always telling what he would have did if he had been thare. I have notised that this kind never git thare."

"AIN'T it wicked to rob this chicken roost, Dick?" "Dat's a great moral question, Gumbo; and we ain't to arguefy it now; hand down anoder pullet."

WHEN ladies vote, candidates will always be elected by "handsome," and sometimes by "sweeping" majorities.

Corner for the Young.

MATHEMATICAL PROBLEM.

A MAN purchased a tract of land in the form of an equilateral triangle, containing 700 acres; and dying left his estate to 3 sons and 5 daughters. By the provisions of the will the land was divided as follows: A circle was inscribed within the triangle and divided equally among the 5 daughters, the three corners outside of the circle being reserved for the sons. How many acres were there in each son's and each daughter's share?

BRINKERHOFF'S CORN SHELLER, SEPARATOR AND CLEANER.

THE BEST IN AMERICA.

[Copy of a Letter from U. S. Agent for the Paris Universal Exposition.]

United States Agency for the Paris Universal Exposition,
No. 40 Park Row, (Room No. 9,) Times Building, New York.

NEW YORK, December 8, 1866.

MR. J. BRINKERHOFF,—*Dear Sir:*—My Advisory Committee, appointed to select Implements for exhibition at the Universal Exposition in Paris, in 1867, have selected and recommended to me, your CORN SHELLER, as the best in America. I have accepted their report and will forward your Sheller, if delivered here, ready for shipment, on or before January 1, 1867.

Yours Truly, J. C. DERBY, *U. S. Agent, &c.*

☞ Sample Shellers shipped on receipt of the price, $20, and warranted to give satisfaction or the money will be refunded. The State of New York is not for sale,—the balance of the territory yet unsold, will be sold by Counties or States. For Circular and further information, address

J. BRINKERHOFF, Box 576, Auburn, N. Y.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

THE most important work for August is the preparation of the ground for fall seeding. Summer fallows are to be worked, and stubble grounds plowed; the latter should be turned over as soon as possible after being cleared of grain. Time is wanted for weeds to start before the final working preceding the sowing, and it is better to let the soil receive the good effects of the air, sun and rain, and become light and pulverized before the seed is deposited in it. At least the stubble should be well harrowed or gang-plowed early to start the weeds.

Seed.—The selection of seed is a matter of great importance to the wheat grower, as profit or loss on a crop are often dependent on the variety sown. If too late in ripening it is in danger from rust and weevil, and early kinds are apt to be tender under exposure to severe climates. Farmers should improve all opportunities to experiment with new varieties, and make themselves acquainted with their characteristics. What they want is a white wheat, one that is hardy, prolific and early. It must stand our Northern winters, yield well and harden the berry before the time of the weevil.

The Diehl wheat, of which we give an illustration, is one of the most promising of the new varieties, and it is spoken well of by some of our best farmers who have grown it. It is a bald, white wheat, the straw is stiff, the kernels set very compact on the head. It ripens as early as the amber. It is certainly "worthy of further trial," as the fruit men say. At any-rate, let the farmer carefully select his seed, sowing only the best; and by observation and inquiry among his neighbors, learn what varieties are the most promising, judging by their record during the past two or three years.

Stock.—Hogs should be well fed during this month; they may glean the stubbles, but be careful that they don't get unruly. It is "fly time" with horses, and the working teams are more comfortable in a clean, cool, roomy stable than in an exposed pasture. Stabled horses will do enough more work than pastured ones to pay the increased trouble; and their keeping is cheaper. See that all stock has plenty of water.

Stubbles should be raked.

Mow fence corners and swales to kill weeds and secure fodder. Many a cow might be wintered on fodder saved from the bye places of farms.

Harvest Tools should all be secured from the weather. Make a memorandum of repairs needed on them. It will refresh your memory for work in the shop on some stormy day.

Underdrains may be cut through swamps and wet lands, and muck gathered for manurial uses.

Weeds.—Briars, elders and bushes of all kinds should be cut this month. Pull weeds from the potato fields.

Hops.—Some will need harvesting the latter part of the month. Get help secured, and see that the kilns, boxes, &c., are in order.

Thrash out stacked grain soon, and take pains to stack the straw so that it will be worth something for stock next winter.

Cultivating.—It is not too late to benefit backward corn and potatoes by cultivating them.

Meadows.—Draw manure on to old meadows, and in all places where it is possible to irrigate the grass, do so. There is a mine of wealth in our brooks and rivers that farmers have not yet worked. We want the water on our grass lands.

IRRIGATION.

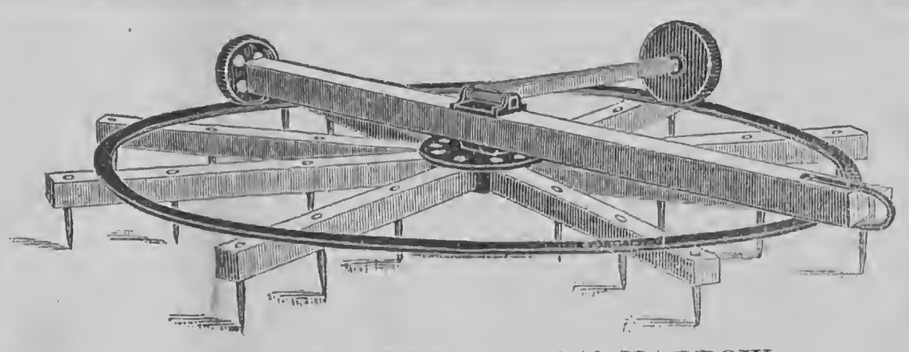
IT is hardly necessary to present arguments in favor of irrigation as a means of increasing the fertility of the soil and of growing large crops, for it is obvious to any farmer that, with the means at command of flooding his fields with water whenever he deems moisture advantageous, a larger and surer yield of products would inevitably result. The only question worth considering is, how and where can irrigation be successfully practiced?

Wherever are running streams of water there are lands lying contiguous which admit of a system of irrigation being carried out, so inexpensive that reasonable profits would certainly follow its adoption. Drains will turn the water into races which will lead it along the highest margins of slopes situated further down the stream, whence it may be spread through smaller conduits over the surface of the field. This is the simplest method of irrigating, the water is merely diverted from its course and caused to spread over the land. And as it is the simplest, so is it the most profitable and likely to be the most widely adopted system. In advance of this, and having a wider range for practice, is the system of raising water to a higher level by means of machinery. More land can be flooded by the latter than by the former system, but the expense is likewise larger. Yet it has been in use from time immemorial; the earliest history records it, and the simple water-wheel, turned by the current of the stream, and raising the fluid in buckets to its topmost height, is yet seen wherever irrigation is extensively practiced. Water is also forced through pumps into elevated reservoirs, and the power to operate the machinery is drawn from the stream. It seems to be a recognized law in the science of irrigation that the water must furnish the power that drives it to a higher elevation.

Irrigation would benefit all crops at some stage of their growth, but obviously some would remunerate the cultivator better than others. The grower of berries would find his products and profits largely increased if he could, in a drouth, flow his plantations freely with water. Irrigation is destined yet to be extensively practiced by the growers of small fruits for market. The market gardener should also avail himself of its benefits where possible. Grass, perhaps, is the ordinary farm crop naturally best adapted to receive the most benefit from irrigation. The product of meadows can be trebled by the free use of pure water only. Two or more heavy cuttings might be taken yearly from irrigated meadows.

In the valleys leading down from the Alps into Italy, and on the plains of Lombardy, irrigation is extensively and systematically practiced. The water, as it flows, is made to contribute to the support of man, and a denser population is maintained per square mile than any where else in Europe. Indian corn is grown betwixt the vineyard rows and the fertility of the soil maintained by thorough irrigation suffices to produce ample harvests of both staples. No labor is spared to bring as large a surface as possible within reach of the advantages of irrigation. The Chinese and Japanese farmers depend largely on irrigation for bountiful crops. In our own country this system, carried out on an extended scale, has made the desert blossom like the rose, and contributed largely to the worldly success of that community of "Saints" located in what, if it lacked irrigation, would be the desert region of Salt Lake.

It is a subject worthy the close and thoughtful attention of American farmers. The water that courses down the steep hill sides, and rushes along the swollen streams, bears with it many soluble elements of fertility drawn from the soil. The alluvial bottoms along the great rivers are evidences of this; they are the cream of the hills. Let the farmer see to it that some part, at least, of this richness is restored to the land before the water seeks and mingles with the sea.



MONROE'S PATENT ROTARY HARROW.

OUR engraving represents a new rotary harrow—a Maine invention now being introduced into Western New York. It was exhibited at the last New York State Fair, where it attracted much attention and was awarded a premium. We recently saw one of these harrows at work for a short time. It is a neat implement, circular in form, with twenty-four teeth, and has a regular rotary motion. This rotary motion is caused by an iron wheel traversing a circular iron track. The wheel being at the end of an arm which is fastened on the top and center of the harrow by a hinge, can easily be changed from one side to the other, thus reversing the motion at pleasure. For further information see advertisement of BRADLEY, BRIGGS & Co. of Buffalo.

THE STOMACH OF THE OX.

AT a late meeting of the Institute Farmers' Club in New York, Dr J. C. V. SMITH discoursed on the stomach of the ox with reference to the economical use of food. He stated that carnivorous animals have but one stomach or mill in which to prepare their food, while the bovine family have several. These animals, after feeding several hours, generally lie down and commence re-grinding the food or pellets which the general receptacle or large hopper has received during the hours of feeding. These are drawn up successively by a kind of air-pump and masticated over again, formed into smaller divisions and dispatched to the second stomach. This mill is composed of the substance known as tripe, and furnished with a fluid which still further modifies the food received, giving it a yellowish tinge. From this it falls into a third hopper of still smaller dimensions, where it combines with a whitish fluid and passes along in a creamy stream to a fourth compartment, where it assumes the appearance of curd, having reached that stage of refinement which enables it to impart vigor to the animals by whose complex organism it has been manufactured and refined. Having reached this stage the animal has no control over it.

THE HARROW—WHY IS IT USED?

THE harrow is an ancient implement, and has been familiar to the husbandman for a thousand years. Shall we speak evil of this venerable and ancient servant of the farmer? Will it do to criticise closely and look sharply into its action after the approval of so many generations? Well this is an irreverent age. Old opinions and old things are cast aside without a twinge of conscience, and scarcely with a show of politeness. Everything must stand the test of new scrutiny and new ideas.

The object of harrowing is to level, pulverize, or loosen the soil, and sometimes to cover grain. It answers the purpose of leveling the earth, but its most important object is to loosen and mellow the soil. Now the teeth of the harrow are cones, points down, and on entering the soil, the pressure principally downwards, with some lateral pressure—moving the earth in the line of the draft—pulverizing a thin surface and compacting that below. As the harrow moves forward the tendency is to press everything down, which is more clearly shown as its passage is repeated, and after passing over a mellow soil six times the surface becomes a compact crust. A stick in the shape of a harrow tooth is frequently used by the miller to pack flour in barrels, and so effectual is it, that with a little repetition the surface may be made almost impenetrable. A new road, thrown up from loose earth, can be rendered solid for the passage of wagons by the use of the harrow sooner than any other implement. In order to mellow the earth it must be lifted and not packed. The construction of the harrow is wrong in principle. It does just the opposite of what is intended. It is only on those soils which are loose and light and need compacting that the harrow should be used, and here it performs its office admirably. To cut up and loosen a hoed surface it is quite useless.

The improved cultivators, with teeth constructed to lift and pulverize the earth, should be used on heavy soils or those easily packed. There is a cultivating harrow, with lifting teeth in the shape of small mold-boards, which cannot be too highly commended. It leaves the soil in fine tilth, about three inches deep, and covers grain admirably. It is not adapted to deep tillage, but for surface culture [illegible]. The harrow draws the grain into the ridge, covers unevenly, and thus renders it less able to stand drouth. The drill is the true implement to distribute and cover grain, as it distributes evenly at the bottom of a small furrow, and covers to a uniform depth. The dews are deposited at the bottom of furrows, and thus in a dry time moisten and fertilize the root. Farmers should study closely into the action of all their implements, and when one is found wanting, cast it aside and supply its place with a better one. S.

AGRICULTURAL EDUCATION.—No. I.

AGRICULTURE is the great business of all sparsely settled countries. Nearly one-half of the population of the United States are engaged in it. The census of 1860 returns 2,423,895 as owners of farms, and more than another million employed as agricultural laborers. It might be considered strange, that so large a proportion of the people of this most enterprising nation, should have no systematic education for their calling. Not more than one farmer in a hundred has ever received any instruction in the philosophy of Agriculture; and not more than this proportion can give an intelligent explanation of its commonest processes. It is owing to this want of instruction that the loosest of all the statistics of every census are those pertaining to Agriculture. The great hindrance to the advancement of Agriculture has been, and is, the want of accurate observation by those engaged in it. In Architecture, Surveying, Engineering, Navigation, the student will find definite rules and instructions, a knowledge of which will accomplish him in the art, but in Agriculture all is loose, partial and unfinished.

Why is this so? The answer is easy. Just observe the different classes of people. The architect, the lawyer, the engineer, the navigator, and even the merchant, must be educated for his calling; but the farmer eschews education. He says, theoretically and practically, that time and money spent in education for his business, is thrown away, and thus it is so few can tell you how many bushels of grain, how many tons of hay or how much of anything they raise, and fewer still can tell how much they raise per acre or what they make from a cow. The merchant keeps accurate accounts. He knows the cost and sale price of every article. He is posted at all times, as to the progress of his business. If a leak occurs he soon discovers it; but the farmer goes on for years cultivating a field without attempting to know whether he makes or loses by it. He keeps no account with his farm, and has no landmarks, except his wants and the supply. Perhaps it would have been well if the income tax had been based upon a sum so small that nearly every farmer would have been subject to it. This would have compelled him from fear of loss, to keep accounts, and the benefits to him would more than have balanced his tax.

Before Agriculture shall take its true position and be regarded as it really is, the most important occupation of man, the farmer must be educated for his business, must be an accurate observer, must be a discoverer, must associate with his fellows in making experiment, and in analyzing and comparing them when made. The Agriculturists possess superior advantages for observation and improvement. They number more than two millions of observers scattered from the Gulf of Mexico to the Columbia River, and from the Atlantic to the Pacific Oceans, embracing nearly every variety of climate and production. Suppose every farmer were an accurate observer and kept a note of his observations, and these were all sent to some central office, where they would all be analyzed, compared and digested—then published and put into the hands of these same observers, who does not see the mighty stride Agriculture would take in ten years? But as only a few of these more than two millions of farmers, are either capable or have the inclination to be accurate observers in the business they are carrying on, suppose only one in every hundred should do this, should exercise his intellect as well as his hands, accurately observe all the phenomena of vegetation under his eye—this would give about 24,000 experimenters and reporters. With this number of accurate experimenters in the field, how long would the many questions that now trouble farmers and find no satisfactory solution, remain undecided?

DEPARTMENT OF AGRICULTURE.—To organize such a corps of observers is the first business of the Department of Agriculture at Washington. And this Department of the Government, organized, as we still hope it *may be*, as the *embodiment* of the Agriculture of the whole country, will mark a new era in our National prosperity. At the head of this Department should be placed a man of generalizing mind, who can comprehend the wants of these two millions of farmers in all their variety of climate and productions. He should be a man of large acquirements, of enthusiasm, of sharp analysis, skilled in reading men, a statesman, but not a politician, in the common meaning of that word. When such a man is placed at the head of that Department, order will begin to rise out of chaos. Tradition, confusion and hap-hazard will succumb to the genius of order and enlightened progress. This Department was instituted for the benefit and enlightenment of the great mass engaged in Agriculture. It is of the people and for the people. The dissemination of abstruse scientific knowledge is not its vocation, but its business is to gather up facts as diversified as its climate and productions, analyze, classify and arrange these, and then send them back again to the farmers. Let the people see to it that this Department does not disappoint their just expectations. E. A. S.

COLIC IN HORSES—TREATMENT.

A. J. MURRAY, conductor of the Veterinary Department of the Western Rural, recommends as a cure for colic in horses an ounce of sulphuric æther and a like quantity of the tincture of opium in a pint of tepid water as a dose. If one does not afford relief, administer another after the lapse of half an hour. In flatulent colic great benefit is obtained by the frequent administration of injections, and they are also very serviceable when the colic arises from indigestion, which it frequently does. Seven or eight drachms of aloes should also be given, as this will remove any irritating substances from the intestines which may have given rise to the colic. He condemns the practice of running horses about under spur of the whip, as is sometimes practiced as a means of relief,—and states that quietude is much better than enforced excitement in such cases.

BEET SUGAR IN EUROPE.—The quantity of land devoted to beet culture for sugar purposes in France last year, says the Massachusetts Ploughman, was about 297,000 acres, giving an aggregate of 5,000,000 tons of beets—equal to 270,000 tons of sugar. In the German Zollverein, 180,000 tons. Russia, 50,000. In all Europe, 630,000 tons of beet root sugar were made. Over 14,000 manufacturing establishments were devoted to this industry during the past year. The actual cost of making the sugar is about four cents per pound, and its retail price about seven cents.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

WOOL AT THE PARIS EXPOSITION.

We defer the editorial matter prepared for this number to give place to a letter from H. D. L. Sweet, Esq., Secretary of the N. Y. State Sheep Breeders' and Wool Growers' Association, in regard to the wool exhibited at the Paris Exposition:

Paris, July 10th, 1867.

Henry S. Randall, LL. D.—*Dear Sir:* I have taken a little pains to hunt up the specimens of wool in the great Exposition, and, so far, have met with pretty good success. Some of the samples I can only see,—but, as a usual thing, they can be got hold of; and, but for the bulk and the care in the remaining portion of my travels, would secure and label each sample; but I can not do it at this late day of my stay here. In the French department I have not been able to see but very little, except in a few small buildings on the outside; but as it is labeled "collective," I concluded it to be all they have,—unless, perhaps, they have more on the Island—four miles down the river. Of the samples I have examined—perhaps 25 very fine ones—the wool, without exception, I call short staple, very fine, usually dry, without luster. Some marked "*lane* wool" was, perhaps, from four to six inches. I should think, coarser than Mr. Wing's or Gazley's, without luster and dirty, but strong and felt harsh. I found a flock of 19 in a pen or building, and labeled "grand prize"—6 rams and 13 ewes. They were owned by four individuals, who compete together as the Department of the Seine. One ewe has been shorn, and I have a sample of the fleece. The animals are very large. I think the rams one-third larger than Mr. Sanford's, weighing from 160 to 175 lbs., shorn; they were all very tall, leggy, and long. They were none of them so square built, or pony built, as I should desire; the wool not long by any means, or very oily, but of good quality and luster. The ewes had no lambs, were three or four years old, and would weigh over 100 lbs. I could find no interpreter that knew anything of them further. The ewe shorn belonged to G. Gannot. In another pen were about a dozen labeled "Mutions." They were South Downs, but of no uncommon excellence. In the English Department I have found nothing, except from the Colonies, and they do exceedingly well. Australia sends, I think, 100 samples in all, and all of them good—some beautiful. The length, the fineness and luster is equal to any I have yet seen here, and the strength good. Canada does well in both combing and fine, except some of the fine wools lacked strength, but their combing wool has excellent luster. The colony of Natal and New Zealand both send samples that are excellent,—but in no great quantity.

Of our own land, perhaps the least said the better. In all departments we are deficient, except machinery, and the Agricultural particularly is a libel and a disgrace. I believe somebody does show three or four fleeces in a glass case, locked up in the grease,—stained and dirty at that. One fleece looks very fine, but fiend like, and it may be some *crack* fleece five or six years old. I cannot find any other samples of any kind or quality.

Spain exhibits in an annex a large collection of fine wool, short and dirty, some very much discolored, locked up mostly,—that which is not is strong and very fine fiber,—but has an old look. Perhaps it is some that has been deposited in their Department of *Agriculture for years*, as there is but little shown by individuals. There are some paintings and photographs of some remarkable rams and flocks, and of recent date, and they are but little better in form than the picture in the "Practical Shepherd," which most people take at first sight for a caricature. How they would look shorn, I can only imagine.

Portugal has but a few fleeces on exhibition, but of both fine and coarse, white and black as well. The fine is from an individual flock of ten fleeces, of beautiful wool, good length, fine quality, bright luster, silky, and strong. If her side hills were not covered with vineyards, she could raise wool. So far, no nation or individual has taken half the pains that I would have taken in showing a fleece of wool; part should be shown in the grease, part washed, its weight in both cases, the age of the animal, age of fleece, and all statistics given, in English, French, and German.

In the Russian Department is about 100 samples handsomely displayed, fine short staple, very oily, some dirty, but apparently compact fleeces,—some of the washed fleeces white and beautiful. The flock of Amidee Philbert of Atonania, Crimea, took a gold medal. The same flock took the prize in London in 1862. His complete flock number 70,000 in all, gave last year, 56,000 shorn, 12,860 (something I could not translate) of Delaine wool. The flock commenced in 1823. Russia also shows some rare wool, and what must be Cashmere goat's hair; long wool invariably coarse. There is also exhibited pictures of the sheep—paintings and photographs. They are some of them good, others with too long necks and not compact enough to suit my notions. The oily fleeces are invariably yellow.—but of course they must have been shorn last year.

Austria shows her wool in little, straight bottles, with brass caps, from an inch to two inches broad, and from two inches to eight long, and mostly ungetatable. The wool varies from half an inch to three inches in length, all in its natural state, and in all about 1,000 samples. In another part of their department is apparently the aristocratic element, among whom is the Duke of Kruman, who exhibits a few fleeces in their natural state,—very fine, very oily, very short, and very dirty. Some of these fleeces, about sixty in all, have been washed, some one-half of each fleece washed, and show very white wool and a strong staple. Austria shows in another place about 500 bottles of long staple,—but there was so little that I could translate that I was obliged to pass it.

Prussia has her wool in flat glass cases for samples, about 10x16 and two inches deep, 176 of these with from 20 to 32 samples in each. The longest I could find of fine was not three inches, and of coarse wool not over six inches. There were 62 full fleeces shown, some of them with full statistics in French and German. Wurtemberg shows in Prussia fifty washed fleeces, locked up, that took a gold medal. They appeared to be shown by different owners, and washed after shearing. They were not uniform in length or quality; that could be easily seen. Several pictures of large flocks and individual animals grace the walls of the room,—but they seem to me to be one-third neck and head, and not squarely built. J. E. Hoffschlaeger of Weisin, shows a picture of a Negrotti ram that looked like a Vermonter. Baron Mattzen shows his wool, about 50 samples, and pictures of his ram, full size, and a large ewe and young lamb. They do not suit me,—too many points, and too far from the center of gravity. The weights of some crack fleeces are placed upon them conspicuously—17.63 kilogrammes.

Egypt makes quite a display of black, white and tan-color,—none of it that I could feel of but what was coarser than spaniel dog's hair.

The Ottoman Empire has a few samples of wool that appear to be about one-fifth hair, and 20 of the Angora goat, labeled "De Laine." I could not get at them.

From South America the show in some departments is good; in others, poor. Chili sends seven fleeces that ought to have remained at home and followed our example. Peru sends a single fleece, apparently a good one.

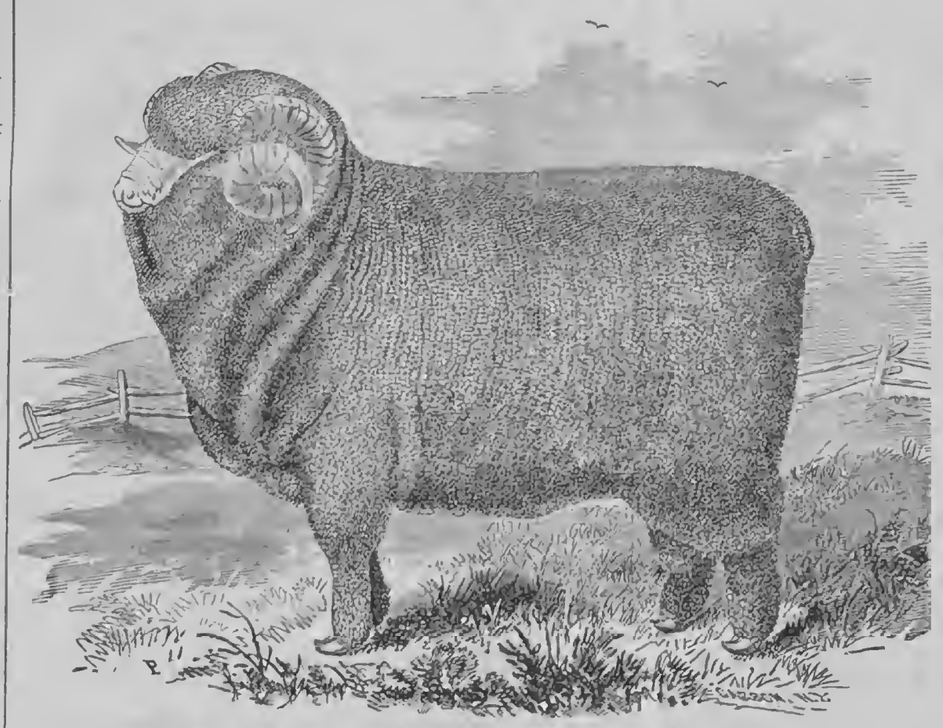
The Argentine Confederation sends 30 fleeces and 100 samples that for length are fair, and otherwise,—quality, luster, and strength,—are first-rate. She also shows separately her long wools, that are good, and a few specimens of the wool or hair of the lama.

Arizona sends 30 fleeces and 100 samples of perfectly *splendid* wool. Some is exceedingly fine, but strong, very long, and beautiful luster. Samples that had been scoured were white as the *undriven* snow.

The worst thing in the Exposition for our wool growers is a Yankee invention to make Mestiza wool as good as our own. It takes out the burrs completely, and so well was it thought of by the foreign jury, that they gave it a medal from a sample of its work, without its having been run.

Probably with more time to examine the samples, and a little more help of interpreters, I might have given you a better account of this Exposition, the greatest the world has known,—but I trust that this, though it be but little, will be acceptable.

H. D. L. S.



MR. HAMMOND'S "GREEN MOUNTAIN."

"Green Mountain," bred and owned by Hon. Edwin Hammond of Middlebury, Vermont, is the favorite stock ram of that gentleman. "Green Mountain" is in such repute that he will serve ewes next fall, as he did last, at $100 per head.

ARREARAGES.—THE TARIFF & MARKETS.

One of the oldest and most intelligent wool growers in Western New York writes us as follows. We regret that he requests us to suppress his name:

——, Wayne Co., N. Y., July 12, 1867.

Hon. Henry S. Randall:—Being solicited to obtain funds for the purpose of defraying the expenses of our delegates to Washington, last winter, to secure the passage of the tariff, I called on men of means, those who are directly benefited by the passage of such a law, and in many instances could not obtain one cent, even from men who are worth to-day fifteen or twenty thousand dollars. The expense ought to be paid, but they could not assist.

Now I call such parsimony downright meanness, whatever others may think, and hope the Lord will have mercy upon their stingy souls, and invite them to do works meet for repentance. The wool trade is very slow here, and whatever the wool growers receive above 30 or 40 cents I believe will be due to the passage of the wool tariff. The buyers in our place are speculators, and purchase pretty much as they have done for the last twenty years—that is they pay as much for wool that will shrink fifty-five per cent as for that which will only shrink forty per cent. I said to one of the parties, two years ago, that such a man's wool was worth fifteen cents a pound more than his neighbors. He knew it, he said, but "if he paid him what his wool was worth, he could not buy another pound in his neighborhood."

The action of the wool buyers directly encourages the propagation of grease (or yolk) in our wool; and accordingly our Wool Growers' Associations award their first premiums to animals which exhibit the most of it. I consider this course highly detrimental to the interests of both parties. That a certain amount of yolk is necessary to produce a soft, fine article, is undoubtedly true, but an excess of it is useless for any legitimate purpose, and highly injurious. As ever, yours truly.

MEETING OF PROTECTIONISTS IN OHIO.

In an article under this heading, the Ohio Farmer of July 13th says:

At the meeting called to be held in this city (Cleveland) on the 4th day of July, inst., the Executive Committee of the Ohio Wool Growers' Association had a long consultation upon matters relating to the present and prospective interests of the wool business. There was a unanimous assent to the provisions of the present tariff law relating to wool and woolens, and an earnest desire expressed that the law might be allowed to remain as it is until it has had a thorough test of its practical effects.

On the political aspects of the case, after a very free interchange of views, and after hearing a variety of explanations of the positions of candidates, it was thought best not to introduce the question in the present canvass for State officers, but regarding the election of a sound tariff man as our next United States Senator as a matter of the first importance, we should carefully consider the election of members of the next Legislature as a preparatory step to that issue.

After some further discussion of the probable price of wool as affected by the present tariff, the committee adjourned.

Condensed Correspondence, Items, &c.

Sheep Medicines.—A person in Vermont, whose name we will suppress, offers to send us remedies for two very serious bovine maladies—the last being no less than that fatal, and hitherto not very completely explained, winter decline which sweeps off so many sheep, especially tegs. He proposes to us to test the remedies, and if we become satisfied of their merits, to "advertise them in the Rural and sell them as extensively as possible"—allowing him such a per cent. of the profits as we think right. As our correspondent offers us the benefit of a trial of his medicines in advance, and writes like a man of intelligence, he may honestly believe he has discovered valuable remedies. But we inform him, 1—That we never even take the trouble to test, and never publicly notice, any sheep remedy the ingredients of which we are not made fully acquainted with; 2—That we never sell or take any interest in the sale of any such remedies; 3—That we never in this Department advertise or puff anything, good or bad, for a share of the profits or any other form of pay.

Death of Sweepstakes.—A correspondent in Southern Illinois, whose letter we have mislaid, asked us a few weeks since whether a company named by him in Missouri, had purchased Sweepstakes and a number of choice ewes from Hon. Edwin Hammond of Vermont—saying that he made the inquiry for the benefit of those who might wish to avail themselves of the opportunity of obtaining that stock, if such purchases had been made. Mr. Hammond informs us that he never made any sales of sheep to the company named, and his old stock ram, Sweepstakes, died in his own possession in June.

"Reports of Great Fleeces."—Wm. F. Barber, Castleton, Vt., alluded to in our article under above head, July 13th, encloses us a note signed by Marcus Hawkins, that he has for two or three years sheared the sheep, and that Mr. B.'s statements are "honest and true," and that he is careful "in putting up his wool in good shape." Also a certificate from C. L. Barber that he "sold to W. F. Barber 10 full-blood Spanish Merino ewes in the fall of 1863, and that they were his culls."

C. E. Shepherd's Tegs.—Since the cut of these was published by us (July 20.) Mr. C. writes us that he has obtained a fuller pedigree, and he encloses the following signed by A. L. Bingham:—"This certifies that I have sold C. E. Shepard, pr. N. E. Wheeler, five ewe lambs dropped by ewes of pure Atwood stock descended from Hammond's flock, and from the ram "Prince," bred by Edgar Sanford, West Cornwall, Vermont. "Prince" was by the Sanford & Lane ram bred by Henry Lane."

Unknown Disease.—Samuel Hart, Scenery Hill, Washington Co., Pa. You do not describe the disease among your father's lambs with sufficient minuteness to enable us to identify it with any one with which we are acquainted. We do not, however, believe that it could possibly have been caused, as you suggest, by their "getting too much milk."

Communications, Etc.

HIRED MEN.

"James, where is the board that belongs in this meal bin?"

"I do not know where it is!"

"You take meal out of this bin to feed the cattle, do you not?"

"Yes sir!"

"Then you must have taken the board out, and know where it is."

"No, sir, I do not!"

"This looks a little singular,—here *you* are the only one that has anything to do with this bin, the only one that takes meal out of it, and yet you don't seem to know where this board is."

"Well, I do not!"

"You might as well tell me I lie! Get out of my barn and leave my premises!"

James did leave, and our choleric friend, choking down his wrath, turned around, found the board which had caused the harsh words, and finished emptying his meal.

We once heard a farmer complaining of his help. He could find but few good men. Most of them he could not trust out of his sight. They were lazy, shiftless and ungrateful. We took pains to find out the cause of this trouble. In the first place, there was no *limit* to a day's work. Noon was taken up by a round of chores—no rest or relaxition of any kind, except taken when out of sight of their master. Added to this, the table was always reset for the hired men, and seldom with a very great variety at that. Complaints were made of the cost of boarding help, and insinuations made of the most provoking kind. A good man would not work at any such place, while any other would shirk responsibilites as much as possible.

How many farmers treat their hired men with as little regard and respect! How many do not seem to consider their help as possessed of any humanity or sensitive feelings. They never seem satisfied with their work, nor to think the day's work completed. The iron hand of labor is never relaxed. A day's recreation for help never occurs to them. Like the thoughtful old lady, they wish it may rain nights and Sundays, So hired men could rest.

Brother farmers, allow work hands some privileges; treat them as though humanity was embodied in them as well as yourself. Consult them in regard to your business—ask advice—give them recreation—let there be some limit to their work;—lay aside this eternal fault-finding, and invest more in humanity and good nature.—E.

POULTRY PROFITS, TREATMENT, &c.

Eds. Rural:—Not long since you published an item in which I gave a statement of my dealing with a few choice fowls; it may be of further interest to you to know that my stock still persevere in well doing, as the statement below will show:

Paid for stock, Spanish, Brahmas and Bantams,		$50 00
" feed 5 months to July 1, 1867		9 93
By eggs sold	$38 37	
" Stock on hand	50 00	
Nett profit		$28 44
	$88 37	$88 37

In addition to the above I have on hand twenty-five chickens, some of which are three months old and very fine. Two of my Brahmas commenced laying when their chicks were but twenty-one days old. I feed my stock with cracked corn, giving young chicks hard boiled eggs for their first food.

My coops for old stock are lathed, plastered and whitewashed, with good light and ventilation, gravel bottom and secret nests. Roosts, two by three joice, two and a half feet from floor beneath to catch droppings, which I find very valuable in the cornfield.

I am glad to see a call for the organization of a Poultry Club in New York city, to be held at Room 24, Cooper Union Building, July 10th. Success to the movement. Cant we do something in this section toward the improvement of *all* live stock. G. K. H.

Glen's Falls, July, 1867.

Rural Spirit of the Press.

New York State Cattle Law.

The following are the principal provisions of the law as lately revised with reference to the running at large in the public highways of this State. Thus:

§ 1. It shall not be lawful for any cattle, horses, sheep, swine or goats to run at large in any public street, park, place or highway in this State; and it shall be the duty of every street commissioner in any incorporated village to seize and take into his possession and keep till disposed of according to law any animal so found running at large. And any person suffering or permitting any animal to so run at large, in violation of this section, shall forfeit and pay a penalty of five dollars for every horse, swine or cattle, and one dollar for every sheep or goat, so found, to be recovered by civil action by any inhabitant of the town, in his own name, or in the name of the overseers of the poor of the town, or by the proceedings hereinafter provided.

§ 2. Section two of said act is hereby amended so as to read as follows:

Section 2. It shall be lawful for any person to seize and take into his custody and remain until disposed of as required by law, any animal which may be in any public highway and opposite to land owned or occupied by him, contrary to the provisions of the foregoing section, or any animal which may be trespassing upon premises owned or occupied by him.

The remainder of the provisions relate to the method of enforcing the law, providing for the sale of the cattle, the payment of the costs, the disposition of the overplus, etc.

Potato Rot—How to Stop it.

At a late meeting of the Institute Farmers' Club, New York, James Warren, Monroe, Iowa, read an essay on the cultivation of the potato. This naturally brought in the subject of the rot, which he imputed to carelessness in not selecting seed from such hills as produce fully ripened potato balls. The absence of these, on a potato vine, is a sure sign of immaturity, and although these potatoes will germinate and produce others, the yield will diminish yearly, become diseased from weakness and finally die out from exhaustion. To bring back the potato, to its former productiveness, the seed must be selected from those hills or stalks producing balls and these only. In this way the tendency to rot will be checked and the old-fashioned productiveness restored. This is a sensible view of the subject, and probably a correct one. Vitiated seed will naturally be followed by an immature and diseased progeny. Plant only perfect tubers, and the potato disease, it is assumed, will soon be among the things of the past.

Smoking or Quieting Bees.

A communication in the American Bee Journal assumes that the best material to burn for smoking or quieting bees is rotton wood, such as may be pulverized by the hand. It has not the bad effects of tobacco or old rags. Take a common fire-shovel with a few glowing coals and place the rotten wood on these and blow the smoke into the entrance of the hive. This will soon quiet, but not stupify or kill the bees. It may be necessary sometimes to repeat the smoking before the operation about the swarm is completed.

Rural Notes and Items.

The Season—Farming Progress.—The harvest season in Western New York, as well as in the Northern and Western sections of the Union generally, now nearly over, has been characterized by excellent weather. The hay and wheat crops have been gathered in good condition while both as to quantity and quality will compare favorably with any preceding harvest for a long series of years. Occasional local exceptions are noted in our exchanges, as they always are in the best and most productive seasons, but these do not invalidate the great general truth that the agricultural labor of the country has been so far munificently rewarded. The autumnal harvest of corn and vegetables promises well, while that of fruit is less flattering, though that of apples will, from present indications, be an improvement on the yield of last season in this section as well as in the State generally. In some localities in the West the yield promises to be more than commonly good. On the whole, we think the farming interest for the present year will be enabled to report fair progress on the closing of the books at the setting in of winter.

Pitch-Forks and Law.—According to the Geauga (O.) Democrat, many of the farmers in Ashtabula and adjoining counties have come to grief on pitch forks. They bought shares last year of a traveling agent in a Patent Pitch-Fork Company—five shares costing $50. For these they gave notes payable in one year. These were sold, at a considerable discount, by the holders, and are now falling due. Not liking the stock or the forks, the makers of the paper determined to repudiate, and got sued as a consequence. Several of these suits have been tried in the courts there with a uniform rendition of judgment against the repudiators. Large numbers of these notes are maturing, bringing grists to the mills of the lawyers, but making serious inroads into the hay mows and grain bins of the badly-forked farmers. The better way for this class is to make sure they want an article and then buy it, rather than purchase the right to manufacture what may prove to be worth little or nothing when made.

Massachusetts' Agricultural College.—The Springfield Republican states that the Agricultural College, located at Amherst, will be open for the reception of the first class of students early in October. Over fifty applications for admission have already been received, but it is not apprehended that any will be denied admission in consequence of a lack of room. The live stock for the farm at present consists of a "six-weeks-old calf of the Jersey persuasion," but an increase—a considerable one—is expected during the present season. Considerable disappointment has been experienced by the retirement of President Chadbourne who is to take a like position at the head of the University of Wisconsin.

Trial of Mowers at Solon, Ohio.—The Ohio Farmer contains a report of a trial of Mowers at Solon, in that State, which took place on the 9th of July, when some fourteen machines went into the grass. The committee report what each mower did, and would have been glad to have stopped at that point, but, as the rules required an award to be made, the question was narrowed to the Excelsior and Buckeye, concerning which the Committee say:—"The one will cut just as much as the other; it will cut it just as easily, and just as well; it costs just the same, and apparently will last just as long; but we prefer the manner of folding and carrying the Buckeye—and the senior Buckeye has our award."

Report of the Michigan State Board of Agriculture.—We are indebted to Hon. Sanford Howard, Sec'y of the Michigan Board of Agriculture, for a copy of its proceedings for the year 1866. It forms a volume of 322 pages, besides a Register of Meteorological Observations, and an Appendix of about 50 pages. The Contents embrace articles on a variety of subjects of direct interest to farmers, and those of Michigan should not fail to read and add the volume to their libraries.

Rotting Flax.—D. S. Abbott, Cuba, N. Y., writes the Iowa Homestead on the subject of handling and rotting flax. He says the Irish, when flax is raised specially for the fiber, do not allow the seed to ripen. The straw is pulled when the seed is in the milk state, and water rotted immediately or before it dries at all. They contend that it spoils the fiber for nice linen to allow the straw to dry before rotting.

Bureau of Statistics.—We have received from the Director of Treasury Statistics, Alex. Delmer, a copy of the monthly report of the Bureau of Statistics, embracing in detail the imports and exports for four months, ending on the 31st day of May, 1867. Cotton seems to have been the leading article of export, amounting to $108,095,373.

Grasshoppers.—This pest has been quite destructive in portions of Kansas the present season. Wheat in some sections has been badly injured; oats nearly destroyed, and corn considerably cut up. These ravages seem to have been confined mainly to that section of the State west of Leavenworth.

Flax in Illinois.—The superintendent of the Flax Works, at Kankakee, Ill., informs the editor of the Gazette of that place that there are 9,000 acres of flax growing in that vicinity. The stand is reported to be excellent, and the yield of fiber, it is anticipated, will be uncommonly large.

Hog Cholera.—The Madison Pioneer, Ark., alluding to complaints about hog cholera, says:—"If people would salt their hogs regularly, give them lime in their slops, good strong wood ashes, and also soft soap and soap suds, their hogs would soon become healthy."

Price of Wheat in 1863.—The range of flour in the St. Louis market in 1863, with gold at 46 to 48 premium was from $4.75 to $7.50. With a harvest this season quite as abundant as at that time, what is to hinder a relapse to the old quotations of that period?

California Wheat to England.—The California Farmer mentions the shipment, June 27th, of 100 tons of fine new wheat direct for Liverpool. It was grown in the Sanoma District—the pioneer spot of large shipments in the same direction.

Wool in Michigan.—According to the reports from this State a considerable portion of the season's clip of wool is being thrown upon the market. At Ann Arbor the receipts are quite large and sales range from 38 to 45 cents.

Early Corn.—We are under obligation to Mr. Sutton of the town of Irondequoit for a liberal sample of green corn grown by him, and picked on the 24th of July.

HORTICULTURAL.

LATE CULTIVATION OF ORCHARDS.

THE period of the year has arrived when cultivation in the orchard should cease. It should not be the policy of the owner to stimulate his trees, either by manuring or cultivating in the latter part of the summer, to make a vigorous late growth. The time for the wood to be formed is in the spring and early summer,—then the cultivator should be kept at work and manure applied. But ample time should be allowed afterwards for the trees to ripen their wood so as to endure the winter uninjured.

On rich soils, where the apple is delicate, late growth of the wood should be especially guarded against. Pear orchards everywhere should not be cultivated and stimulated after the prime of summer is passed. The peach growers of Maryland and Delaware have learned better than to cultivate their orchards late in the season by noticing the tendency of trees thus treated to cast their fruit. If a neglected orchard is plowed late the fruit is sure to fall the next year. In localities where the rot has been prevalent in vineyards it has been noticed that uncultivated vines escaped while those well taken care of were infected. So it has been thought better by some cultivators to have weeds cover the ground and healthy fruit the vines, than to take up with the reverse, clean ground and rotten fruit. Perhaps late cultivation in the vineyard induces the rot when other circumstances also favor. But a weedy, apparently uncared for orchard or vineyard is an eye-sore to the enthusiastic fruit grower, and such an appearance is likely to be assumed when the cultivator and hoe are laid aside at midsummer. To avoid this, to check late growth of orchards, and for the purpose of enriching the soil at the proper time, we suggest that some crop, as rye, be sown the last time of cultivating. This crop would also shield the ground in the winter and furnish a coat of manure to plow under in the succeeding spring.

FRUIT GROWING IN EGYPT.

EDS. RURAL:—It was not until within a few years that the idea of fruit growing for market first attracted notice in this locality. Since the completion of the Illinois Central Railroad there some few enterprising northerners first conceived the notion that apples, peaches, pears, plums, cherries, berries and grapes could be raised to supply the northern market, and now from Jonesborough to Carbondell, for from 3 to 6 miles from the railroad, is almost one continuous orchard, employing hundreds of men and women to gather the fruit, and a fruit train runs directly from Jonesborough to Chicago every day, laden with the fruits of the season. First in order came the strawberries; next raspberries and cherries. Now the peaches are going at the rate of three and four car-loads a day, and it is thought they will exceed the number of twelve car-loads per day before the season ends.

Gardening also receives its share of attention. It has been found that the raising of early vegetables for northern market, can be made very profitable also, and hundreds of boxes of early tomatoes and early potatoes are going on their way north every day. The disposing of the products here is carried on quite differently from the way usually adopted by producers generally. Instead of selling at the railroad station, as is usually done by farmers, every man does his own shipping—sending to his favorite commission merchant, mostly in Chicago, but a great deal is sent to various other places throughout the northwest. Cobden is the center of the fruit trade. The place is commonly called South Pass—it being the only place of railroad passage through the range of hills, or rather it is an elevated table-land, extending from Cape Girardeau, Mo., to Shawneetown on the Ohio. It is emphatically a Yankee town, something rather uncommon in this region. Here are found the largest orchards and vineyards. There are peach orchards, covering from 100 to 200 acres, lying in every direction from the place, and as the present crop is a fair one the returns will undoubtedly be great, and energy and enterprise will, as it always does, meet with its reward.

J. E. S.

THE ARMY WORM—PREVENTIVE.

MR. CHARLES S. MCCOLLUM, of Newfane, Niagara county, N. Y., informs the editor of the Niagara Democrat that he has tried many experiments for preventing the army worm from ascending his fruit trees without effect, until recently, when he succeeded in stopping them. Thus:—"Take cotton batting, open it and cut it into strips of 3½ to 4 inches wide, take a strip of the cotton and tie it with a string around the tree, about two feet from the ground. The string should be tied at the lower edge of the cotton, turning the cotton down smoothly over the string, when it will adhere closely to the bark of the tree. See that there is no opening left in the cotton. Experience has proved that the worms cannot get over the cotton.

This should be put on between six and nine o'clock in the morning. The worms, it is said, commence leaving the trees for the earth at daylight, remain four or five hours on the ground, and commence going up the tree at from nine to ten o'clock—that they remain in clusters until one or two o'clock P. M., and then commence feeding. It is believed that they contine eating the leaves until daylight, when they descend to the earth, especially if the ground under the trees is plowed. Next to the above remedy, lard and sulphur have proved the most successful. The experiment is certainly worth trying. The worms will accumulate in great numbers below the cotton, and should be swept off with a broom occasionally.

PERENNIAL LARKSPURS.

IN this favorite class of flowers the perennial varieties are worthy of special attention and cultivation. If the seed is sown late in autumn, or very early in the hot-bed, they will usually flower the first season. The plants should stand about a foot and a half apart. The perennials are richly colored, showing beautiful shades of white, blue, red and pink. The engraving furnished by our Floral Contributor, Mr. J. VICK, shows a spike of flowers of natural size. The larkspurs are in season now, and every garden should make a fine show of this beautiful flower.

HORTICULTURAL GLEANINGS.

Pruning Pole Beans.—Pole beans, left to themselves, run quickly to the tops of the poles, and produce nearly all the crop above. When the vines reach half way up the poles, nip off their ends, and they will branch out and clothe the poles with leaves and beans from the ground all the way to the top.

Grafting Prunes on Wild Plums.—Hon. Levi Bartlett of Warner, N. Y., says that about ten years ago he grafted French prunes into the wild plum stock, and has since had an abundance of plums. He, however, has had to jar the trees every day for two weeks after the fruit sets, to prevent its destruction by the curculio.

Old Pear Trees.—At the ancient village of Cahokia, just below and opposite St. Louis, are pear trees estimated to be one hundred and twenty years of age. The trees are said to be from forty to fifty feet high, with trunks three feet in diameter. They produce from fifteen to twenty bushels each of a pear said to rival the Seckel in quality.

Plums and the Curculio.—Dr. KIRTLAND says of the curculio, that in one season it destroyed every plum on his farm, except the crop of one tree in his swine lot, which bent under its load of fruit. JOHN J. THOMAS tells of a cultivator in Western New York, who, by keeping a large number of hogs in his plum-yard, had abundant crops for more than twenty years, while his neglectful neighbors lost a greater part of theirs.

A New Raspberry.—The West Jersey Fruit Growers' Association report that among the new raspberries lately introduced, the Clarke promises to be valuable, being hardy, large and a fine bright red color, very juicy and delicious, will bear carriage a hundred miles and keep for three days in good condition; having seen it in bearing for three years past, the Association feel safe in recommending it for general cultivation, both for amateurs and market men.

Introduction of the Tomato.—It is generally supposed to be a native of South America, and to have been cultivated at an early period by the people of Peru and Mexico. It made its appearance in Europe in the 16th century, the first mention of it being by Rembert Dodoens, the famous Dutch herbalist, whose work, published in 1583, speaks of tomatoes as vegetables which may be eaten as a sort of salad with pepper, salt and oil. John Gerarde, an Englishman, whose "Herbal" was given to the world in 1597, tells us that in his time several varieties were to be found in the gardens of his country. Half a century later, in 1656, John Parkinson, another English writer on plants, treats of them as garden curiosities, cultivated more for their beauty of appearance than for utility. He styles them sometimes love apples, and sometimes amorous apples.

Fruit Growing in Florida.—A correspondent of the Farmers' Register, writing from Florida, under date of June 12th, says:—"My Hartford Prolifics are now ripe; Crevelings nearly so; Concords not quite. A two-year-old Iona has made thirteen feet of new wood from the ground—it commenced growing Feb. 16th. A two-year-old Israella has not grown a foot. Rogers' Hybrids, Herbement, Ives, Rebecca, Diana, Concord, Allen's Hybrid, Union Village and Adirondac, are all doing finely. The Delewares look pitiful, struggling for a miserable existence. Strawberries began to ripen the last day of March, and have borne well ever since. The Triomphe de Gand is a failure; Wilson's does best of all. There is no better peach country than this; the trees hang full, and early ones are ripe. Tomatoes were shipped from here a month ago; sweet potatoes are half grown; figs about ripe; a big crop of oranges is coming along."

Boring Fruit Trees.—It is a disputed point among fruit growers whether boring fruit trees, when they cease to bear, or cut their fruit in an immature state, is beneficial or the reverse. In a late number of the Scientific American there was an extract from a letter of an Ohio correspondent, in which occurred the following:—"A neighbor of mine has a cherry tree that is about ten inches in diameter, and every year the fruit either dropped off, or that which remained was so knotty and wormy as to be unfit to eat. Having seen a statement that boring through the heart and introducing roll brimstone into the cavity would improve such trees, I tried it some three years ago. Whether from this cause or not, it is certain that a change was at once apparent. The tree put on quite another appearance; the leaves assumed a healthier color, and the yield ever since has been splendid in quality and large in quantity. After introducing the brimstone the hole was plugged up."

The Iona Grape.—The American Journal of Horticulture says:—"This new grape, which has been so highly praised by its friends, and especially by its originator, fruited in different parts of the country last year, and gave the public opportunity to judge of its merits. There can be no question that it is a grape of very high quality; in fact, we regard it as the best hardy grape yet introduced: but there is still some doubt as to its proving early enough for a large portion of our country.

"The vine is a good grower, with good foliage, that remained free of mildew in the same vineyard where the Delaware was nearly a failure on account of the mildew of the foliage; gives good-sized bunches and berries which *failed* to ripen. It is true that last season was an unfavorable one all over the country for the ripening of the grape-crop; yet the Concord and Creveling ripened, and a large crop was sold from the same vineyard in which the Iona failed. Now, the Concord is full late enough for the North; and any variety that will prove considerably later than that will be of little value, however good its quality. It is fully as late as the Rebecca and Allen's Hybrid, which did not ripen with us last year.

PRETTY PLANTS FOR THE KITCHEN.

TAKE a common tumbler, or a fruit can; fill it nearly full of soft water. Then tie a bit of coarse lace or cheese sacking over it, and press down into the water, covered down with a layer of peas. In a few days they will sprout, the little thread-like roots going down through the lace into the water, and the vines can be trained up to twine, or what is prettier, a frame may be made for the purpose. The tumbler, or jar, should be set in a window where the sun shines. It requires no care, and you will have a delicate, pretty vine to rest your weary eyes upon.

You can make another pretty thing with as little trouble. Take a saucer and fill it with fresh green moss. Place in the center a pine cone, having first wet it thoroughly. Then sprinkle it thoroughly with grass seed. The moisture will close the cone partially, and in a day or two, the tiny grass spires will appear in all the interstices, and in a week you will have a perfect cone of beautiful verdure. It only wants a plentiful supply of water to be a "thing of beauty" all summer.

Horticultural Notes and Queries.

APPLES HALF SWEET AND HALF SOUR.—Mr. S. FORSOM, editor of the Attica Atlas, informs us that last spring he set ten grafts, each graft being made up of two varieties by means of halving the stems and buds and nicely fitting the different parts together. Five of these are living, some having made a growth of seven or eight inches. Mr. F. is confident that he can produce apples having the sweet and sour flavor mixed, but he says he has no expectation of receiving that $100 offered by SOLON ROBINSON, as he does not suppose the fruit will be *exactly* half sweet and half sour or half red and half green, but he believes the different flavors and colors will be distinctly perceptible in one apple.

PRUNING BLACKBERRIES, GRAPES, &C.—(Constant Reader.) It is advisable to prune blackberry bushes during the growing season by clipping off the tops of the young canes to prevent their growing too high and to send the growth into the laterals. The old canes should be cut out late in the fall or early in the spring. Grafting grapes in the vineyard is a very uncertain operation, and not to be recommended except for experimental purposes. The best time is probably early, cutting the cions at the time of grafting.

STRINGS—HOW TO GET THEM.—It is frequently quite as easy to save expense as to earn it, and many strings are wanted about the vineyard, nursery and garden in course of the year. Allow an amateur gardener to tell RURAL readers how to get them cheaply. Go to some junk shop or rag warehouse and buy an old boat bow or stern line, and with a sharp tool cut it in lengths to suit convenience; then untwist it and you will have what is called spun yarn, a most excellent strong string and cheap.—YANKEE.

TRANSPLANTING FULL-GROWN TREES.—Thirty beautiful elms, fully forty feet in height, were removed from their native forests, and replanted in front of the site of Congress Hall at Saratoga, to take the place of the trees destroyed by fire. They are now in full leaf and appear to thrive under this singular treatment. The same thing has has been successfully accomplished in Scotland, also in Paris.

FLOWER FOR A NAME.—"A RURAL Reader," Carmal, Indiana. The flower, forwarded by you for a name, is known among botanists as "Musk Mallow," *Malva Moschata.*

YELLOW BUGS ON GRAPE VINES.—A Subscriber asks, "Will some one inform me through the columns of the RURAL what will exterminate *large yellow bugs* on grape vines?"

DOUBLE FLOWERIG HORSE CHESTNUT.—(B.) You can procure the above named Chestnut of the majority of nurserymen.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

WHILE visiting at the hospitable mansion of Judge BLACKMER of Salisbury, N. C., some months ago, we partook of several dishes which were far more palatable than the "fare" at first-class hotels in Washington, Richmond, &c. The "Southern Pudding" and "Boiled Custard" were decidedly extra, and Mrs. B. having kindly complied with our request to furnish recipes, we take pleasure in offering them to housewives of the RURAL circle—with the assurance that if "Southern institutions," they are good ones and worthy of more general introduction:

SOUTHERN PUDDING.—Two eggs, 2 teacups sugar, 2 cups sweet milk, 4 cups flour, butter the size of a large hen's egg, 1 teaspoon soda, 2 teaspoons cream tartar.

Sauce for Above.—Half cup butter, 1 cup sugar 1 cup wine, 2 tablespoons brandy, a handful of raisins and a little nutmeg.

BOILED CUSTARD.—One quart fresh milk, 6 eggs, 2 cups sugar, 3 tablespoons arrow root or starch, a pinch of salt, 1 teaspoon butter. Stir together the yolks and sugar; mix the starch with a little milk, and pour it into the remainder of the milk, which must be on the fire boiling. As soon as it thickens, add the yolks and sugar, stirring constantly. Let all boil two or three minutes, and then pour the whole over the well-beaten whites. Flavor to taste.

EDS. RURAL:—I will send a few recipes which I have never seen in the RURAL, and which I know to be good:

TOMATO SOUP.—3 teacups of tomatoes; scald the tomatoes and cut up fine; then pour on 1 quart of boiling water; afterward add 1 teaspoon of soda, 1 pint sweet milk or cream; butter, pepper and salt to taste. Be sure and add the soda before the milk or it will be spoiled. Pour the soup over slices of bread or crackers.

TOMATO CATSUP.—1 peck of ripe tomatoes; cook three hours; then strain through a coarse sieve; scald, and add 3 tablespoons of salt, 2 of cinnamon, 1 of cloves, 1 of Cayenne and 1 of black pepper; when cold add 1 pint of strong vinegar. Bottle, and set in a cool place.

RIPE CUCUMBER PICKLES.—Take ripe cucumbers, pare them, cut them lengthwise, scrape out the inside, and put them in weak brine three or four days; to 2 quarts vinegar put 4 lbs. sugar, 1 grated nutmeg, a small bunch of cinnamon, a few cloves; press the brine out of the cucumbers, rinse in cold water, and boil in the vinegar until tender and transparent. They make a very nice pickle.

GREEN CORN PUDDING.—To 1 dozen ears of corn take 1 cup sweet milk, 1 spoonful sugar, 1 egg, a little salt. Grate off the kernels, or split and cut them off. Bake in the oven.—A FARMER'S WIFE, *Erie Co., N. Y.*

GOOD BLACK INK.—P. H. WILLIAMS, Manlius, sends the following for making black ink:—In 2½ gallons of soft water, hot, dissolve 1 oz. extract of logwood and ½ oz. bicromate of potash. Strain clear from the dregs, and be sure to get good chemicals.

New Advertisements.

THE GREAT EUROPEAN STRAWBERRY
DR. NICAISE.
Strong plants ready for delivery by mail from August 15th. Read the Rural and send your orders early.
MARK D. WILLSON, No. 195 North St., Rochester, N. Y.

FRUIT PICKER.—RICHARDS & LINCOLN'S FRUIT PICKER. Will pick all kinds of fruit, and *deliver it in the basket* with great rapidity, as perfect as when hanging on the tree. No climbing to be done, nor ladders needed. Weighs 2¾ lbs. Single machines sent by express for $2,00. Special inducements to agents. Address L. RICHARDS, Patentee and Proprietor, Varysburg, Wyoming Co., N. Y.

THE GREAT
EUROPEAN STRAWBERRY

DR. NICAISE:

Said to be the LARGEST BERRY known, plants are hardy, vigorous growers, and productive. Fruit of this variety from plants set in September last was exhibited at the Western New York Fruit Growers' Convention held in Rochester on the 27th of last June, which weighed 1¾ ounces and measured 6¾ inches in circumference.

This variety we have imported at a great expense, and will have a fine stock to offer our customers in August and September.

The following are extracts from European Catalogues: "*It is of enormous size, the berries weighing over 1¾ ounces, (nine to the pound,) and early, of a bright red color, very glossy, the flesh white, and of fine quality.*"

This sort has the best characteristics of any we have ever introduced. Orders must be sent in EARLY, as they will only be filled in rotation. ☞ We will furnish plants postage paid, at the following rates:—$1 ₰ plant; $10 ₰ dozen; $75 ₰ 100. Address FROST & CO.,
914-4t Genesee Valley Nurseries, Rochester, N. Y.

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.
W. H. MANN & BRO., Normal, Ills.
P. S.—Agents Wanted. 911-13t

THE
GREAT AMERICAN
TEA COMPANY

HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₰ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₰ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₰ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₰ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₰ lb.
GUNPOWDER $1,25, best $1,50 ₰ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY,

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.

A MOTHER'S PRAYER.

Father! listen to my prayer,
As I kneel to Thee, to-night,
Gazing on my jewels rare
Slumbering 'neath the moon's pale light.

They are purer than the pearls
Glowing neath the star-lit sea,
Fairer than king's diadems,
Though of priceless wealth they be.

Ask I not a setting rare
For my gems; nor gifted name,
Well I know the thorns of care
Lurk 'mid laurel leaves of fame.

Ask I not for length of days,
Measured out amid earth's tears,
Till the weary traveler prays
Respite from the coming years.

Father! in this holy hour,
As I bend the suppliant knee,
Send thy spirit down in power,
Bend their tender hearts to Thee.

And when death's lone vale they tread,
Jesus! Thou their refuge be;
Thou who of such children said,
"Suffer them to come to me."

Porter, 1867. A. E. H.

CURIOSITIES OF MARRIAGE.

Marriage is the first and most ancient of all institutions. As the foundation of society and the family, it is universally observed throughout the globe, no nation having been discovered, however barbarous, which does not celebrate the union of the sexes by ceremony and rejoicing. The abuses of the institution, as polygamy, infidelity and divorce, have in no manner touched its existence, however they may have vitiated its purity.

The condition of women in all countries has afforded a fruitful theme for the observation of the traveler, and the speculations of the philosopher and the novelist. It has been uniformly found that the savage is the tyrant of the female sex, while the position and consideration given to woman is advanced in proportion to the refinement of social life. Under the laws of Lycurgus, Numa, and even later law-givers, the power of the husband over the wife was absolute, sometimes even including the power of life or death. The wife was always defined and treated as a thing, not as a person—the absolute property of her lord. In the earlier ages a man might sell his children or his wife indifferently, and relics of this rude custom still survive, even among nations called civilized and Christian.

In the countries of the East, where polygamy is almost universal, marriage is not the sacred tie which it is held to be in Christian countries. In Persia men marry either for life or for a determinate time. Travelers or merchants commonly apply to the magistrate for a wife during their residence in any place, and the Cadi produces a number of girls for a selection, whom he declares to be honest and healthy. Four wives are permitted to each husband in Persia, and the same number is allowed by the Mohammedan law to the Mussulman.

In Chinese Tartary a kind of male polygamy is practiced, and a plurality of husbands is highly respected. In Thibet it is customary for the brothers of a family to have a wife in common, and they generally live in harmony and comfort with her. Among the Calmucks, the ceremony of marriage is performed on horseback. The girl is first mounted, and permitted to ride off at full speed, when her lover takes a horse and gallops after her. If he overtakes the fugitive she becomes his wife, and the marriage is consummated on the spot. It is said that no instance is known of a Calmuck girl ever being overtaken unless she is really fond of her pursuer.

The Arabs divide their affections between their horses and their wives, and regard the purity of blood in the former quite as much as in their offspring. Polygamy is practiced only by the rich, and divorces are rare. In Ceylon the marriage proposal is brought about by the man first sending to her whom he wishes to become his wife, to purchase her clothes. These she sells for a stipulated sum, generally asking as much as she thinks requisite for them to begin the world with. In the evening he calls on her, with the wardrobe, at her father's house, and they pass the night in each other's company. Next morning, if mutually satisfied, they appoint the day of marriage. They are permitted to separate whenever they please, and so frequently avail themselves of this privilege that they sometimes change a dozen times before their inclinations are wholly suited.

In Hindostan the women have a peculiar veneration for marriage, as it is a popular creed that those females who die virgins are excluded from the joys of paradise. In that precocious country the women begin to bear children at about the age of twelve, some even at eleven. The proximity of the natives of India to the burning sun, which ripens men, as well as plants, at the earliest period in these tropical latitudes, is assigned as the cause. The distinguishing mark of the Hindoo wife is the most profound fidelity, submission and attachment to her husband.

On the banks of the Senegal, and among many African tribes, the matrimonial prize most sought after is abundance of flesh. To obtain corpulence is regarded as the only real comeliness. A female who can move with the aid of two men is but a moderate beauty, while the lady who cannot stir, and is only to be moved on a camel, is esteemed a perfect paragon. Nor is this queer fancy for obesity in women confined to the savages in the torrid zone, since we read in Wraxall's Travels in Russia that "in order to possess any pre-eminent degree of loveliness, a woman must weigh at least two hundred weight." The Empress Elizabeth, and Catharine II, both accounted very fine women, were of this massive kind.

In Italy, matches are made with proverbial levity, and marriage vows, if report speaks truly, are easily broken. Young virgins are systematically bartered and sold by their parents, and young people are married every day who never saw one another before. Concubinage is a constant remedy for these ill-advised and deceitful marriages, and the peculiarly Italian term, *cicisbio*, indicates the indemnity which custom prescribes for the fair sex fettered to husbands unloved.

In France, as has often been remarked, women monopolize all the society and a large share of the business of life. The coffee houses, the theaters, the shops, the cabarets, or drinking shops, are filled with women. Women lord it at all assemblies, and are better informed and more capable managers than men. Marriage is looked upon not so much as a matter of affection as of interest, and the sacredness of the tie is proportionately slender.

Marriage in Sweden is commonly governed wholly by the will of the parents, and is founded upon interest. A stolen match is almost unheard of, and persons of either sex seldom marry before the age of twenty-five or thirty. Divorces are very rare.

Russia appears to be the most preposterous country in Europe in its treatment of women. The nuptial ceremonies, all singular, are based upon the degradation of the female. When the parents have agreed upon the match, the bride is examined by a number of women to see if she has any bodily defect. On her wedding day she is crowned with a garland of wormwood, to denote the bitterness of the marriage state. She is exhorted to be obedient to her husband, and it is a custom in some districts for the newly married wife to present the bridegroom with a whip, in token of submission, and with this he seldom fails to show his authority. In this cold and cruel country, husbands are sometimes known to torture their wives to death without any punishment for the murder. If a woman prove barren, the husband generally prevails on her to retire into a convent and leave him at liberty. If he fails in persuasion, he is permitted to whip her into condescension.

Such is the slavery in which the Muscovites are kept by their parents and guardians, that they are not allowed to dispute any union agreed upon by their elders, however odious or incompatible it may be. This extends so far, that officers in the army are not permitted to marry without the consent of the sovereign, and wives whom they do not want are even sometimes forced upon them.

Whether it be the result of this system of oppression, or of their savage climate, or of the unnatural hot air of the stove-heated apartments, it is certain that a more unlovely race of women than the Russian would be difficult to find. "They want," says an English traveler, "the genuine flavor which only nature can give. That charming firmness and elasticity of flesh, so indispensably requisite to constitute beauty, and so delicious to the touch, exists not among the Russian females, or in very few of them."

We are told of the Aleutian Islanders who form a part of our new Russian American acquisition, that they marry one, two or three wives, as they have the means of supporting them. The bridegroom takes the bride upon trial, and may return her to her parents, should he not be satisfied, but cannot demand his presents back again. No man is allowed to sell his wife without her consent; but he may (and often does) assign her over to another. This custom, it is said, is availed of by the Russian hunters, who take Aleutian women or girls to wife for a time, for a trifling compensation.

No Farmer's Girls now.—Seward Mitchell, Cornville, Me., sends a communication to the Maine Farmer, which goes to show that there are some "old fogies" down east yet. Hear him:—"There are no girls now-a-days; they are nearly all young *ladies*. It is generally thought to be a disgrace to *work*, they must be dressed in silks and satins, and be doing some kind of fine sewing or worthless crocheting. Instead of subscribing for a valuable agricultural or domestic paper, which would be of service to them they are insane in reading Godey's Lady's Book." We judge from this that Mrs. Mitchell is not presistent or punctual in Candleing her man or he would not dare to break out in such manner and style as aforesaid.

Teach the Children.—The celebrated Gerson, although Chancellor of the University of Paris, and the theological leader of the reformatory councils of Pisa and Constance in the early part of the fifteenth century, felt that he had a greater work to do. After taking a prominent part in all the leading questions of the age, he retired to a convent at Lyons, and found his chief delight in the instruction of little children, saying that it was with little children that the reformation of the church should commence. And on his death-bed he sent for the little ones that they might pray for him.

Example for Mothers.—The late Henry Winter Davis said of his mother:—"She was the incarnation of all that is Christian in life and hope, in charity and thought, ready for every good work, herself the example of all she taught." What an example for parents, and especially for *mothers!* The legitimate sphere of woman seems to many to be very humble and obscure. But it is hers to teach and to temper the secret springs of being and of character, and to flash forth her power upon nations and ages, through the *sovereignty over heart and life* she wields in the home circle.

Women are like precious carved works of ivory, nothing is whiter and smoother, and nothing sooner grows yellow.

Choice Miscellany.

THE MUSIC OF THE SEA.

The gray unresting sea,
Adown the bright and belting shore,
Breaking in untold melody,
Makes music evermore.

Centuries of vanished time,
Since the glad earth's primæval morn,
Have heard the grand unpausing chime,
Momently new-born.

Like as in cloistered piles,
Rich bursts of massive sound upswell,
Ringing along dim-lighted aisles
With spirit-trancing spell;

So on the surf-white strand,
Chants of deep peal the sea-waves raise,
Like voices from a viewless land,
Hymning a hymn of praise.

By times in thunder notes,
The booming billows shoreward surge;
By times a silver laugh infloats;
By times, a low soft dirge.

Souls more ennobled grow,
Listing the wordless anthem rise;
Discords are drowned in the great flow
Of Nature's Harmonies.

Men change, and "cease to be,"
And empires rise and grow and fall;
But the weird music of the sea
Lives, and outlives them all.

That mystic song shall last
Till Time itself no more shall be;
Till seas and shores away have pass'd,
Lost in eternity. [*Once a Week.*

Written for Moore's Rural New-Yorker.

SELF-RELIANCE vs. HOME INFLUENCE.

It was only a few days ago as I was traveling in the northern portion of a county in Southeastern Missouri, that I fell in company with a young man who was, as it happened, intent on visiting a cave that I had traveled many miles to see. Our horses jogged along together as we conversed on matters of general interest that suggested themselves from our surroundings. I could not help observing with interest my new companion. We entered the cave with others, each bearing a torch. Every passageway opened into new beauties, and we were more than delighted with our visit into the bowels of the earth, so cool and refreshing in contrast with the heated atmosphere at the surface. On returning I noticed many beautiful specimens that my friend had brought out with him. Desiring to know something of him I ventured to ask him, "Are you not from the East?"

"Yes, sir," he replied.

"What part?"

"New York."

"How long have you been a resident of the county?"

"Quite two years."

"May I ask your business?"

"In chivalric parlance, I am a —— Yankee schoolmaster."

"How have you succeeded since you have been here?" I asked.

"Very well."

"Have you visited other parts of the West?"

"Yes, sir, the North-west. I graduated at Genesee College when twenty-one, in 1862, remained at home one year, and being surrounded by such influences that led me to believe I would lose all I had gained, I started rather independently West. During one year, having obtained a general knowledge of the part I visited, a few very valuable practical lessons, and tested my own power of endurance and self-reliance, I returned again. Believing that my wild oats were all sown, I concluded to settle down on a farm, a business I had little taste for, merely to please my father, who held the "loaf," as he styled it, under his own arm. I married, became harnessed to my task, forgot the past, and determined to live for the future. I found my task only promising in manual labor. I had struck the wrong lead. It was not long in being made manifest that I possessed tendencies that were being totally destroyed by my newly chosen field of labor. These brought again into exercise those home influences that were besetting sins to me, and I resisted them. To my surprise, one day my father (worth several thousand dollars) generously offered me the pay of a common farm laborer for my time, and would take off my hands what I had actually bought for the farm and what he had given me, consisting of a cow and calf and six sheep, and assume control of all he had transferred to me. To his surprise I immediately accepted his offer, and within two weeks started for Missouri with my wife and a very limited amount of greenbacks. I had traveled perhaps eight hundred miles, paid two physicians' bills and lay sick for a time at a friend's in the grand old Prairie State. Leaving my wife as soon as I was able, I continued my journey, landing at last in a city on the west bank of the Mississippi with a dollar and ten cents in my pocket—all I had in the world. Since then, laboring with the powers God had given me, seeking such labor as was consistent with my taste, and assisted by my wife, now sleeping in death, I have been enabled to secure a very honorable position with the comfortable salary of thirteen hundred dollars per year. When I found labor I was quite willing to begin, receiving less than six bits [shillings] per day.

"Where is your home?" I asked.

"All the home that is left to me is in ——, where I buried the only one that ever made it happy. I am here doubtless by the same motive that led you here. While in the discharge of my duties I am very fond of observing God's wondrous works; hence you saw me in the cave searching for these beautiful specimens of stalactitic carbonate of lime.

"Will you remain a citizen of our State?"

"Yes; tears and suffering have endeared it to me. The golden bowl of sympathy is broken, and I can only think well of them. I wish now only to become a worthy and obedient servant of my newly adopted State."

At this we parted. I saw by the sad and hopeful expression deeply written upon his face, that may be there were other sorrows known only to Him that knoweth all things. I had not misjudged. Business led me the same evening to where my new-found friend was to lecture. I entered the hall and for more than an hour with many others, listened to him. I had heard other men often, but I confess I never was more agreeably entertained. The conversation at the cave, the convictions of duty, the unpretentious manner, the freedom, the cogent power of expression, together with my surroundings, led me to reflect upon the past and future of the young man who stood at the desk before me. I then felt the full force of those "home influences" he referred to in the morning's conversation. Although I believe they were fast consuming the best blood of his soul, I felt glad that he was here. I thought how little his father or mother knew of the powers that were slumbering within him. What a precious possession and strength he would have been to them in their old age had they only fully appreciated his true worth. Home influences lost to them a noble and worthy son. He can only think well of them. We have gained him, and his sterling worth will be felt among us. His sad face, his positive, though generous principles, and his indomitable energy, will carry him, as his words attest, to positions that will afford a noble contrast with the effect of those wrecking "home influences" that drove him to us. G. W. A.

Cape Girardeau, Mo., July, 1867.

THE WEST IN OUR FUTURE.

The political importance of the West cannot be overstated. It already wields a large part of the Republican power of the country, and it will not be many years before we shall look to the millions near the Mississippi to crystalize into laws the hopes and aspirations which freighted the Mayflower. The South has as yet shown no political characteristics. There is no party there whose principles can be reckoned as forces for the future. The ideas of the people are chaotic. We believe that by the introduction of Northern educational institutions they will sometime grow into that radical love of liberty which is to be the bulwark of the nation; but to-day we are not sure of their future. The States that lie between the James River, the Hudson River and the great Illinois prairies, are full of political theories unsound and unsafe. Too timid to confirm by law whatever is right in morals, too much bound by commercial interests to be radical in their thinking and voting, loaded down with the debris of that kind of democracy which thought twice before it struck a blow for the tottering Government, it will for a long while stand neutral in the great political contests that are coming. But the Far West, with its large farms and its large-hearted men and women, its immense number of Germans and Scandinavians, who bring with them to their homes the fresh, beautiful love of liberty which compelled them to leave the old world, if we can only plant in its midst the school-houses and churches, the lyceums and the presses, which have been the moulding influences of the East, can always be relied upon to stand firm for that justice between man and man, and for those rights and privileges which enable the poorest born to reach and hold the highest office within the people's gift. Nothing is more evident than this, that New England and the West will write the next page of American history. —*Rev. Geo. H. Hepworth.*

Literature in Germany.—The periodicals of Germany, including the German provinces of Austria and Switzerland, in 1866, numbered 2,957 journals; of these, 747 were political, and 2,210 non-political journals. By way of comparison, it may be stated that the total number of journals in France is 1,771, of which 336 are political, and 1,435 non-political. The total number of those in England is 2,064, of which 1,527 are newspapers, and 437 magazines, showing that in this respect Germany occupies the first rank among European nations. The greatest establishments for printing are in Saxony, in which State one-third of all German books, and nearly all the popular illustrated works and journals, are published.

We hear it not seldom said that ignorance is the mother of admiration. A falser word was never spoken, and hardly a more mischievous one; for it seems to imply that this healthiest exercise of the mind rests, for the most part, on a deceit and illusion, and that with better knowledge it would cease. For once that ignorance leads us to admire that which, with fuller insight, we should perceive to be a common thing, and one demanding therefore no such tribute from us, a hundred, nay a thousand times, it prevents us from admiring that which is admirable indeed.—*Trench.*

Value of Character.—Colonel Chartres, who was the most notorious rascal in the world, and who had by all sorts of crimes amassed immense wealth, sensible of the disadvantages of a bad character, was once heard to say, that "he would give ten thousand pounds for a character, because he should get a hundred thousand pounds by it." Is it possible, then, that an honest man can neglect what a wise rogue would purchase so dear?

In spite of the assertions of human pride, the operations of science are limited. The electric telegraph, that triumph of science, cannot communicate ordinary intelligence to a fool.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

MEMORIES.

My heart is full of memories
This quiet summer night,
Sweet memories of "long ago,"
When youth and hopes were bright.
Oh, olden, golden schooldays;
To-night they seem to be
So present, and so real,
That I almost think I see
The living forms of loved ones,—
Seem to clasp once more their hands,—
Seem to mingle, carefree, happy,
With the dear old friendly bands.
How the sleighs sped down the hillside,
And the gleaming snow balls flew;
In those merry, merry winters
When the happy years were new.
But the dear old band is scattered;
And Virginia's bloodstained shore
Holds some we loved and cherished
In those *diamond* days of yore.
And some of that bright, joyous band
Have sought the land of gold;
Others are 'mong the rocky peaks,
Of mountains grand and old.
Fair, gentle, sweet-voiced Marian,
The purest of us all,
Long years ago we laid her down
Wrapped in the shroud and pall.
Oh nevermore, while journeying here
'Mid mingled joy and pain,
Shall we fondly meet the friendly clasp
Of those dear hands again.
But let us keep the mem'ries bright,
That cling around the past,
And trust that in the far home-land,
We all may meet at last.

Farm Home, E. Bloomfield. Fannie W. J.

THE TRUE VICTORY.

Victory over self is victory over the world. It is not the outward enemy, but the traitor within, that storms or undermines the citadel of spiritual life. Alas, that the gates are so often unbarred for the hosts of evil to enter! Alas, that the soul should so easily surrender, and suffer itself to be laid waste! As in the conflicts of nations, the conquering army reënforces its own strength by the munitions of war taken from the vanquished foe, so does the victorious soul gather new forces from every temptation.

Yet the victory is gained—not by self-confidence and spiritual pride, but by humility and self-abnegation. The humble soul alone is truly strong, and safe from fall. What outward power can abuse him who, while he reverences the nature God has given him, still is lowly in his own eyes, "esteeming others better than himself?" What circumstances or condition of life can be adverse to him whose will is merged in the will of God? To him the tide of life flows "like a broad river's peaceful might," through sunshine and through storm, bearing steadily on its appointed course. His abundant peace is not stoicism. He is still a being of smiles and tears—tenderly alive to the joys of human sympathy, both in giving and receiving the blessed charities of life. At leisure from internal strife, he has a word of courage for the tempted, comfort for the sorrowing, reproof for the hardened sinner, hope for the penitent.—*Monthly Religious Magazine.*

THE BRIGHT SIDE.

God doth chequer his providences, white and black, as the pillar of cloud had its light side and dark. Look on the light side of thy estate; who looks on the dark side of a landscape? Suppose thou art cast in a lawsuit, there is the dark side; yet thou hast some land left, there is the light side. Thou hast sickness in thy body, there is the dark side; but grace in thy soul, there is the light side. Thou has a child taken away, there is the dark side; thy husband lives, there is the light side. God's providences in this life are various, represented by those speckled horses among the myrtle trees, which were the red and white, (Zach. 1, 8;) mercies and afflictions are interwoven; God doth speckle his work. Oh, saith one, I want such a comfort; but weigh all thy mercies in the balance, and that will make thee content. Look on the light side of your condition, and then all your discontent will easily be dispersed; do not pore upon your losses, but ponder upon your mercies. What! wouldst thou have no cross at all? Why should one man think to have all good things, when he himself is good but in part? Wouldst thou have no evil about thee, who hast so much evil in thee? Thou art not fully sanctified in this life, how then thinkest thou to be fully satisfied? Never look for perfection of contentment till there be perfection of grace.—*Watson.*

THE LIFE WE NEED.

It is interesting to observe, that while the saints of old appealed simply to God through his revealed attributes—his mercy, his faithfulness, his goodness which endureth forever—it is upon God manifested in the flesh, in the fact of our Lord's life, and the relations which that life has established, that the apostles found their claim. They rest not so much upon what God is, as what he has become to men, their neighbor in Christ Jesus, and as such bound, as an old divine says, to love them even as himself. And if it has become hard for believers to recognize the fact of their living membership with Christ and with each other, let us seek more earnestly for the light which makes these relations manifest. (1 John 1: 7.) We shall not find it in the phosphorescence of any dead man's candle. Exhalations from the tombs, though they be the tombs of saint and martyr, give but an uncertain glimmer; for it is not galvanic, but organic life we need, and this is not to be obtained by descending into the past to touch the ashes of even a prophet's bones.

BEAUTY AND THE BEAST.

[Continued from page 252.]

If poor Mr. Barly had done it on purpose, his ruin could not have been more complete and ingenious. When his affairs came to be looked into, and his liabilities had been met, it was found that an immense fortune had been muddled away, and that scarcely anything would be left but a small furnished cottage, which had been given for her life to an old aunt just deceased, and which reverted to Fanny, her godchild, and the small sum which still remained in the three-per-cents, of which mention has been made, and which could not be touched until Belle, the youngest of three daughters, should come of age.

After two or three days of miserable confusion,—during which the machine which had been set going with so much trouble still revolved once or twice with the force of its own impetus, the butler answering the bell, the footman bringing up the coals, the cook sending up the dinner as usual, suddenly everything collapsed, and the great mass of furniture, servants, human creatures, animals, carriages, business and pleasure engagements, seemed overthrown together in a great struggling mass, panting and bewildered, and trying to get free from the confusion of particles that no longer belonged to one another.

First, the cook packed up her things and some nice damask tablecloths and napkins, a pair of sheets, and Miss Barly's umbrella, which happened to be hanging in the hall; then the three ladies drove off with their father to the cottage, where it was decided they should go to be out of the way of any unpleasantness. He had no heart to begin again, and was determined to give up the battle. Belle sat with her father on the back seat of the carriage, looking up into his face a little wistfully, and trying to be as miserable as the others. She could not help it,—a cottage in the country, ruin, roses, novelty, clean chintzes instead of damask, a little room with mignonette, cocks crowing, had a wicked, morbid attraction for her which she could not overcome. She had longed for such a life when she had gone down to stay with the Ogdens at Farmborough last month, and had seen several haystacks and lovely little thatched cottages, where she felt she would have liked to spend the rest of her days; one in particular had taken her fancy, with dear little latticed windows, and a pigeon-cote, and two rosy little babies with a kitten toddling out from the ivy porch; but a great rough-looking man had come up in a slouched wide-awake and frightened Emily Ogden so much that she had pulled Belinda away in a hurry.....but here a sob from Fanny brought Belle back to her place in the barouche.

Anna felt she must bear up, and nerved herself to the effort. Upon her the blow fell more heavily than upon any of the others. Indignant, injured, angry with her father, furious with the managers, the directors, the shareholders, the secretary, the unfortunate company, with the Bankruptcy Court, the Ogdens, the laws of fate, the world in general, with Fanny for sobbing, and with Belle for looking placid, she sat blankly staring out of the window as they drove past the houses where they had visited, and where she had been entertained an honored guest; and now—she put the hateful thought away—bankrupt, disgraced! Her bonnet was crushed in, she did not say a word, but her face looked quite fierce and old, and frightened Fanny into fresh lamentations. These hysterics had been bro't on by the sight of Emily Ogden driving by in the new barouche. This was quite too much for her poor friend's fortitude. "Emily will drop us, I know she will," sobbed Fanny. "O, Anna! will they ever come and ask us to their Thursday luncheon parties any more?"

"My children," said Mr. Barly, with a placid groan, pulling up the window, we are disgraced; we can only hide our heads away from the world. Do not expect that any one will ever come near us again." At which announcement Fanny went off into new tears and bewailings. As for the kind, bewildered, weak-headed, soft-hearted littman, he had been so utterly worn out, harrassed, worried, and wearied of late, that it was almost a relief to him to think that this was indeed the case. He sat holding Belle's hand in his, stroking and patting it, and wondering that people so near London did not keep the roads in better repair. "We must be getting near our new abode," said he at last almost cheerfully.

"You speak as if you were glad of our shame, papa," said Anna, suddenly turning round upon him.

"O, hush!" cried Belle, indignantly. Fortunately the coachman stopped at this moment on a spot a very long way off from Capulet Square; and, leaning from his seat, asked if it was that there little box across the common.

"O, what a sweet little place!" cried Belinda. But her heart rather sank as she told this dreadful story.

Myrtle Cottage was a melancholy little tumbledown place, looking over Dumbleton Common, which they had been crossing all this time. It was covered with stucco, cracked and stained and mouldy. There was a stained glass window, which was broken. The veranda wanted painting. From outside it was evident that the white muslin curtains were not so fresh as they might have been. There was a little garden in front, planted with durable materials. Even out of doors, in the gardens in the suburbs, the box edges, the laurel bushes, and the fusty old jasmines, are apt to look shabby in time if they are never renewed. A certain amount of time and money might, perhaps, have made Myrtle Cottage into a pleasant little habitation; but (judging from appearances) its last inhabitants seemed to have been in want of both these commodities. Its helpless new occupants were not likely to have much of either to spare. A little dining-room, with glass-drop candlesticks and a rickety table, and a print of a church and a dissenting minister on the wall. A little drawing-room, with a great horsehair sofa, a huge round table in the middle of the room, and more glass-drop candlesticks, also a small work-table of glass over faded worsted embroidery. Four little bed-rooms, mousey, musty, snuffy, with four-posts as terrific as any they had left behind, and a small black dungeon for a maid servant. This was the little paradise which Belle had been picturing to herself all along the road, and at which she looked round half sighing, half dismayed. Their bundles, baskets, blankets, were handed in, and a cart full of boxes had arrived. Fanny's parrot was shrieking at the top of his voice on the narrow landing.

"What fun!" cried Belinda sturdily, instantly setting to work to get things in some order, while Fanny lay exhausted upon the horsehair sofa; and Anna, in her haughtiest tones, desired the coachman to drive home, and stood watching the receding carriage until it had dwindled away into the distance,—coachman, hammercloth, bay horses, respectability, and all. When she re-entered the house, the parrot was screeching still, and Martha, the under house-maid,—now transformed into a sort of extract of butler, footman, lady's maid, and cook,—was frying some sausages, of which the vulgar smell pervaded the place.—[To be continued.

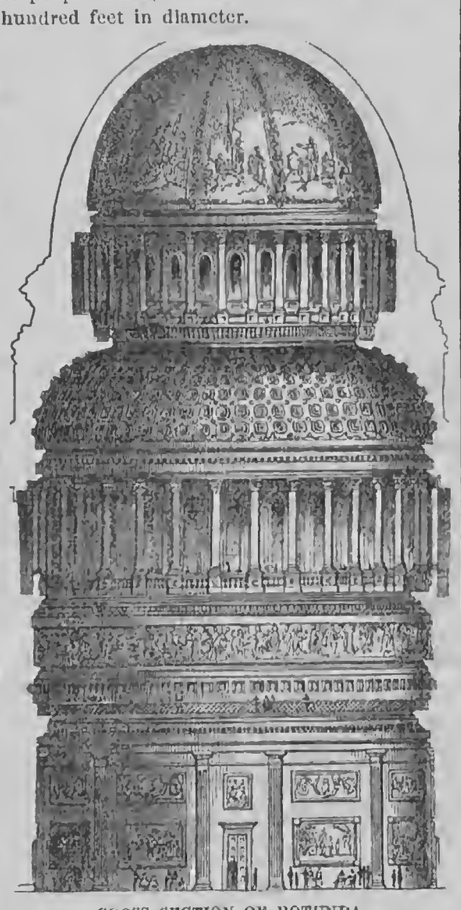
THE richer a man makes his food, the poorer he makes his appetite!

Various Topics.

THE DOME AND ROTUNDA

OF THE CAPITOL, WASHINGTON, D. C.

FROM Arlington Heights, miles away to the west, from the Navy yard as far distant eastward, or from any part of the wide city, the great dome of the capitol is in sight,—a wonder to those who have never seen it, as great a wonder to those who see it daily. Go up the broad Pennsylvania Avenue toward the south-east and it is in full sight. Stop at the entrance of the capitol grounds, stand by one of the open gates, look up the broad slope of rising walks and grassy terrace, higher up, over fountains and trees there it is, in its noble symmetry, four hundred feet above you,—over three hundred feet from basement to the crowning image of LIBERTY, the rest is the rise from your standing place. Go up the paved walk, with rippling water, and flashing fountains, and flowers, and the grateful shade of tall trees on either side and above you, up a long flight of stone steps to reach the top of the grassy terrace, stop a moment to see the hundreds of gold fish, in the water tank, on up another flight to reach the entrance of the basement, still up the solid stairs, now marble, to a swinging door yielding to the motion of the hand, pass through, and you are in the Rotunda—the great circular-room beneath the dome, of which our engraving gives a sectional view. There may be hundreds of people there, but no crowd. It is about a hundred feet in diameter.



CROSS SECTION OF ROTUNDA.

Large pictures are on its walls, some of them excellent, others *not*. The "Departure of the Pilgrims in the Mayflower" is the best. The wife of MILES STANDISH is a figure and face of wondrous beauty, yet simple, natural, womanly. Besides these pictures are rich carvings, historic busts in stone, and the exquisite fitness of architectural device and proportion—panels, pilasters, entablatures, the grand arch of the dome, so strong yet so self-sustaining, and almost two hundred feet above, the great fresco painting by BRUMIDI, an Italian,—heathenish and allegorical its design, which is much criticised, but beautiful in its coloring and effect.

Still above is the smaller dome with the lantern, and crowning that the bronze "LIBERTY," colossal yet not seeming so, in its lofty place.

LIBERTY.

Ample windows in the dome send down light, and on special occasions at night, the blaze of a thousand gas lights makes the great Rotunda seem like some brilliant place of pageantry in an enchanted land.

Although both the east and west sides of the Capitol have their stairways and porticos, architecturally the east is *the* front. The ground on that side is level, and at fit distance one has a fine view of the noble front, seven hundred and fifty feet of stairways, and pillars, and statues, and long ranges of noble windows with their exquisite ornaments of carved marble, and the majestic dome over the center.

A beautiful square some acres in extent is on the east side, and in its center the colossal figure of Washington, of which we give an excellent view.

The half-nude old Roman style of drapery gives one a little chill, grateful enough in August, but it is a grand figure. The little Indian figures at the corners of the chair are delicately chiseled.

COLLEGE AND OTHER LACONIC WRITING.

THE Portland (Me.) Press tells of a letter from THEODORE TILTON to the students of Bates' College in regard to giving an address at their Commencement in July. It was laconic, as follows: "New York, May, 1867, Yes. THEODORE TILTON;" but it took some time to know whether the central word was *yes* or *no*, or NEBUCHADNEZZAR.

This letter would go with one written by a President of a Michigan Railroad to a farmer on the line, directing him to move his barn that a new track might be laid over the site. The agreement had been previously made, and the farmer knew what the letter was for, but could not read it. Going to Detroit soon, he showed it to the conductor on the cars as a pass, who, seeing the signature, supposed all right, and *the letter served as a free pass all the year.*

These recall an English correspondence, laconic, but clear to the parties:

A father and son were coal-dealers in different ports. The father had bought a lot of coal at the port where the son was, and sent to have it shipped aboard his vessel at the dock. We give the correspondence:

DEAR SON—; YOUR FATHER.

The answer was—

DEAR FATHER—: YOUR SON.

Semi-colon,—see my coal on. Colon,—coal on.

Here's another: An actress, not of the highest standing, had a graceless son. He writes:—"Dear Mother, I'm in jail;" and she replies—"Dear Son, So am I."

Short and pithy, indeed!

TYRANNY OF HABIT.

IN 1866 a lady sent for a physician to see her husband. He was highly esteemed, at ease in wealth, and had no special disease, but no strength, appetite or enjoyment. The physician frankly told the wife that her husband was the victim of long and incessant stimulation by liquor. Not drunkenness, but to such degree that he could not live three months unless the habit was broken. She told him, and his answer was, "I can't do it." He died a victim, too weak to be saved by friends, family or fortune.

In 1825, when yellow fever raged in New Orleans, nearly 5,000 drinkers died before a temperance man was taken. In the same year, when cholera swept off one in sixty at Albany, but one in twenty-five hundred strictly temperate were taken. Let our habits be *good*, and their power will be freedom, lifting *up*, never tyranny, dragging *down*.

A WISE GENEROSITY.

THEODORE S. FAXTON, Esq., of Utica, who is largely interested in some manufacturing establishments in that city, is about to do a handsome thing for the benefit of the operatives. His plan is to erect a fine building in the western part of the city, near the cotton mills, at a cost of about $20,000, which shall be exclusively their own, to contain a suitable Hall for lectures, with Reading-Room, Library, and all such arrangements needful to mental and moral improvement. It is designed to make it a place far more attractive than the grog shop, and so, not only improve the condition of those who frequent it, but perchance also save some from utter ruin. It is a wise and noble work, and will long stand, we trust, a suitable monument to the sagacity and liberality of the founder.

ORIGIN OF THE TERM PERFUME.—The first perfumes were obtained by a combustion of aromatic woods and gums, (hence the name perfunum, "through smoke,") and the first use primitive nations made of them was to offer them on the altars erected to their gods, perhaps with the mystic idea that their prayers would reach them sooner wafted on the blue wreaths of smoke, or for the less poetic purpose of counteracting the smell of the flesh burned in their sacrifices. Modern incense derives its sweet balsamic smell from benzoin (Styrox benzoin) which also formed one of the chief ingredients in pastiles and fumigating powder.

Useful, Scientific, &c.

PHYSICAL SCIENCE.

FROM a lecture on the "Method of Studying Zoology," by T. H. HUXLEY, F. R. S., LL. D., before the science classes of South Kensington, England, we extract some views which are significant of the great changes going on:

"Modern civilization rests on physical science; take away her gifts to our own country and our position among the leading nations of the world is gone to-morrow. The whole of modern thought is steeped in science; it has made its way into the works of our best poets, and even the mere man of letters, who affects to ignore and despise science, is unconsciously impregnated with her spirit, and indebted for his best products to her methods. I believe that the greatest intellectual revolution mankind has yet seen is slowly taking place by her agency. She is teaching the world that the ultimate court of appeal is observation and experiment, and not authority; she is teaching it to estimate the value of evidence; she is creating a firm and living faith in the existence of immutable moral and physical laws, perfect obedience to which is the highest possible aim of the intelligent being.

But of all this your old stereotyped system of education takes no note. Physical science, its methods, its problems, and its difficulties will meet the poorest boy at every turn, and yet we educate him in such a manner that he shall enter the world as ignorant of the existence of the methods and facts of science as the day he was born. The modern world is full of artillery, and we turn out our children to do battle in it, equipped with the shield and sword of the ancient gladiator.

Posterity will cry shame on us if we do not remedy this deplorable state of things. Nay, if we live twenty years our own consciences will cry shame on us. The only remedy is to make physical science an integral part of primary education. I should look upon the day when every schoolmaster was a center of genuine, however rudimentary, scientific knowledge, as an epoch in the history of the country.

Let me entreat you, as teachers, to remember my last words; mere book-learning in physical science is a delusion and a sham—what you teach, you must first know, and real knowledge of science means personal acquaintance with the facts, be they few or many.

MAGNETIC LIGHT.

SOME great and very extraordinary discoveries have recently been made in England in connection with magnetic batteries, which render it probable that magnetic light will eventually be used for illuminating our cities. It is stated that all that is required for the perfect illumination of a large city is a tower tall enough to project the light to every portion of it, and strong enough to stand the concussion of the powerful wheel machinery employed. The expense is trifling; and the light is said to be so intense that when brought to bear in full force on a piece of metal at a distance of fifty yards it fused it completely. We suggest that the "full force" be used only in the winter season, when this newly-discovered light will undoubtedly not only put an end to the extortionate demands of the gas companies, but bring down the price of coal in a wonderful degree.

AMERICAN FEET.

A LATE number of the New York Hyde and Leather Journal notices a few of the differences in the shape of the pedal extremities of people in various sections of the country. Shoes made for one locality are not adapted for all. For instance, a broad shoe, wide in the shank, is best adapted to the Eastern trade, a narrow sole meeting with but little favor. Rhode Island, though the smallest State in the Union, can boast of some of the biggest feet that ever trod soleleather. The Middle States require slimmer shoes and higher in the instep than the East. The instep grows higher as we progress southward, commencing with Virginia, and the foot shorter and more plump. Rarely, at the North, does a full-grown man wear less than a No. 6, running up in the scale of sizes to No. 11, but at the South many a full-sized man wears fours and fives, and seldom over nines.

THE SILK PLANT.—The Department of State, at Washington has received information from the United States Consul at Lambayeque, Peru, that an important discovery had recently been made in Peru of the silk plant. Preparations were being made to cultivate it upon an extensive scale. The shrub is three or four feet in height. The silk is enclosed in a pod, of which each plant gives a great number, and is declared to be superior in fineness and quality to the production of the silk worm. It is a wild perennial, and seed small and easily separated from the fiber. The stems of the plant produce a long and very brilliant fibre, superior in strength and beauty to the finest linen thread. Small quantities have been woven in the rude manner of the Indians, and the texture and brilliancy is said to be unsurpassed.

ANTHRACITE COAL SUPPLY.—Our anthracite coal fields cover some 740 square miles and some 10,000,000 tons are mined yearly. With the prospective increase of demand, and our wasteful use, the Scientific American estimates the supply will be gone in 180 years. Our bituminous coal fields cover 206,469 square miles, and ere the anthracite supply is gone science must step in and master some new mystery of nature's laws to give a substitute, probably better still. The English are discussing the possible failure of their mines, as their area is but a *seventeenth* of ours.

Reading for the Young.

ORIGIN AND SEALS OF THE STATES.

NUMBER NINE.

SEAL OF OHIO.

IN 1788 forty-seven persons, from New England settled at Marietta on the wild bank of the beautiful Ohio river, and soon after some Pennsylvanians stopped near Cincinnati, and some French emigrants near Gallipolis. From this small beginning in the forest grew the great State with its cities and railroads, and rich farms, and schools, and churches.

In 1802 Ohio was made a State of the Union, and had a population in 1860 of 2,339,511. Its area is about 40,000 square miles. Along the Ohio river are broken hills. On the Miami and other rivers are rich lands, finely cultivated. The level lands in the northern part feed many cows, and a great deal of cheese and butter is made. Corn and wheat are produced in large quantities. The north-eastern part of the State is called the Western Reserve, or New Connecticut, as it formerly was owned by Connecticut, and is settled mostly by New England people.

The seal, with a flat-boat, herds of cattle, and men in the forest, tells of the occupations of the early settlers.

SEAL OF INDIANA.

In 1702 a few French settled at Vincennes, but in 1763 there were very few people in the great forests or on the prairies of the territory. In 1816 Indiana was made a State and has since reached to a population of 1,340,428, in 1860. It has an area of 33,809 square miles. Along the Ohio there are broken hills, but most of the State is rolling or level, and the greater part was covered by heavy forests. The Wabash Valley and other river valleys are very rich, and yield vast quantities of corn. On the northern border are beautiful prairies interspersed with groves and lakes. Fruit grow finely, and the natural wealth of the soil is great. Coal is found in the central or western part, and manufactures of wool, &c., are growing important.

Its seal, with the buffalo on the prairie, the woodman and emigrant wagon, calls up the pioneer life.

SEAL OF ILLINOIS.

In 1682, LA SALLE, a Frenchman of great energy, came from Canada and founded Kaskaskia and Cahokia, in the center of the State. But the number of settlers increased slowly, as they were far away from other white people. In 1809 there were less than 10,000 people in the territory. In 1818 Illinois was made a State, and has since been rapidly settled, its population in 1860 reaching to 1,711,951, on an area of 55,405 square miles. The center of the State, or rather the larger part of it, is a series of broad and rich prairies, most of them not marshy, but gently rolling and very productive of grain, as well as fit to pasture great herds of cattle. There are forests and rich bottom lands on the rivers, and the southern part is more hilly and has more trees. As the prairies are settled and trees planted for shelter from the winds, and for orchards, they are very pleasant.

The seal has an eagle on a rock, emblem of the stability of the Union, and the steamboat, and reaping machine on the broad prairie.

THE WORD WITHOUT THE BLOW.

I REMEMBER when a boy how one of our neighbors always excited wonder, by his manner of driving his oxen. There was none of the loud shouting and hallooing, the flourishing and cracking of whips, that I was accustomed to see in others; but he walked quietly by their side, or rode in his seat, never raising his voice above his usual tone, never speaking a second time; but whether he wished them to advance or stop, turn to the right hand or the left, he gave the appropriate word, as he would speak to you or me; and what most of all upset my ideas of the requisites of a teamster was, they always obeyed him. Whether the load was light or heavy, whether hauling stones or uprooting stumps, 'twas all the same; they girded their stout necks to the yoke with a right good will, as though they had found a master for whom "duty was a pleasure and a law."

THE surgeon may heal a bodily wound, but what balm can bind up the bite of a slanderous tongue? Robbery may be recompensed by restitution; but how can you ever make amends to the man you have traduced? Remember it as a truth, that not all the wealth you have in the world can wipe away the wrong you have done in such a case.

Two First-Class Journals for $3.50.

MOORE'S RURAL NEW-YORKER,

(The Leading Weekly of its Class—Price $3.00 a Year,)

AND

THE MARYLAND FARMER,

(A Standard Agricultural Monthly—Price $1.50,)

BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that now is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year *(when ordered together)* for only $3.50.

Address either

D. D. T. MOORE, Rochester, N. Y.

Or S. S. MILLS & CO., Baltimore, Md.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 3, 1867.

NEWS OF THE WEEK.

From Washington.

IT is said the President will issue a proclamation warning all persons against engaging in unlawful expeditions to Mexico.

The President thinks of calling the five military District Commanders from the South to Washington, to consult on their best action.

Clerks in the Treasury Department are to stop work at three P. M. instead of four o'clock.

Rumors of Sheridan's contemplated removal are pronounced unfounded.

The ram Stonewall, sold to Japan, will start out the 5th of August.

The statement of the Public Debt will show a decrease for the month of over $2,000,000.

Gen. Rousseau goes to Washington Territory and Walrussia in command of that department.

The Treasury Department are soon to issue fifteen cent notes.

The Surratt trial still goes on, occupied mostly with efforts by the defense to invalidate testimony of witnesses.

So much of the international postage law with Great Britain as refers to newspapers, books or pamphlets, begins October 1st; the rest Jan. 1st.

Generals Sherman and Terry are appointed by the President members of the Indian Commission, completing the list.

Testimony in the Surratt case closed the 27th; the arguments were yet to be made by counsel.

Two of the Indian Commissioners start West, and will be joined by Gen. Sherman and others, on their way to the Plains to hold a Council with the Kiowas and Camanches on war and peace.

From the South.

GENERAL CARLIN reports officially that at Franklin, Tenn., a colored Loyal League were fired on while peacefully walking in procession, and 27 wounded. They returned the fire, killing and wounding several.

The tobacco crop in Kentucky is about two-thirds an average one.

Cholera at Memphis is decreasing. It prevails on some Arkansas plantations, a planter near Helena losing 25 hands.

The corn crop in Arkansas promises largely, full two-thirds of lands planted being in cereals.

At Memphis the Radical and Conservative Committees mutually agree to discourage violence at the elections. Sixty delegates to a Republican State Convention met at Columbia, S. C., the 24th. The proceedings were orderly. At Rogersville, East Tennessee, the 23d, at a Conservative meeting, a riot occurred in which it is alleged Emerson Etheridge was shot at. Both parties were armed, firing took place, a white and black man were killed, and several badly wounded. Mr. Etheridge was interrupted in his speech by Tom King, a Radical, and hard words passed between them.

In a riot at a political meeting at Knoxville, Tenn., addressed by Gen. Blair, two negroes wounded, but the police and Freedmen's Bureau agent stopped further trouble.

Brownlow's militia are going to various points in Middle and Western Tennessee.

It is reported from Washington that General Meade may succeed Sheridan.

From the West.

A NUMBER of the officers of the steamer McGill at St. Louis from the Missouri, report 150 Sioux Indians attacking peaceful Indians and stampeding Government horses from Fort Stephenson. Fifty-two cases and seven deaths of cholera at Forts Harker and Hays on the Plains. Immense deposits of tin ore have been found in Madison county, Mo., near Pilot Knob and Iron Mountain, said to be the largest in the world.

A courier from Fort Gibson, on the Plains, comes to Leavenworth for medical supplies for cholera, which is among civilians, Indians and freedmen, but not the troops. It is decreasing at Fort Harker. The Kiowa Indians south of the Arkansas are committing outrages. The Indians have virtual possession of the Pacific Railroad route from Fort Saunders to Fort Bridger.

FROM CANADA.—A Commissioner of the Imperial Government left Montreal the 26th for the Northwest to organize a Colonial Government and facilitate settlement near the Pacific, to counterbalance our acquisition of Russian America. It is privately rumored that Rev. J. McMahon and other Fenian prisoners, may be released.

Latest European News.

BISMARCK'S official organ at Berlin denies the truth of recent reports on the probability of a war.

By a Russian Imperial Ukase all Governmental distinction between Russia and Poland is obliterated, and Poland is a province of the Empire.

The French Government forbids the Russian Railroad Loan being offered in Paris.

Great preparations are making at Vienna for the Sultan's reception.

The Austrian frigate Nouvia has sailed from Trieste for Vera Cruz for Maximilian's body.

The British House of Commons has passed the bill abolishing church rates.

Sir Morton Petos' liabilities are stated at $45,000,000; his assets at $1,000,000.

Omar Pasha reports the Cretan insurrection suppressed, and war on the island ended.

The Prime Minister of Italy has offered to garrison Rome against the threatened attack of the party of action under Garabaldi and Mazzini.

London capitalists show much caution as the feeling grows that a war between France and Prussia is imminent.

A private dispatch from Berlin says the general opinion there is that the war will come, and Prussia is actively preparing.

The Sultan of Turkey was at Vienna the 27th. The Empress Eugenie visited the U S. Steamer Colorado at Cherbourgh, and expressed herself highly pleased. Napoleon gave a State Dinner the 28th to Admiral Farragut. The Moniteur denied that Napoleon urges Prussia to surrender a part of Schleswig to the Danes.

SONS OF TEMPERANCE.—The Grand Division of Eastern New York Sons of Temperance met the 24th ult. at Saratoga. They report 204 subordinate divisions with 16,000 members and 5,000 lady visitors—an increase of 5,000 members in the quarter. A resolve was passed to hold a public meeting at Cooper Institute, New York, in October. Also, requesting the Constitutional Convention to submit to the people at the next election a separate section of the Constitution prohibiting the sale of liquors as a beverage, and urging the enforcement of the prohibitory provisions of the present law.

FROM NEW YORK.—About a month ago Rufus Lord, the victim in the Lord bond-robbery, received $1,400,000 of the stolen bonds from an unknown source. It seems they were sent him from J. G. King & Co., who had them from Baring Brothers, London, who took them of a London lawyer, who had them from the guilty party, still secret. The weekly report of deaths by Dr. Harris, in the last week of June shows 153 deaths less than the average of the same week for six years. No signs of cholera or any epidemic disease.

NEWS PARAGRAPHS.

THE death of Justice Swayne of the United States Supreme Court, leaves no vacancy to fill, as the number of Judges has been reduced by Congress.

THE total amount of beet sugar produced in the world is reported to be about 2,800,000 tons annually. France is the chief grower of beet sugar, and a small amount is raised in the United States.

FORREST, the tragedian, was directed by the Superior Court of New York, to pay his divorced wife alimony from the time the divorce was granted many years ago. The sum amounts to about $60,000.

A LETTER from Dr. S. G. Howe, says there are as many as 12,000 Cretans in Greece entirely dependent upon outside aid for food and clothing, and he makes an appeal for further aid from Boston and America.

RECENTLY a train passed westward on the N. Y. Central Railroad carrying 454 Mormons on their way to Utah. They are chiefly Danes, and among them several interesting young girls from ten to sixteen years of age.

TRUMAN J. BACKUS, a graduate of the University of Rochester, and for the last two years a successful Assistant in the Home Mission Rooms, has accepted the Professorship of Rhetoric and English Literature in Vassar College.

THE Sandwich Islands promise to supply the Pacific coast with sugar. They are on the Pacific what Cuba is to us on the Atlantic. The number of acres planted with cane is 16,266; the capital in the business is $2,000,000.

THE Connecticut Legislature has agreed to unite with the city of Hartford in erecting a monument to mark the site of the Charter Oak, the State to pay two two-thirds and the city one-third, the cost not to exceed $9,000.

THE New York and Erie Railroad Company has just celebrated its sixteenth anniversary. It gives employment to some 8,000 men, and with their families makes a support to some 40,000 persons. It last year paid out some half a million dollars monthly to employees.

THE first Convention to revise the State Constitution of New York—1777—sat forty-six days. The second—1801—fourteen days. The third—1821—seventy-four days. The fourth—1846—one hundred and thirty days. This, the fifth, will probably last two or three months.

RAIMBEAUX, whose horse received the pistol destined for the Czar at Paris, has not only received a Russian and a French order for knighthood, but he is to get a title of nobility, and his wife has been presented with £12,000 worth of diamonds by the Empress of Russia.

FLOATING ELEVATORS are nearly completed on the Mississippi. They will carry grain to New Orleans on the way to New York, and farmers in Missouri, Iowa and Minnesota, and in parts of Wisconsin and Illinois, will save thirty cents on every bushel.

PURCHASE OF THE SANDWICH ISLANDS.—Our Government is said to be negotiating for the purchase of these islands, which are of great consequence on the Pacific. The people of the Pacific States are anxious for their annexation, and prominent men are in Washington from that region urging it. The inhabitants of the islands are said to favor our Government.

MRS. LINCOLN.—The Milwaukee Wisconsin says:—"Mrs. Lincoln is now in Racine, boarding at Congress Hall. She is simply spending the summer there. She dresses in deep mourning, does not receive company, nor appear at the common table. It is not true that she intends making her home there. Her two sons are now in Washington attending the Surratt trial."

FROM BOSTON.—The new steamship Ontario, built for a line to Liverpool, is out on a trial trip. A meeting to commemorate the death of Gen. Meagher was held in Faneuil Hall with addresses and resolutions.

STATE TEACHERS' ASSOCIATION.—The State Teachers Association for three days at Auburn, beginning the 23d ult., was attended by some 500 to 600 teachers, and its proceedings were of unusual interest.

Riverside Institute.

WE gather the following particulars from a Philadelphia contemporary in regard to the Riverside Institute, the advertisement of which appears in our columns:

This Institute promises to be one of the grandest and noblest institutions of its kind ever organized. In order that money may be speedily raised for the maintenance of the Home, the Washington Library Company has organized and adopted a plan which will meet with a hearty approval and earnest support from all. This Company knowing from the past that to raise funds by appeals to the charitable public is slow and uncertain work, oftentimes resulting in total failure, have adopted their present method for accomplishing this much-desired result. Their plan is to issue stock at one dollar per share, each share of stock entitling the holder thereof to one finely-executed steel-plate engraving, which at retail could not be purchased for this sum. In addition to this, presents consisting of several thousand dollars in greenbacks, real estate, horses, jewelry, silver ware, sewing machines, pianos, melodeons, and hundreds of other valuable articles, amounting in the aggregate to $300,000, will also be bestowed among the stockholders. Every stockholder not only receives his engraving at the time of purchase, but will also receive a present at the distribution, there being no exceptions. The Company are enabled to act thus liberally from the fact, that making their purchases of engravings, and of the presents to be given away, in such enormously large quantities, the cost per single article is greatly reduced to what would be the price were the purchase of the same made at retail. Besides this all the presents, such as real estate, etc., have been handed over to the Company by the original owners at their lowest market value. On this account are the Company enabled to offer such great inducements to those who would interest themselves and aid in alleviating the miseries and distress of the hundreds and thousands of poor and forsaken orphans who are now daily seen in the lanes and thoroughfares of our large cities.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, July 30, 1867.

THE money market at the East is well supplied with capital, and financial matters are fairly easy in the commercial towns at the West. We see nothing to change the present condition of things for some time at least. At the South money is scarce and rates of interest high. Financial embarrassment must be the rule in that section for some time to come. Early in the season a large crop of cotton was anticipated, but recent accounts are far from favorable, and it is now thought this year's crop will not much if any exceed that of last season, and may fall short of it. The ravages of the army worm—the overflowing of plantations on the Mississippi—with an unusually wet season—have combined to lessen the prospects of a large yield. Other crops are good, and place the people beyond the fear of a famine. Where wheat is grown the yield has generally been good, and there is every prospect of a large crop of corn.

At the North and West, the abundant harvest of winter wheat, and the heavy yield of hay, with the prospect that other crops will soon be gathered in equal abundance, have imparted great confidence in the immediate future of commercial matters. The capitalist has confidence, and is looking about for opportunities to invest his surplus means. The talk in bank parlors is not gloomy and uncertain; the earth has produced and is producing just what will enable people to pay notes, and bank officers have discovered it—hence the uncertainties of the future are less discussed.

Merchants, while partaking of much of the hopefulness of the capitalist, are a little uncertain in regard to trade. Not but what they expect there will be a reasonably large amount of trade in the next six months, but they are not so clear about the profits of that trade. For the last year profits have been small, as they always are on a falling market. Consumers have been close buyers, and are likely to be such for some time to come. Importers and manufacturers are now holding goods higher than jobbers feel warranted in paying, consequently there is just now great hesitancy about stocking up for the fall trade. But the most important point is made sure—buyers can pay for goods. Merchants in the interior should be close and careful purchasers for the fall trade. The decline on the present stocks is all they will care to lose.

WOOL.—The wool market has still further declined. We quote now at 35@40c. Some extra lots may be taken at a trifle above the outside figure, but not much. Buyers are not very anxious to purchase largely at 40c There is rather more disposition to sell than there was a week since.

The decline at the West is about the same as in this locality. Michigan farmers have recently been free sellers, and the quantity of wool arriving at Detroit is very large. The receipts at that point for the month of July will be considerably in excess of the receipts for the corresponding month in either 1865 or '66, though the receipts were unusually light this year prior to the 15th of the month.

The sales in Boston, last week, to manufacturers were quite large—amounting to 1,000,000 lbs. The range for fleece was 25@60c., and 45@47½c. for the various grades of pulled. The receipts at the East are large and increasing. The Boston Bulletin of Saturday says:—"The wool market is weak, and prices lower and tending down." It seems hardly probable that prices can go much lower. We think with the Bulletin "that when a staple and imperishable commodity, like wool, is depressed much below its intrinsic and relative value, the chances are strongly in favor of its recovery at no distant day."

WHEAT.—The samples of new wheat exhibited in this section are very fine, and the same is said to be the case at all points West. A few sales have been made to millers in this city at $2,50 per bushel. It is not anticipated this price will be paid for red wheat for many days. We hear of contracts at considerably less.

The flour market just now is unsettled.

PETROLEUM.—The eastern market for petroleum is still excited, and prices are higher.

Rochester Wholesale Prices Current.

Special Notices.

STUMP PULLING IN WATERLOO.

A TRIAL of the WILLIS Stump Machine was had on the farm of W. C. DUTTON, Waterloo, N. Y., on the 18th of July, witnessed by a large number of persons of both sexes. Fifteen large pine stumps—one six feet in diameter—were extracted in a short time. The performance was of a most satisfactory character—even those friendly to the Screw Machine conceding its great power and ready working. These facts are vouched for by W. C. DUTTON, J. H. VANESS, and S. L. VAUGHAN. Those interested in the matter can see one of the machines operate on the farm of Mr. ASHLEY in Greece a few miles from the city. Those wishing information on the subject should address W. W. WILLIS, Exchange Hotel, Rochester, N. Y.—enclosing a stamp—when a circular, explanatory of the machine will be sent to the address of the applicant.

THE ONLY GOLD MEDAL

Awarded to AMERICAN SEWING MACHINES at the Paris Exposition of 1867, was given to the Machines manufactured by this Company, of which ELIAS HOWE, JR., is President.

THE HOWE MACHINE CO.
914-4t 699 BROADWAY, N. Y.

OFFICE OF THE HOWE MACHINE CO.,
699 BROADWAY, N. Y., July 17, 1867.

OFFICIAL.

PARIS EXPOSITION, 1867.

ADVICES just received by mail enable us to announce positively that the only gold medal for American sewing machines was awarded to ELIAS HOWE, JR., as the manufacturer of the best sewing machine that was exhibited. There were eighty-two different machines in competition for the prize, and Mr. HOWE received the additional award of the Cross of the Legion of Honor, as manufacturer and inventor. The exact wording of the award is as follows:

HOWE MACHINE.	WHEELER & WILSON.
"Co-operateur Elias Howe, Jr., promoteur de la machine a coudre. *Medaille d'or.*	"Wheeler & Wilson pour la machine a bontoniere. *Medaille d'or.*

The official list of those who were made Knights of the Legion of Honor, as published in the Paris papers, reads thus: "MONS. ELIAS HOWE, JR., *fabricant de machines a coudre, exposant;*" which translated into English, reads: "Mr. ELIAS HOWE, JR., maker of sewing machines, exhibiting."

From this it will be seen that the medal awarded to Wheeler & Wilson was for a "Buttonhole Machine," *and not for the Sewing Machine.*

GOOD READING VERY CHEAP!

WE have a few extra copies of Volume XII of the RURAL NEW-YORKER, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. A few bound copies of same volume for sale at $3. We can also furnish bound copies of most of the volumes issued since 1855, at $3 each. Bound volumes of 1865 and 1866, $4 each. ..

PRESIDENT OF THE
HOWE SEWING MACHINE COMPANY,
AWARDED A
GOLD MEDAL
AND CREATED A
Knight of the Legion of Honor by
THE EMPEROR NAPOLEON
FOR THE SEWING MACHINE, which puts "the HOWE" at the HEAD of all Sewing Machine Exhibitors.

THE HOWE SEWING MACHINE TRIUMPHANT!

The FIRST and BEST MACHINE in the WORLD.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THERE is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement;* that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 908-tf.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—It adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying,

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

LADIES AND GENTLEMEN EMPLOYED. Picture business. Very profitable. No risk. Seventeen specimen Pictures and Catalogue sent for 15cts postage. MANSON LANG, 397 Bowery, New York City.

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?
"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*
"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*
"All young persons should have a standard Dictionary at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged.* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*
"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the nvails of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*
In one vol. of 1,840 Royal Quarto Pages.
Published by G. & C. MERRIAM, Springfield, Mass.
Sold by all Booksellers. 1912 4t

THE HARRIS HOP PRESS, (ILLUSTRATED and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that fourthirds of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.
Messrs. RAMSEY & HANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.
BUCKINGHAM, WALSH & CO.,
911-9t Waterville, Oneida Co., N. Y.

1867.
The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED
HALL THRASHING MACHINES,
With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.
We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.
We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.
We have a branch Warehouse at 38 West Larned St, Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.
For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.
THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are
WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world
These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.
They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton goods, with silk, cotton or linen thread. They will sew, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.
The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
E. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.
"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*
☞ THE SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd,** the best and latest work on American Sheep Husbandry. Large 12mo.—451 pages, Illustrated. Price $2—sent post-paid.
Address D. D. T. MOORE, Rochester, N. Y.

THE GATE AT LAST—Curtiss' Patent Improved Sliding and Self-Shutting Yard and Farm Gate. Simplest, cheapest, best. Never stands open; shuts by its own weight.
☞ Territory to sell and Agents wanted in every portion of the United States. Address
898-tf GEO. G. CURTISS, Rochester, N. Y.

PORTABLE STEAM ENGINES—Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
904-26t J. C. HOADLEY & CO., Lawrence, Mass.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

MANUFACTURERS of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising
"Star" Cotton Gins and Condensers,
"Stac" Railway Powers, (Emery Patent,)
"Star" Lever Powers, "Star" Threshers & Cleaners,
Threshers and Separators, Circular and Bragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c.

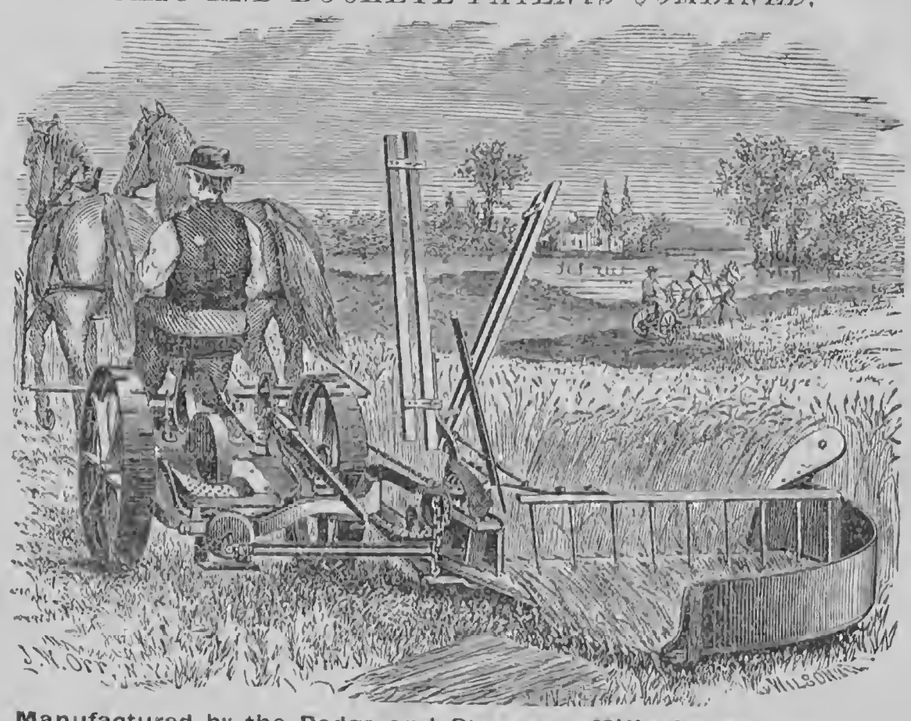
OUR "STAR" THRESHER AND CLEANER
as now made by us, unites more valuable features and possesses qualities far more superior than were ever before combined in such a machine. Comparatively small, —compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw,* so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be threshed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.
We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power. With regard to

OUR RAILWAY POWER,
we may say that everywhere the "EMERY POWER" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as

THE "STAR" RAILWAY POWER,
it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c.

OUR "STAR" LEVER POWER,
though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.
Our extensive works are under the immediate Superintendence of Mr. WM. B. EMERY, (Surviyor of EMERY BROTHERS,) which fact, from his long personal experience in the Manufacture of Agricultural Machines, gives additional guarantees of the superior character of the machines made by this Company, and confident, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Dealers and others, assuring such that all orders with which we may be favored shall be executed with the utmost promptness and fidelity.
☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge,* on application, and all information cheerfully furnished.
Agents, both Traveling and Local,
are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 913

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In completeness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,
place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,
On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also
Awarded the Gold Medal as the Best Mowing Machine!
at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.
This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the
DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.
J. RAPALJE, Agent, No. 17 South St. Paul St., Rochester, N. Y.

"THE WORLD WOULD BE THE BETTER FOR IT."

This noble poem has been often supposed to be of foreign authorship, but it is by M. H. Cobb, editor of "The Agitator," in Wellsboro, Tioga Co., Pa.

If men cared less for wealth and fame,
And less for battle-fields and glory,
If, writ in human hearts, a name
Seemed better than in song or story;
If men, instead of nursing pride
Would learn to hate it and abhor it,
If more relied
On love to guide,
The world would be the better for it.

If men dealt less in stocks and lands,
And more in bonds and deeds fraternal,
If Love's work had more willing hands,
To link this world with the supernal;
If men stored up Love's oil and wine
And on bruised human hearts would pour it,
If "yours" and "mine"
Would once combine
The world would be the better for it.

If more would *act* the play of Life,
And fewer spoil it in rehearsal;
If Bigotry would sheath its knife,
'Till good became more universal;
If Custom, gray with ages grown,
Had fewer blind men to adore it,—
If Talent shone
In Truth alone,
The world would be the better for it.

If men were wise in little things—
Affecting less in all their dealings;
If hearts had fewer rusted strings
To isolate their kindred feelings;
If men, when Wrong beats down the Right,
Would strike together to restore it,—
If Right made Might
In every fight,
The world would be the better for it.

The Story Teller.

[From the Cornhill Magazine.]

BEAUTY AND THE BEAST.

BY MISS THACKERAY,
AUTHOR OF "THE VILLAGE ON THE CLIFF," ETC.

PART I.

I.

Fairy times, gifts, music and dances are said to be over, or, as it has been said, they come to us so disguised and made familiar by habit that they do not seem to us strange. H. and I, on either side of the hearth, these long past winter evenings, could sit without fear of fiery dwarfs skipping out of the ashes, or black puddings coming down the chimney to molest us. The clock ticked, the window-pane rattled. It was only the wind. The hearth-brush remained motionless on its hook. Pussy dozing on the hearth, with her claws quietly opening to the warmth of the blaze, purred on and never once startled us out of our usual placidity by addressings us in human tones. The children sleeping peacefully up stairs were not suddenly whisked away and changelings deposited in their cribs. If H. or I opened our mouths, pearls and diamonds did not drop out of them, but neither did frogs and tadpoles full from between our lips. The looking-glass tranquilly reflecting the comfortable little sitting-room, and the stiff ends of H.'s cap-ribbons, spared us visions of wreathing clouds parting to reveal distant scenes of horror and treachery. Poor H.! I am not sure but that she would have gladly looked in a mirror in which she could have sometimes seen the images of those she loved; but our chimney-glass, with its gilt moulding and bright polished surface, reflects only such homely scenes as two old women at work by the fire, some little Indian children at play upon the rug, the door opening and Susan bringing in the tea-things. As for wishing-cloths and little boiling pots, and such like, we have discovered that, instead of rubbing lamps or spreading magic tablecloths upon the floor, we have but to ring an invisible bell (which is even less trouble,) and a smiling genius in a white cap and apron brings in anything we happen to fancy. When the clock strikes twelve, H. puts up her work and lights her candle; she has not yet been transformed into a beautiful princess all twinkling with jewels, neither does a scullion ever stand before me in rags; she does not murmur farewell forever and melt through the keyhole, but "Good night," as she closes the door. One night at twelve o'clock, just after she had left me, there was indeed a loud orthodox ring at the bell, which started us both a little; H. came running down again without her cap, Susan appeared in great alarm from the kitchen. "It is the back-door bell, ma'am," said the girl, who had been sitting up over her new Sunday gown, but who was too frightened to see who was ringing.

I may as well explain that our little house is in a street, but that our back windows have the advantage of overlooking the grounds of the villa belonging to our good neighbor and friend, Mr. Griffiths, in Castle Gardens, and that a door opens out of our little back garden into his big one, of which we are allowed to keep the key. This door had been a postern gate once upon a time, for a bit of the old wall of the park is still standing, against which our succeeding bricks have been piled. It was a fortunate chance for us when our old ivy-tree died and we found the quaint little doorway behind it. Old Mr. Griffiths was alive then, and, when I told him of my discovery, he good-naturedly cleared the way on his side, and so the oak turned once more upon its rusty hinges to let the children pass through, and the nursemaid, instead of pages and secret emissaries and men-at-arms: and about three times a year young Mr. Griffiths stoops under the arch on his way to call upon us. I say young Mr. Griffiths, but I suppose he is over thirty now, for it is more than ten years since his father died.

When I opened the door, in a burst of wind and wet, I found that it was Guy Griffiths who stood outside, bareheaded in the rain, ringing the bell that winter night. "Are you up?" he said. "For Heaven's sake come to my mother, she's fainted; her maid is away; the doctor doesn't come. I thought you might know what to do." And then he led the way through the dark garden, hurrying along before me.

Poor lady, when I saw her I knew that it was no fainting-fit, but a paralytic stroke, from which she might perhaps recover in time; I could not tell. For the present there was little to be done: the maids were young and frightened; poor Guy wanted some word of sympathy and encouragement. So far I was able to be of use. We got her to bed and took off her finery,—she had been out at a dinner-party, and had been stricken on her return home,—Guy had discovered her speechless in the library. The poor fellow, frightened and overcome, waited about, trying to be of help, but he was so nervous that he tumbled over us all, and knocked over the chairs and bottles in his anxiety, and was of worse than no use. His kind old shaggy face looked pale, and his brown eyes *ringed* with anxiousness. I was touched by the young fellow's concern, for Mrs. Griffiths had not been a tender mother to him. How she had snapped and laughed at him, and frightened him with her quick sarcastic tongue and hard unmotherlike ways. I wondered if she thought of this as she lay there cold, rigid, watching us with glassy, senseless eyes.

The payments and debts and returns of affection are at all times hard to reckon. Some people pay a whole treasury of love in return for a stone, others deal out their affection at interest, others again take everything, to the uttermost farthing, and cast it into the ditch, and go their way and leave their benefactor penniless and a beggar. Guy himself, hard-headed as he was, and keen over his ledgers in Moorgate street, could not have calculated such sums as these. All that she had had to give, all the best part of her shallow store, poor Julia Griffiths had paid to her husband, who did not love her: to her second son, whose whole life was a sorrow to his parents. When he died she could never forgive poor Guy for living still, for being his father's friend and right hand, and sole successor. She had been a real mother to Hugh, who was gone; to Guy, who was alive still and patiently waiting to do her bidding, she had shown herself only a stepdame; and yet I am sure no life-devoted mother could have been more anxiously watched and tended by her son. Perhaps—how shall I say what I mean?—if he had loved her more, and been more entirely one with her now, his dismay would have been less, his power greater to bear her pain, to look on at her struggling agony of impotence. Even pain does not come between the love of people who really love.

The doctor came and went, leaving some comfort behind him. Guy sat up all that night burning logs on the fire in the dressing-room, out of the bedroom in which Mrs. Griffiths was lying. Every now and then I went in to him and found him sitting over the hearth shaking his great shaggy head, as he had a way of doing, and biting his fingers, and muttering, "Poor soul, poor mother." Sometimes he would come in creaking on tiptoe; but his presence seemed to agitate the poor woman, and I was obliged to motion him back again. Once when I went in and sat down for a few minutes in an arm-chair beside him, he suddenly began to tell me that there had been trouble between them that morning. "It made it very hard to bear," he said. I asked him what the trouble had been. "I told her I thought I should like to marry," Guy confessed with a rueful face. (Even then I could hardly help smiling.) "Selfish beast that I am. I upset her, poor soul. I behaved like a brute." His distress was so great that it was almost impossible to console him, and it was in vain to assure him that the attack had been produced by physical causes. "Do you want to marry any one in particular?" I asked at last, to divert his thoughts, if I could, from the present. "No," said he; "at least—of course she is out of the question—only I thought perhaps some day I should have liked to have a wife and children and a home of my own. Why, the counting-house is not so dreary as this place sometimes seems to me." And then, though it was indeed no time for love-confidences, I could not help asking him who it was that was out of the question.

Guy Griffiths shrugged his great round shoulders impatiently, and gave something between a groan and sigh, and a smile,—(dark and sulky as he looked at times, a smile brightened up his grim face very pleasantly.)

"She don't even know my name," he said. "I saw her one night at the play, and then in a lane in the country a little time after. I found out who she was. She's a daughter of old Barly the stock-broker. Belinda they call her,—Miss Belinda. It's rather a silly name, isn't it?" (This, of course, I politely denied.) "I'm sure I don't know what there is about her," he went on in a gentle voice; "all the fellows down there were head over ears in love with her. I asked,—in fact I went down to Farnborough in hopes of meeting her again. I never saw such a sweet young creature,—never. I never spoke to her in my life." "But you know her father?" I asked. "Old Barly?—Yes," said Guy, "his wife was my father's cousin, and we are each other's trustees for some money which was divided between me and Mrs. Barly. My parents never kept up with them much, but I was named trustee in my father's place when he died. I didn't like to refuse. I had never seen Belinda then. Do you like sweet sleepy eyes that wake up now and then? Was that my mother calling?" For a minute he had forgotten the dreary present. It all came rushing back again. The bed creaked, the patient had moved a little on her pillow, and there was a gleam of some intelligence in her pinched face. The clock struck four in quick tinkling tones; the rain seemed to have ceased, and the clouds to be parting; the rooms turned suddenly chill though the fires were burning.

When I went home, about five o'clock, all the stars had come out and were shooting brilliantly overhead. The garden seemed full of a sudden freshness and of secret life stirring in the darkness; the sick woman's light was burning faintly, and in my own window the little bright lamp was flickering which H.'s kind fingers had trimmed and put there ready for me when I should return. When we reached the little gate Guy opened it and let me pass under some dripping green creeper which had been blown loose from the wall. He took my old hand in both his big ones and began to say something that ended in a sort of inarticulate sound as he turned away and trudged back to his post again. I thought of the many meetings and partings at this little postern gate, and last words and protestations. Some may have been more sentimental perhaps than this one, but Guy's grunt of gratitude was more affecting to me than many a long string of words. I felt very sorry for him, poor old fellow, as I barred the door and climbed up stairs to my room. He sat up watching till the morning. But I was tired and soon went to sleep.

II.

Some people do very well for a time. Chances are propitious, the way lies straight before them up a gentle inclined plane, with a pleasant prospect on either side. They go rolling straight on, they don't exactly know how, and take it for granted that it is their own prudence and good driving and deserts which have brought them prosperously so far upon their journey. And then one day they come to a turnpike, and destiny pops out of its little box and demands a toll, or prudence trips, or good sense shies at a scarecrow put up by the wayside,—or nobody knows why, but the whole machine breaks down on the road and can't be set going again. And then other vehicles go past it, hand-trucks, perambulators, cabs, omnibuses, and great prosperous barouches, and the people who were sitting in the broken-down equipage get out and walk away on foot.

On that celebrated and melancholy Black Monday, of which we have all heard, poor John Barly and his three daughters came down the carpeted steps of their comfortable sociable for the last time and disappeared at the wicket of a little suburban cottage,—disappeared out of the prosperous, pompous, highly-respectable circle in which they had gyrated, dragged about by two fat bay horses, in the greatest decorum and respectability; dining out, receiving their friends, returning their civilities. Miss Barlys had left large cards with their names engraved upon them in return for other large cards, upon which were inscribed equally respectable names, and the addresses of other equally commodious family mansions. A mansion—so the house-agents tell us—is a house like another with the addition of a back staircase. The Barlys and all their friends had back staircases to their houses, and to their daily life as well. They only wished to contemplate the broad, swept, carpeted drawing-room flights. Indeed, to Anna and Fanny Barly this making the best of things, card-leaving and visiting, seemed a business of vital importance. The youngest of the girls, who had been christened by the pretty silly name of Belinda, had only lately come home from school, and did not value these splendors and proprieties so highly as her sisters did. She had no great love for the life they led. Sometimes looking over the balusters of their great house in Capulet Square she had yawned out loud from very weariness, and then she would hear the sound echoing all the way up the skylight and reverberating down from baluster to baluster. If she went into the drawing-room, instead of the yawning echoes the shrill voices of Anna and of Fanny were vibrating monotonously as they complimented Lady Ogden upon her new barouche, until Belinda could bear it no longer and would jump up and run away to her bedroom to escape it all. She had a handsome bedroom, draped in green damask, becarpeted, four-posted, with an enormous mahogany wardrobe, of which poor Belle was dreadfully afraid, for the doors would fly open of their own accord in the dead of night, revealing dark abysses and depths unknown, with black ghosts hovering suspended or motionless and biding their time. There were other horrors: shrouds waving in the blackness, feet stirring, and low creakings of garroters, which she did not care to dwell upon as she hastily locked the doors and pushed the writing-table against them.

It must therefore be confessed, that to Belinda the days had been long and oppressive sometimes in this handsomely appointed Tyburnian palace. Anna, the eldest sister, was queen-regnant; she had both ability and inclination to take the lead. She was short, broad and dignified, and some years older than either of her sisters. Her father respected her business-like mind, admired her ambition, regretted sometimes secretly that she had never been able to make up her mind to accept any of the eligible young junior partners, the doctor, the curate, who had severally proposed to her. But then, of course, as Anna often said, they could not possibly get on without her at home. She had been in no hurry to leave the comfortable kingdom where she reigned in undisputed authority, ratifying the decisions of the ministry down stairs, appealed to by the butler, respectfully dreaded by both of the housemaids. Who was there to go against her? Mr. Barly was in town all day, and left everything to her; Fanny, the second sister, was her faithful ally. Fanny was sprightly, twenty-one, with black eyes and a curl that was much admired. She was fond of fashion, flirting, and finery, inquisitive, talkative, feeble-minded, and entirely devoted to Anna. As for Belle, she had only come back from school the other day. Anna could not quite understand her at times. Fanny was of age and content to do as she was bid; here was Belle at eighteen asserting herself very strangely. Anna and Fanny seemed to pair off somehow, and Belle always had to hold her own without any assistance, unless, indeed, her father was present. He had a great tenderness and affection for his youngest child, and the happiest hour of the day to Belinda was when she heard him come home and call for her in his cheerful, quavering voice. By degrees it seemed to her as she listened, that the cheerfulness seemed to be dying away out of his voice, and only the quaver remained; but that may have been fancy, and because she had taken a childish dislike to the echoes in the house.

At dinner-time Anna used to ask her father how things were going in the city, and whether shirtlugs had risen any higher, and at what premium the Tre Rosas shares were held in the market. These were some shares in a Cornish mine company of which Mr. Barly was a director. Anna thought so highly of the whole concern that she had been anxious to invest a portion of her own and her sister Fanny's money in it. They had some small inheritance from their mother, of part of which they had the control when they came of age; the rest was invested in the Funds in Mr. Griffith's name, and could not be touched. Poor Belle, being a minor, had to be content with sixty pounds a year for her pin-money, which was all she could get for her two thousand pounds.

When Anna talked business Mr. Barly used to be quite dazzled by her practical clear-headedness, her calm foresight and powers of rapid calculation. Fanny used to prick up her ears and ask, shaking her curl playfully, how much girls must have to be heiresses, and did Anna think they should ever be heireases? Anna would smile and nod her head in a calm and chastened sort of way, at this childish impatience. "You should be very thankful, Frances, for all you have to look to, and for your excellent prospects. Emily Ogden, with all her fine airs, would not be sorry to be in your place." At which Fanny blushed up bright red, and Belinda jumped impatiently upon her chair, blinking her clear gray eyes, as she had a way of doing. "I can't bear talking about money," said she; "anything is better....." Then she stopped short and blushed.

"Papa," interrupted Fanny, playfully, "when will you escort us to the pantomime again? The Ogdens are all going next Tuesday, and you have been most naughty and not taken us anywhere for such a long time."

Mr. Barly, who rarely refused anything anybody asked him, pushed his chair away from the table and answered, with strange impatience for him, "My dear, I have had no time lately for plays and amusements of any sort. After working from morning to night for you all I am tired, and want a little peace of an evening. I have neither spirits nor——"

"Dear papa," said Belinda eagerly, "come up into the drawing-room and sit in the easy-chair, and let me play you to sleep." As she spoke, Belinda smiled a delightful, fresh, sweet, tender smile, like sunshine falling on a fair landscape. No wonder the little stock-broker was fond of his youngest daughter. Frances was pouting, Anna frowned slightly as she locked up the wine and turned over in her mind whether she might not write to the Ogdens and ask them to let Frances join their party; as for Belinda, playing Mozart to her father in the dim drawing-room up stairs, she was struck by the worn and harrassed look in his face as he slept, snoring gently in accompaniment to her music. It was the last time Belle ever played upon the old piano. Three or four days after the crash came. The great Tre Rosas Mining company (Limited) had failed, and the old-established house of Barly & Co. unexpectedly stopped payment.—[Continued on page 249, this number.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 16 letters.
My 1, 3, 14, 12 is used as fuel.
My 7, 14, 15 is a human being.
My 2, 3, 11 is an agricultural implement.
My 7, 4, 9, 9 is a young girl.
My 11, 10, 6 is congealed water.
My 16, 14, 13, 6 is the name of a college.
My 7, 8, 5, 10 are little animals partial to cheese.
My whole is an interesting department of the Rural.

Bethlehem, N. Y. A. Van Allen.

VOL. XVIII. NO. 32.} ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, AUGUST 10, 1867. {WHOLE NO. 916.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

ABOUT WEEDS.—No. II.

HARBORING PLACES.

THE bye-places of the farm wherein weeds harbor comparatively unnoticed and unharmed, are prolific sources whence they spread, and strongholds last taken by the aggressive farmer. To the easy, slothful farmer they are impregnable, and from their commanding position hold his possions forever under dominion. Prominent among these harboring places are the fence corners, and they are especially favorable to the weeds when partly filled with rubbish or stone from the fields. There new varieties are often first introduced by means of birds, or from the fence opposing a barrier to those downy seeds that float in the air. There, too, the seed finds a congenial place to grow; there is shade, a rich soil, and they are undisturbed by machinery. Often the rubbish or stone piles are so dense as to protect the weeds against the farmer's efforts to uproot them. Consequently they mature their seed and it is scattered. A patch of couch grass may exist for years in a fence corner unnoticed; but when its creeping roots strike out far enough for the plow to tear them they are distributed far and rapidly over the field, and every joint becomes a new plant wherever it permanently lodges. Eradication, then, is nearly impossible. The roadsides, which ought to be scrupulously kept clean are too often safe harboring places for weeds. Manure heaps containing the seeds are frequently neglected until the vigorous growth induced has brought the plants to maturity; and many spots around farm buildings and yards are unsightly from a dense annual growth of weeds. In short, the farmer may set it down as an axiom, that wherever on his soil a useful plant does not grow a weed will flourish and occupy the room. Nature abhors an unprolific soil. It is the farmer's business to see that all plants which grow on his premises are beneficial to his interests.

HOW WEEDS WORK INJURY.

If farmers would more closely consider the detriment to their interests which arises from the presence and growth of weeds in the soil, they would be incited to greater and more united effort to accomplish their extradition. Fertility of the soil is diminished mainly by the crops grown on and removed from it. Weeds rob it of much plant food without returning any equivalent to the farmer, and in most soils available plant food is not so abundant but that the growth of weeds diminishes the yield of the cultivated crop exactly in proportion to the amount of the elements of that crop thus abstracted. Let any farmer observe his fields closely at harvest time, noting the great variety and mass of plants which the soil supports besides the crop he cultivates, then estimate the increased yield which would have resulted had the elements which formed these been given to the crop and he will feel in his pocket how detrimental to his interests are the weeds. The hoed crops yield most abundantly, and to their comparative freedom from weeds this result may be chiefly ascribed. And here we will suggest that good farming demands that all grain crops be cultivated at different stages of their growth.

Besides the loss weeds occasion the cultivator by diminishing the yield of his crops, they impose on him a large amount of unremunerative labor. In fitting the ground for sowing the seed, in cultivating, harvesting and cleaning the grain, the presence of weeds in the soil and crop causes much extra work to be performed. Loss also occurs through the deterioration of crops in value when weeds or other seeds are mixed freely with them.

COWS FOR DRAFT.

OFTEN a good thing is opposed and neglected because it has not the sanction of custom, and as often a bad thing is retained because it has the sanction of custom. An Irishman, writing home his impressions of America, said it was an "Aisy country for women and cows, but death on men and horses." Eating his want of gallantry, he evidently thought cows might be useful for something more than giving milk. We raise this question expressly for the benefit of small farmers. The tendency now is to small farms; and the question how draft animals, with the other necessary stock, are to be kept on a small farm, is a pressing one. A team will consume too large a proportion of the productions of a small farm. To keep a pair of horses in proper condition costs as much as the keeping of four cows. This on a ten to twenty-five-acre farm is ruinous economy. It will consume one-third to one-half of its production, as they are ordinarily managed. A pair of oxen will consume as much as three cows; and in either case this expense is encountered for the small return of the team work on the farm. It would, no doubt, be cheaper to hire the team work than to keep one; but, unfortunately, teams are not to be had in times of greatest need. And, therefore, every farmer who would perform his labor in season must keep his own team. And as we have seen, the expense of keeping a team, aside from the capital invested, is too great for a small farm, unless it is useful for other purposes.

Let us enquire, then, is it practicable to perform the labor on a farm with cows? To the American, perhaps, this is a novel question, and his first impressions are decidedly in the negative. He will probably think it barbarous to subject the cow to the yoke. This arises from his habit, and not from the nature of the case. Why cannot the cow bear labor as well as the mare? The cow has a power of endurance little inferior to the ox, and is more gentle and docile. Taken young, they break to the yoke easily. The work upon a small farm may be done with cows without overtaxing their strength, besides, as cows are kept for profit of their milk, a farmer need not be limited to one pair, but may use two or three pairs, and thus make the work easy for the team. They are quicker than oxen, and stand moderate labor as well. This is not theory. It is a common practice with small farmers in Germany and France. There they work their farms and send their products to market with cows. And there can, certainly, be no reason why American cow cannot work, that does not apply to the European.

The next question will be, how does labor affect the quantity of milk? There is no doubt but hard labor will diminish the quantity of milk; but moderate labor with an increase of food will not materially affect the milk. We have no doubt that cows soiled, with the addition of three to five pounds of pea meal or bran, per day, would keep in as good condition and give as much milk with moderate labor as cows running in ordinary pasture.

This then is a question of the highest importance to the farmer of twenty-five acres or less. To him it makes all the difference between profitable and unprofitable farming. If the cow gives a little less milk, still the expense of a team will be but a trifle. This will also furnish the advantage of a team as powerful as required, for the capital invested in cows will be paying, aside from the labor, and the farmer can afford to use it liberally. He can plow his few acres deep, and sub-soil, so as to bring out all its productiveness. This is seldom done; and by laying out sufficient labor on his few acres, he might find the amount of his productions not far behind his prosperous neighbors with more land.

Now don't elevate your noses in disgust at the mention of this cow team! A pair of fine rounded Devon heifers would not look bad coupled together with a well-formed yoke. Many of you, with a sly leer upon your faces, would be very glad to have such a pair, and they would look every way more beautiful and appropriate than a pair of old plugs, such as many drive. No! you had better consult your own interest rather than your prejudice, and commence at once to fall into line with a pair of fine heifers.

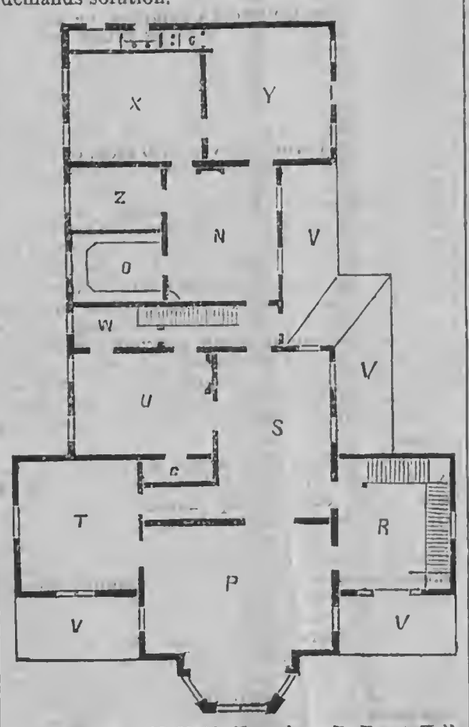
And you, *large farmers*, must turn in and help make this fashionable. It would be an example to those to whom a team is a necessity, and who now feel a delicacy in commencing the practice. To those who have counted the cost of keeping a good team, even on a farm of one hundred acres, the importance of saving the expense of one will appear no insignificant item. When this is once put in practice, the great objection that small farms cannot be worked without greater proportional expense will fall, and the small farmer will be as independent as any in the land.

E. W. S.

PLAN OF FARM HOUSE—ELEVATION.

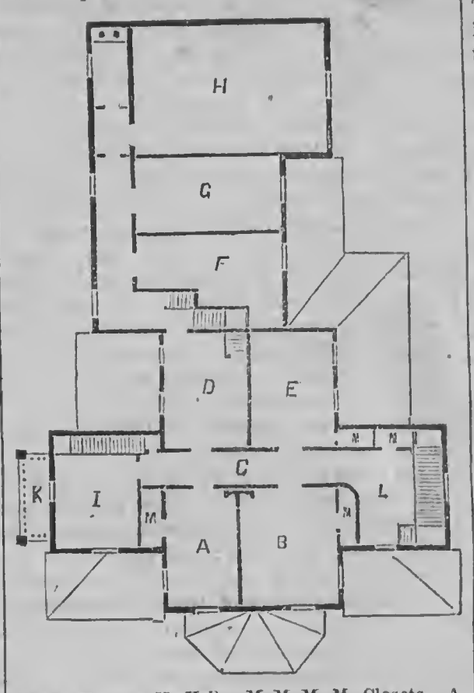
RURAL ARCHITECTURE.

THE object of devoting so much space in the "RURAL" to country homes is, doubtless, to diffuse a knowlege of the principles of Rural Architecture. To divide up a square, parallellogram or octagon into a number of rooms, closets, halls and stairways, will afford scarcely amusement, much less improvement, in taste. The plans, elevations and perspective views of houses are useful, mainly, as they serve to illustrate some principle of Architectural Art. In submitting his plans to your hundred thousand and more of readers, the Architect should have a problem to solve, which he can make clearer by his diagrams. Even, if they are somewhat defective, he may do something to awaken interest and render the public taste discriminating, by showing that such a problem actually exists and demands solution.



LOWER FLOOR.—V, V, V, Verandas. R, Front Hall, 14+14. P, Parlor, 15+25. S, Sitting Room, 15+21. T, Library, 14+14. C, China or Clothes Closet. U, Dining-Room, 14+19 6. N, Kitchen, 15+17. O, Pantry, 10.6+8. Z, Store-Room, 10.6+8.6. X, Wash-Room. Y, Wood-House. *c*, Water-Closet. W, Bath-Room, 6+11.

In the above plan two important elements were especially taken into consideration. First, the site, which generally requires careful attention before the artist can develop a proper plan for it. In this case, an extensive plot of ground, shaded by a number of large trees, was bounded by two roads, which by their intersection formed an angle of about 100°. This necessitated at least two fronts and a cheerful out-look from a third side. As the trees were large and stately, and the adjacent hills of much magnitude in appearance as possible.



UPPER FLOOR.—N, Hall. M, M, M, M, Closets. A, B, D, I, Chambers. F, G, Servants' Chambers. H, Woodhouse-Chamber. K, Balcony.

An attempt is made, secondly, to reconcile simplicity and variety—a difficult problem always—and especially in a building of moderate dimensions, and at a cost within the reach of a well-to-do farmer. This house is not designed for a gentleman's mansion, nor for a village residence, but for a farm house, located at some distance from village or city. It supposes the existence of a numerous household of children and help; and may, without offensive pretension, be called a "Farm Villa." The exterior is plain and comparatively inexpensive, though very irregular. It will be noticed that verandas are introduced, not for show, but for their legitimate objects, viz., to furnish shade and to give unity to the whole building by connecting its different parts. The French windows, serving the double purpose of furnishing light and passage-way, lead to the verandas, and in no case are made as if designed to give the unwary visitor a tumble of several feet to the ground, and to the outsider an uncomfortable sense of the perils of such outside trap doors. In this bleak climate they should be used sparingly in any room that is to be constantly used in winter. The woodhouse is an essential part of the plan, and should be finished in the same style as the rest of the building on the outside.

The front entrance is in the wing, which forms a hall for stairs. These are wide, and with two platforms are easy of ascent; and on this account as well as on account of comparative inexpensiveness and really grand appearance, are to be preferred to a circular stairway, so much in fashion just now. The parlor and sitting-room are spacious, but will not be found too large for a family at all numerous. The tendency of late has been to cut up country houses into small apartments, to the destruction of all architectural effect, the exclusion of proper furniture and the discomfort of family and friends. In accordance with custom a dining-room, separate from sitting-room, has been designated; but most country families will find it convenient to convert it, especially in winter, into a family bed-room, as two fires are as many as they will wish to keep up all day. The back hall shuts off the sitting and dining-rooms from unpleasant odors of the kitchen. In the kitchen next to the bath-room is a small cistern having a lid to cover it and a lead or iron pipe in the bottom leading to the bath tub, which can thus be supplied with warm or cold water conveniently. This cistern is marked C. The number and location of the water closets, which are to be furnished with ventilating flues, and a deep vault with drain, will be approved.

From the hall on the second floor three closets are taken, leaving it still sufficiently spacious. The closet opening into the hall is designed for a common depository of linen and bed-clothes and furs in summer. Stairs lead to a pleasant room in the third story, which can be used for an observatory or other purpose. Stairs, partly in the wing and partly in the main building, lead to the attic. The woodhouse chamber is designed for a store-room for sacks of wool, sage, hops or tobacco, and is designedly spacious. The sash hang on hinge butts and fastened inside to a movable standard, so that they may be opened for the reception of these or other products. The other rooms, as their size and location are indicated on the plan, do not need special mention.

E. M. R.

THE CROPS OF THE SOUTH LAST SEASON.

THE July Southern Cultivator overflows with correspondence from the now wide-awake planters in the cotton States. They are very well-read, practical farmers. Although some of them evidently sigh after the leeks and onions of Egypt, yet the majority say they would not have slavery reinstated on any account. It is refreshing to read the painstaking experiments going bravely on in spite of the trials of transition from the old to the new regime. The best thing of all is to see the planter his own overseer, and his sons bravely learning the use of their own hands; then the substitution of labor-saving farm implements and machinery for the old system of one-mule scratching plows, seventeen of which, with seventeen negroes to drive them, were so often seen in one field. It would seem that necessity, inducing enterprise and a close attention to business, is now working wonders for the permanent agricultural prosperity of the South.

One planter, as an apology for the short crops of 1866, recites the causes of failure thus:—"The teams were ruined by hard usage and the constant military impressment system of the war, by day and by night, both officially and without authority,—hence the land was badly plowed, left foul, ditches filled up, and the banks grown up with bushes and briars. Of course we could not be prepared to commence the operations of the plantation the beginning of last year. The laboring population were disorganized, and we were troubled for both hands and good teams, and were late preparing to plant. The land, owing to slovenly farming during the war, was rough and foul, and it plowed badly, so that crops were poorly put in to begin with. Then there was a great scarcity of good cotton seed, and many damaged seeds were sown, and some sown too sparingly to get a good stand; many planters did not get seed until May when, the rains having set in, they were sown on wet land. Hence, the common complaint of bad stands to start with; the demon grass came up, and the wet season soon covered them with grass. The rains continued, the white men complained, and the freedmen despaired,—they 'neber seed de like afore.' Replanting was done until June. Some lost the entire crop by trying to save all, instead of turning out a portion. Besides grass, *sore shin*, cut and boll worms, rot and catterpillers, rust, wind and rain decimated the cotton crop."

*

STEAM PLOWING.—It was stated at the New York Farmers' Club that the reason why steam plowing had not proved successful in this country was because the attempts had all been with locomotive instead of stationary traction engines] There is always great difficulty in starting a railroad train by an engine which may be fully sufficient after it has obtained momentum. That difficulty stands in the way of steam plowing.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

WOOL GROWING IN THE SOUTHWEST.

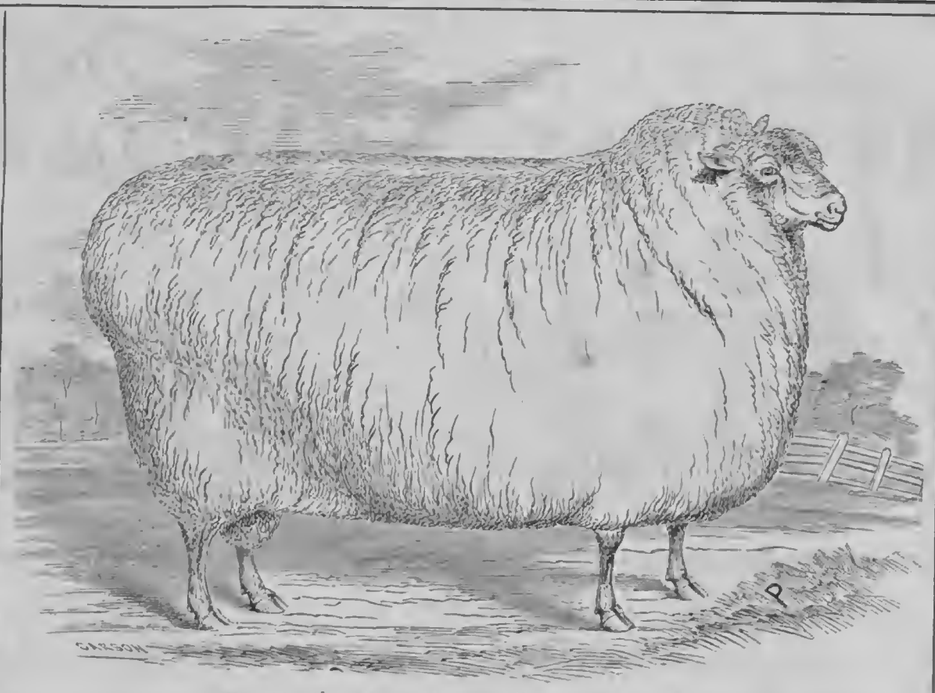
N. BURTLESS, Auburn, N. Y., asks us:—"Is wool growing a safe business in the West or or Southwest on Government land, and if so, where is the best locality for a man of small means?"

We have attempted to show in recent issues of this paper, how very cheaply wool can be grown in Texas. But to Northern men of "small means," the expense of getting there with their families is an item of consequence; and many who have means do not choose to "go so far from home." We will therefore now call attention to an intermediate region—lying between 34° and 38°, embracing Southern Missouri, Northern Arkansas and all the hilly and mountain country lying to the east between the same parallels of latitude as far as the eastern slopes of the Alleganies in Virginia and the Carolinas. Besides the portions of States above named, this would also include considerable parts of Kentucky, Tennessee, and the northern sections of Georgia, Alabama and Mississippi. The climate in the localities thus designated—altogether embracing an immence region of country—equally avoids the extremes of the North and South, and is as uniform as any in the United States. At moderate elevations the winters are very short and mild; and we think we speak quite within bounds when we say that the period during which it is necessary to give artificial feed to stock is not more than half so long as in corresponding situations in the present principal sheep growing States of the North. Abundant experiments have already proved that the country is well adapted—indeed, specially adapted—to the healthy production of sheep and wool. We understand that any quantity of it can be purchased at or below the price of Government lands, with the usual advantage found in such sparsely inhabited countries of pasturing unoccupied adjacent lands without cost. There are such a multitude of particular localities which present about equal advantages for wool growing, that we are not prepared to express a preference; tho' were we ourselves going out "prospecting" for a great body of cheap fine lands for this purpose, within the localities named, we should not fail to give particular attention to the Ozark Hills of Southern Missouri.

If, then, wool growing is a "safe business" in any part of the North, it must be a safer one in the regions above mentioned. But does our correspondent mean to point to another idea—sometimes advanced by broken down wool speculators: does he mean to inquire whether wool growing intrinsically, so to speak—that is whether there is anything in the natural or artificial circumstances which surround it, which renders it necessarily more precarious than other industries? In natural circumstances it has the advantage over most other agricultural pursuits, because it supplies one of the greatest and most indispensable articles of human consumption, while it is less exposed to casualties. The winter does not freeze out or insects destroy wool as they do wheat. The frost does not nip it as it does corn. Bad seasons do not cut off the supply to the same extent they do most other salable farm products.

It must be confessed that the artificial circumstances which have surrounded wool growing in our country have often proved very destructive. The principal of these has been our national legislation in respect to it—our tariffs. These have at times inflated it into the regions of wild and dangerous speculation, and then as suddenly depressed it, by reactionary measures, as opposite extremists have obtained ascendancy in Congress. It would be difficult to say whether the wool grower has had most occasion to pray to be delivered from his ostensible friends or enemies. Even those directly interested in the success of this industry—those, too, disposed to favor prudent and moderate legislation—have not until recently "pulled together." The manufacturer is almost as much interested in the success of domestic wool production as the grower. How long is it since the former was wont to declare that the protection of his industry gave a corresponding advantage to the grower, and that the direct protection of the raw material was therefore unnecessary, and moreover that it conflicted with some mysterious dogma of political economy! Consequently, he was uniformly embarked in a hostile struggle with the grower on the floors of Congress,—thus disuniting interests which were essentially the same, and neither of which could sustain itself separately against free-trade opposition.

Yet amongst the vicissitudes thus occasioned in the wool growing interests, has it been more fluctuating—less remunerative on the average—than other productive industries? It was our exceeding good fortune to call out some very important statistics on this subject, before his lamented death, from perhaps the only person in the United States capable of furnishing them in a form so absolutely authentic, and for so long a period. These consist of the quarterly average prices for which wool of the different grades sold in Boston, for a period of thirty-five years preceding the recent war. So far the record is complete, and it is given in part for three preceding years, during which the tariff of 1824 was in operation. This table will be found in the Practical Shepherd, pp. 92, 93, 94. From 1827 to 1861 inclusive, the average price of fine wool was 50 cents, 3 mills; of medium, 42 cents, 8 mills; of coarse, 35½ cents. Coarse wools did not for most of this period include any amount of the valuable English combing wools. They were mainly the rough, uneven, mongrel wools, frequently burred or cotted, and badly put up, grown by farmers who kept a few sheep as a convenience, but bestowed no care on their management or improvement.



MR. WING'S COTSWOLD RAM "GOLDEN FLEECE."

What other farm industry during that long period can show a better average record than this? The other industries, too, have had their "ups and downs!" On this topic we can speak, to some extent, from experience. We have owned sheep from our infancy, and have had the direct management of them, and of other branches of farming—been a somewhat attentive observer of all of them—for more than thirty-five years. Our experience and observation during the whole of that period, has satisfied us that sheep husbandry is exposed to no greater risks or vicissitudes than any other branch of farming, and has been on the whole as profitable.

The recent war changed the relations of things. The cost of labor and subsistence, and taxes, became so largely increased that we could no longer compete with wool grown on as cheap lands, and by greatly cheaper labor, in other countries. We called on Congress to make foreign wools pay as much for the use of our markets as we ourselves paid. The manufacturer, ignoring old fallacies, admitted our equal right to production, and acted as our ally. The result was the present tariff. Its effects are yet unfelt, owing to extraneous causes. A vast surplus of foreign woolens had accumulated in our markets before its passage, which it required time to drain off. The deranged finances of a portion of the country, and the short crops of last year, have, to an unprecedented degree, depressed the woolen trade, and thus prevented that surplus from being consumed. Our manufacturers have encountered a rise in the cost of carrying on their business, corresponding with the rise in the cost of producing the raw material; and they cannot make goods to undersell the foreign ones on hand, with wool bought at a fair price. Many small mills have stopped running. The larger ones have been run on as short time as they could be without breaking up, scattering and driving into other pursuits that skilled operative labor which will be necessary when they can find remunerative markets. Many of those who are able to carry their goods—*i. e.*, keep them on hand—are doing so. To add to the present extreme depression of wool, the country banks, notwithstanding the money plethora in New York City, are unwilling, and probably unable, to advance funds to country buyers, with the understanding that they will help them carry their wool over sixty days.

Yet it was in view of all the preceding facts, that we recently put forward the assertion that we never felt stronger hopes of the future of the wool grower than now; and we reiterate that assertion. We will give some of our reasons. The temporary causes of depression are already being removed. The crops are generally abundant—so that money will flow into the country. The cost of subsistence will diminish. The laboring classes of the North will replenish their scanty wardrobes, and the half naked South will reclothe itself. This will clean the market of old goods and make a place for new ones. Just how long it will take to effect this we cannot say, but the time cannot in the nature of things be distant.

For a permanet improvement in the condition of wool industry, we look to the new era which has been established in tariff legislation, and the greater promise it gives of stability in its continuance and effects. The provisions of the present act were made in what was intended to be equal reference to the interests of the three great interested parties, viz., the producer, the manufacturer and the consumer. It gives moderate and reasonable protection to the first, without imposing a burthen on the last greater than all industries are called on to bear for the mutual support of each other. It is a triumph of no one interest over other interests. These circumstances promise stability—and anything like stability in wise, fair and equal tariff legislation is a thing we never have yet had, and what the wool grower more than anything else needs. Even imperfect legislation is better for him than ever changing legislation.

Other circumstances favor stability. The manufacturers gave their hearty assistance in procuring the passage of the act, and consequently are as much pledged to its support as the growers. This co-operation gives the united interests both a moral and political power which they never before possessed and renders them more than a match for the free traders. Manufacturing is on a much firmer pecuniary basis than formerly, and there is no danger of foreign combinations breaking down establishments which can ride out the present storm. Our markets are therefore not as likely to be broken up or disturbed by pecuniary reversions as formerly. And the grower has much better stock than heretofore. The same number of sheep, or the same feed, produces upwards of twenty-five per cent more of wool than formerly, and the improvement in this particular is still going on.

All that we need for the future is the certainty of the present stability of the wool and woolen tariff. We have no doubt whatever that the free-traders are preparing to make a great, united, desperate onset on it, and that they will succeed unless they are met by equally determined efforts on the part of it friends. Commissioner WELLS is now in Europe picking up ammunition for them. But does anybody expect that, having won this great victory of American Industry, its friends will stack their arms, go to sleep, and let their defeated opponents rally and surprise them? We, for one, expect no such thing. We believe our people are sleeping *on their arms*, and that when the signal sounds they will again be prepared to rush, shoulder to shoulder, to victory. Thus, and not otherwise, our hopes are bright for the future.

MR. WING'S COTSWOLD SHEEP.

MR. JOHN D. WING of "Maple Shade," Washington, Dutchess County, N. Y., made importations of Cotswold sheep in 1855, 1856 and 1857, and they and their descendants now number about fifty. They were selected from the best flocks of England, and without regard to price. Mr. WING made it a point, while securing the most highly improved sheep, to obtain those of the pure Cotswold blood, without any of those Leicester or other crosses which have been so generally made in the English flocks, and in many if not quite all of those from which sheep have been introduced into the United States and Canada, within the last few years. Where equal improvement has been secured without the cross, there can be no doubt, we think, that he judged wisely in this particular—for the old Cotswold sheep—as ancient a distinctive breed or variety as there is in Great Britain—are much hardier, surer breeders, and better mothers, than the Leicesters; and a mixture with the latter on all theoretical considerations should, and there is no doubt practically does, dilute their good qualities in these respects. Even should the pure improved Cotswold be found, as we should be prepared to expect, not to possess quite so early maturity as the Leicesters and their crosses—which exceed all breeds in the world in this particular—we are convinced that in this country this loss does not compare in importance with the gain above mentioned. Our climate, products and systems of husbandry do not favor that careful and continuous forcing system which is necessary to develop extreme earliness of maturity; our markets do not call for it; and as it is not extensively practiced even by the holders of Leicesters among us, it is fair to infer that they do not deem it, under ordinary circumstances, profitable. On the other hand, our comparative rigorous and variable climate, our great difficulty in procuring experienced shepherds, and the high price of labor, do imperatively require hardy breeds of sheep, which do not demand either too much or too skillful attention.

Mr. WING'S Cotswolds were selected from the flocks of WILLIAM LANE, Esq., of Broadfield Farm, WILLIAM HEWER, Esq., of North Leach, ROBERT GARNE, Esq., of Aldsworth, and GEO. FLETCHER, Esq., of Andoversford—all breeders of high reputation. The largest portion of them were obtained of Mr. LANE, known in Gloucestershire as the Cotswold Champion, on account of his great success in winning prizes and out-selling other breeders. At his ram sale in July, 1866, he disposed of fifty-four yearlings at an average of £26 18s. 9d. per head, being the greatest sale of the breed ever made in England, and £6 over the average of the next flock. Four of these rams brought over £100 each, one £200, and one £210, for which £250 was subsequently refused. Two of the high-priced ones were got by the celebrated "Cotswold King," the sire of Mr. WING'S ram "Golden Fleece," (a portrait of which is herewith given) and Mr. WING paid for the first choice of the lot. "Cotswold King" brought the highest price for a ram of this breed ever sold. A beautiful photographed drawing has familiarized his appearance to many American breeders, and it in our judgment represents the most perfect Cotswold ram we have ever seen. The dam of "Golden Fleece" won the prize of the Royal Agricultural Society. Many of Mr. WING'S ewes were also by "Cotswold King."

"Golden Fleece" won the first prize of the N. Y. State Agricultural Society in 1866, and of the N. Y. State Sheep Breeders' and Wool Growers' Association at Auburn, in May, 1867. He also won the sweepstakes prize of the latter. He was sheared on the ground, and his fleece, then of about one year's growth, weighed twenty pounds. It was entered for the RANDALL prize on scoured wool, and it is thought, by some, will yield more scoured wool than any ram's fleece on our records. "Champion," a ram leg bred by Mr. WING (out of ewe No. 4, by a choice ram bred by Mr. FLETCHER,) was exhibited on the same occasion, and won the first prize on yearlings. His fleece also competes for the RANDALL prize.

The "Maple Shade" flock, as Mr. WING'S is termed, yields, on the average, twelve pounds of wood per head—some ewes going as high as fifteen pounds. The length of the staple is from twelve to eighteen inches. The sheep receive only the ordinary green feed in summer. In winter they get plenty of roots, and the young stock occasionally some grain.

Dairy Department.

MORE ABOUT MILK FEVER.

IN 1865 two cows belonging to the writer came in early in the month of July, one of which was not dried off till within about a month of the time of calving, while the other was milked more or less the whole preceding time. The first one was fleshy, and was seized with milk fever within twenty-four hours, and died in three days. The other cow was in ordinary condition, and came through well. Several days preceding calving they were kept apart from other stock in a cool grove where there was scant pasture and an abundant supply of pure, soft water. Both were fed with bran mashes, and otherwise treated in the usual manner.

The surviving cow again calved the year following the latter part of May. As with the fatal case the year before, so this cow was milked to about one month of her time. The weather was neither cold nor hot, and the animal was comfortably housed in the stable at night. The next day symptoms of the disease appeared, and within twenty-four hours the carcass was given to the wild animals of the woods. A veterinarian practitioner attended both cases, but nothing that was done was of the least avail. He did not claim to know how to control the disease, and would like to learn.

These are the only cases of the complaint the writer has had in twenty years of experience in the ownership and management of cows. They are also the only instances recollected in his practice when the milking was continued to so near the time of calving. In the first fatal case, the animal was fleshy, the weather hot, and the udder was carefully kept drawn down beforehand. In the second, the cow was only in fair condition, was not milked before calving, and the weather was moderate. Yet the result was the same in both cases.

Our *theory* is (it may be crude and irrational,) that milking those cows so long had the effect to keep up the secretions down to the point of time when nature was preparing for a renewal of the operation, and that, on discontinuing the milking quite abruptly, the system necessarily absorbed the secretions, with a constantly increasing tendency in that direction, down to the time of calving, with deadly milk fever as a natural consequence at that time. We this year had no cows that did not go dry two or three months, had none of the disease, and no fears of any. And we are inclined to believe, had the animals which were lost remained dry as long, it would have been one and a half hundred dollars advantage to

W. B. P.

DAIRY ITEMS.

Cheese Factories—Wyoming.—The Attica Atlas states that in the early days of dairying in Western New York cheese made in that vicinity won a high reputation, under the general designation of "Orangeville cheese." This "ville" is the geographical center of the Tonawanda Valley dairy district, and Attica the commercial outlet for the dairy products of that region. Factory dairying is fast superseding the old system in that section. As a proof of the progress of this change, the Atlas names some thirty different factories in that region now in operation—twenty-four of them being located in Wyoming county, embracing thirteen towns. Not long since sixty wagon loads of cheese passed down the Tonawanda Valley in a single day. These cheese trains are of pretty frequent occurrence.

Warts on Cows Teats.—If "Rural Reader," South Haven, Mich., will wash his cows teats in alum water several days in succession, directly after milking, the warts will probably disappear—the operation having proved successful in several instances as reported to us. The remedy is easily applied, and should it fail no harm will have been done. Sometimes dairymen cut the warts off. If this is done, and they are numerous on the teats, the soreness caused by the cutting will materially diminish the flow of milk. This remedy, therefore, which we believe is effectual, should be applied when the cows are out of the milking season. The other is available at any time.

The Cheese Market.—The Utica Herald of the 30th ult. states that the cheese trade has a gloomy aspect, and a further decline in price at Little Falls market is noted. Family dairy cheese was selling at 9c. to 10½c.—the latter a top price. For factory made, prices varied from 11c. to 13½c.—195 boxes from Chenango were taken at that price, and 423 boxes from Cattaraugus at 13¼c.

Accounts from Liverpool show a decline of from 1s. to 2s. Operations were quite lively at 58s. to 60s. for fine extra factories, which were most in demand. Medium to good dairies were offered at from 52s. to 56s., and ordinary to middling 30s. to 48s. Receipts of the week ending July 12th, 42,284 boxes.

Milk Fever in Cows—Cure.—J. B. PARMALEE of Ogden, in this county, states that a considerable number of cows have died in his neighborhood, during the last few years, in consequence of milk fever. During one spring quite a number were lost in this way by his neighbors, when one of his own fell sick. Knowing that smartweed was good for some ailments, he steeped a quantity of it, and filling a quart bottle with the decoction, poured it down the cow's throat in a tepid state. The result was a speedy cure of the animal. Since that time it has been successfully used in his neighborhood, and is regarded as a sure cure, if timely administered to the afflicted animal. A quart bottle full is usually sufficient to effect a cure. The remedy is a simple one, and as most farms supply the weed there can be no difficulty in testing its merits as occasions for its use may arise.

Rural Notes and Items.

SEASON, CROPS, PROSPECTS, &c.—The wheat crop is secure, and in splendid order. If loss now results to the grower from wet it will be through his negligence and carelessness. A *large* crop of *good* wheat is now in the hands of the farmers of this county. Prices cannot rule as high as during the past year, but we can see no reason for a depression to a point where the producer's profits will not be fair. Reports of the corn crop are not highly flattering. Oats will come in well, and doubtless yield abundantly. The season has favored those late sown. Barley is likely to be of good quality. Grass is abundant, and potatoes are healthy and vigorous. Such, at least, is the crop prospects in this section, and from all we know at present, there is a promise of satisfactory harvests generally.

LOCAL COMPLACENCY.—Among the papers embraced in the Transactions of the Iowa Agricultural Society for 1866, is one on the "Agricultural Advantages of Iowa," by M. V. ASHLEY, which we find in a recent number of the "Homestead." Among other things the writer says:—"To us, Iowa is the garden spot of the West. It has a better proportion of timber to the prairies than Illinois; is better watered—having over forty rivers of convenient size; has a better position on the meridian, being nine by ten counties affording no chance for Northern and Southern feeling. Missouri is too far south for a competitor, Nebraska not old enough, and Minnesota is too far north. The only State having fair claims to competition with Iowa is Wisconsin, but even this State agriculturally is, so to speak, behind the light-house. The summing up is 'that Iowa has no equal as an agricultural State.'"

FARM ITEMS FROM NORTHERN ILLINOIS.—H. R. S. writes us from Akron, Illinois, that in the latter part of July the thermometer showed as high as 98 degrees in the shade; corn has grown very rank and promises well. Wheat is slightly damaged by rust, but there will be more than an average yield. There are fair crops of oats, barley, and rye. The hay crop is splendid, and was gathered in good condition. The Colorado bug is making havoc with the potatoes, and even the the ladies go into the fields to fight them. Fruit is doing finely; we have plenty of peaches, and grapes wherever there are trees and vines."

EGGS—A CURIOSITY.—Capt. E. C. WILLIAMS of this city, has shown us a curiosity in the egg line which will bear noticing. It is from the henery of WILLIAM PARKER, Walworth, Wayne Co., N. Y., and consisted of an egg within an egg, both perfect in form, but the exterior shell contained albumen, but no yolk. What the interior shell—which is perfect in form and about the size of a pullet's first efforts—contains is not known, as it remains intact in the exterior shell. Such doublets are of rare occurrence, hence noticeable when found.

DIEHL WHEAT.—Messrs. SWAN & JENKINS, who occupy the well known ELISHA HARMON farm of Wheatland, recently showed us some fine heads of the Diehl variety of wheat, of which they are harvesting this season 75 acres. We think well of this variety; it is an early, white, bald wheat, and so far as we have heard, is yearly gaining favor. Some of the heads we saw had over 80 kernels in them. Messrs. S. & J. harvested 200 bushels from 10 acres last year, and they say the present crop is more promising.

OHIO TO NEW YORK.—The editor of the Ohio Farmer, alluding to the State Fair to be held in Buffalo this fall, remarks: "The Empire State has located her Fair as near to Ohio as she could, and Ohio will give her a benefit at Buffalo, on the 1st to 4th of October. We love to join company with the stately gentlemen of the New York State Agricultural Society; it is next to meeting with the solid men of Boston—the best groomed of all the silver-grey people. It puts a western man upon his propriety to fall in such excellent company."

TREADWELL WHEAT.—This variety originated in Michigan, and has gained considerable favor among farmers in some sections of that State. A correspondent of the Western Rural says:—"The straw of the Treadwell is very bright, with a heavy berry, weighing last season 64 pounds to the bushel, and sells for white wheat. It is extremely hardy, and stands the winter as well or better than any other variety I ever raised. It is about five or six days earlier than the Soule, and is equally as early as the Diehl."

DEATH OF AN AGRICULTURAL WRITER.—Mr. RICHARD C. KENDALL of Thistlewood, near Philadelphia, a noted contributor to most of the agricultural journals, and for many years agricultural editor of the Philadelphia Saturday Evening Post, died recently at Acto, N. J. He was born in China, of American parents, and has traveled extensively in most of the civilized portions of the globe. He was possessed of great versatility, his style was entertaining and genial and his information full and accurate.

TROUBLE WITH THE BEES.—A. T., Shelby Co., Ind., writes that "the bees of two hives have come out and gone to work between and on the back side of the hives. These are common box hives, set on a low bench close to the fence and covered with a broad board. The bees also work on the under side of the cover. The hives are full to the bottom, and have had no honey taken from them for two years. Don't think they have swarmed this season. Will some Ruralist tell me what I shall do with them?"

CHEAP WASH FOR OUT-BUILDINGS.—T. R. S., Loudon Co., Va., writes:—"I should be pleased to see in your paper a cheap and durable wash for out-buildings, to be used instead of paint, and statements how long such washes will last without being renewed." Perhaps crude petroleum mixed with lime or mineral paint is as good as any. We have published several recipes for cheap paints, but should be glad to have more information from our readers who have experimented with such.

THE BEST CIDER MILL.—(E. R., Union City, Mich.) We are not informed as to the place where you can purchase the cider mill you describe. There have been two mills advertised in the RURAL since the commencement of the present volume, but neither of them is mentioned as superceding the handling of the pomace in the cider-making process.

CAST IRON CHIMNEYS.—D. M. S., Evansberg, N. Y., inquires "about the merits of cast iron chimneys, whether they are satisfactory to those who have used them, and if they are more liable to be struck by lightning than those made of brick."

WHEAT IN KENTUCKY.—The yield of wheat in this State was somewhat less than was anticipated, still the crop was a good one. It is selling in Louisville at $1.50 @ $1.75 per bushel.

HORTICULTURAL.

BLACK CAP RASPBERRIES.

THE popularity of this class of berries is chiefly due to their hardiness, productiveness, and the comparatively little labor required to grow them. The habit of propagating themselves by layers from the tips of the canes, instead of suckers from the roots, is of great value to the cultivator, as it saves him the constant labor of destroying superfluous plants. A patch of this kind of berries will not drive a man out of his garden and take full possession, and then boldly undermine the fence for fresh conquests, as will Antwerps or Lawtons, unless vigilant watch is kept over them. And the fruit, although not ranking in the first class as to quality, is so plentiful, healthful, and bears transportation and handling so well, that it must ever be popular and grown in large quantities.

But if not so troublesome to cultivate, the Black Cap is also not so lasting in the ground. Our own experience is that on some soils it is best to renew the plantation in three or four years, but on rich, moist land the bushes may fruit abundantly and keep in vigorous condition twice this length of time. Mulching with coarse manure is very beneficial in increasing the size of the fruit and prolonging the bearing condition of the plant.

Every grower of this fruit, for family use only, should provide a supply of new plants, from as young bushes as possible—those of the first season's growth being preferable. When the tips of the cane assume a purple tinge in the early autumn, become denuded of leaves and bend downward, then insert these hard tips in the ground, just deep enough to keep the wind from blowing them out, and the roots of new plants will speedily form. They may be transplanted late in autumn, but the spring-time is preferable. By pursuing this course, the small cultivator may always have plants enough to replace his old bushes, and some to spare to his neighbor, who, perhaps, needs such slight encouragement to induce him to provide a supply of this almost family necessity.

DWARF TREES.—WHAT AILS THEM?

E. G. W., Kingsboro, N. Y., under date of July 22d, writes:—"I wish to ask you what ails my dwarf apple trees? They were transplanted in the spring of 1863; have been faithfully cut back every year in the latter part of the season, August and September. They have made an excellent growth; are very symmetrical in form, and are the admiration of good observers. The bodies of some of them are three inches in diameter, just below the branches, and ten feet in height, and about the same across the branches. Some of the smallest have had a few blossoms but no fruit. Some of my neighbors are in like condition—one having tried it longer than I have, has got no fruit, and has given it up."

REMARKS.—The difficulty, in these cases, probably arises from the fact that the power of the tree is exhausted in the production of wood, leaving nothing for that of the fruit. If our correspondent will take a spade and dig a circle around each tree, about three feet from the body, deep enough to sever all the lateral roots, by thrusting the spade downward, the probability is that his trees will soon throw out fruit spurs, and redeem themselves from the charge of barrenness now lying against them. Instead of pruning late in autumn or early in the spring, which incites a vigorous growth of wood, prune in summer during the season of growth. These operations tend to dwarf the tree and throw it early into a bearing condition.—EDS.

SAVE YOUR WINTER SQUASHES.

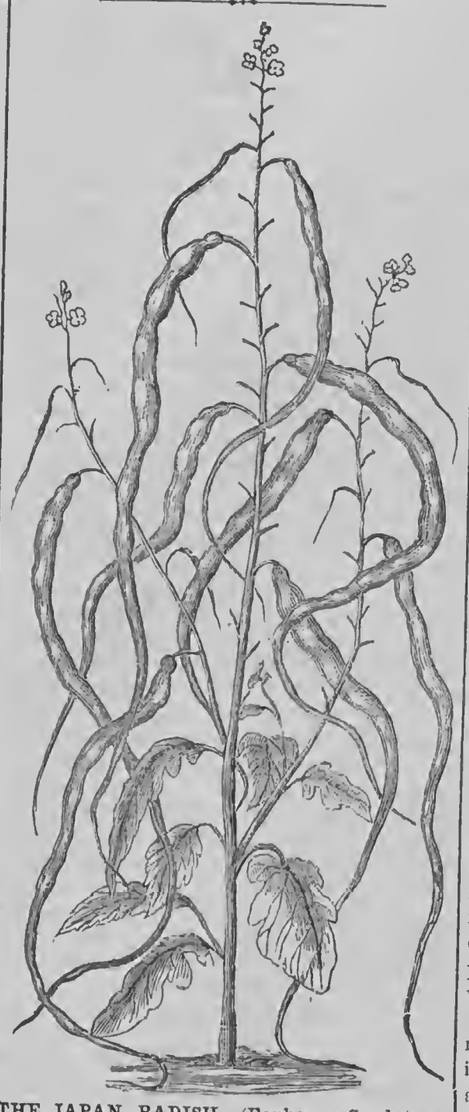
EDS. RURAL:—When the vines of the squash, cucumber or potato begin to wilt in the summer, it is my theory that the larva of the insect that injures and often destroys these vegetables is at work upon the roots. Our remedy is to cover the roots with earth, and pack it down as hard as can well be done. This prevents the grub from affecting further injury, or even escaping easily in the form of a fly. Besides, the vine above where the larva exists will at once begin to draw in nourishment from the soil, and soon put on a healthy appearance, unless the remedy has been applied too late. Squash vines will send down roots from any point where they are covered with earth. I have often started them to growing healthily, after they were badly wilted, by covering a portion of the vine with earth.

For the curious and observing, I would raise the inquiry, if the insect that causes the potato rot, which some say hides about the root of the vine during the day and works upon the leaves at night, may not be forestalled in its movements by pressing the earth against the vines when or soon after they are hoed the last time? The experiment is worth a trial. ECONOMY.

Lima, N. Y., July, 1867.

ABOUT THE DOOR.

A BIT of shrubbery in the yard, (says a writer in the Massachusetts Ploughman,) a vine climbing by a trellis, a strip of refreshing green spread from the door, are sure to make a place of greater marketable value, which, with many, is a consideration to be thought of before any other. Such need no further appeal to their sense of neatness, than. But those who really love the suggestions of beauty for their own sake, will not omit the flower patch, the shrubbery, and the hedge and vine, because they make almost any home more attractive and lovely, and cause the sentiments to sprout, like the very leaves and buds themselves. How few stop to consider what a powerful association lies lurking in every simple but familiar object, like a bush, a tree, a bit of grass, or a border of flowers. They are objects that hold us almost as steadily and strongly to home as wife and children; they are closely associated with these in fact, and can with difficulty be separated. Therefore we say to all, brush up about the door, and plant near by an object of simple beauty. It will bear fruit in the heart a hundred fold.



THE JAPAN RADISH.—(Raphanus Caudatus.)

THIS very curious radish was introduced into England from Japan some two years since, and was offered for sale by some of our leading seedsmen last spring. Unlike other radishes, the seed-pods and not the root is eaten, and they grow to an enormous length, from one to two feet, and nearly an inch in diameter at the thickest part. The plant grows about two feet in height, is well branched, as shown in the engraving, and the long seed-pods hang to the ground.

The treatment should be in all respects similar to that given the common radish. It is also subject to similar enemies, the little flea beetle being exceedingly troublesome. The pods, when about half or two-thirds grown, are excellent cut up as salad, and have the taste of our best radishes. Cut of suitable lengths and cooked and served as asparagus, they are also very fine. We cannot say whether this will ever become popular as a market vegetable, but it is certainly worthy the attention of amateurs.

DISEASES OF THE PEACH.

THE YELLOWS.—The disease termed the Yellows is truly formidable. It is peculiar to the peach and nectarine. It has destroyed whole orchards in portions of the country, and for a time induced the entire abandonment of the peach culture in certain localities.

The cause of this malady has not been satisfactorily ascertained. According to conjecture, it has arisen originally from exhaustion, by deteriorated soil, overbearing, and neglected pruning and bad cultivation. But whatever may have been its origin, it appears at present to be chiefly communicated from diseased trees. It is quickly induced by inserting the bud from an affected tree into a healthy stock. It spreads by contact with diseased roots; a knife used in pruning the tree will infuse the poison if used on another. It appears to be communicated without actual contact, the healthy branches nearest a diseased tree being usually first attacked. It is also probable that the stones from diseased trees cause its development after a few years' growth. Its highly contagious nature, when in its most virulent form, is indicated by the equal facility with which young and vigorous trees, and old and feeble, may be inoculated by contact.

Its infallible indications are, first, a premature ripening of the fruit, some weeks earlier than usual—accompanied with a rather insipid flavor, and with purple discolorations of the flesh. These usually occur the first season, and on a part of the tree which has been first inoculated with the poison. The following season numerous small wiry shoots are frequently thrown up from the larger branches, the leaves become yellow, the whole tree assumes a sickly appearance, and eventually perishes. No instance is known where a decidedly developed case of this disease has ever been cured. When once attacked, to prevent a spread of the disease the tree should be immediately removed and burned. No young trees should be planted on the same spot, as the diseased roots still remain. Stones for seedlings should be procured from districts of the country where it has not been introduced.

In some parts of the country, possessing a strong fertile soil, as, for instance, portions of Western New York, this disease has not spread extensively when introduced from abroad. It has generally destroyed a few trees near the affected ones, and has then disappeared.

THE CURL OF THE LEAF, in the peach, occurs during the early part of the season, and appears to be caused by a minute internal fungus in the pores of the leaf, developed by cold weather. The only known remedy is a thrifty growth, imparted by good cultivation and pruning back. When the disease is severe it destroys most of the foliage, and injures and sometimes kills the tree.

MILDEW OF THE PEACH.—The growth of peach trees is often retarded by mildew. It seizes the tender points of the shoots and young leaves, and sometimes wholly stops their growth. It is confined to glandless, cut-leaved varieties only; such as the Early White Nutmeg, the Early Anne, and some of the earliest varieties of the Red Rareripe. Yellow-fleshed peaches rarely or never suffer from it. It is not often a formidable evil, although it seriously lessens the thrifty and handsome appearance of some varieties while growing in the nursery.

It is a minute fungus, and may be destroyed or lessened without injury to the tree, by syringing with soap-suds on its first appearance. A mixture of lime water with the soap-suds is preferred by some cultivators, and a subsequent dusting with sulphur has been recommended. A thrifty growth and good pruning are, however, usually the best remedies.—*Thomas' American Fruit Culturist.*

HISTORY OF IMPROVED PANSIES.

IT is impossible to say at what precise period the parent of our garden varieties of Heartsease, or Pansy, first attracted the attention of some zealous and far-seeing florist, who either spared it while destroying the other weeds in his garden, or transplanted it thither from the cornfield or waste, where he found it growing, for the plant, (Viola tricolor,) is a native one. At whatever date it was first introduced into gardens, the beginning of the century found it an occupant of our mixed flower-borders, and in a state very considerably improved as compared with the parent; and its convenient mode of reproducing itself from seed, served the twofold purpose of originating new varieties and new plants to supply the place of the old ones, which seldom survived the hardships of half a dozen years.

The Pansy, however, was never honored with much attention until about the year 1825, when its great adaptability to improvement, and the almost incalculable manner in which it could be propagated, as compared with the Auricula, Ranunculus, Tulip, &c., by which it had been preceded, led some enthusiastic person to bring it into notice; and so rapid was the improvement in its form and colors, that the botanist seemed almost at a loss whether to set down the fashionable occupants of a pan of Heartsease at a flower show as belonging to the genus Viola or not.

That all the improvements were effected at one time and by one individual it is scarcely necessary to say was not the case. A long category of names, including most of the celebrities of the day, lent able and skilful hands to the work. Amateurs and professionals alike [illegible] assors settled the points by which the merit of each flower were to be judged. This work, of course occupied some time; but I believe there was no previous example of a plant so quickly becoming fashionable, and at the same time so rapidly approaching perfection. The Dahlia was in the field some few years prior to it, but was several years in making much progress out of the single condition in which it first reached us. The Pansy, however, being a second-class border flower, was quickly elevated into the condition of an occupant of the same beds that the Tulip, Ranunculus, &c., had held years before. Like them, the opening of fresh flowers was watched with interest. I believe the best varieties then in cultivation were first dignified with distinct names about 1829; and from 1832 to 1842 may be regarded as the most fashionable period of this flower.—*Cottage Gardener.*

Horticultural Notes and Queries.

BUDDING PEACH TREES.—"RURAL Reader," Mich. By republishing an illustration we can answer your inquiry how to bud peach trees better and quicker than by a free use of types. Peach trees should be budded during the first season's growth in the last half of August, and first of September. Select a

5 4 2 3 1

smooth, clean place on the tree near the ground, and make an incision in the bark, as shown in figure 1. From the stock of buds in your hand cut off one in the form of fig. 2. Then raise the bak with some smooth implement, (budding knives hve ivory handles for this purpose,) as shown in fig. 3. Insert the bud as represented in fig. 4, and tie up with basswood bark, (fig. 5,) so as to leave only the bd exposed. After ten or twenty days remove this badage.

OSAGE HEDGE—THICKENING THE BOTTOM.—"A Subscriber," Sparta, N. C., asks how he can best reclaim an Osage Orange hedge, that has been neglected for years and grown tall and thin at the bottom? If it will not bear cutting down to the ground and training over again, is it best to uproot it and plant a new one.

FRUIT GROWING IN ILLINOIS.—According to the best statistics there are now planted along the line of the I. C. R. R., south of Centralia, 500,000 peach trees, 250,000 apple trees, 85,000 pear trees, 100 acres grapes, 325 acres strawberries, and 75 acres raspberries.

Domestic Economy.

GOOD BREAD AND CRACKERS.

THE RURAL urges the importance of good bread. I compliment your judgment, for I would not exchange one good loaf of bread for the best cake baked. Of course the cake is good in its place, but bread is the staff of life. If we dine at a table spread with sweetmeats and have poor bread, our meal is spoiled; but if we have plenty of good hop-yeast bread, (for I think that best and healthiest,) good sweet butter, a few other articles, and a nice cup of coffee or tea, I am sure the cook will receive praise.

I will send one of several good recipes. Take from three to five potatoes, boil so as to have enough water left when they are cooked to pour over about a pint of flour; mash the potatoes, put them in, stir well, and if not thin enough add a little cold water; when it is cool, put in a teacup of good hop yeast, stir well and set in a warm place; stir down a few times, for it may find its way over the top of the crock if you do not watch it; then put in a cool place until morning, and set with good fresh buttermilk or sour milk. When light, mix stiff, knead half an hour; let it rise again, then mold into loaves. Do not let it rise too much before baking, for that is the great secret. If raised too much the loaf will be flat, the bread coarse-grained, and it will dry out soon. If it is not so light when put in a well tempered oven it will come out right. Keep some of the yeast to start another time, by putting cold water over it and setting in the cellar.

SODA CRACKERS.—In one quart of flour mix one heaping teaspoon of cream tartar; add a lump of butter a little larger than a hen's egg, well rubbed in the flour; a teaspoon of soda in half a pint of sweet milk—the newer the milk the better, if cold; wet it up hard; roll it out so that it will appear flaky. Bake in a quick oven, and give close attention. They are nice. —MIMA.

VARIOUS ORIGINAL RECIPES, &c.

MESSRS. EDITORS:—In reply to "A Farmer's Wife," relative to coloring red for flannel, I send my recipe, which I know to be perfectly reliable. Also one for the culinary department:

TO COLOR SCARLET.—For a pound of cloth—1 oz. cochineal; 2 oz. muriate of tin; ½ oz. cream tartar. Tie the cochineal in a bag and rub it out in warm water; when it is boiling add the tin; stir it well; have the cloth wet and entirely free from soap; put it in the dye; let it boil fifteen or twenty minutes; rinse in soft water and dry in the shade.

LEMON CUSTARD WITHOUT EGGS.—Take one lemon, grate enough of the outside to flavor it, then peel off the rest and throw away; cut the inside up very fine; mix [illegible] with a pint of boiling water; stir up four tablespoons corn starch in a little water; add it to the rest and let it boil up good. —A SUBSCRIBER, *Florence, Mass.*

A GOOD PIE.—Take 2 cups of water; 1 cup of cracker; 1 cup of pie plant; 2 cups of sugar. Season to taste.

TO DRY PIE PLANT.—Prepare as for pies; add a little sugar; stew; then spread on plates and dry.

SOFT GINGERBREAD.—1 cup of molasses; 1 cup of water; 1 large spoonful of ginger; 1 teaspoon of saleratus; a little salt, and a piece of shortening as large as an egg.—M. J. T.

SODA CAKE.—1 cup white sugar; 1 do. sweet milk; 1 egg; 2½ tablespoons of melted butter; 2 teaspoons of cream tartar; 1 do. soda; ½ pint of flour; extract of lemon.

TEA CAKE.—2 cups of sugar; 1 do. butter; 1 egg; ½ teaspoon soda; nutmeg to taste; flour sufficient to enable you to roll it out. Bake in a moderately warm oven.—MRS. S. B., *Onondaga Co. N. Y.*

TO CAN GREEN CORN.—Cut from cob; put it in a tin can and solder tight; then put the can in water and boil four hours; take it out, pierce the can for air to escape, and solder it immediately.—MRS. J. S. I.

CUSTARD PIE.—¾ cup of sugar, 2 tablespoons of butter, stirred to cream; add 2 eggs, 1 tablespoon of flour, half cup of milk and 1 cup of cold water; season with nutmeg. Try it.—MEHITABLE.

EDS. RURAL:—In a late No. of your paper is a request for a recipe for pie crust. Mine is:—One coffee cup of sour milk; ½ teaspoon of saleratus; 1 coffee cup of lard. The above makes three pies. S. R., *Coldwater, Mich.*

SUPERIOR INDIAN LOAF.—1 quart of sour milk; 1 quart of Indian meal; 1 pint of flour; ½ cup of molasses; 1 teaspoon of salt; 1 tablespoon of soda. Stir well. Steam two hours and bake one hour.—NETTIE.

INQUIRY.—Will some of the readers of the RURAL inform me how to put up pickles airtight? and oblige—MRS. N. P. E., *Mt. Pleasant, Iowa.*

SUGAR AS AN ARTICLE OF DIET.—Dutrone calls sugar the "most perfect alimentary substance in nature." Dr. Rush says it affords a greater quantity of nourishment in a given quantity of matter than any other article in Nature. Sir John Pringle tells us that the plague has never been known to visit any country where sugar composes a material part of the diet of the inhabitants. Dr. Cullen is of the opinion that the frequency of malignant fevers of all kinds has been lessened by the use of sugar.

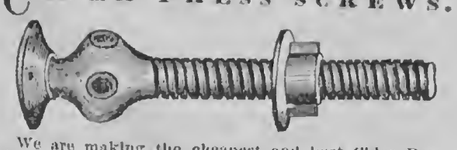
New Advertisements.

10,000 CATAWISSA RASPBERRIES and HOUGHTON GOOSEBERRIES for sale. Send stamp for our Circular, showing the habits of this prolific Raspberry; which bears a crop in July, and another that is abundant in Sept. and Oct. Address CHAS. D. COPELAND, Agent, Genesee Nurseries, Lima, N. Y.

HYACYNTHS, TULIPS, &c., &c.—I shall receive from Holland about the 1st of Sept., a splendid lot of HYACINTHS, TULIPS, CROCUSES, LILIES, and all other Hardy Bulbs suitable for Autumn planting. Catalogues supplied free.
Address JAMES VICK, Rochester, N. Y.

IT DON'T SCRATCH YOU! OR TEAR YOUR CLOTHES? Davison's Thornless Black-Cap Raspberry is the best, as it is hardy, productive, early and sweet, and it is a pleasure to cultivate it. Circulars giving origin, description, prices, testimonials, &c., will be ready in September. JOSEPH SINTON, Angola, Erie Co., N. Y.

CIDER PRESS SCREWS.



We are making the cheapest and best Cider Press Screws in market. Send for Circular and Prices.
RUMSEY & CO., Seneca Falls, N. Y.

J. KEECH'S NEW STRAWBERRIES.—Gen'ls Grant, Meade, Sherman and Sheridan. Plants by August 20th, $1 ₱ doz.; $3 for 50; $5 ₱ 100; $25 ₱ 1,000. [915-1t] J. KEECH, Waterloo, N. Y.

THE GREAT EUROPEAN STRAWBERRY DR. NICAISE. Strong plants ready for delivery by mail from August 15th. Read the Rural and send your orders early.
MARK D. WILLSON, No. 125 North St., Rochester, N. Y.

FRUIT PICKER.—RICHARDS & LINCOLN'S FRUIT PICKER. Will pick all kinds of fruit, and *deliver it in the basket* with great rapidity, as perfect as when hanging on the tree. No climbing to be done, nor ladders needed. Weighs 2½ lbs. Single machines sent by express for $2,00. Special inducements to agents. Address L. RICHARDS, Patentee and Proprietor, Varysburg, Wyoming Co., N. Y.

THE GREAT EUROPEAN STRAWBERRY

DR. NICAISE!

Said to be the LARGEST BERRY known, plants are hardy, vigorous growers, and productive. Fruit of this variety from plants set in September last was exhibited at the Western New York Fruit Growers' Convention held in Rochester on the 24th of last June, which weighed 1¾ ounces and measured 6¾ inches in circumference.

This variety we have imported at a great expense, and will have a fine stock to offer our customers in ——— and September. We extract from European Catalogues: *"It is of enormous size, the berries weighing over 1¾ ounces, (nine to the pound,) and early, of a bright red color, very glossy, the flesh white, and of fine quality."*

This sort has the best characteristics of any we have ever introduced. Orders must be sent in EARLY, as they will only be filled in rotation. ☞ We will furnish plants postage paid, at the following rates:—$1 ₱ plant; $10 ₱ dozen; $75 ₱ 100. Address FROST & CO.,
914-4t *Genesee Valley Nurseries, Rochester, N. Y.*

A NEW GRAPE.—SALEM.—The Subscriber now offers for sale for the first time the above grape, No. 33 of his hybrids, named SALEM, from the place of its origin.

This grape has been withheld from sale or exhibition for various reasons, until a stock of plants could be obtained. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape: being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and highly-flavored fruit.

This grape is a hybrid between the native and Black Hamburg, bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for sale. E. S. ROGERS, Salem, Mass.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

The undersigned now offers for sale this Autumn, the above valuable Vine, in quantity, one and two year old plants, suitable for vineyard purposes. The demand for it will be large, and those wishing to secure them would do well to send in their orders early. Price List and engraving will be sent in August, on application to
J. L. WARING, Sole Proprietor "SALEM" Vine,
Amenia, Dutchess Co., N. Y.

NAPOLEON, III.

THE BEST STRAWBERRY FOR AMATEUR CULTURE.—Fruit very large, handsome, and of high, aromatic flavor; plant very vigorous, hardy and exceedingly productive.

"One of the most distinct fruits we know, and one of the best in many respects."—*Thos. Meehan, Editor Gardeners' Monthly.*

"A strong and vigorous grower, productive; promises to be an acquisition."—*A. S. Fuller, author of "Small Fruit Culturist."*

Descriptive Circular mailed to applicants. Price, by mail, postage free, $3 ₱ dozen.

Ladies' Department.

THE LADY'S YES.

"Yes!" I answered you last night;
"No!" this morning. Sir, I say!
Colors seen by candle-light,
Will not look the same by day.

When the tabors played their best,
Lamps above and laughs below—
Love me sounded like a jest,
Fit for *yes*, or fit for *no!*

Call me false or call me free—
Vow, whatever light may shine,
No man on thy face shall see
Any grief for change of mine.

Yet the sin is on us both—
Time to dance is not to woo—
Wooer light makes fickle troth—
Scorn of *me* recoils on *you*.

Learn to win a lady's faith
Nobly, as the thing is high;
Bravely, as for life or death—
With a loyal gravity.

Send her from the festive boards,
Point her to the starry skies,
Guard her, by your truthful words,
Pure from courtship's flatteries.

By your truth she shall be true—
Ever true, as wives of yore—
And her *yes*, once said to you,
Shall be yes forever more.

E. B. BARRETT.—(*Mrs. Browning.*)

Written for Moore's Rural New-Yorker.

"UNDER MY THUMB."

I DID not know until quite recently that I had my husband under my thumb. I was quite surprised, for I'm a very insignificant person, and he is a tall, broad-shouldered, manly fellow, whom I could hardly manage with my thumb I assure you. Since the ladies would like to know how this wonderful affair came about I will tell them, and they can tell their husbands.

I always thought I had one of the best husbands in the world. I suppose he began very foolishly to indulge me when we were first married. He used to ask my advice about things, and often tell me when he went away, where he was going, how long he would be gone, and kiss me fondly beside. I had not been used to hard work, and when my husband came in and found my face flushed and saw me looking weary, he would kindly offer to help, and would get rain water and wood, and even empty the swill. I seldom found myself obliged to ask for such favors, but when nearly helpless from chill fever he had to do a great many things for me that an awkward girl could not, so his generous heartedness, and necessity together made him a very indulgent husband. Sometimes he would come in with his boots covered with mud, that left their mark at every step—I would say, "please, my dear, wont you clean your boots,"—and do you believe, ladies, he would go straight back and clean them! He wasn't afraid of mud, not a bit; you could tell this by his coat, pants, horses, buggies, &c. Like a noble man, that he was, he didn't tell me to mind my business! I think some men live in misery lest they should seem to concede to their wives' wishes. They want people to know they are lords indeed! But ladies, are we, being the weaker ones, obliged to submit to *everything?* If our husband brings in enough mud on his boots to make a moderate sized flower bed, and spits on every inch of carpet in the house, why its no matter, since we were made to wait on him! And if we're ever so tired and there is'nt a stick of wood in the house and none chopped, not one word must we say; but go and pick up what we can find and get our "lord's" dinner; and if he puts it all in the stove at once, and burns everything black, its no matter.

Just a few instances of this—"I'll do as I please"—that I've seen. Mr. So and So started early Monday morning after a woman to wash. It was but a little way, everything was ready for the washing, but he don't return and its ten o'clock. The wife waits until eleven, begins to get dinner, and just as its all ready the husband and washwoman came. "Well," says the wife, (aside,) "isn't this grand; I haven't meat enough cooked;" she puts more cooking, and by the time dinner is over its afternoon. The wife learns all about the affair, but no thanks to her husband. He stops to trade horses with a neighbor, (though he's traded every day for a year,) and, about eleven, goes on to get the woman, while she, thinking no one was coming, goes to another place. But this *business man*, determined not to go again, drives a mile further, takes her from her work and returns as independent as a sovereign. Nobody inconvenienced, of course.

I once heard a lady ask her husband to put a stick of wood in the stove just to keep the fire. It was a mild spring day; but he threw in stick after stick, and the lady says, "please don't, my dear, it will make the room uncomfortable." Do you suppose he deigned to notice this? Certainly not, and very soon the doors must be thrown open. I saw a look of appeal in the wife's face, while her eyes constantly followed little NELLIE, a frail child, just running about the floor. Some one turned the mother's attention a moment and NELLIE ran for the open door. "O husband, take her away out of the draft, do," exclaims the wife; but he replies, "do let the child take the air, I don't think it will hurt her, for once." The mother snatches her darling away, well knowing that the strong current of air is dangerous. At night NELLIE has the croup, and just lives, by the mother's weary watching.

Now, dear ladies, if you don't want it said that *your* husband is under *your* thumb, keep quiet. Don't say one word, though there isn't a stick of wood cut and your husband is at the neighbors, leaning over the fence talking, and all the sheep and hogs are in the yard, eating, and rooting up flowers and trees. What if he trades horses every day and gets cheated while you economise so closely, and at last you take in washing to support him, don't say anything. If you modestly hint you would like to go somewhere and he tells you its a woman's place at home, don't venture to ask what business a man can have to be gone all day, and late at night. Though you're in closer bondage than a very slave, and so under your *husband's thumb* that you can't speak without his permission, its all right since you're a woman, and must love, honor and *obey*.

I can't say how much you love, but honor him you can't, while he is a tyrant, and obey him you're not obliged to, since he neither loves or cherishes you. It does seem as though wives were human beings, and entitled to their rights, as such. The wife needs sympathy and encouragement and help from the strong and able husband to bear life's burdens of care and watching which fall on her. No true hearted person ever thought less of a husband for sometimes heeding the wishes and counsel of a wife, while many a man has been saved from ruin and disgrace by heeding a wife's entreaties. But again, dear ladies, don't, I pray, ever venture to say anything.

H.

DOMESTIC FAULTS.

HOMES are more often darkened by the continual recurrence of small faults than by the actual presence of any decided vice. These evils are apparently of very dissimilar magnitude; yet it is easier to grapple with the one than the other. The eastern traveler can combine his force and hunt down the tiger that prowls upon his path; but he can scarcely escape the musquitoes that infest the air he breathes, or the fleas that swarm the earth he treads. The drunkard has been known to renounce his darling vice; the slave to dress and extravagance, her besetting sin; but the waspish temper, the irritating tone, rude, dogmatic manners, and the hundred nameless negligences that spoil the beauty of association, have rarely done other than proceed till the action of disgust and gradual alienation has turned all the currents of affection from their course, leaving nothing but a barren track, over which the mere skeleton of the companionship stalks along.

A SWEET LAUGH.

A WOMAN has no natural gift more bewitching than a sweet laugh. It is like the sound of a flute on the water. It leaps from her in a clear, sparkling rill, and the heart that hears it feels as if bathed in a cool, exhilarating spring. Have you ever pursued an unseen fugitive through trees, led on by a fairy laugh—now here, now there, now lost, now found? We have, and we are pursuing that voice to this day. Sometimes it will come to us in the midst of care and sorrow, or irksome business, and we turn away and listen to hear it ringing through the room like a silver bell, with power to scare away the evil spirit of the mind. How much we owe that sweet laugh. It turns the prose to poetry; it flings flowers of sunshine over the darkness of the wood in which we are traveling; it touches with light even our sleep, which is no more the image of death, but is consumed with dreams that are the shadows of immortality.

NOVEL CAUSES FOR DIVORCE.

IT is said that in Indiana "cold feet" are regarded as a good cause for divorce. If the petition of a dissatisfied wife in one of the St. Louis courts is allowed we shall believe the Indiana story. This distressed complainant reports the first chill her affections received was on the wedding tour, when she caught cold and was not allowed to have a fire at the hotel, on account of the expense. Her next shock was from a tough beef-steak, seasoned with lard. The deadly stab was the husband's refusal to furnish her with a feather bed. A killing blow was unkindness to her sisters; but the "unkindest cut" of all was his reticence at the dinner table; he did not help her to the mutton chops; failed to pass the potatoes; neglected to furnish her plate with vegetables, and left her to help herself. These insufferable indignities preyed upon her health and wrecked her peace of mind, and she now appeals to the courts for redress.

GENIUS STRUGGLING WITH POVERTY.—The Round Table brings to the notice of the public a sad, and we hope a rare instance of fine poetic genius struggling with poverty and misfortune, such as seldom falls to the lot of any. Mrs. Howarth, living in New Jersey, who has written many most beautiful and striking poems, has supported for many years by her manual labor, and the scanty pay received for her writings, a blind husband and five children. She has struggled with the greatest possible fortitude through this severe ordeal until quite lately when a stroke of paralysis has completely disabled her, and deprived her, and those dependent upon her, of all means of livelihood. Some of her friends are preparing a volume of her poems for publication, "but meantime," says the Round Table, "her destitution is extreme."

RARE.—At a sale of jewels in London, a superb diamond necklace, composed of forty-nine graduated stones set in collets, and a brilliant cluster snap, the property of Baroness Truro, was sold for eight hundred and ninety guineas. A rare and valuable old Sevres dessert service, enriched with bands of tourquoise, *rehausse d'or*, and pencilled with wreaths of flowers by Boucat, Bouillat, Fumez, Lector and other Sevres painters of the time of Louis XV. and XVI., consisting of one hundred and five pieces, brought five hundred and twenty guineas. It was described as the finest dessert service on sale in Europe.

Choice Miscellany.

FOLDED HANDS.

BY ELIZA O. CROSBY.

When the heavy night-time shadows round our homes their vigils keep,
Rest we in the solemn silence, all with folded hands in sleep;

From the tiring strain of labor resting all our weary powers,
While old Time with tireless fingers gathers to himself the hours.

Ah! Time's hands are never folded, weary with the work of day,
Tireless from Creation's morning 'till the earth shall pass away;—

Working out the constant changes in all human love and life;
Mingling for us joy and shadow, smiling peace and weary strife:

Bringing fairest flowers of spring-time, blighting soon with sad decay:
Giving youth and joy and beauty, touching then the hair with gray;

Granting rest beneath the willows when the race of life is run.
Till eternity is dawning and his work at last is done.

So we rest amid the shadows: tiny hands of children fair
Folded, as when sleep embraced them while they lisped the evening prayer.

Or stretched outward in the darkness, as it were a shining way,
Vainly reaching for fair flowers held by angels far away:

Manly hands that battle nobly in the world's unceasing fight,
Bearing high the truthful standard, striving ever for the right:

Weary hands that find no flower bearing not a cruel thorn,
Stirring with no gladdened pulses at the joyous break of morn:

Aged hands that tremble weakly, for the cup of life they bear
Will hold little more of blessing, little more of earthly care:

Kindly hands that brush the teardrops from sad eyes that ever weep,—
All are folded in the silence, in the blessed rest of sleep.

Deep beneath the cedar-shadow, moving o'er the grassy mould,
Pulseless hands that death has folded are forever still and cold.

Sadly thus we last beheld them, closely clasping snowy flowers,
Giving no returning pressure to the warmest clasp of ours;

Finished all their long life-labor, laid aside the heavy cross;
Theirs the gain of crown and blessing, ours the painful, bitter loss.

When we bend beneath life's burden, neath the heavy yoke of sin,
When the conflict rages hotly, world without and heart within,

We long to share their peaceful slumber in the grave's untroubled rest,
With our hands forever folded on our still and lifeless breast.

Many hands are ever idle, folded not by death or sleep,
Gathering from Time no treasure as the winged moments sweep,

Plucking ne'er the lovely flowers that the roughest pathway yields,
No bright grains of wisdom gleaning from the world's broad harvest fields;

Ever idly, weakly folded, though of old our SAVIOUR taught
That the talent hidden deeply no reward or blessing brought,

Though He wrought with love amid the people of all sects and lands,
And without the city gateway bore his cross with patient hands.

Rouse O! ye thus idly waiting, there is labor for us all;
Work while lasts the golden daylight, ere the dark death-shadows fall:

Raise the cup of sparkling water to the weary wanderer's lips,
Send some gleaming ray of comfort where reigns sorrow's dark eclipse.

There are souls in greater number than the shining sea-shore sands,
That to life can ne'er be quickened by your idly folded hands.

Strive that blessings here may crown you, that your spirit may be blest,
When death ends the strife and kindly folds the hands in peaceful rest.

Orangeport, N. Y., 1867.

OUT IN THE HAYFIELD.

YES, out amid the new-mown timothy and fragrant clover, with light hearts and willing hands. O, how doubly blest are they who make a pleasure of business, rather than a "business of pleasure." Last week found everything in readiness on "Busywild Farm," and haymaking was commenced with a zest. Up with the birds in the early morning our busy household was astir. First, there were the cows to milk, and drive away to their dewy pasture; pigs, chickens and ducks to feed; and then, thanking Heaven for manifold mercies, we were ready to partake of our cheerful morning meal. Soon the farm horses, "Fan" and "Doll," were hitched before the mower, and HENRY rode whistling away to the field, while ANDREW, the farm boy, equipped with a scythe, (an implement not quite obsolete nor altogether indispensable in these days of mowing machines,) proceeded to mow around fence corners and small patches in out-of-the-way places. Long ere the sun had reached its high meridian a glance at the "Upper Flat" sufficed to show that the grass which so proudly waved its luxuriant tresses in the morning breeze was laid low, and fast withering 'neath the sun's searching rays, and in a few hours would be dry and fit to store away for winter's use.

The noonday hours were a season of refreshing rest to workmen and teams, and both, with renovated powers, were prepared for the active work of the afternoon, which was commenced by HENRY, who, seated in his sulky-rake, gave "Doll" the rein, and they were soon fast tossing the bright green hay into winrows. ROSIE, ready to lend a helping hand, and much enjoying out-of-door exercise and sport, and cousin FRANK, who is spending her summer vacation with us, and to whom country life in many of its phases is yet a novelty, volunteered their services, which were accepted in the spirit they were offered, and each furnished with a hand-rake, in high glee, donned sun-hats and stout shoes and were soon traced by their merry peals of laughter to the afore-mentioned fence corners, where, working with a right good will, they spent a happy hour, merry as the birds, and like them breathing an atmosphere redolent with the sweetest of perfumes—new-mown hay. Meanwhile, ANDREW drove the brindle steers from their shady nook, yoked and drove them for a load of hay to the banks of the placid Genesee, whose waters gleamed in patches of silver brightness through the graceful willows that fringe its curving banks, lending a charm to the picturesque scene which our haymakers fully appreciated. As the fresh bright hay was tossed over the rack into the wagon, FRANC declared it must be fine sport to ride on the load and begged the privilege of tramping it down, and, climbing through the rack, took her place for that purpose, while the quiet ROSE complacently seated herself on the horse-rake to do the cross-raking, so that HENRY could be at liberty to assist in loading; and soon the load was completed, and FRANC, perched on the top, crowned with clover blossoms, rode in triumph to the barn, where our little five-years-old CHARLIE, who all day long had flitted about trying to be useful, was stationed with grandpa by the carriage of his baby sister, waiting to see the ponderous masses, lifted by the horse-fork, swing in mid-air, then descend and be snugly stored in the depths of the capacious bay.

"Longest days must have an end," and these bright summer days are no exception. At eventide the girls came home in high spirits, but with weary limbs, dishevelled locks, and the rose tint of their cheeks deepened to almost a peony blush; but they knew that a cold bath and sweet sleep would make all right, and were happy in the consciousness of a well-spent day, where toil and pleasure went hand in hand. How true, in a great degree is it that "life is what we make it." In our country homes, enlivened by rural pastimes, should be the purest joys, such as give noblest impulses to the heart and mind, and fit us better to cheerfully take up the cares and duties of active life.

JENNIE.

Busywild, Allegany Co., N. Y., July, 1867.

PERSONAL GOSSIP.

MR. EDWIN P. WHIPPLE, the critic and essayist, is described as a man somewhat under the medium height. He has a broad face, rather heavy features, a pallid complexion, a wide forehead, and great gray eyes that seem about to start from their sockets. In ordinary intercourse Mr. Whipple is reserved, but to his friends he is open and genial, and his friends comprise about the best part of Boston. He lives in a modest brick house in Pickney street, a little back from the crown of Roscoe Hill, and here he spends his afternoons in social ease or study. He is now associate editor of the Transcript—the literary authority and tea-table companion of the literary Bostonians. He writes the book notices and purely literary articles for that journal; and that is about all he does write, except an occasional political article for the Atlantic Monthly.

Laborious writing is characteristic of all the Boston authors. Holmes labors over a sentence till every word is welded to its place, if it takes him a week to do it; and Lowell works the better part of three months on an article for the North American Review. Emerson's second volume of Essays was fifteen months in going through the press, and when it was done the corrections cost more than the original composition. It is so, also, with Longfellow. Every one has heard of the Coterie who eat up of nights over Dante, and the proof-sheets of that work show that after it had passed that ordeal it was sadly interlined, and whole verses were altogether re-written by the translator. By such rugged paths have these men scaled the flowery heights of Parnassus!

Longfellow always sends to the printer very clear copy. His MSS. is all written in lead pencil, upon large sheets of a good quality of book paper; each sheet contains never more than two four-line verses. The MSS. copy of his translation of Dante, if bound, would make several immense volumes.

THE COUNTRY FOR THE CHILDREN.—For the children especially, there is no tonic so effective, no alterative so sure of benefit, as a run in the country. Put on them stout shoes, and plain, serviceable clothes, and let them loose in the fields and on the hills. Never mind dirt, never mind bruises, never mind sunburned faces, and brown hands and arms. A few weeks of a wild, romping, out-door life is worth more to their future than the most accomplished tuition and faithful study.

ADVICE.—Always mind your dots in writing, A Western Congressman, on arriving at Washington, wrote to his wife that he had "formed a connection with a very agreeable *Mess*, and expected to spend the winter very pleasantly." Unfortunately, and greatly to the surprise and mortification of his good lady, he inadvertently dotted the letter *e* in the word *Mess*. Only think of it!

THOSE WE LOVE.—At all times, in this wintry life, the presence of those we love is like a gleam of sunshine through the clouds, lighting up one particular spot amid the shadows, and giving warmth and luster and loveliness to all beneath the ray. The passing gleam still seems brighter than the full sunshine.

IDLENESS.—If idleness does not produce vice or malevolence it commonly produces melancholy. Let every man be occupied, and occupied in the highest employment of which his nature is capable, and die with the consciousness that he has done his best.

Sabbath Reading.

Written for Moore's Rural New-Yorker.

LONGING.

BY COUSIN MAUDE.

WHERE the summer sun is glowing,
Where the gentle breeze is blowing,
And the tall trees shadows throwing,
On the grassy lea;
Here I sit and ponder,
While I long to wander
By the silver sea.

Here, the dusky pine upliftеth
Boughs, through which the sunlight sifteth;
And the wind it's dead leaves driftеth
O'er the lonely land;
There the palm-tree's top is waving,
And the silver sea is laving
All the golden sand.

Oh, I hear its voice of gladness,
Drowning every note of sadness,
And all melancholy madness
In its lowly hum;
Saying when the waves are rushing
Fierce, or with calm music gushing,
"Worn and wearied, come!"

Reading, Mich., July 24th, 1867.

Written for Moore's Rural New-Yorker.

WORK FOR JESUS.

"BROTHER, you may work for JESUS,
GOD has given you a place
In some portion of his vineyard,
And will give sustaining grace.
He has bidden you 'go labor,'
And has promised a reward,
Even joy and life eternal
In the kingdom of your LORD."

NEARLY every laborer, before he engages to work for his employer, ascertains what shall be his wages or reward, and if he deems the sum he is to receive a sufficient recompense for his toil, with what zeal and earnestness does he engage in it, looking forward with joyful anticipations to the end when he shall have accomplished the work given him to perform and obtained the promised reward; and if at any time he is inclined to idle away the precious moments in which the work is to be done, he instantly remembers the contract, and, redoubling his zeal, and exerting every nerve, it is soon finished and the reward obtained.

So it should be with the Christian. When he first starts out to serve his Master he is commanded to spend all his time, talents—yes, his whole life, in the LORD'S service; for such as do these things, "there is laid up a crown of righteousness which the LORD, the righteous JUDGE, shall give in that day." There is no reason to doubt this, "for all the promises of GOD in him are yea, and in him Amen." Therefore, Christian, "be sober, be vigilant, because your adversary, the devil, as a roaring lion, walketh about seeking whom he may devour," "because strait is the gate and narrow is the way which leadeth unto life and few there be that find it."

"Disciples of JESUS, why stand ye here idle—
Go work in his vineyard, he calls you to-day,
The night is approaching when no man can labor,
Our Master commands us, and shall we delay?"

MARY.

GOOD TEMPER IN BUSINESS.

MANY a Christian has infirmities of temper which impair his religious influence; and few business men can review their lives without regret or remorse. The Christian Intelligencer makes honorable mention of a business man in our city whose example can be commended for general imitation. The grace of God can control both the heart and the tongue:

Not long since, a Christian died in Boston who had been uninterruptedly in business for more than half a century. What manner of man he was appears by the record made just after his death, that during this long period, according to the testimony of those most closely connected with him, he never had an unpleasant dispute about any of his business transactions. "Of the two required to make a quarrel, he could not be one; for by his invariable good humor and generosity, he turned aside any angry word. Nor did his own mind suffer from reverses or failure, since the contentment in which he kept his spirit, and the natural sunshine of his heart, restored it almost immediately to its accustomed evenness. Whatever troubles he met—and he had his full share—could not long appear to outward observers; not that he hid them in his mind, so much as that he carried all his burdens to One able and willing to bear them. With this evenness of temper he united judgment and integrity." Can any one give a reason why such a record should be so rare? True, there are some men with whom, as Paul seems to imply, it is impossible to "live peaceably." Yet if the disciple studied more habitually the Master's precept, "*wise as serpents and harmless as doves*," there would be less wonder at a long business life pursued and finished without a single altercation.

RELIGION EXEMPLIFIED.—I would not give much for your religion unless it can be seen. Lamps do not talk, but they do shine. A light-house sounds no drum, it beats no gong, and yet far over the waters its friendly spark is seen by the mariner. So let your actions shine out your religion. Let the main sermon of your life be illustrated by all your conduct, and it shall not fail to be illustrious.—*Spurgeon.*

To a busy man temptation is fain to climb up together with his business, and sins creep upon him only by accident and occasions; whereas to an idle person they come in a full body, with open violence, and the impudence of a restless importunity.

Educational.

N. Y. STATE TEACHERS' ASSOCIATION.

The Annual Meeting of this important corps of educators took place at Auburn, July 23d, and the two days following. Some five hundred teachers were present, about an equal number of men and women. Hon. Geo. W. Clinton of Buffalo, Dr. H. B. Wilbur of Syracuse, Chas. Davies, LL. D., the well-known mathematician, and other distinguished friends of popular education were present, and Gov. Fenton was in the Hall the last evening.

Addresses were given and papers on various educational subjects read, with discussions of the topics thus introduced. An address by Dr. Wilbur, partly a criticism on the stereotyped modes of classical education awakened much interest. A report by Prof. Howe on the "Proper Limits of the Free School System," called out a stirring discussion. An animated debate was had also, on a resolution recommending that the metric, or decimal, system of weights and measures, be studied in schools where practicable, as valuable from its adaptation to common use over the world; the resolution was adopted. Other subjects of interest and value, which we cannot mention, were examined.

The change in the school law, made last winter, by which all rate-bills are abolished and a school tax put in their place was a subject of gratulation, as helping to raise the standard of education, more especially in country districts. The importance of graded Union Schools in towns and villages was dwelt on, and the signs of the times point toward the substitution of these free schools of a higher grade in place of private academies, and to the scholars going up under one system, from the primary classes to the higher College grades.

In Michigan they yet have the rate-bills, but their Union Schools are more numerous and perfect than ours. Villages of from 1,500 people upward, and all the leading towns as well as cities, have fine buildings costing from $15,000 up to $75,000 with schools in which pupils can fit for the University. In these there is no tuition fee for scholars residing in the district, but those from outside, pay moderate fees, less somewhat than the usual terms in private academies, of which there are but few in that State, the excellence of the Union Schools making them needless. The State University, under the Common School Law, has no tuition fee from students in the State, but is the People's College. It has now 1,250 Students and 20 Professors, with a high standard of scholarship. By this plan the older pupils in country districts, can go to these Union Schools more advantageously than to Academies, and the spirit of the school is broadly democratic, while the country district school is not injured, but rather benefited by being a part of this graded system.

The abolition of our school-rates, by the late change in the law, puts us in advance in that respect, and should make it all the more feasible to avail ourselves of any excellencies we may find in other States. The tendency in higher schools and colleges to pay more attention to Natural Sciences, and to such studies as the new conditions of our modern life call for, and to give students more latitude of choice as to the branches they may pursue, was manifest in the Association as we find it elsewhere.

On the last afternoon a paper on Studies for Ladies' Colleges, by Dr. J. C. Gallup, called forth an animated discussion, of which the general tendency was in favor of more thorough and varied education for women. Mr. Barringer of Troy, recommended the higher, as well as the primary, education of the sexes together. Miss Sherman of Lyons, made a speech, sensible and pointed, on the need of physical education, that women might finish their studies with more health and capacity to work as teachers or otherwise. Mrs. H. E. Randall of New York, also read simply and yet eloquently "An Order for a Picture," by Alice Carey.

A committee was chosen "to memorialize the Trustees of Cornell University, to extend the privileges of that distinguished school to all, without distinction of race or sex."

On the whole, the meeting was of value and interest to the educators of the State, and to all. Much work was done, good order prevailed, and the President, S. G. Williams of Ithaca, filled his place excellently.

Too Fast.—As educators, we are advancing too rapidly. We must make haste slower. We must strive to roll back this impetuous tide that threatens to sap the very foundation of our educational system. Our colleges, academies and public schools are true types of the spirit of the age. Our students, snuffing the popular breeze, cannot wait to be scholars. High on the brow of too many of our would-be scholars you can trace this insignificant inscription, "not transferable; good for this trip only." Our young men are not willing to tarry at Jericho until their beards be grown, but are pressing on to the Holy City. To their minds, Jerusalem is the place where men ought to worship.—*Illinois Teacher.*

The University of Wisconsin.—The University of Wisconsin has been reorganized under recent acts of the Legislature of that State. It has four departments of instruction, as follows: 1. A College of Letters, embracing a four years' course in mathematics, ancient and modern languages, literature and science. 2. A College of Arts, embracing a three years' course in mathematics, modern languages and literature, and the natural sciences in their application to agriculture and the arts. 3. A Preparatory Department. 4. A female Department, embracing a three years' course in languages, literature and science.

Various Topics.

FINGER AND SIGNET RINGS.

Not only do women wear rings, but on any street of city or village may be seen daily the heavy gold, with stones of varied colors and astounding size on the fingers of men. In the past, men of rank wore rings more than now. In this country we are too busy, and not enough given to the antique, to make collections of finger rings, but European cabinets are rich in such curiosities; reaching back to the days of the glory of Venice, and even to the times of Roman power.

The Hotel de Cluny, at Paris, has such a collection, not only of rings, but of necklaces, jewels, crowns, &c., of great wealth and historic interest. The Londesboro' collection is the best in England. At an early day the ring was proof of both nobility and authority, and even rich tradesmen had their "mark" on the ring, used as their signature. Of these in the Londesboro' collection is Fig. 1, with the private signet on its face, and the owners initials on its side, of exquisitely chased green and red enamel. These "marks" were merely devices adopted by each person for his own use, combinations of initials and figures, and also placed on bales of merchandize. Fig. 2 is a commercial signet.

Fig. 1.

Fig. 2.

Venetian jewelry was rich and exquisite—excelling all other. In the Londesboro' collection is one, Fig. 3—claws grasping a sharp-pointed diamond, much sought, for writing on glass. With such a diamond, doubtless, the graceful courtier, and ready man of the world, Sir Walter Raleigh, wrote on a window pane of Queen Elizabeth's palace, "Fain would I rise, but that I fear to fall"—to which she added; "If thy heart fail thee do not rise at all." Thus encouraged he rose to fortune and high achievement, but reached a prison at last, though hardly for his own fault. We have, in Fig, 4, the signet ring of Sir Thomas Gresham, an early merchant-prince in London, a man of signal ability and character. It opens horizontally, forming two rings linked together, with the inner side of each inscribed with the half of a scripture passage, as the fashion was, *Quod Deus conjunxit* and *Homo non seperet*, make up the text in this: "What God hath joined let no man separate."

Fig. 3.

Fig. 4.

These were called gimmel rings, from the Italian *gemelli*, twins, and were much used as wedding rings. Their make will be seen by another Londesboro' specimen, Fig. 5 and 6. The closed ring, as worn is Fig. 6. It is set with sapphire and amethyst, the elaborate design enriched with enamels. Fig. 5 shows the ring parted, with its inscriptions.

Fig. 5.

Fig. 6.

A mystical ring, from Londesboro,' is Fig. 7, very curious; the outside plain and set with ruby and amethyst. Pressing these stones a spring opens and shows a surface engraved with mystical signs and names of spirits; Asmodiel, Nachiel, Zamiel, &c. Worn without suspicion, such a ring might be used by some devotee of occult sciences, some seeker for the philosopher's stone, or the elixir of life, or for power over the unseen world of spirits, as a mark of introduction to his brother heretics in days when it was not specially safe to be known as straying from the beaten path.

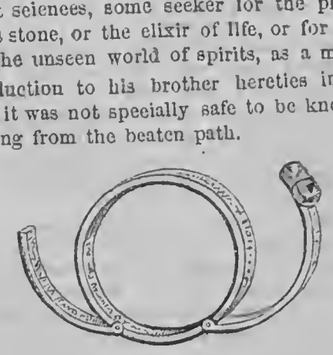

Fig. 7.

The matrimonial ring, about A. D. 1600, was generally inscribed with a "posy" of one or two lines of rhyme.

Fig. 8 is like the badge of the Order of the Garter, with a buckle in front, and the motto of the Order outside; inside "I'll win and wear you." Fig. 9 has "Let Likinge laste;" inscriptions being always inside.

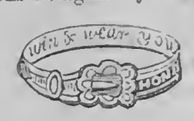

Fig. 8.

Fig. 9.

Quaint conceits for these rings racked the brains of sentimental poets of those days, and up to the middle of the last century, but a story of John Thomas, Bishop of London in 1753, shows his sentiment not the finest. On his *fourth* wife's ring he inscribed "If I survive, I'll make them five."

Fig. 10.

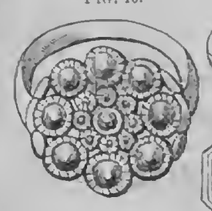

Fig. 11.

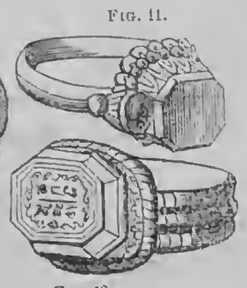

Fig. 12.

Here are three Moorish rings, for the Moors were skilled in the fine arts quite as well as the nations of Europe. Fig. 10 is of silver, set with five turquoise and four rubies; the center turquoise with each kind alternating around it. Fig. 11 is silver, set with a bloodstone and a turquoise on either side. Fig. 12 is a silver signet ring, with the owners name engraved on a cornelian.

These are all in the Londesboro' collection, and doubtless if any of our readers ever visit England, they will wish to visit a museum so rich in artistic *antiques*.

MURDER AND SUICIDE.

The news items of the daily journals seem to indicate an alarming increase in the number of murders and suicides throughout the country. Whether this is a real or only an apparent increase—due to the facts being reported about the same time, is a question which statistics alone can determine. The Journal of Commerce has some truthful reflections on the alleged fact:

One of the great earthly benefits conferred upon the world by Christianity was the new value that it put upon human life. Until Christianity came, human life was something which men threw away like a worthless weed. Murder and suicide were the all-prevailing crimes of antiquity. Men not only took other lives without a feeling of remorse, but tossed off their own with the same indifference. The gladiatorial exhibitions were possible only in a pagan world. Men trained slaves as "gladiators" and hired them out to be killed at so much a head. The slaves themselves went into the contest with the recklessness and resolution of bull-dogs, and when they received their mortal stabs, died in picturesque attitudes for the entertainment of the gay throng of men and women who looked down upon them from the vast galleries of the Coliseum. To prolong the death scene and make it more effective, the poor wretches were accustomed before entering the arena, to drink potions which thickened the blood and made it trickle more slowly from their gaping wounds. Rome looked upon this horrid spectacle without a shudder; and, but for Christianity, these dreadful sports would still be the most pleasing pastime that could be offered by the Kings and Emperors of European nations to their subjects. We find the same indifference to human life in China, Japan, and all other heathen countries. In Japan, the old Roman custom of suicide strangely reproduces itself; thus showing that it is an instinct of unchristianized human nature. As it was honorable in ancient Rome to escape the humiliations and calamities of life by suicide, so it is in Japan to-day; and the hari-kari will never be banished from that land till it flies before the advancing light of Christianity. It is not necessary to produce further evidence to establish the proposition that a contempt for human life is the special characteristic of heathen countries, for every missionary report and sermon teaches us this truth. If it is a fact that the American people are becoming less regardful of the sacredness of life, then to that extent the nation is becoming dechristianized; and if the tendency should not be checked, we shall ultimately fall back into barbarism. It is not possible to escape this conclusion, if the teachings of history are worth anything.

SUNDAY IN LONDON.

"Menadock," in his London letter to the New York Times, draws the following picture of Sunday in a portion of the English metropolis:

For a large portion of the poorer classes in London, Sunday is the great trading day—a weekly fair on which they make the bulk of their purchases. From an early hour until noon, and more or less through the day, whole streets and quarters of the metropolis are turned into noisy, open markets. All the shops are open, costermongers throng the sidewalks, groceries, bread, meat, clothing, fish, vegetables, crockery ware, cheap jewelry, all sorts of things bought by the lower classes are cried and sold. The crowd, three-fourths women, is impassable. It is ragged and dirty as well. The noise is deafening. In vain the church bells are ringing; they are not heard or not heeded. At 1 o'clock the public houses are opened, and the thirsty crowd rushes into them for gin and beer. The squares and streets of the fashionable quarters are as quiet as any one could desire. The shops in the better class of business streets are all closed, except confectioners' and tobacconists', —cigars and sugar-plums being necessarily sold on Sunday; but just turn out of Holborn into Leather Lane, or visit the New Cut, in Lambeth, and a half-a-dozen other localities, on Sunday morning, and you will see and hear what no one can describe.

As to the people who market on Sunday, it is the only day on which they have leisure and money to make their purchases. A million of people in London never go to church on Sunday. They eat, drink and sleep. For a number it is the only day on which they have anything like a decent meal, or any relaxation from their weary tasks. They live in one room, a whole family, they work twelve or fifteen hours a day, they sleep in their clothes on a heap of rags in a corner at night; they live on bread, dripping, herrings, when they are cheap enough, and thin beer or tea, and contrive to have a bit of meat on Sunday. When work is slack they pawn their clothes, or whatever is worth pawning, getting sixpence on one article and fourpence on another, and when this resource fails there is the parish. The great fight is to keep out of the workhouse—to work hard and fare hard, and have their liberty. The work-house separates husbands and wives, parents and children, and it is the end of hope. Mr. Hughes estimates the number engaged in buying and selling every Sunday in the metropolis at 80,000 to 100,000.

BLIND BRUTALITY.

A Commission appointed by the English Government to investigate certain outrages perpetrated in Sheffield at the instigation of the Trades' Unions, reveal a series of horrible and barbarous crimes. According to the testimony the Unions hired ruffians to commit these outrages upon persons who had made themselves obnoxious to the Unions by refusing to join them and by engaging in business in opposition to them. The Unions gave sixty dollars for "doing for" a man,—shooting him so as to disable him from work, which in one case was effectual, as he died a few days after from the wound. Twenty-five dollars were paid for blowing up the houses and stores of those who were designated. The whole scheme has a premeditated and cold-blooded deviltry about it, that rivals the plans once popular in the South for protecting servile labor from all competition with free ideas. It is the same spirit which, in "strikes," undertakes to prevent men by force from working for such wages as are offered and they choose to take.

Lying in Bed.—It is often a question among people who are unacquainted with the anatomy and physiology of men, whether lying with head exalted or level with the body is the most wholesome. Most, consulting their own ease on this point, argue in favor of that which they prefer. Now, although many delight in bolstering up their heads at night, and sleep soundly without injury, yet we declare it to be a dangerous habit. The vessels in which the blood passes from the heart to the head are always lessened in their cavities when the head is resting in bed higher than the body; therefore, in all diseases attended with fever, the head should be pretty nearly on a level with the body; and people ought to accustom themselves to sleep thus, and avoid danger.—*Medical Journal.*

Reading for the Young.

THE LIGHTNING KING.

BY S. N. HOLMES.

Say—have you seen the Lightning King?
And have you heard his lightning sing?
And how he speaks both near and far,
To speed or stop the railroad car?

His lightning horse does never tire,
Yet runs astride the magic wire;
You see him not, but hear him kick,
From being spurred by A. L. Dick.*

Like Alexander on his throne;
He speaks in quiet undertone;
But yet 'tis power combined with will,
Although it's done so very still.

'Tis wondrous strange the way it's done,
And how one's thoughts so swift can run,
For nought is seen, or little heard,
Still, far away they hear each word.

In days of yore, the heathens' mind,
Whose superstitions made them blind,
Would look with awe, and quake with fear,
Lest Satan's imps were coming near.

But now, it makes their children laugh,
To learn these pranks of Telegraph;
As, commonplace they hear its clatter,
With "we don't care of what's the matter."

The first who found this lightning horse
Is said to be Professor Morse;
With science's aid and mother wit,
He caught its power by the bit.

With speed of thought the far-off know
The latest news for weal or woe;
Through ocean's bed it wipes out space,
And marks an era to our race.

Syracuse, N. Y., July, 1867.

*Gen. Dick, Supt. of New York Central Railroad Telegraph.

LAKE MICHIGAN.

Would'nt it be pleasant, this hot weather, to go on a steamboat the whole length of Lake Michigan? Three hundred miles or more, from north to south, and when you are out on the center of the lake, land is forty miles away, out of sight just as much as though you were on the middle of the Atlantic.

Years ago we went this voyage several times, and it is pleasant to think of it. Starting from Chicago when it is very warm, as soon as you get out onto the lake the fresh air is delicious. The water is very deep, more than a thousand feet in some places. It is very clear too, and in places near the shore where it is not very deep, by looking down the shady side of the vessel so that the sun may not dazzle your eyes, you can see large fish swimming about, ten or fifteen feet below the surface. The water is nice to drink, and all the boats use it.

After sailing some twelve hours or more northward, and meeting a good many vessels, we get in sight of the eastern shore, on the Michigan side. The shore is sandy and sometimes there are great hills of sand washed up in curious shapes by the water, and behind them long ranges of forests with very few houses in sight. The farms and villages are back from the shore, and most of the people live in the more southern part of the State, which has been longer settled. But they are beginning to clear away the forest, and find it a pleasant region to live in. One of these sand hills is named, by the Indians, "The Sleeping Bear." It is some three hundred feet long and forty feet high, and, as you see it from a distance, looks some like a great bear with its head between its paws and the water coming up almost to its nose. It made me think of the name some Dutchman gave a mountain on the Hudson river, "Anthony's nose," and the great hill, two thousand feet high jutting out into the water and rising up very steep, does look, as the steamboats pass it, a little like a monstrous great nose.

As we get beyond the "Sleeping Bear" the lake is narrower, until we come to Mackinaw,—a beautiful island, where are Indians, fishermen who catch white-fish and salmon, a little village and a fort where soldiers used to stay, but do not much now. It is delightful to roam over the island, and up the rocks west of the fort you can look over the lake a long way. The salmon are large and nice, and they always cook some and have a fine meal on the boats. The little fishing boats go out a good ways from shore and show very handsomely as the sun strikes their one white sail, or the shade makes it seem almost black for a moment. Some time, perhaps, you may take this pleasant ride, but if you should not, it is well to know something about it, and then, if it should happen to storm when you are on the lake, and the wind toss the boat about, it is not very pleasant, and you escape it all by being on land. On the western side of the lake are large towns and cities,—Waukegan, Kenosha, Racine, Milwaukee, Sheboygan and smaller places, and fine houses, and schools and churches, and great steamboats, and cars, where forty years ago were only Indians, and squaws with their *papooses* or babies, and wigwams, and canoes.

German Temperance Proverbs.—Bacchus has drowned more than Neptune.
Temperance is the best physic.
The ass that carries wine drinks water.
When the wine is in, the wit is out.
Wine and youth are fire upon fire.
There is no truth in wine.
Ever drunk, ever dry.
Where drink enters wisdom departs.
Temperance is honorable.
Temperance is a feast.

Don't Do It.—My son, a bad boy is trying to persuade you to go to forbidden places. Don't do it.

My son, you have lately learned to do a bad deed. Don't do it any more.

My son, doing wrong is the worst thing you can do. Don't do it.

My son, you have been guilty of a fault, and you are being tempted to hide it. Don't do it.

ILLUSTRATED REBUS.

MISCELLANEOUS ENIGMA.

I am composed of 50 letters.
My 33, 15, 10, 34, 16 is a river in South America.
My 44, 28, 40, 38, 36, 21, 46, 23, 23, 49 is an animal.
My 4, 37, 29, 33 is much used.
My 7, 15, 43, 2, 36 is an article of dress.
My 26, 24, 38 is a river in Europe.
My 29, 47, 13, 6, 22, 12, 33, 42 is a quadruped.
My 50, 45, 20, 31, 23, 9 is a troublesome weed.
My 5, 31, 5 is a beverage.
My 39, 22, 17, 27, 42, 25 is a noun.
My 2, 29, 5, 32, 14 is a musical instrument.
My 48, 1, 8, 35, 45, 30 is an article of dress.
My 2, 34, 19 is a transitive verb.
My 11, 18, 47, 41, 9, 14 is very inflammable.
My whole is the middle verse in the Bible.
Arcola, Indiana. A. H. Bates.

ANSWERS TO ENIGMAS, &c., IN No. 914.

Answer to Miscellaneous Enigma:—It is an ill wind that blows nobody good.

Answer to Mathematical Problem:—Each son's share, 92.2602+ acres; each daughter's share, 84.6438+ acres.

Two First-Class Journals for $3.50.

MOORE'S RURAL NEW-YORKER,

(The Leading Weekly of its Class—Price $3.00 a Year,)

AND

THE MARYLAND FARMER,

(A Standard Agricultural Monthly—Price $1.50,)

BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that now is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year *(when ordered together)* for only $3.50.

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 10, 1867.

NEWS OF THE WEEK.

From Washington.

RUMORS are afloat that Gen. Thomas will succeed Gen. Sheridan, who will report to Gen. Sherman.

The U. S. Treasurer holds in trust for the National Banks, for their circulation of notes, $340,649,500, and for deposits of public money, $38,797,950.

The Cherokee neutral lands have been surveyed, and those not occupied the last day of August by actual settlers will be open for sale, in a body, for cash, until October, and after that in separate tracts, to the highest bidders.

The Internal Revenue receipts last week were $6,789,304.67.

Complaints are made that the commandant at Wilmington, N. C., has obstructed the serving of processes issued by Chief Justice Chase. Gen. Sickles is to report on the matter.

The facts as to Santa Anna's capture are officially said to be as before reported. It is also stated that Juarez, not wishing to be President, will be sent to Washington as the Mexican Minister. Senor Romero, the present Mexican Minister, is to leave for his home during the present month, on a leave of absence from his Government. Senor R. has represented his country at Washington for the past eight years.

The estimate of the sum necessary to support the U. S. army in the Southern States during the present year, is $35,000,000 to $40,000,000.

The force of the Coast Survey Office has been engaged the last six weeks in preparing charts of our Pacific coast, including the Aleutian Islands and the coast of Walrussia.

From the West.

AN Omaha dispatch at St. Louis says the Indians are concentrating at the base of the Mud River Mountains, near the Sweet Water.

A private letter to Gen. Dodge says travel from Green River to Fort Sanders is stopped by daily attacks on trains.

There were $221,000 of bullion assayed in Nevada the last week in July.

Cholera at Fort Harker is decreasing, and the alarm is over.

Indian depredations on the stage route between Salt Lake and Denver by firing on coaches and stealing stock.

Father De Mortel, a Catholic priest at St. Mary's Mission, died of cholera near Ellsworth. He had been among the Pottawatomies 17 years, and was much respected in Kansas.

Considerable fighting has recently taken place on the plains between the whites and the Indians. The latter were badly whipped.

From the South.

AT Nashville and other places in Tennessee, the election the 1st inst., passed off quietly. So far as heard from Brownlow has a majority for Governor. Whites and blacks voted quietly with few hurrah's even from either side. Memphis gives Brownlow 2,292 majority; Clarksville, 728; Nashville, 2,459. Madison county gives Etheridge some 300 majority.

At Richmond, Va., a Republican Convention of some 5,000, whites and blacks, met at the African Church and had a warm debate as to the policy to be pursued.

Gen. Sheridan issued an order re-adjusting the Board of Aldermen of New Orleans. He says they were removed because they had reduced the city credit by injuring its finances, and sought to impede the execution of the laws of Congress.

At Nashville, Tenn., Gen. Duncan had control of the troops who were at hand, but not near the polls. Three hundred special police were also chosen. The same course, as to troops, was elsewhere adopted. Special police forces were also chosen at other places.

At Knoxville, just before the election, a Conservative fired at some negroes, and, in the fight, two persons were wounded. Mayuard and Etheridge spoke to separate crowds, much excitement but no outbreak. Capt. Hamilton's State Guard was attacked by 20 guerrillas, fighting until daylight, when the guerrillas were driven through the woods to the Tennessee River Road, with three wounded.

Cholera is again in Memphis—eleven deaths in one night, but thorough sanitary measures are taken to stop it.

Gen. Sickles dismissed Magistrate Tully of Columbia, S. C., for releasing hastily and with too little bail, two men arrested for beating and assaulting Thompson and Armstrong. The military have arrested the two men. Meetings both of Conservatives and Radicals were held, disclaiming any sympathy with their acts. Gov. Orr's Private Secretary has sought the placing of these men in the hands of the civil authorities.

Galveston is declared an infested port. Sheridan has removed Gov. Throckmorton of Texas, for rebellious acts, and put E. M. Pease in his place.

The negroes in New Orleans, commemorated the massacre of July 30, 1866, by High Mass at Mechanics' Institute, for the repose of the souls of the victims.

Reports of crops in Georgia are encouraging. Brownlow's majority for Governor of Tennessee, 30,000. All the Republican Congressmen probably elected. The Legislature strongly Radical. So far as heard from Louisiana registers 42,462 whites and 79,129 negroes.

Foreign Intelligence.

THE Reform leaders are to have another grand demonstration in Hyde Park, to protest against cutting down the franchise in the Reform Bill as it passed the Commons.

The reported distress in the counties of Mayo and Connemora, Ireland, from famine, is greatly exaggerated.

At the Paris trial of mowing and reaping machines, the 30th ult., on the Emperor's farm at Versailles, C. H. McCormick received the highest prize for mower and reaper, and gold medals are given to Messrs. Wood and Perry. McCormick's did its work in 24 minutes, and Wood's in 26 minutes. Over a dozen machines from France, Spain, England and the United States, entered the list, the American machines working best and fastest.

Altona, the largest city in Holstein, and five miles from Hamburg, has joined the new German Zollverein, (or customs' union for tariff.)

More than a hundred miners were recently killed or wounded in an explosion in a large mine in Moravia, owned by the Rothschilds.

Advices from St. Petersburg say that over a hundred ships were lost by the breaking up of the ice in the White Sea, in June, and the crews in a desperate condition, on floating ice or the frozen shore.

The Moniteur at Paris says rumors of war are wholly false, but this denial is not credited in London. Napoleon visits Vienna on the 7th. Reports from farming districts of France say the drouth has caused much damage to crops.

The British House of Lords has increased the copyhold franchise from five to ten pounds per year, and that of lodgers from ten to fifteen pounds, against which the people protest.

FROM MEXICO.—Official reports from Queretaro confirm the shooting of Vidauri. The Ranchero confirms the shooting of Gen. Castello and other Imperial officers. Unanimous feeling seems to be for Juarez as President. Forces are moving to crush Canales and Gomez in the center of the State. Matamoras will be garrisoned by 2,000 men.

FROM THE WEST INDIES.—The cable from Key West to Cuba will be completed in about a week. Salnave's election as President of Hayti was enthusiastic. Jamaica, under the recently formed English colonial system, is not prospering.

NEWS PARAGRAPHS.

AT Montreal the conduct of the volunteers in firing into the crowd at the St. Hyacinthe riot, is condemned as useless, and showing no presence of mind.

THE total loss of the Austrian army, in the late war with Prussia, was 84,041 officers and men, or over one-fifth of the whole number put in the field.

A PRIVATE meeting of the New York Central Railroad officers was held at the Astor House on the 1st inst., preliminary to a conference with other competing roads.

BLACK WALNUT lumber has been shipped from Toledo, Ohio, this season, in larger quantity than ever, the amount being 14,767,000 feet, worth about $700,000.

SIX steamers left New York the 3d inst., carrying $608,464 in specie. Two deaths from cholera in New York the 2d. Deaths in the city last week from all causes 85 less than same date last year.

OTHO, King of Greece, just deceased, was the second son of Louis I., King of Bavaria. He was born at Salzburg on the 1st of June, 1815, and ascended the Greek throne when he was only 17 years of age. We believe he leaves no children.

IT is stated that about thirty suits have been commenced against the contractors on the Champlain Canal, for damages caused by breaks and delays in the navigation of the canal, whereby the interests of the forwarders have been largely affected.

MR. D. C. SCOVILLE, formerly teacher at Cazenovia, more recently Professor of Mathematics in the Genesee Wesleyan Seminary, has been elected Professor of Latin in the Seminary at Cazenovia. Prof. Scoville is one of the best educators in Central New York.

LETTERS have been received in Buffalo from Rome, in which it is stated that Bishop Rosecrans of Cincinnati, is to be the successor of the late Bishop Timon of Buffalo. Rochester, with the counties of Livingston, Steuben, Ontario and Monroe, will be created a separate diocese, with the Very Rev. Mr. Gleason of Buffalo, as Bishop.

THE legacies bestowed upon Harvard College, during the past year, for objects more or less closely connected with that institution, amounts to $475,300. The principal items are—George Peabody, gift for archæological and ethnological purposes, $150,000; for the new Episcopal Divinity School, $100,000; bequests of Charles Minot, $60,000, and bequests of Paschal P. Pope, $50,000.

THE General Land Office reports an aggregate disposal of 82,291 acres of public lands during June last, at the following local offices: San Clare, Wis., 76,165 acres: Denver City, Colorado, 6,036 acres. The cash sales realized amounted to $9,124.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, August 6, 1867.

WE have to report an unchanged condition of money matters. In New York there is a great supply of capital, and this has had the effect of stimulating stock operations. The number of shares sold in the last two weeks has been unusually large for the season. The surplus capital of the the East must soon be called for to move western produce.

Some recent failures of National Banks have given occasion for comments in regard to the present system of banking. We can hardly see that the failures that have occurred are directly chargeable to the National system. Some of the closed banks were simply reorganized from State banks, and the same men have managed them that were officers and directors under the former system. It should not be expected that the National system can confer financial ability, where it did not exist, or make all men honest. One thing is sure—bill-holders in all the defunct institutions are saved from loss. Depositors living in the immediate neighborhood of a bank ought to know something of the integrity of the men to whom they commit their funds for safe keeping. Individuals fail, and often swindle their creditors out of large sums, —but their rascality cannot be charged upon any financial regulation of the Government. If the National banking system shall prove bad, and not adapted to the wants of the commercial community and the best interests of the people, we shall be free to condemn it. The few bank failures that have occurred we think prove nothing but the inefficiency or dishonesty of those having charge of the institutions.

The New York Financial Bulletin says:—"The majority of our banks are sound concerns, and are above suspicion in all that relates to their business and management; but the great evil is that there is occasionally a bank that never ought to have had any existence, which finally brings discredit on the whole system. The sooner these superfluous institutions go into liquidation the better for the community at large."

WHEAT AND FLOUR.—Farmers in Western New York seem disposed to sell their wheat early. Every thrashing machine is in active operation, and as fast as the grain is thrashed it is taken to the mills and warehouses. Buyers have been paying from $2 to 2 25. The market, under the pressure to sell, is rather tending downward. At some points in this and the adjoining counties sales have been quite large. Mills in the country have generally commenced grinding, and most of the flouring mills in this city commence to-day.

Flour is unsettled in price. The amount of new flour that will soon be upon the market must cause a considerable decline.

The accounts from the West, where spring wheat is grown, are highly favorable. The yield will be very large, and the quality good.

WOOL.—The market in Western New York is dull. Farmers are not disposed to sell at present prices, and buyers care little about purchasing. Prices range from 35 to 40c. Those that are able to hold are not shipping, but are waiting what must determine the future of the market—movement in woolen goods.

Sales in Boston continue large, though at rather reduced rates, footing up last week 1,200,000 lbs., at 60@62½c. for fleece. Receipts at the East continue large, though rather falling off. The Bulletin of Saturday says: "The chances are decidedly in favor of a reaction and improvement in values, when receipts shall have considerably fallen off, and the stocks of both wool and its manufactures shall have been reduced. But no such improvement can take place as long as the goods market remains inactive."

COAL.—Last week 75,000 tons of Scranton coal were sold at auction in New York. The decline since the June sales is 23c. per ton for lump, 26½c. for grate, and 15c. for stove.

Special Notices.

Sick-Headache. Very many are troubled with this distressing complaint every few days through the Summer months. A gentleman from Ohio who has been subject to such attacks writes that COE'S DYSPEPSIA CURE cured him.

WHO TAKES IT?

A PRIZE of $100 will be given by me to any man who will produce a stump machine which will pull up and turn down half as many stumps of good size, green or dry, in a given time, as my patent stump and tree extractor. The time of unloading and setting up the machines for work to be included in that agreed upon for the trial. W. W. WILLIS,

Rochester, N. Y., August 5th, 1867.

YOUNG MEN WANTED!

THE UNION TELEGRAPH COLLEGE, OBERLIN, OHIO, has authority from Telegraph employers to receive students and *guarantee* them *good situations* upon graduation. This is the *only* school of the kind in the Union which has such support, and in point of numbers is the LARGEST. Offices are secured to graduates by WRITTEN CONTRACT. Our letters of authority for graduating can be seen by any who doubt our ability to promise employment. Operators receive from $45 to $125 per month. For full particulars address

C. H. POND, Oberlin, Ohio.

THE ONLY GOLD MEDAL

Awarded to AMERICAN SEWING MACHINES at the Paris Exposition of 1867, was given to the Machines manufactured by this Company, of which ELIAS HOWE, JR., is President.

THE HOWE MACHINE CO.

914-4t 699 BROADWAY, N. Y.

OFFICE OF THE HOWE MACHINE CO.,
699 BROADWAY, N. Y., July 17, 1867.

OFFICIAL.

PARIS EXPOSITION, 1867.

ADVICES just received by mail enable us to announce positively that the only gold medal for American sewing machines was awarded to ELIAS HOWE, JR., as the manufacturer of the best sewing machine that was exhibited. There were eighty-two different machines in competition for the prize, and Mr. HOWE received the additional award of the Cross of the Legion of Honor, as manufacturer and inventor. The exact wording of the award is as follows:

HOWE MACHINE.	WHEELER & WILSON.
"Co-operateur Elias Howe, Jr., promoteur de la machine a coudre. *Medaille d'or.*	"Wheeler & Wilson pour la machine a boutonlere. *Medaille d'or.*

The official list of those who were made Knights of the Legion of Honor, as published in the Paris papers, reads thus: "MONS. ELIAS HOWE, Jr., *fabricant de machines a coudre, exposant;*" which translated into English, reads: "Mr. ELIAS HOWE, Jr., maker of sewing machines, exhibiting."

From this it will be seen that the medal awarded to Wheeler & Wilson was for a "Buttonhole Machine," *and not for the Sewing Machine.*

GOOD READING VERY CHEAP!

WE have a few extra copies of Volume XII of the RURAL NEW-YORKER, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. A few bound copies of same volume for sale at $3. We can also furnish bound copies of most of the volumes issued since 1855, at $3 each. Bound volumes of 1865 and 1866, $4 each.

Address D. D. T. MOORE, Rochester, N. Y.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement;* that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 908-tf.

Died.

Y.

ELMIRA FEMALE COLLEGE. Next Session Opens Sept. 4th. This College presents superior inducements to those who desire a thorough practical Christain education at a moderate cost. All students share in the lighter domestic labors of the family. For Circulars address REV. A. W. COWLES, D. D., President.

EVERY PIANO FORTE TEACHER says, that of the hundreds of Books of Instruction in Piano-Forte Music published, RICHARDSON'S NEW METHOD, takes the lead and seems destined to keep it. TWENTY-FIVE THOUSAND COPIES OF RICHARDSON'S METHOD ARE SOLD EVERY YEAR,—a sale which no similar book has ever reached. It is adapted alike to the youngest and to the oldest; to the beginner, for first lessons, and to the amateur, for general practice. Sent post-paid. Price, $3,75. OLIVER DITSON & CO., Boston, Mass.; CHAS. H. DITSON & CO., New York.

AGENTS WANTED—For J. T. Headley's Great Work on our Navy, entitled "FARRAGUT AND OUR NAVAL COMMANDERS," comprising the early Life and Naval Career of Admirals Farragut, Porter, Foote, Dupont and a host of others. In one volume, 609 pages—the only work of the kind published.—agents find no competition. This work is highly recommended by the leading Naval Officers, and endorsed by Secretaries Seward and Welle, Governors Fenton, Buckingham and Burnside and leading men throughout the country. Our Agents, in connection with this work, can take orders for four other standard works by the same author. Our terms are nowhere excelled.
E. B. TREAT & CO.,
916-6teo Publishers, 654 Broadway, N. Y.

ANOTHER IMPROVEMENT—BOOK- Holder, Writing Desk, Invalids Tea-Table and Ladies' Work Stand, combined with Lamp-Supporter and Ink Stand attached. We are now satisfied that our invention cannot be superseded, and confidently affirm that for comfort, convenience and practical usefulness, there is not nor never has been any thing like it. All who see it bear testimony to this fact. Every family should have one. Every student should have one. Every invalid should have one. Every aged person should have one. EVERYBODY should have one. Send for it immediately. Ask your stationer about it. Send stamp for illustrated circular. Get up a club of eight and we will send you one gratis. We want a good Agent in every county. Money made canvassing for it. Terms liberal. Sales rapid. Address
JOHN CONNACHER & CO., 208 Broadway, N. Y.

THE UNION PACIFIC RAILROAD CO.

THEIR FIRST MORTGAGE BONDS AS AN INVESTMENT.

THE rapid progress of the Union Pacific Railroad, now building west from Omaha, Nebraska, and forming, with its western connections, an unbroken line across the Continent, attracts attention to the value of the First Mortgage Bonds which the Company now offer to the public. The first question asked by prudent investors is, "Are these bonds secure?" Next, "Are they a profitable investment?" To reply in brief:

1st. The early completion of the whole great line to the Pacific is as certain as any future business event can be. The Government grant of over twenty million acres of land and fifty million dollars in its own bonds practically guarantees it. One-fourth of the work is already done, and the track continues to be laid at the rate of two miles a day.

2d. The Union Pacific Railroad bonds are issued upon what promises to be one of the most profitable lines of railroad in the country. For many years it must be the only line connecting the Atlantic and Pacific; and being without competition, it can maintain remunerative rates.

3d. 425 miles of this road are finished, and fully equipped with depots, locomotives, cars, &c., and two trains are daily running each way. The materials for the remaining 92 miles to the eastern base of the Rocky Mountains are on hand, and it is under contract to be done in September.

4th. The net earnings of the sections already finished are *several times greater* than the gold interest upon the First Mortgage Bonds upon such sections, and if not another mile of the road were built, the part already completed would not only pay interest and expenses, but be profitable to the Company.

5th. The Union Pacific Railroad bonds can be issued only as the road progresses, and therefore can never be in the market unless they represent a *bona fide* property.

6th. Their amount is strictly limited by law to a sum equal to what is granted by the U. S. Government, and for which it takes a *second* lien as its security. This amount upon the first 517 miles west from Omaha is only $16,000 per mile.

7th. The fact that the U. S. Government considers a second lien upon the road a good investment, and that some of the shrewdest railroad builders of the country have already paid in five million dollars upon the stock (which is to them a third lien,) may well inspire confidence in a first lien.

8th. Although it is not claimed that there can be any better securities than Governments, there are parties who consider a first mortgage upon such a property as this, the very best security in the world, and who sell their Governments to re-invest in these bonds—thus securing a greater interest.

9th. As the Union Pacific Railroad bonds are offered for the present at 90 cents on the dollar and accrued interest, they are the cheapest security in the market, being 15 per cent. less than U. S. Stocks.

10th. At the current rate of premium on gold, they pay

Over Nine per Cent. Interest.

The daily subscriptions are already large, and they will continue to be received in New York by the
CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & Co., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,
and by BANKS AND BANKERS generally throughout the United States, of whom maps and descriptive pamphlets may be obtained. They will also be sent by mail from the Company's Office, No. 20 Nassau Street, New York, on application. Subscribers will select their own Agents in whom they have confidence, who alone will be responsible to them for the safe delivery of the bonds.

JOHN J. CISCO, Treasurer,
916-2t NEW YORK.

GENTLEMEN!—IF YOU WANT A LUXU- riant growth of beard in five weeks, use the Italian Compound. *Satisfaction guaranteed or money refunded.* Price, by mail, closely sealed, 50 cents. RUSSELL & CO., Watertown, N. Y. 906-13t

WANTED—AGENTS FOR BOSTON, Philadelphia, Cincinnati, Chicago, with $150 to locate. Also, 20 Traveling Agents can make $2,500 per annum, selling Prof. JOHNSON'S Wash Crystals, Prepared Starch, and Improved Indigo Blue, &c. Address, with postage stamp for Circulars, or send 50 cts. for samples. L. T. JOHNSON, 346 Greenwich St., N. Y. 907-tf.

THE HARRIS HOP PRESS, (ILLUS- trated and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that fourfifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.

Messrs. RAMSEY & JANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.

BUCKINGHAM, WALSH & CO., Waterville, Oneida Co., N. Y. 911-9t

THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₱ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER $1,25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound Hotels, Saloons, Boarding House Keepers and Families who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges,** by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations.* We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

WHISKERS.—Dr. Lamontes Corrollin will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Prest.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—It adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and made easy.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

1867.
The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED
HALL THRASHING MACHINES,
With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. H. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal. 899-tf GLEN & HALL, Rochester, N. Y.

BUFFALO, N.Y. CHICAGO, ILL.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

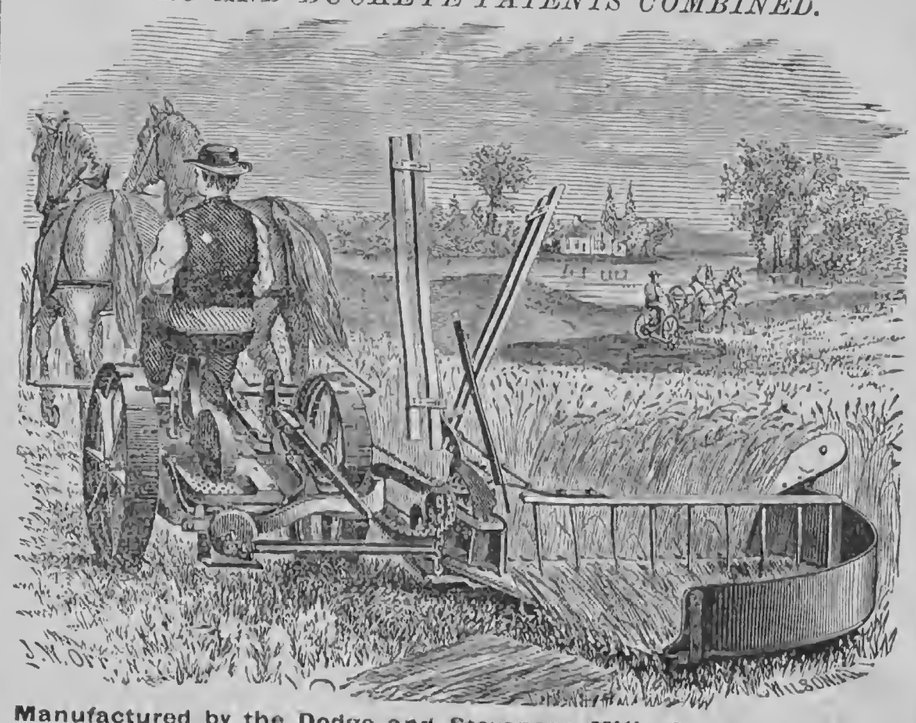
DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER;
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-3 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Parma, Mich., will supply the *Adjustable* Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

IN SUMMER TIME.

The jessamines in starry bloom
Are ever climbing higher,
Sweet odors fill the morning air
From roses and sweet briar;
Upon the purple clover-heads
A thousand diamonds glisten,
The robins sing their morning songs.—
You cannot choose but listen.

The snowy lilies, silver bells,
My lilies, how they blossom!
The sweetest saint in Paradise
Might wear them on her bosom.
Oh holy lilies, angel-pure,
Too pure for my caressing,
A weary, weary human heart
Comes unto you for blessing.

The Saviour's lilies! shed your light
On this day's weary duty,
And breathe into my restless heart
Your faith, your love and beauty!
Such whiteness,—see the silver leaves,
Unstained amid the staining;
Behold the lilies, how they grow,
Then wither uncomplaining.

Oh golden, golden summer months,
The time of blooming roses,
And each sweet bud on yonder spray
Its tender grace discloses,
So may the summer be a sign
Of that fair home of ours,
Where God's sweet summer ever smiles,
Where bloom unfading flowers.

The Story Teller.

[From the Cornhill Magazine.]

BEAUTY AND THE BEAST.

BY MISS THACKERAY,
AUTHOR OF "THE VILLAGE ON THE CLIFF," ETC.

PART I.

[Continued from page 249, last number.]

III.

Belle exclaimed, but it required all her courage and natural brightness of spirit to go on looking at the bright side of things, praising the cottage, working in the garden, giving secret assistance to the two bewildered maids who waited on the reduced little family, cheering her father, smiling, and putting the best face on things, as her sisters used to do at home. If it had been all front stairs in Capulet Square, it was all back staircase at the cottage. Rural roses, calm sunsets, long shadows across the common are all very well; but when puffs of smoke come out of the chimney and fill the little place; when, if the window is opened, a rush of wind and dust—worse almost than the smoke—comes eddying into the room, and careers round the four narrow walls; when poor little Fanny coughs and shudders, and wraps her shawl more closely around her with a groan; when the smell of the kitchen frying-pan perfumes the house, and a mouse scampers out of the cupboard, and black beetles lie struggling in the milk-jugs, and the pump runs dry, and spiders crawl out of the tea-caddy, and so forth; then, indeed, Belle deserves some credit for being cheerful under difficulties. She could not pretend to very high spirits, but she was brisk and willing, and ready to smile at her father's little occasional puns and feeble attempts at jocularity. Anna, who had been so admirable as a general, broke down under the fatigue of the actual labor in the trenches which belonged to their new life. A great many people can order others about very brilliantly and satisfactorily, who fail when they have to do the work themselves.

Some of the neighbors called upon them, but the Ogdens never appeared. Poor little Fanny used to take her lace-work and sit stitching and looping her thread at the window which overlooked the common and its broad roads, crossing and recrossing the plain; carriages came rolling along, people came walking, children ran past the windows of the little cottage, but the Ogdens never. Once Fanny thought she recognized the barouche,—Lady Ogden and Emily sitting in front, Matthew Ogden on the back seat; surely, yes, surely it was him. But the carriage rolled off in a cloud of dust, and disappeared behind the wall of the neighboring park; and Frances finished the loop, and passed her needle in and out of the muslin, feeling as if it was through her poor little heart that she was piercing and sticking; she pulled out a long thread, and it seemed to her as if the sunset stained it red like blood.

In the meanwhile Belle's voice had been singing away overhead, and Fanny, going up stairs presently, found her, with one of the maids, clearing out one of the upper rooms. The window was open, the furniture was piled up in the middle. Belle, with her sleeves tucked up and her dress carefully pinned out of the dust, was standing on a chair, hammer in hand, and fixing up some dimity curtains against the window. Tablecloths, brooms, pails, and brushes were lying about, and everything looked in perfect confusion. As Fanny stood looking and exclaiming, Anna also came to the door from her own room, where she had been taking a melancholy nap.

"What a mess you are making here," cried the elder sister very angrily. "How can you take up Martha's time, Belinda? And oh! how can you forget yourself to this degree? You seem to *exult* in your father's disgrace." Belinda flushed up.

"Really, Anna, I do not know what you mean," said she, turning round, vexed for a minute, and clasping a long curtain in both arms. "I could not bear to see my father's room looking so shabby and neglected; there is no disgrace in attending to his comfort. See, we have taken down those dusty curtains and we are going to put up some others," said the girl, springing down from the chair and exhibiting her treasures.

"And pray where is the money to come from," said Anna, "to pay for these wonderful changes?"

"They cost no money," said Belinda, laughing. "I made them myself, with my own two hands. Don't you remember my old white dress that you never liked, Anna? Look how I have pricked my finger. Now, go down," said the girl, in her pretty imperative way, "and don't come up again till I call you."

Go down at Belle's bidding.....

Anna went off fuming, and immediately set to work also, but in a different fashion. She unfortunately found that her father had returned, and was sitting in the little sitting-room down below by himself, with a limp paper of the day before open upon his knees. He was not reading. He seemed out of spirits, and was gazing in a melancholy way at the smouldering fire, and rubbing his bald head in a perplexed and troubled manner. Seeing this, the silly woman, by way of cheering and comforting the poor old man, began to exclaim at Belinda's behavior, to irritate him and overwhelm him with allusions and reproaches.

"Scrubbing and slaving with her own hands," said Anna. "Forgetting herself; bringing us down lower indeed than we are already sunk. Papa, she will not listen to me. You should tell her that you forbid her to put us all to shame by her behavior."

When Belle, panting, weary, triumphant, and with a blackened nose and rosy cheek, opened the door of the room presently and called her father exultantly, she did not notice, as she ran up stairs before him, how wearily he followed her. A flood of light came from the dreary little room overhead. It had been transformed into a bower of white dimity, bright windows, clean muslin blinds. The fusty old carpet was gone, and a clean crumb-cloth had been put down, with a comfortable rug before the fireplace. A nosegay of jasmine stood on the chimney, and at each corner of the four-post bed the absurd young decorator had stuck a smart bow, made out of some of her own blue ribbons, in place of the terrible plumes and tassels which had waved there in dust and darkness before. One of the two arm-chairs which blocked up the wall of the dining-room had been also covered out of some of Belinda's stores, and stood comfortably near the open window. The sun was setting over the great common outside, behind the mill and distant fringe of elm-trees. Martha, standing all illuminated by the sunshine, with her mop in her hand, was grinning from ear to ear, and Belle turned and rushed into her father's arms. But Mr. Barly was quite overcome. "My child," he said, "why do you trouble yourself so much for me? Your sister has told me all. I don't deserve it. I cannot bear that you should be brought to this. My Belle working and slaving with your own hands, through my fault,—through my fault." The old man sat down on the side of the bed by which he had been standing, and laid his face in his hands, in a perfect agony of remorse and regret. Belinda was dismayed by the result of her labors. In vain she tried to cheer him and comfort him. The sweeter she seemed in his eyes, the more miserable the poor father grew at the condition to which he had brought her.

For many days after he went about in a sort of despair, thinking what he could do to retrieve his ruined fortunes, and if Belinda still rose betimes to see to his comfort and the better ordering of the confused little household, she took care not to let it be known. Anna came down at nine, Fanny at ten. Anna would then spend several hours regretting her former dignities, reading the newspaper and the fashionable intelligence, while the dismal strains of Fanny's piano (there was a jangling piano in the little drawing-room,) streamed across the common. To a stormy spring, with wind flying and dust dashing against the window-panes, and gray clouds swiftly bearing across the wide open country, had succeeded a warm and brilliant summer, with sunshine flooding and spreading over the country. Anna and Fanny were able to get out a little now, but they were soon tired, and would sit down under a tree and remark to one another how greatly they missed their accustomed drives. Belinda, who had sometimes at first disappeared now and then to cry mysteriously a little bit by herself over her troubles, now discovered that at eighteen, with good health and plenty to do, happiness is possible, even without a carriage.

One day Mr. Barly, who still went into the city from habit, came home with some news which had greatly excited him. Wheal Tre Rosas, of which he still held a great many shares which he had never been able to dispose of, had been giving some signs of life. A fresh call was to be made: some capitalist, with more money than he evidently knew what to do with, had been buying up a great deal of the stock. The works were to be resumed. Mr. Barly had always been satisfied that the concern was a good one. He would give everything he had, he told Anna that evening, to be able to raise enough money now to buy up more of the shares. His fortune was made if he could do so; his children replaced in their proper position, and his name restored. Anna was in a state of greater flutter, if possible, than her father himself. Belle sighed; she could not help feeling doubtful, but she did not like to say much on the subject.

"Papa, this Wheal has proved a very treacherous wheel of fortune to us," she hazarded, blushing, and bending over her sewing; "we are very, very happy as we are."

"Happy?" said Anna with a sneer.

"Really, Belinda, you are too romantic," said Fanny, with a titter; while Mr. Barly cried out, in an excited way, "that she should be happier yet, and all her goodness and dutifulness should be rewarded in time." A sort of presentiment of evil came over Belinda, and her eyes filled up with tears; but she stitched them away and said no more.

Unfortunately the only money Mr. Barly could think of to lay his hands upon was that sum in the three per cents upon which they were now living; and even if he chose he could not touch any of it until Belinda came of age; unless, indeed, young Mr. Griffiths would give him permission to do so.

"Go to him, papa," cried Anna, enthusiastically. "Go to him; entreat, insist upon it, if necessary."

All that evening Anna and Frances talked over their brilliant prospects. "I should like to see the Ogdens again," said poor little Fanny. "Perhaps we shall if we go back to Capulet Square." "Certainly, certainly," said Anna. "I have heard that this Mr. Griffiths is a most uncouth and uncivilized person to deal with," continued Miss Barly, with her finger on her chin. "Papa, wouldn't it be better for me to go to Mr. Griffiths instead of you?" This, however, Mr. Barly would not consent to.

Anna could hardly contain her vexation and spite when he came back next day dispirited, crestfallen, and utterly wretched and disappointed. Mr. Griffiths would have nothing to say to it.

"What's the good of a trustee," said he to Mr. Barly, "if he were to let you invest your money in such a speculative chance as that. Take my advice, and sell out your shares now if you can for anything you can get."

"A surly, disagreeable fellow," said poor old Mr. Barly. "I heartily wish he had nothing to do with our affairs."

Anna fairly started with rage. "What insolence, when it is our own. Papa, you have no spirit to allow such interference."

Mr. Barly looked at her gravely, and said he should not allow it. Anna did not know what he meant.

Belinda was not easy about her father all this time. He came and went in an odd, excited sort of way, stopping short sometimes as he was walking across the room, and standing absorbed in thought. One day he went into the city unexpectedly, about the middle of the day, and came back looking quite odd, pale, with curious eyes; something was wrong, she could not tell what. In the meantime Wheal Tre Rosas seemed, spite of Mr. Griffiths' prophecies, to be steadily rising in the world. More business had been done, the shares were a trifle higher. A meeting of directors was convened, and actually a small dividend was declared at Midsummer. It really seemed as if there was some chance, after all, that Anna should be reinstated in the barouche, in Capulet Square, and her place in society. She and Fanny were half wild with delight. "When we leave," was the beginning of every sentence they uttered. Fanny wrote the good news to her friend Miss Ogden, and, under these circumstances, to Fanny's unfeigned delight, Emily Ogden thought herself justified in driving over to the village one fine afternoon and affably partaking of a cracked cupful of five-o'clock tea. It was slightly smoked, and the milk was turned. Belinda had gone out for a walk, and was not there to see to it all; I am afraid she did not quite forgive Emily the part she had played, and could not make up her mind to meet her.

One morning Anna was much excited by the arrival of a letter directed to Mr. Barly in great round handwriting, and with a huge seal, all over bears and griffins. Her father was forever expecting news of his beloved Tre Rosas, and he broke the seal with some curiosity. But this was only an invitation to dine and sleep at Castle Gardens from Mr. Griffiths, who said he had an offer to make Mr. Barly, and concluded by saying that he hoped Mr. Barly forgave him for the ungracious part he had been obliged to play the other day, and that, in like circumstances, he would do the same by him.

"I shan't go," said Mr. Barly, a little doggedly, putting the letter down.

"Not go, papa! Why, you may be able to talk him over if you get him quietly to yourself. Certainly, you must go, papa," said Anna. "O, I'm sure he means to relent,—how nice!" said Fanny. Even Belinda thought it was a pity he should not accept the invitation, and Mr. Barly gave way as usual. He asked them if they had any commands for him in town.

"O, thank you, papa," said Frances. "If you are going shoping, I wish you would bring me back a blue alpaca, and a white grenadine, and a pink sou-poult, and a —"

"My dear Fanny, that will be quite sufficient for the short time you remain here," interrupted Anna, who went on to give her father several commissions of her own,—some writing-paper stamped with Barly Lodge and their crest in one corner; a jacket with buttons for the knife-boy they had lately engaged upon the strength of their coming good fortune; a new umbrella, house-agent's list of mansions in the neighborhood of Capulet Square, the *Journal des Modes*, and the New Court Guide. "Let me see, there was something else," said Anna.

"Belle," said Mr. Barly, "how comes it you ask for nothing? What can I bring you, my child?"

Belle looked up with one of her bright melancholy smiles and replied, "If you should see any roses, papa, I think I should like a bunch of roses. We have none in the garden."

"Roses!" cried Fanny, laughing. "I didn't know you cared for anything but what was useful, Belle."

"I quite expected you would ask for a saucepan, or a mustard-pot," said Anna, with a sneer.

Belle sighed again, and then the three went and stood at the garden-gate to see their father off. It made a pretty little group for the geese on the common to contemplate,—the two young sisters at the wicket, the elder under the shade of the veranda, Belle upright, smiling, waving her slim hand; she was above the middle height, she had fair hair and dark eyebrows and gray eyes, over which she had a peculiar way of blinking her smooth white eyelids;—and all about, the birds, the soft winds, the great green common with its gorgeous furze-blossom blazing against the low bank of clouds in the horizon. Close at hand a white pony was tranquilly cropping the grass, and two little village children were standing outside the railings, gazing up open-mouthed at the pretty ladies who lived at the cottage.

IV.

The clouds which had been gathering all the afternoon broke shortly before Mr. Barly reached his entertainer's house. He had tried to get there through Kensington Gardens, but could not make out the way, and went wandering round and round in some perplexity under the great trees with their creaking branches. The storm did not last long and the clouds dispersed at sunset. When Mr. Barly rang at the gate of the villa in Castle Gardens at last that evening he was very weary, wet through, and far less triumphant than he had been when he left home in the morning. The butler who let him in gave the bag which he had been carrying to the footman, and showed him up stairs immediately, to the comfortable room which had been made ready for him. Upholsters had done the work on the whole better than Belle with all her loving labor. The chairs were softer than her print-covered horsehair cushions. The wax lights were burning although it was broad daylight. Mr. Barly went to the bay window. The garden outside was a sight to see. Smooth lawns, arches, roses in profusion and abundance, hanging and climbing and clustering everywhere, a distant gleam of a fountain, of a golden sky, a chirruping and rustling in the bushes and trellises after the storm. The sunset, which was lighting up the fern on the rain-sprinkled common, was twinkling through the rose petals here, bringing out odors and aromas and whiffs of delicious scent. Mr. Barly thought of Belle, and how he should like to see her flitting about in the garden, and picking roses to her heart's content. As he stood there he thought too, with a pang, of his wife whom he had lost, and sighed in a sort of despair at the troubles which had fallen upon him of late; what would he not give to undo the work of the last few months, he thought,—nay, of the last few days? He had once come to this very house with his wife in their early days of marriage. He remembered it now, although he had not thought of it before.

Sometimes it happens to us all that things which happened ever so long ago seem to make a start out of their proper places in the course of time, and come after us, until they catch us up, as it were, and surround us, so that one can hear the voices, and see the faces and colors, and feel the old sensations and thrills as keenly as at the time they occurred,—all so curiously and strangely vivid that one can scarcely conceive it possible that years and years, perhaps, have passed since it all happened, and that their present shock proceeds from ancient and almost forgotten impulse. And so as Mr. Barly looked, and remembered, and thought of the past, a sudden remorse and shame came over him. He seemed to see his wife standing in the garden, holding the roses up over head, looking like Belle; like, yet unlike. Why it should have been so, at the thought of his wife among the flowers, I cannot tell; but as he remembered her he began to think of what he had done,—that he was there in the house of the man he had defrauded,—he began to ask himself how could he face him? How could he sit down beside him at table and break his bread? The poor old fellow fell back with a groan in one of the comfortable arm chairs. Should he confess? O, no,—no, that would be the most terrible of all!

What he had done is simply told. When Guy Griffiths refused to let Mr. Barly lay hands on any of the money which he had in trust for his daughters, the foolish old man had sold out a portion of the sum belonging to Mr. Griffiths which still remained in his own name. It had not seemed like dishonesty at the time, but now he would have gladly—O, how gladly!—awakened to find it all a dream. He dressed mechanically, turning over every possible chance in his own mind. Let Wheal Tre Rosas go on and prosper, the first money should go to repay his loan, and no one would be the wiser. He went down into the library again when he was ready. It was empty still, and, to his relief, the master of the house had not yet come back. He waited a very long time, looking at the clock, at the reviews on the table, at the picture of Mrs. Griffiths, whom he could remember in her youth, upon the wall. The butler came in again to say that his master had not yet returned. Some message had come by a boy, which was not very intelligible,—he had been detained in the city. Mrs. Griffiths was not well enough to leave her room, but she hoped Mr. Barly would order dinner,—anything he required,—and her son would shortly return.

It was very late. There was nothing else to be done. Mr. Barly found a fire lighted in the great dining-room, dinner laid, one plate and one knife and fork, at the end of the long table. The dinner was excellent, so was the wine. The butler uncorked a bottle of champaigne, the cook sent up chickens and all sorts of good things. Mr. Barly almost felt as if he by some strange metempsychosis, had been converted into the owner of this handsome dwelling, and all that belonged to it. At twelve o'clock Mr. Griffiths had not yet returned, and his guest, after a somewhat perplexed and solitary meal, retired to rest.

— [To be continued.]

A Nice Distinction.—"I fear," said a country curate to his flock, "when I explained to you in my last charity sermon that philanthropy was the love of our species, you must have understood me to say *specie*, which may account for the smallness of the collection. You will prove, I hope, by your present contribution, that you are no longer laboring under the same mistake."

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $3.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

PURE WATER.

PURE WATER.—Health and economy. Patent Lead Encased Tin Pipe, recommended by the Medical Faculty and approved by Water Commissioners. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply THIS Pipe at a LESS price per foot than common Lead Pipe. To furnish the cost per foot please state the head or pressure of water and bore of pipe. Pamphlets sent FREE on application. Address THE COLWELLS, SHAW & WILLARD MANUFACTURING COMPANY, foot of West 25th St., New York. 9t-31

BELLS! BELLS!!
MENEELY'S WEST TROY BELL FOUNDERY,
ESTABLISED IN 1826.
Bells for Churches, Academies, Factories, &c., made of genuine Bell-metal, (Copper and Tin) mounted with Improved Patented Mountings, and warranted. Orders and inquiries addressed to the undersigned, will have prompt attention, and an illustrated catalogue sent free, upon application. E. A. & G. R. MENEELY, West Troy, N.Y.

USE PRATT & BUTCHER'S
CELEBRATED MAGIC OIL,
Warranted in cases of Rheumatism, Neuralgia, Bruises or Pains.

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle,

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER
Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines.*

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS
twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder,** in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

Walker & Taylor

Sole Proprietors, Chicago, Ill
P. O. Drawer 5826.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE.
With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.
HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.
GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

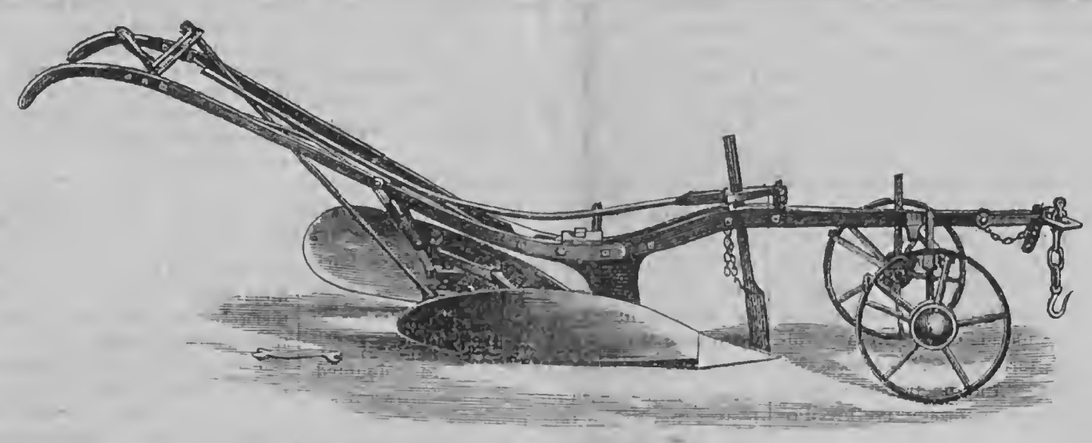
PLOWS AT THE GREAT EXPOSITION.

PARIS, July, 1867.

LET us take a turn about the Champ de Mars and note a few of the many things that would, if seen, and ought to if well described, be of interest to the readers of the RURAL. Did we wish to survey our field, instruments of the finest and most accurate workmanship could here be found to do it;—did we wish to fence it, here can be obtained patterns of fencing of all materials, from the simplest to the most expensive, and were a wire fence our choice a simple device for straining the wires, consisting of only two pieces of iron, one a piece of band iron and the other a casting, forms one of the neatest ever got up for the purpose. Had our field to be cleared, as I have seen no steam saw for cutting down trees nor steam stump extractor, we should have to resort to the old process, and of axes you can take your choice, for there are all kinds, from the French, which seem identical with the old Indian hatchet so often found on the Indian lots, to the latest styles of the New England manufacturer. Wouldn't a steam machine to cut down trees, cut the logs, cut up the brush to supply its own fuel, to pull the stumps, level the ground and its own road, be a huge invention? But all this is stuff and brush and rubbish. Let us turn it under—and for this work let us look about for a plow. Let us do as charity should, "begin at home."

Of the American plows, a dozen or more all together—a few from Pittsburgh, some from Hartford, and one or two from Illinois,—all but one look as though they were constructed by our poorest makers and on the principle of offering the greatest amount of resistance to the forward motion of the horse. The one plow, a steel one I should think, with an iron beam, very elegant in form and of elegant workmanship, has its mould-board all *slathered* over with a spread eagle and a great, useless spider of round iron work of the old shovel and tongs variety stuck in between the handle. How surprising it is that some of our best workmen have such shocking bad taste, or, rather, want of taste. Certainly the man who could finish up the beam and the clevis could finish as well the mould-board, and the man who could forge such iron work could have made two properly curved handles in the place of the butcher knife one at present on the plow. But as it is only a step from the sublime to the ridiculous, so too it is but a few, in the exhibition at least, from the Occidental to the Oriental, and therefore let us step over and see what has been sent from Egypt. A very large wooden plow of the oldest of the old styles. An extra well-formed oak beam, though long and heavy—a four-inch square upright post with two pegs for handles—an iron point and coulter, and a plain flat slab of wood for a mould-board. A rude enough structure to look at, certainly,—but as it is not unreasonable to suppose that the man in Illinois has sent his plow here from the far West to show the world how a plow ought to be made, so too may we not suppose that the Egyptian, whose plow has stood the test of 3,000 years, has sent it also, to teach the world the same lesson? Well, yes, and with just about as much reason in the one case as the other.

Coming along up from the south and east through Japan, China, Turkey and Siberia—all



SKELTON'S PATENT IRON ONE-WAY OR TURNWREST PLOW.

these show not so much by their tools as by their wheat that they know how to till the soil. Hungary has sent two dozen plows, which for workmanship of the compound wood and iron sort, far surpass all others, but the beams and the handles are straight, which does not seem right to us, and the forward end of the beam is carried on an independent cart with wheels from a foot and a half to two feet in diameter. From Greece there are a few rude agricultural tools, but in one of the plows there is an idea embodied that might be turned to good account in a stubble plow by our makers. The novel feature consists in having the beam directly over [illegible] side. This renders it necessary to have the coulter and standard offset three or four inches, so as to come into proper position, and it is the offset that constitutes the improvement, as the stubble and straw that is continually clogging an ordinary plow will, as it follows up on the horizontal parts, fall off by its own weight and thus prevent clogging. Russia sends one plow—a counterfeit American. Austria several of good workmanship, but which are stouter than with us, if possible. Prussia, a few of iron and steel, of excellent workmanship and passable form. Belgium, a great variety of all conceivable forms, but the right one. France has a quarter of an acre of ground covered with plows, but they are almost all of them rubbish; the only ones that make any pretensions to novelty, are the side-hill sort—two complete plows, one above and the other below the beam, to be reversed at the end of each furrow—very top-heavy, loose-jointed concerns.

England, far ahead of all other countries in their combination of form, design and workmanship, is represented by two of her leading firms in the common plows, and by one or two others in steam plows. The ordinary plows are wholly of iron and steel, and (with the exception of the two wheels in front,) they are simple as well as long and graceful. RANSOMES & SIMS' Turnwrest Plow, as it is called—that is, a side-hill plow to use on level ground to do away with dead furrows—is a complete invention. By reversing a handle (which is situated between the ordinary handles,) from side to side one mould-board is drawn back and turned into position to form a land-side, while the other is put into position for a mould-board. The accompanying drawing will give a better idea of this plow than a page of description. It will be seen that the plow is fitted with two wheels, the same as the ordinary English plow. These are used only when the plow is used as a common plow. When used as a side-hill plow then only one of the wheels is used, or neither, at the option of the plowman.

Now that we have seen what the world use, shall we fall back into our original groove?—Illinois to the Chicago scoop; Pennsylvania to her Pittsburgh stub and twist, and New England to her boasted free soil revolvers?—or shall we try something else?—try an English hard pan cork-screw, and determine whether it is not possible for us even to profit by this Great Paris Exposition? J. E. S.

RURAL FARMERS' CLUB.

Dear Mutton and Cheap Dogs.

"G. S.," Rhinebeck, N. Y., writes us in favor of taxing dogs to the extent that a sufficient revenue will accrue to cover all losses they occasion. As the law now stands a flock may be worried and immensely damaged, and nothing recovered therefor. The farmer's interest in this matter gets very little help either from the press or legislators. He advises farmers to note this matter when they elect their law-makers, and asserts that complete protection from dogs in counties near our large cities, would materially reduce the price of mutton to the consumer. We will remark that if the people of cities and villages, who complain so much of the high prices of meat, would endeavor to abate this dog nuisance to farmers instead of fostering it, they might procure good mutton and therefore beef at much cheaper rates. Heretofore farmers have failed to urge this view of the case, with the effect it is capable of producing. Let them enlist the sympathies of the consuming classes by showing the prospect of cheaper meats, and the [illegible]

"Breed and Color a Humbug."

"CRITIC" sends us the following from the dairy regions of New York:—"A writer, in a late number of the Farm and Fireside, discoursing on the subject of neat cattle remarks:—'I care not for breed or color—it is all a humbug for dairy profit. Breeding stock is another story.'

"This seems to me an absurdity, since, if for stock purposes, breed and color are important, why not for those of the dairy? It is true that an occasional cow, small, scrawny and of no particular breed, is found to be a good milker, but this is simply an exception, and not one person in a hundred would be satisfied to breed from such, even for 'dairy profit,' when animals of greater perfection of form are available for the purpose. It is too late in the day to assert, with a prospect of gaining general credence, that breed is of no consequence—is a humbug—even for 'dairy profit.' Great improvement in stock has characterized the efforts of breeders, during the last quarter of a century, in which the dairy department has largely shared."

Straw Sheds for Winter Shelter.

"PROGRESSIVE FARMER" writes us from Iowa to "urge farmers—especially western ones—who lack ample barns, sheds and stables for sheltering their stock in winter, to make their straw stacks available for this purpose. Thrashing time is the proper season to construct these cheap shelters. Erect a frame of strong posts and poles and stack the straw on and around it, so as to form a shed. But little labor is expended thus, and a great deal of comfort and of course profit, is derived from it." The idea is practical; we endorse it.

Merits of the Lombardy Poplar.

A CORRESPONDENT writing from Omaha, Neb., inquires for knowledge respecting this tree, whether it will grow from cuttings, if its timber is as valuable as that of the cotton wood, if it grows as rapidly, and whether it is cleanly in regard to worms and insects? It is readily grown from cuttings either of wood one year old or that three or four years old. It does not possess any great merit as a timber tree, but its growth is rapid. A moist soil is preferable to a dry one. If any of our readers can recommend it particularly, we should like to hear from them. We cannot.

Farming with Small Means.

"M. D. W.," Company H, 1st Infantry, New Orleans, writes:—"I am a soldier, but intend becoming a farmer if I can do so with five hundred dollars. Would you advise me to commence with so small a sum? What State would you advise an unmarried man, 27 years old, to settle in? You will probably say, 'in to the state of matrimony.'"

A healthy man, of the age mentioned, willing to work and fond of a farm-life, can safely make a beginning, on the cheap lands of the West, with the sum specified. Suppose you invest your capital in seeds, team and machinery, and work hired land for a year or two. You can see plenty of opportunities, if you use your wits and senses, in a comparatively new country. You will find plenty of men everywhere who have won a healthy independence through farm pursuits, beginning with no capital but their hands, health and strong wills. And there are yet plenty of similar chances.

AGRICULTURAL EDUCATION.—No. II.

THE true foundation for a general diffusion of the knowledge of Agriculture among farmers, is in the Common Schools. Here, Young America receives his earliest and most impressive training. Here, in nine cases out of ten, the mind takes its bent for life. Ask our liberally educated men, and especially our self-made men, and they will nearly all refer their first ambitions impulses to the Common Schools. This is the common nursery of knowledge for the people. Here should the rudiments of scientific agriculture be taught. Here should the mind imbibe, in the simplest forms, the elements of Chemistry, Geology, Mineralogy, Entomology and Botany. This may seem, to some, impossible of introduction into these elementary schools. But the elements of the natural sciences are not more difficult of comprehension, by the pupils of these schools, than are Geography, Arithmetic and Grammar. They can mostly be taught with objects to aid the understanding. In this way, the child will drink in the facts and even the technical terms, as easily as the philosopher. The memory cannot, usefully, be crammed with technical terms without the objects to which to apply them, but with these, all is simple and easy for the child. In fact, children very readily comprehend the simple facts of nature when thus illustrated—much more easily than abstract ideas. A child may earlier be taught to understand the simple elements of Botany than Arithmetic or Grammar. The tree, the stem, the leaf, the flower may be present for examination. The pupil observes the peculiar form, size and color of each variety, compares them together, learns the terms by which to describe each, without burdening the memory, as the word is associated with an object. Thus, also, may Geology, Mineralogy and Entomology be taught with objects. Chemistry is not so easily illustrated with natural objects as it requires, besides, an apparatus for this purpose; but a simple one might be kept in every school to illustrate some of the ordinary phenomena of Chemistry.

The perceptive faculties of children are usually active, and, with a proper training, would be still more so. They take great delight in learning all the facts about new objects, and this inquisitiveness should be gratified in every rational way. We see the natural order in children is to learn facts before abstract ideas, but the ordinary method, pursued has been the reverse. The attempt has been to fill their minds with abstract knowledge, with no effort to teach its application. This has been felt by them only as a weary task, to be escaped if possible. But introduce to their minds, in the proper way, objects of natural science, and their listlessness will change to eager attention—the teacher will be their most interesting companion. The old way of teaching everything abstractly is now giving place to the practical method, of unfolding nature to the pupil and directing his mind in the channel of self-culture. The teacher's duty is only to open the way, show the scholar the road, stimulate his investigations, lead him eagerly in the pursuit of knowledge, but let *his mind* do the thinking, pursue the investigation, solve the problem, and not the teachers'. The true object of the teacher should be to learn the pupils to instruct themselves. They should be led to investigate for themselves and to draw their own conclusions, with as little assistance from the teacher as possible. This is developing their nature—educating it. The Common School should do this—should fit all the children of the State for pursuing any of the ordinary avocations of life.

This system is now gaining ground with teachers everywhere. The Normal School, at Oswego, founded mostly on this plan, is gaining adherents rapidly. This school is turning out hundreds of teachers imbued with this method; and the various Normal Schools, now being established in various parts of the State, will soon supply a more advanced class of teachers, and our Common Schools will take a higher rank.

FREE SCHOOLS.

Our last Legislature, with great unanimity, passed an act to relieve our Empire State from the odium of the Rate Bill, and to establish *Free Schools*. Let us thank them for this tardy justice. It means *much* to the children of the State. No further question can be made of the ability of parents to pay the school bill of their children. Neither parsimony nor poverty need further deprive children of the benefits of the District School. It is the *Light House* for young humanity, and if they but heed its light may [illegible]

The greatness and strength of the North compared with the South—the loyalty of the one and the treason of the other—lay in the Common Schools of the North and the want of them in the South. Our only safety in amalgamating all nations with our own, taking the ignorant masses of Europe into our family and adopting them, is in the Common School, that great Bethesda, where the ignorance of the multitude may be washed away.

But it may be said that the teachers are not qualified to teach the natural sciences, and therefore this scheme cannot be adopted. At present this is true, as only a few Common School teachers in the State are thus qualified. But these Normal Schools are instituted expressly to educate teachers, and it is to be hoped that the standard will be raised and the teachers fitted to instruct pupils in the elements of the natural sciences. The principal supporters of the Free School in this country, are farmers, and it is but just that they should have a school adapted to their wants. And whether they shall have such a school depends upon themselves. Their voice, uttered with any degree of unanimity, in ever so low a whisper, will be heard and heeded by the Law Makers. They are the power in the State; let them command. E. W. S.

ATMOSPHERIC PLANT FOOD.—ORGANIC MANURES.

IN my last I did not mean that a soil exhausted of the mineral elements of plants could be made by tillage to bear crops by atmospheric aid alone. The soil on which Mr. LAWES got fifteen bushels of wheat to the acre, year after year without manuring, was not exhausted of the mineral or inorganic elements, potash, phosphorus, lime, &c.; yet 200 lbs. of the sulphate of ammonia to the acre doubled the crop of wheat. This clearly shows to every farmer, the imperative necessity of well saving his stall manure, that the urine which contains the most of the nitrogen may be absorbed and saved intact. Poor, rain-washed or fire-fanged stall manure has lost a great share of its nitrogen, although it still retains its mineral elements, capable only, as Mr. LAWES has proved, of producing half a crop.

As red clover, cow peas, and other leguminous plants are three times richer in nitrogen than the narrow-leaved grasses, they are especially valuable to plow-under to enrich the soil with ammonia salts. Superphosphate of lime, if not made from burned bones contains much ammonia as well as soluble phosphate of lime. Finely crushed bones though not immediately soluble, soon give up their ammonia to the roots of plants, and the phosphate of lime becomes slowly soluble in a well tilled soil. But pure, dry Peruvian guano, is undoubtedly the most immediate amendment, according to its weight, of any of the commercial manures; and the fact that its power is so soon exhausted, only proves its superior solubility. What is lost in manure is saved in the crop. *

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

IMPORTATION OF SILESIAN MERINOS.

We alluded, a few weeks since, to the fact that William Chamberlain, Esq., of Red Hook, Dutchess Co., N. Y., had made a small importation of Silesian Merinos from Germany, and was expecting a few more. The whole have now arrived—thirty-one ewes and two rams. They were selected by Carl Heyne, whose great skill and judgment as a practical shepherd have been already more than once mentioned in these columns. Mr. Chamberlain's object was to obtain a fresh infusion of blood into his previously established flock by procuring wholly unrelated, or less nearly related animals of the same family; or, should a more improved variety, bearing wool of the same class, be found, to import a sufficient number for the foundation of a new flock. Several of the old Spanish varieties, such as the Negretti, Infantado, &c., have been kept distinct in Germany; in other cases they have been crossed, generally on some definite plan, the records of which are carefully preserved.

Heyne reached Bremen on the 20th of April last. He traveled some thousand or more miles, carefully examining and comparing the most noted flocks. He found that nearly all of them had materially improved, in respect to the quantity and quality of their wool, within the last few years. At length he reached Wirchenblatt, in Prussian Silesia, and the flock of Louis Fischer, from which Mr. Chamberlain's previous stock was derived. After the most careful investigation, he came to the conclusion that these sheep combined the most excellencies, and he made his purchases from them.

A letter was published by us in the Practical Shepherd (p. 39,) in which Mr. Chamberlain gave an account of the blood of his sheep. By this it appears that they were descended from four Negretti rams and one hundred Infantado ewes, imported from Spain in 1811 by Ferdinand Fischer, the father of Louis Fischer. No other strain of blood in the Fischer flock being mentioned, we supposed it only comprised this Negretti-Infantado family,—and probably have conveyed that impression to others. But it appears from the following certificate that the Fischers have also preserved a pure Negretti family, and that Mr. Chamberlain's last importation are exclusively of that blood:

"Pedigree.—Mr. Carl Heyne of Red Hook, State of New York, has bought from my full-blooded Negretti stock thirty-one owes and two rams. My flock was founded in 1811, my father having imported the best animals from the flocks of the Duke of Alfara, the Count Negretti, and the Marquis d'Iranda in Spain. This stock has been kept unmixed, as far as the Negretti branch is concerned. Certified to the above. Louis Fischer.

"Wirchenblatt, near Jessnitz, Prussia, 12 May, 1867."

In speaking of Dr. Davisson's sheep (derived from Mr. Chamberlain's stock) in this paper, July 20th, we said:

"The Silesian sheep meet the same want in manufacturing that was formerly met by the Saxons, while they are greatly larger, hardier and heavier fleeced. Broadcloth and various other manufactures need such wool, and it is not supplied by the heavy-fleeced American Merino. All who desire to see *all* branches of woolen manufactures flourish in our own country, will be glad to see the Silesian sheep more extensively introduced. They will extend the range of our wool production without competing with the varieties already established."

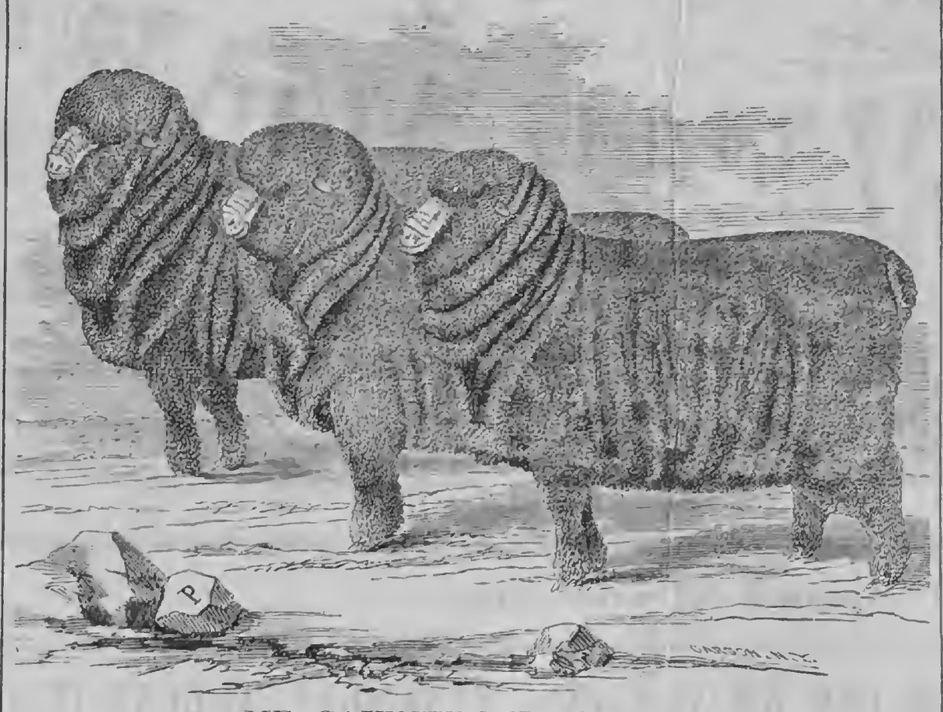
This has called out a communication, couched in an amusing tone of reproachfulness, from a "Washington Co. Wool Grower," who asks us, among other things, if "he is to understand us as saying that we consider the Silesian sheep more profitable in this country than the American Merino?" It seems to be one of the "manifest destinies" of an editor to receive foolish questions! What is there in our words implying such an idea, or raising such a question? The American Merino is *our* favorite sheep. We have neither owned nor been interested in any other for a long course of years. But because we choose to produce what meets one demand of the wool market, shall we not tolerate, nay, shall we not encourage our neighbor in producing what meets another and not even a competing demand?

There is a vastly greater consumption of, and therefore call for, medium fine wool than for broadcloth wool, in the United States; and this state of things will doubtless always continue. But a portion of our people also will always use broadcloths and some other textures requiring similar wool; and we suppose they have a perfect right to do so. The heavy-fleeced American Merino does not supply the raw material for such fabrics. Its wool is not fine and soft enough, and it is generally too long in the staple. What then is to be done about it? Shall we buy our broadcloths, or the raw materials for them, in other countries, when we can just as well make and grow them at home? The same question applies equally to combing and other coarse wools and the fabrics made of them. Why not raise them all and manufacture them all at home?

We will go a step further in regard to fine wools. Special causes conspired to drive their production out of our country. Our broadcloth manufactures were overthrown by the tariff of 1846. Our former fine wool sheep (the Saxons) were comparatively a feeble, unproductive race. Without stopping to make a definite computation we may probably safely enough say that it cost 100 per cent. more per pound to grow their wool than it would have cost to grow that of the heavy fleeced American Merino, while reliable statistical records show that it sold on the average but for 15 per cent. more. But now, special causes call as decidedly for the restoration of this branch of wool growing. Our broadcloth manufactures are reviving. Other manufactures are starting up which require wools of equal fineness. The quantity of them now consumed in the single article of hats, for example, is very large. The scarcity compels the buyer to make a fairer discrimination in prices than formerly. A reasonable tariff shuts up destructive foreign competition. And finally, as already said, we have a vastly more productive breed of fine wooled sheep.

In view of these facts—an extensive demand to supply, and excellent available materials to supply it with—what reasonable doubt should there be that, up to the limits of the demand, the production of fine will be as profitable as that of other kinds of wool? There is a call for an increase in the production of all our domestic wools. They do not yet supply our manufactures, and our manufactures do not increase as rapidly as the consumption of our population. If the wool and woolen tariff stands, the future, after the present brief period of depression passes away, is full of auspicious promise to all classes of American wool growers; and the success of each, so far from injuring, will positively benefit the others, not only from general commercial considerations which we have not limits to attempt to explain, but emphatically because it will preserve that union of interests without which no effective tariff legislation can be made permanent.

In conclusion, we beseech our "Washington county" friend hereafter to pray earnestly to be delivered from narrowness of mind, short-sightedness, and from so inordinate a mania *to sell rams of his own breed* that he would depopulate the world of all other and even now competing breeds! The world is large enough for sheep of different kinds, and men of different tastes.



MR. SAWYER'S EWE TEGS.

Bred by F. B. Sawyer, Webster, New Hampshire. He writes:—They were got by H. W. Hammond's "Kearsarge." The dam of No. 1 (left hand figure) was by "Little Wrinkley" out of a ewe which was out of the dam of "Old Greasy," from the "First choice of old ewes." The dam of No. 2 (middle figure) was by H. W. Hammond's "Paymaster," 9, dam by "Little Wrinkley." The dam of No. 3 (right hand figure) was out of the dam of No. 1 by "Sweepstakes." These tegs received the first prize at the New England Agricultural Fair in 1866. Samples of their wood forwarded is of superior quality and excellent style.

IMPORTS OF WOOL IN 1866 AND 1867.

We have been able to obtain from an official and perfectly reliable source the following heretofore unpublished statistics, giving the quantity and class of wools entered at the New York Custom House during the first six months of 1866 and 1867 respectively:

FIRST SIX MONTHS, 1866.	
Class 1, "Clothing Wool,".....	23,692,043 lbs.
Class 2, "Combing Wools,".....	
Class 3, "Carpet Wools, and other similar wools,".....	4,839,533 "
Total.....	28,531,576 lbs.
Noils.....	13,737 "
Camel's Hair.....	408,417 "
FIRST SIX MONTHS, 1867.	
Class 1, "Clothing Wool.".....	4,346,183 lbs.
Class 2, "Combing Wools,".....	122,796 "
Class 3, "Carpet Wools, &c.,".....	8,240,652 "
Total.....	12,709,631 lbs.
Camel's Hair.....	163,339 "

We are authorized to say that "most all of Class 1, imported since the present tariff went into operation, was entered *in bond*, and it is presumed either remains in bond or has been shipped out of the country."

We need not remind our readers that Class 1 embraces all the foreign wools which compete *with any kind of wool grown in the United States*, except "combing wools of English blood." During two months of 1867 (January and February) the present tariff was not in operation. Yet considerably less than *one-fifth* as much "clothing wool" was imported in the first half of 1867 as in the first half of 1866;—and most of the small amount imported in 1867, as has been stated, *remains in bond or has been exported to other countries!* It has not been brought into competition in market with our own wools. Who now shall say that the tariff has not been as effective in shutting out foreign competition as was expected, or as can be reasonably desired by the great mass of the wool growers of our country!

There is, it is true, a gain in the import of "combing wools"—but the amount is inconsiderable. Very probably the wool was entered before the passage of the tariff. At all events, the imports of this class of wools *into all our different ports*, especially those of the Canadian frontier, will fall off during the year probably in about equal proportions with those of "clothing wools." Our foreign supplies were mostly drawn from Canada, and it is notorious that the last clip of that country is unsold—that the market is utterly flat—and that the impression is now prevalent there that under present duties the English market will prove a better one for them than ours.

The import of "carpet wools" nearly doubled. These compete with no wools now grown in the United States, and their increased import therefore does not affect our growers, provided no frauds are practiced—provided other wools are not invoiced, and pass our Custom Houses under that name. Are such frauds practiced? Not, in our opinion, in New York. John A. Bausi, who appraises every invoice of wool entered at that port, is an old, experienced, perfectly competent, and we believe thoroughly upright officer—the very man we would put in the place, were the appointment made by us. We have made inquiries in respect to the officer at Boston, who has the appraisement of wools under his charge. We learn that he has not had an experience on the subject extending much beyond two years—a thing certainly much to be regretted—but he is regarded among the business men of Boston as a man of integrity, and he has, it is said, an official number him in this department who is a very experienced judge and appraiser of wool. With this aid and the aid of the standard samples, an upright man can discharge his duties faithfully.

These are the principal ports of entry for foreign wool, but there are others which deserve attention. We trust our friends who have any opportunities for ascertaining the character and conduct of wool appraisers, in any of them, will keep the officers of the National Wool Growers Association informed of the facts. It is one of the most obvious duties of these officers to keep watch and ward on the subject of a fair and just administration of the law, and to expose any frauds practiced by its administrators. We, for one, are prepared to do the latter *with a will*, should occasion demand it.

Condensed Correspondence, Items, &c.

Wool Samples.—Messrs. Pottle & Maltman, Ontario Co., N. Y. Ram "Ontario." Wool 2½ inches long, style excellent, quality about that considered desirable in a ram, yolk liquid and of gold tint.

George Brown, Whitneys Crossing, N. Y. Five tegs, five 2-year old ewes, and one ram, exhibited in the Delaine Class at State Sheep Fair at Auburn in May. The teg samples from 2⅝ to 3⅛ inches long; those from 2-year olds all 2¾ inches long; ram's 2¾ inches long. Style and quality ranging from good to excellent. Yolk moderate in amount and golden tinted. Ram named "Duke of Rochester," got "by a Gold Drop ram bred by E. Hammond out of a Paular ewe."

Hewey Brackett, samples from Shropshire ram and ewe; from Merino ram and ewes; and from a cross from Shropshire ram and Saxony ewe. The first we regard as of but moderate quality of its kind. The second is of nice style and finer than is sought by breeders of American Merinos—looking as if the sheep had a dash of Saxon blood. The third is fair grade wool, but we can see no object in mixing the breeds to grow it.

Jonas Hungerford, Watertown, Litchfield Co., Conn., writes that he has seventy full blood sheep "that he has raised from sheep direct from Stephen Atwood's." He encloses samples from ten of them. No. 1, 3 yrs. old ram, staple rather over 3 in. long; fleece 12½ lbs. No. 2, 2 yrs. old ram, staple over 3 in.; fleece 12 lbs. 7 ozs. No. 3, 2 yrs. old ewe, staple 2½ in.; fleece 8 lbs. 3 ozs.; carcass 50 lbs. No. 8, ewe teg, staple 3 in.; fleece 8½ lbs.; carcass 57 lbs. The rest 2 yrs. ewes and tegs, staple from 2⅝ to 3½ in.; other particulars not given. All the wool of good, fair quality, quite free from yolk, staple from middling to good. The whole flock shears a trifle over 6 lbs. a head. Mr. H. says he has sold sheep to several prominent buyers whom he names, retains as good ones still, and criticises the statements of some of our correspondents who have reported so much heavier fleeces than his own and his neighbor, Stephen Atwood's, whose highest weight of ram's fleeces he gives. He asks us "whether *he* is on the right path or no,?" We are always ready to express our opinions, in a general way, on any point of sheep husbandry, but we do not feel authorized to enter upon any direct comparisons between either the *sheep* or the *statements* of individuals, where we are not personally cognizant of the facts, and where there are not particular public reasons for so doing.

Rural Notes and Items.

☞ In justice to both himself and many of his correspondents—especially those expecting replies to letters of a personal or confidential character—it is proper to state that Mr. Moore has for some time been unable to give usual attention to business, in consequence of his own impaired health and severe illness in his family. The same reasons have precluded Mr. M. from preparing for publication the notes of his pleasant and interesting trip through the South, during the past spring—notes partly promised some time ago, as we are occasionally reminded by friends and correspondents. We may perhaps be able to give a portion of the notes ere long, yet even that is doubtful, and perchance not desirable at this late day. Meantime, the sound members of our corps of editorial contributors will be enabled to keep the good ship Rural under full sail, with its usual weekly cargo of practical, instructive and entertaining reading—giving us opportunity, while convalescing, to complete certain arrangements designed to greatly augment the value and popularity of this journal in the future.

Death of an Agricultural Editor.—We extract the following from the August number of the Maryland Farmer:—"Just as we go to press, we learn through a private source, and with feelings of deep regret, of the death of Wm. N. White, editor of the leading Southern agricultural journal, 'The Southern Cultivator,' over which he had presided with so much ability for so many years. The deceased was a gentleman of great energy, force of character, and an ardent and devoted friend to the progress of Southern Agriculture, in which cause the better part of his life was devoted. We have not learned the particulars or date of his death, but know his loss will be keenly felt by the entire South. His many noble qualities of mind and heart had endeared him to thousands all over the country."

Illinois State Fair Grounds.—From the perusal of a long article in the Quincy (Ill.) Herald, in reference to the State Fair shortly to be held in that place, we infer that it is designed to make it eclipse anything of the kind ever seen in the West. The grounds themselves embrace 74 acres, and are being supplied with buildings admirably adapted to the purposes for which they are intended. Everything seems to promise a flattering success.

Chicago Cattle Market.—Parton, in the Atlantic Monthly some time since, described the stock yards near Chicago as "the great bovine city of the world." Two millions of dollars have been expended in fitting up the grounds. About 350 acres are enclosed in cattle pens—150 of them being floored. There have been at times as many as 25,000 cattle, 20,000 to 30,000 sheep and 75,000 hogs stored in the place at one time.

Wheat in North Carolina.—The Old North State, Salisbury, N. C., boasts of the yield of wheat obtained this season by Thomas E. Brown of that place. He sowed five bushels of Baltimore white wheat on as many acres and got in return 113 bushels, or a trifle short of 23 bushels to the acre. This is doing pretty well for North Carolina, but the show would probably have been better if more seed to the acre had been sown.

The State Fair.—The Committee at Buffalo, having the matter in charge, have agreed to pay the State Society $9,000 and put the grounds and buildings in good condition. The Fair Committee state the sum of $2,000 of the necessary funds is yet to be raised. The solid men of Buffalo should draw their calfskins at once.

Harvest Trouble.—The Wayne Co. Democratic Press mentions, commiseratingly, the case of a farmer in Sodus whose crop of wheat was so prodigiously large as to necessitate the leasing of a piece of ground of a neighbor to make room for shocking his wheat!

First Cotton.—The Augusta (Ga.) Chronicle states that the cotton bales had commenced opening in the southern section of the State on the 27th ult. In Florida the commencement was somewhat earlier.

Wheat in Minnesota.—The Minneapolis Tribune states that a party in that city has contracted with reponsible persons for 100,000 bushels of wheat deliverable at that point for $1 per bushel.

Horticultural.

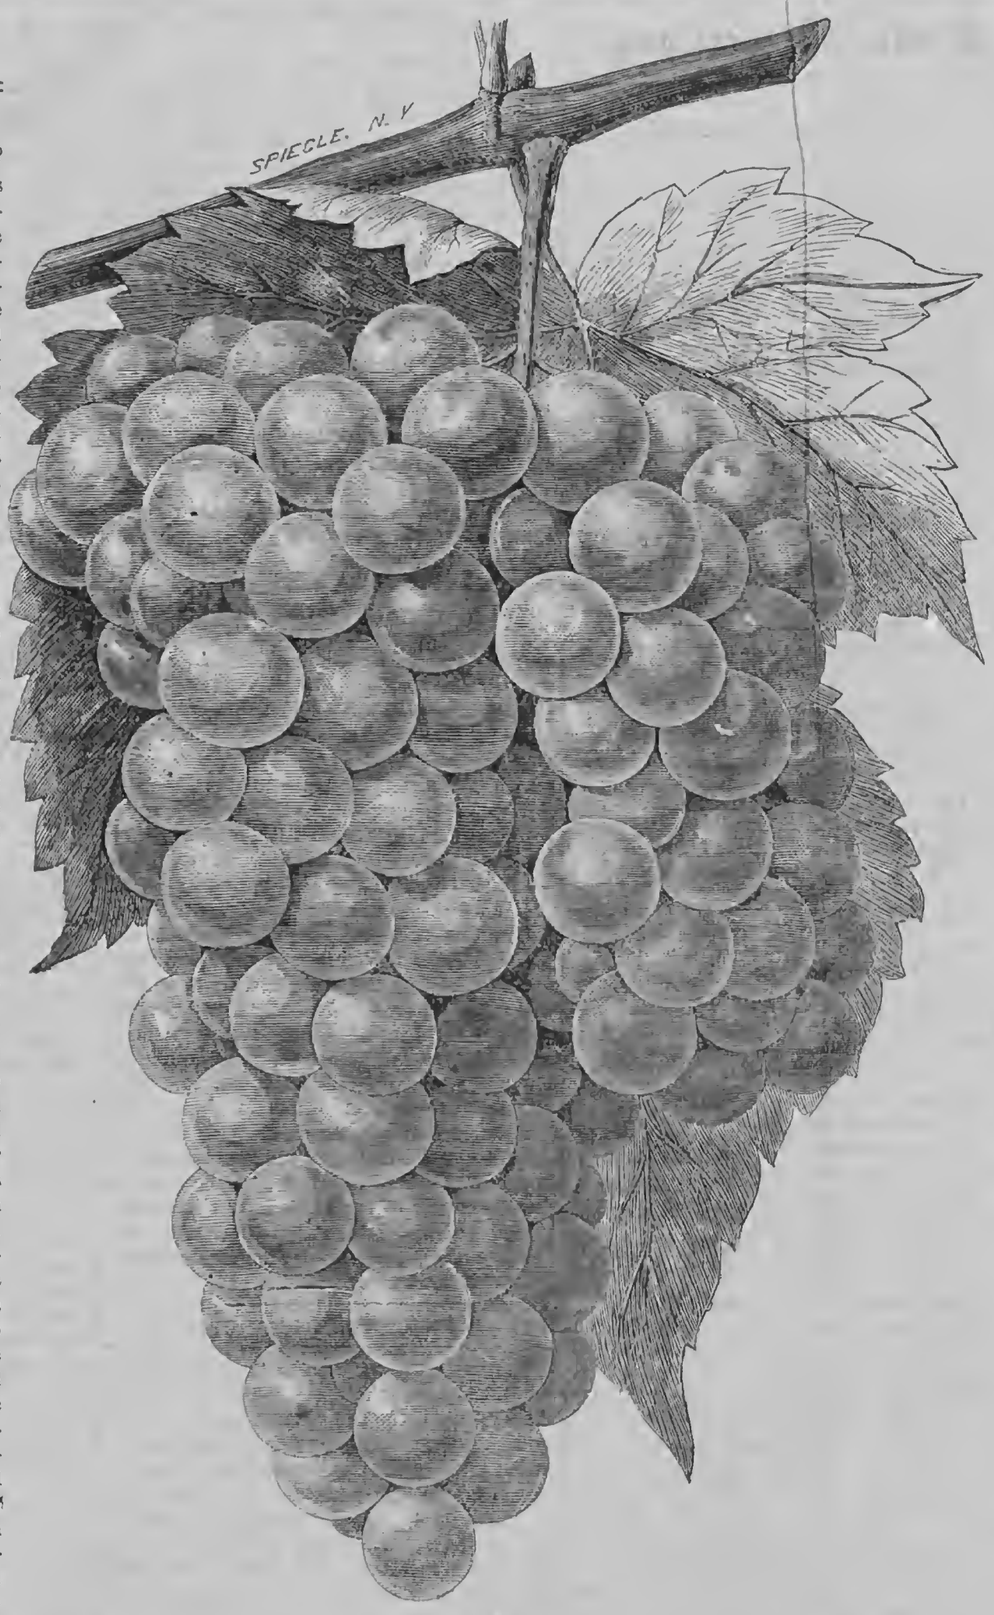
AMERICAN GRAPE GROWING.

SHALL WE CULTIVATE ONLY ONE VARIETY?

GRATIFYING as the result undonbtedly is which has already been obtained, and glorious as is the promise of the future, grape growing is yet in its infancy; and we manifest at every step that we are but beginners. A new variety is brought before the public, satisfactory to the originator, tried perhaps by a few friends in the neighborhood: and at once they go into ecstasies about it; it is *the* grape *par excellence;* should be planted over the whole country; and every one who is not willing to join in its praise is put down as an ignoramus. But their costly favorite travels: it is transplanted into a different soil, different surroundings, and a climate not at all resembling that of its original locality; and, lo! it does not feel at home; its cultivators here cannot see the excellences which its originator claimed for it; they put it down as an imposition, and call its disseminator a humbug and cheat. This is one instance. Another grape is sent out, with no very great pretensions, except that it is hardy and healthy. It travels, and finds a more congenial climate and soil, and develops qualities of which those who have seen it only under unfavorable circumstances can form no idea. It is tried for wine in its new home, and makes an excellent article: its new friends claim for it a reputation as a *wine grape;* but those who cultivate it under unfavorable circumstances scorn the idea of *that* grape making a drinkable wine; ridicule those who give but their *actual experience*, and call them humbugs and swindlers. These are instances of two extremes. Do you wish examples? You have them at once in Dr. Grant's Iona and the Concord. For the first, its originator and a few friends claim that it combines all the excellences of the native and foreign varieties; is healthy, hardy and productive. We will grant them, for the sake of argument, that it is all they claim for it, *with them:* but we also *know here* that the Iona will not succeed; that it is subject *here* to every disease the grape is heir to; and we think that it will not afford us a great deal of satisfaction to grow a grape of very fine quality, when we can get only a few scattering berries of it to ripen, and the balance is swept away by rot, mildew, and sun-scald. Now let us look at the Concord. Its merits at the East and North are only that it is hardy and healthy everywhere, is showy, and a good market-fruit. Its pulp there is tough and acid, its flavor repugnant to many. No one would think of making a good wine out of it there. But, as it travels further West and South, it ripens more thoroughly, its acid pulp dissolves, our warmer sun develops more sugar in it, its flavor becomes more delicate, we make wine of it which can be justly called *very good*, and its yield is all that can be wished. Is it surprising, then, that it should become the "grape of the million," and that hundreds of acres are planted every year? Yet those who have tasted it only at the East turn up their noses in supreme contempt at the "uncultivated tastes of those Western people," and think, because *we* contend that the Concord is a *good* grape, and makes *good wine*, we are to be classed among the semi-barbarians, and do not know what a good grape is.

Now, this is all wrong; and the sooner we see it, the better. The sooner the eyes of the nation are opened to the plain fact, that grape growing, and the success or failure of certain varieties, depend upon the *locality* chosen, the more rapid will be our progress. Let us glance at the grape growing districts of Europe. The famous wine of Schloss Johannisberg, which stands without a rival among the Rhenish wines, is grown on but a very small area, and the product of vineyards scarcely a hundred yards distant is sold for less than one-third the price which the product of that celebrated vineyard will bring. The favored locations on the Rhine have acquired a world-wide fame, while those immediately adjoining are not heard of. And yet some of our grape-growers insist, that, in this country, one variety of grapes, which they have tried and are pleased with, should be the choice of the whole nation. Instead of an area of hardly a hundred miles over which grape growing in Germany extends, and on which several hundred varieties are cultivated, we have several thousand miles here; and yet we insist (or some of us do) that one grape should adapt itself to all these different locations, and succeed well everywhere. They ask impossibilities, and their just reward is disappointment and failure. It is time that we learned to discriminate; that we began to see that the success or failure of our vineyards depends upon a wise choice of varieties adapted to our locality, soil and climate. Eighteen years of close observation, devoted to grape growing, have but tended to make me more cautious every year in recommending any grape for *general cultivation*, until I do not feel quite sure in recommending any variety before the other, even to the nearest neighbor. If the idea were more generally entertained and followed, that each variety of grapes requires a peculiar soil and climate, we should also have more charity for the opinion of others whose experience in different localities may differ materially from our own.—*Geo. Husmann, in Am. Jour. of Hort.*

TULIPS AND HYACINTHS.—These bulbs should be taken up as soon as the leaves turn yellow, the offsetts removed and the bulbs put up in paper bags until quite late in the fall. The bulbs are then to be replanted. This treatment improves them considerably.



THE WALTER GRAPE.

THE WALTER GRAPE.

EDS. RURAL NEW YORKER:—This new grape is a seedling of the Delaware crossed with Diana, originated by A. J. CAYWOOD, at Modena, Ulster Co., N. Y., seven miles west of the Hudson. It was moved to Poughkeepsie, N. Y., in the spring of 1865, it then being five years old and having borne three times,—the main stem measuring one inch in diameter. The soil in which it first grew was about seven inches deep, underlaid with an almost impermeable mixture of blue clay and gravel. It now stands in a dry situation; soil, slatey loam, and is bearing the sixth time. The Walter was the only one of the twenty-seven vines raised from the crossed cluster that bore fruit, excepting one of the same lot standing near it, that four years ago bore two berries, but has never borne since. It much resembles the Delaware, as did all of them.

The Walter is so perfect a mixture of Delaware and Diana, that most of the leading horticulturists of the country have declared it was difficult to decide which it most resembles. In growth the vine surpasses the Diana, the wood appearing in every particular like an overgrown Delaware. Persons unacquainted with its leaf could not distinguish it from Delaware under glass. Outdoor it is more lobed, leaves large as the largest Concord, fleshy and leather-like, but a little darker green beneath and on the surface than its parent, the Delaware, and as free from down on the underside of the leaf as that variety. It has never yet shown mildew. In bunch and berry a medium between Delaware and Diana, some berries as large as those of the latter. The cluster in shape differs from Delaware very little if any. Not a particle of acid can be found in it. It is highly charged with sugar throughout the flesh, seeds small and from one to two in number. When the sugary substance which adheres to the skin is drawn off with the tongue, it is left as thin as that of the Delaware, and this also is generally eaten, as it is fully as rich as the skin of a raisin. They preserve readily if placed in any dry situation, in-doors or out. We now have a few raisins two years old. It is a great bearer and needs thinning. It ripens here by the 20th of August. We have had ripe berries of this kind as early as the 6th.

Now, Mr. Editor, as you see, I have said many good things for this grape, and know that I will be arraigned before the horticultural world if my statements are not true, but in view of this responsibility I will repeat what I may have said before,—that it has but one fault, viz: it is, like its parents, too compact in the cluster, notwithstanding the declaration in the November number of the Horticulturist that it was too loose. We did not intend to bring it before the public quite so soon, but have felt compelled to by the attack made by "Penn Yan" and others.

A. J. CAYWOOD.

Poughkeepsie, N. Y.

A FRUIT GATHERER.

ALTHOUGH it is hardly time yet to use fruit gatherers, it is well to be prepared when the time does come, as it will in a few weeks. The instrument here illustrated (Fig. 1,) is light and cheap, and free from all pulleys, strings and levers. It consists of a light pole, having a forked iron fastened to the end, and a small chain attached, near the fork, supporting a canvas bag, into which the fruit falls upon being detached by the fork. The mouth of the bag is held open by a light wooden hoop.

FIG. 1. FIG. 2.

Fig. 2 shows another form or modification of the same, the canvas bag being attached to the pole instead of being suspended.

A good ladder for picking fruit and for general purposes is made by sawing a tamarac pole in the direction of its length into two equal parts, which are separated the proper distance, holes bored through, and the rounds or steps put in. This makes a very light and strong ladder for any purpose.

M. H. COOPER.

FALL PLANTING OF ASPARAGUS.

WITHIN the past two years we have watched experiments made by several gentlemen on planting asparagus in August, and the result is a remarkable success.

The ground is prepared as for the crop at any other season, and after cutting off the green tops of the young seedlings the roots are set precisely as in spring planting. They push new roots at once, and make eyes so strong that even from one-year old seedlings some asparagus—but not, of course, very strong—has been cut the following spring, and where two-year old roots have been used, a full crop has been cut in the same time,—a result no one expects from spring planting.

In this region the plan has taken strong hold of gardeners, and asparagus planting is likely to take rank at once with the strawberry as a regular August operation.

It will, of course, be best in such cases to cover the beds, after they have once become frozen, with some kind of litter, not to keep out frost, but to prevent thawing and freezing until the natural spring season comes, or the plants may be thrown out.—*Gardeners' Monthly.*

Horticultural Notes and Queries.

NAME OF A PLANT.—Mrs. M. E. T., Canton, N. Y. The plant sent by you is familiarly known as "The Pitcher:" botanically—*Sarracenia purpurea.*

THE NEW SEEDLING STRAWBERRY, originated by ELLWANGER & BARRY, and heretofore noticed in the RURAL, has been named the *Nicanor*, and plants are now offered for sale as will be seen by an advertisement in this paper. A good illustration of this berry will be given in our next number.

SKELETONIZING LEAVES.—A correspondent asks us for information through the RURAL as to the best method of skeletonizing leaves. We cannot do justice to the subject or give satisfaction to the reader in the limits of an article. If one is especially interested we advise the purchase of the book entitled, "A Treatise on the Art of Producing Skeleton Leaves." It is for sale at the RURAL Office. Sent by mail; price, $1.50.

AMERICAN POMOLOGICAL MEETING.—The Farmer's Advertiser, St. Louis, reminds the public that the great meeting of American Pomologists at that place commences on the 11th of September. Those having fruits which they are desirous of exhibiting, but which are not likely to keep till that time should forward samples marked "Pomological Meeting"—Express charges paid—to MCKAY & HOOD, 712 South Third-street, who will place them in a preserving house till the time of the meeting.

THE IONA GRAPE.—A noted correspondent of an American Journal of Horticulture asserts that "the Iona grape was defoliated last summer in Dr. GRANT'S own grounds, where not grown under glass." We remember to have heard the Dr. assert, at a somewhat celebrated fruit fair last autumn, in the presence of many anxious seekers after the fruit of the potted vine, that "circumstances too painful to dwell upon had rendered him unable to make a show of its fruit." We wonder if the above gives the clue to those "painful" circumstances.

KEYES' EARLY PROLIFIC TOMATO.—When the seed of this tomato was sent out last spring it was with the statement that the variety was thirty days earlier than all others. With precisely the same treatment in all respects we have ripened it only four days earlier than the large early red—a variety common and well known. The Tilden is about ten days behind. The editor of the Horticulturist says the Keyes ripened one week *later* on his ground than Powell's Early, and thinks it resembles closely a kind he has grown before.

HAVE WE A "UNIVERSAL" GRAPE.—GEO. HUSMANN says, in an article on "American grape growing," published in the Journal of Horticulture, "We have *no* wine grape for the *whole country*, nor do I think it likely that we shall ever have one which will meet all the requirements in *every location throughout this vast territory.* * * * I am confident we have grapes already equal to the Riesling, Traminer, Burgundy, and Oporto, but we must not persist in forcing them upon an uncongenial soil and climate. Let us drop the "universal" Yankee when it comes to varieties; but let us make grape culture *universal* throughout the land by making experiments, and planting only such varieties as are suited to each locality."

Domestic Economy.

VARIOUS RECIPES—SELECTED.

TO BAKE TOMATOES.—Season them with salt and pepper; flour them over; put them in a deep plate with a little butter, and bake in a stove.

TO BROIL TOMATOES.—Wash and wipe the tomatoes, and put them on the gridiron over live coals, with the stem down. When that side is brown, turn them, and let them cook through. Put them on a hot dish, and send them quickly to the table, to be there seasoned to taste.

TOMATO SAUCE FRANCAISE.—Cut ten tomatoes into quarters, and put them into a saucepan with four onions sliced, a little parsley, thime, one clove, and a quarter of a pound of butter; set the saucepan on the fire, stirring occasionally for three-quarters of an hour; strain the sauce through a hair seive, and serve with beefsteak.

BLACK CURRANT VINEGAR.—Pour three pints of vinegar on five pounds of very ripe black currants, stir them twice a day for three days, then squeeze and strain off the juice, boil it ten minutes, add one pound of loaf sugar to every pint of juice, boil and drain it about 20 minutes longer, and bottle it when cold.

PRESERVING FRUIT WITHOUT SUGAR.—To preserve fruit in this way, for winter use, in a fresh state, put them up in bottles, fill them up with cold spring water, tie down with bladder tightly; put them in a kettle or copper of cold water up to the neck of the bottles, with hay to steady them; let them simmer for a quarter of an hour, but not boil; let them cool in the water; wipe the bottles, and put in a dry place. On no account open them till their contents are wanted for eating.

BLACKBERRY WINE.—There is no wine equal to the blackberry wine when properly made, either in flavor or for medical purposes, and al persons who can conveniently do so, should manufacture enough for their own use every year, as it is invaluable in sickness as a tonic, and nothing is a better remedy for bowel diseases. We therefore give the recipe for making it:—"Measure your berries and bruise them; to every gallon adding one quart of boiling water. Let the mixture stand 24 hours, stirring occasionally; then strain off the liquor into a cask, to every gallon adding two pounds of sugar; cork tight, and let stand till the following October, and you will have wine ready for use, without further straining or boiling. This makes a most excellent and palatable wine.

COOKIES.—3 cups of sugar; 3½ cups of cream; 1 cup of water; 3 eggs; 2 teaspoons of saleratus; salt and season to taste.

New Advertisements.

FRUIT AND ORNAMENTAL TREES.—A large stock for sale at the Niagara Nurseries. For Wholesale, Retail and Descriptive Catalogues address
917-3t E. MOODY & SONS, Lockport, N. Y.

GRAND RIVER NURSERIES,
Lowell, Kent Co., Michigan.
We offer for the Fall Trade:—60,000 Yearling Peach Trees; 75,000 Apple, one year from graft; 25,000 Apple, two year from graft; 1,000 Transcendent Crab, one year; 100,000 Budded Peach Stocks.
NOAH P. HUSTED, Lowell, Kent Co., Mich.

ELLWANGER & BARRY'S
SEEDLING STRAWBERRY
"NICANOR."
Having Fruited it for six years, we pronounce it a decided acquisition to the list of Market Strawberries. Plant very hardy and vigorous, surpassing in quantity of fruit, and hardiness of vine, any other variety we have ever tested. It commences to ripen a few days before the Early Scarlet, and continues on up to the latest, thus making it profitable at both ends of the season. Fruit from 1 to 1¼ inches in diameter, very regular and uniform in size, roundish conical, bright scarlet, and more firm and not so acid as the Wilson. Plants will be ready for delivery about the 15th of Sept., at $5 per dozen.
ELLWANGER & BARRY,
917-3t Mount Hope Nurseries, Rochester, N. Y.

STRAWBERRY PLANTS.
We offer the following
Select List of Strawberry Plants,
which will be ready to send out by September 1st:

Alpine, Red and White,	Longworth Prolific,
Agriculturist,	Russell's Seedling,
Buffalo Seedling,	Triomphe de Gand,
Early Scarlet,	Wilson's Albany,

at 50 Cents per Doz.; $2 per 100; $10 per 1,000.
ALSO,
A large collection of New and Foreign varieties including
Lenning's White, Durand's Seedling, Green Prolific, &c.,
At $1 per dozen. And a limited quantity of
"DR. NICAISE,"
THE LARGEST STRAWBERRY KNOWN,
AT $6 PER DOZEN.
All orders from unknown correspondents must be accompanied with the Cash.
ELLWANGER & BARRY,
917-3t Mount Hope Nurseries, Rochester, N. Y.

HUTCHINSON'S
Patent
CIDER AND
WINE MILL
with Press.
Grinds fine, fast and easy—large and small. Best Cast Cider Press Screws—fine thread, very stout and powerful.—Grinders and Presses separate.
Best & Cheapest
FEED CUTTERS.
GALE'S Copper Strip, all sizes and length of cut.

Send for Illustrated Circular to PEEKSKILL PLOW WORKS, Peekskill, N. Y.

SMALL FARM FOR SALE—Containing 13 acres, situated half a mile west of the Colleges at Geneva, N. Y. There is an excellent Gothic Dwelling, with nine rooms, besides kitchen and two bed-rooms. Good barn, stable and carriage house, and an Orchard of two acres, well watered by pipes from White Spring Farm. The land is thoroughly underdrained with tile, and as productive as any land in Western New York. The house is on elevated land, with a view of Seneca Lake and part of Geneva. Price for the whole $10,800, or the buildings with four acres, including the orchard, will be sold for $6,300. Apply to
917-6t JAMES THOM on the Farm.

10,000 CATAWISSA RASPBERRIES and HOUGHTON GOOSEBERRIES for sale. Send stamp for our Circular, showing the habits of this prolific Raspberry; which bears a crop in July, and another that is abundant in Sept. and Oct. Address CHAS. D. COPELAND, Agent, Genesee Nurseries, Lima, N. Y.

HYACYNTHS, TULIPS, &c., &c.—I shall receive from Holland about the 1st of Sept., a splendid lot of HYACINTHS, TULIPS, CROCUSES, LILIES, and all other Hardy Bulbs suitable for Autumn planting. Catalogues supplied free.
Address JAMES VICK, Rochester, N. Y.

J. KEECH'S NEW STRAWBERRIES.—Gen'ls Grant, Meade, Sherman and Sheridan. Plants by August 20th. $1 ₩ doz.; $3 for 50; $5 ₩ 100; $25 ₩ 1,000. [915-1t] J. KEECH, Waterloo, N. Y.

THE GREAT EUROPEAN STRAWBERRY
DR. NICAISE.
Strong plants ready for delivery by mail from August 15th. Read the Rural and send your orders early.
MARK D. WILLSON, No. 195 North St., Rochester, N. Y.

FRUIT PICKER.—RICHARDS & LINCOLN'S FRUIT PICKER. Will pick all kinds of fruit, and *deliver it in the basket* with great rapidity, as perfect as when hanging on the tree. No climbing to be done, nor ladders needed. Weighs 3¼ lbs. Single machines sent by express for $3.00. Special inducements to agents. Address L. RICHARDS, Patentee and Proprietor, Varysburg, Wyoming Co., N. Y.

THE GREAT
EUROPEAN STRAWBERRY

DR. NICAISE!
Said to be the LARGEST BERRY known, plants are hardy, vigorous growers, and productive. Fruit of this variety from plants set in September last was exhibited at the Western New York Fruit Growers' Convention held in Rochester on the 27th of last June, which weighed 1¾ ounces and measured 6¾ inches in circumference.
This variety we have imported at a great expense, and will have a fine stock to offer our customers in August and September.
The following are extracts from European Catalogues: "*It is of enormous size, the berries weighing over 1¾ ounces, (nine to the pound,) and early, of a bright red color, very glossy, the flesh white, and of fine quality.*"
This sort has the best characteristics of any we have ever introduced. Orders must be sent in EARLY, as they will only be filled in rotation. ☞ We will furnish plants postage paid, at the following rates:—$1 ₩ plant; $10 ₩ dozen; $75 ₩ 100. Address FROST & CO.,
914-4t *Genesee Valley Nurseries, Rochester, N. Y.*

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.
W. H. MANN & BRO., Normal, Ills.
P. S.—Agents Wanted. 911-13t

1858. H. P. BALLARD & CO. 1867.
THE WELL-ESTABLISHED STRICTLY

No. 32 WASHINGTON ST., NEW YORK.
☞ Reference—North River Bank, New York. ☜
Have unequalled facilities for disposing of Wool, Hops, Leaf Tobacco and Highwines, direct to manufacturers. Strict attention given to Butter, Cheese, Pork, Beef, Flour, Grain, Beans, Peas, Dried and Green Fruits, Seeds, Eggs, &c., &c. ☞ Consignment Solicited.

Ladies' Department.

A MORN OF MAY.

FROM A NEW VOLUME BY JEAN INGELOW.

All the clouds about the sun lay up in golden creases,
(Merry rings the maiden's voice that sings at dawn of day;)
Lambkins woke and skipped around to dry their dewy fleeces,
So sweetly as she caroled, all on a morn of May.

Quoth the Sergeant, "Here I'll halt; here's wine of joy for drinking;
To my heart she sets her hand, and in the strings doth play;
All among the daffodils, and fairer to my thinking,
And fresh as milk and roses, she sits this morn of May."

Quoth the Sergeant, "Work is work, but any ye might make me,
If I worked for you, dear lass, I'd count my holiday.
I'm your slave for good and all, an' if ye will but take me,
So sweetly as ye carol upon this morn of May."

"Medals count for worth," quoth she, "and scars are worn for honor;
But a slave an' if ye be, kind wooer, go your way."
All the nodding daffodils woke up and laughed upon her.
O! sweetly did she carol, all on that morn of May.

Gladsome leaves upon the bough, they fluttered fast and faster,
Fretting brook, till he would speak, did chide the full delay:
Beauty! when I said a slave, *I* think I meant a master;
So sweetly as ye carol all on this morn of May.

"Lass, I love you! Love is strong, and some men's hearts are tender."
Far she sought o'er wood and wold but found not aught to say;
Mounting lark nor mantling cloud would any counsel render,
Though sweetly she had caroled upon that morn of May.

Shy, she sought the wooer's face, and deemed the wooing mended;
Proper man he was, good sooth, and one would have his way;
So the lass was made a wife, and so the song was ended.
O! sweetly she did carol all on that morn of May.

LITTLE THINGS.

Look over the fair page that follows this leading article. Whatever may be your judgment, good reader, of its intellectual or moral value, it is surely attractive to the eye. And why? "Well printed and in good taste," you will say. True, but the secret of this excellent printing is *care of little things*. Of all these thousands of letters each type was picked up by ready and skillful fingers and put in just the right place, and after that the articles were read over twice, in "proof," to make all sure. Possibly there may still be a mistake or two, but very few if any. Suppose this care had been neglected, the beauty of the page would be gone; misplaced letters, misspelled words, sentences bungled, and all ajar, making "confusion worse confounded." "But what of all this?" you may ask. "We are not printers. What *are* you coming to?" Patience, gentle readers. (Readers are always *called* gentle, good, fair, &c. That's a writer's license, and a privileged mode of appeal to that corner in every soul that *is* gentle and fair.)

Shakspeare says there are

"Sermons in stones, books in the running brooks,
Teachers in trees, and good in everything."

And our lesson is that this page is much like life, *made up of little things;* little yet important, for there is no symmetry of life, no harmony of thought, no ease of action unless they be well done.

We once knew a bright little colored boy in a family down east, and the Miss Ophelias of the household took him in special charge as a pupil. The alphabet was mastered rapidly, words short and then long were grappled and conquered, and the dark face shone with proud delight as reading was tried and triumphed in. Primers, books, the family Bible, newspapers, were eagerly sought and explored, for the quick wit took in not only sound but sense. So long as he stood beside his teachers and read under their eye, every word was faithfully rendered, but when he began on his own account queer pranks came out. The precise ladies soon found that Jack would not pronounce a word of less than two syllables, sliding past the *ifs* and *buts* in silent contempt, and making nonsense of the gravest sense. They remonstrated, and his bright eyes flashed as the answer came, ready and exultant:—"Little dum things, dey ain't wuff mindin!" Yet he had just as much sense and judgment as many bigger and whiter folks show in their actions, which "speak louder than words," as the old adage well says.

A woman's life is largely made up of these small matters. A well-managed household is the crowning result of constant care in preparing the many meals, of thoughtful attention to rooms, and fires, and cool shade, and the thousand affairs that clamor for hourly attention. The tasteful parlor, with its nice adaptations of color, style, and place, in carpet, furniture, pictures and ornaments, all combining so pleasantly, is possible only by taste and diligence in these delicate *minutiæ*. But some *gentle* reader, waxing warm with righteous indignation, may demand:—"Shall not men, too, attend to the little things? Shall women be condemned to petty cares and vexations alone?" Of course men *must* and *do*, when they are of any consequence or real worth in the world, and if they are careless, as some are, in these small matters, they fret themselves and plague everybody about them miserably. A steamboat, or a great factory, runs smoothly only as all is right, from least to greatest, and if the manager cannot, and does not, do all himself, he knows how to put men and women in places where all can and will be done. So an ample household cannot be managed, or a large house kept in order, by any one pair of hands, however busily efficient, but the central and guiding power can see that other hands reach every corner and finish every slightest task, that order, comfort and grace may rule.

Woman is the artist in life, puts on the fine, finishing touches, and this high work of hers is not duly appreciated. As to her "sphere," a true woman can safely judge, and whatever her heart and hand may be equal to, that is her work, in which no high-minded *man* would molest her. But, go where she will, her artist-soul goes with her, and she puts finer aspects on the work she does and reveals new beauties therein. Men tend to over-rate the ruder work they do, and to under-rate the more delicate tasks of women, which yet fling the halo of a spiritual life over the realms they reach. Slowly but surely shall we understand each other better, and prize each other the more. It is not alone in work of the hand, but still more in manner, language, tone of voice and all fine proprieties and graces that the thoughtful and cultured soul is revealed, blessing all by its presence.

As the painter stands before the canvas, putting the last finish to his picture, how delicate his touch! At a ruder stage the brush might turn awry with little damage easily repaired, but now every stroke must be subtly accurate. The block of marble may be hewn from its bed by rude hands, and shaped to some proportion for the statue by common workmen, but, as it draws toward completion the slightest tremor of a firm hand mars all, and the nice touches that complete and beautify the work are *little things*.

LETTER OF A TRUE AND LOVING WIFE.

A neat pamphlet with addresses by Hons. Schuyler Colfax, Richard Yates, Wm. E. Dodge, Henry Wilson, J. B. Grinnell, Sam'l McKee, Hiram Price, F. E. Woodbridge and J. W. Patterson, at the first meeting of the Congressional Temperance Society, in the Capitol, Washington, D. C., Feb. 17, with a list of members, is published by S. R. Wells, New York.

Richard Yates of Illinois in his brief word, full of emotion and manly resolve, read a note from Mrs. Yates, full of the heartfelt interest of a noble woman's soul. He said:

"After I signed this pledge, I wrote to a little lady out in Illinois, who weighs about a hundred pounds, has black hair and flashing black eyes, and a form fairer than Grecian chisel ever woke from Parian marble, and I received the following answer:

"*My Dear Richard:*—How beautiful is this morning! how bright the sun shines! how sweetly our birds sing! how joyous the children! how happy is my heart! I see the smile of God. He has answered the prayer. Always proud of your success, you have now achieved that success which God and angels will bless. It is the shining summit of human aspiration, for you have conquered yourself. All who love you will aid you to keep the pledge. I love you, my dear boy! Katie."

OUR SPICE BOX.

Scolding, says a good-for-nothing old bachelor, is the pepper of matrimony, and the ladies are the pepper-boxes.

"Steel your heart," said a considerate father to his son, "for you are now going among some fascinating girls." "I had much rather steal theirs," said the unpromising young man.

A chap out west, who had been severely afflicted with palpitation of the heart, says he found instant relief by the application of another palpitating heart to the part affected.

Mrs. Rugg, a widow, having taken Sir Charles Price for a second husband, and being asked by a friend how she liked the change, replied: "Oh, I have got rid of my old Rugg for a good Price."

"It is very difficult to live," said a widow with seven girls, all in genteel poverty. "You must husband your time," said a sage friend. "I'd rather husband some of my daughters," answered the poor lady.

A certain cockney, overcome by his sensibilities, fainted at the grave of his fourth spouse. "What shall we do with him?" asked a perplexed friend of his. "Let him alone," said a waggish bystander, "he'll soon revive."

A pretty little Jewish prima donna of Brussels was courted by a young lawyer, and finally married him, in consideration of his embracing the Jewish persuasion. Such persuasion as she offered he was only too willing to embrace.

Miss Buchanan, once rallying her cousin, an officer, on his courage, said:—"Now, Mr. Harry, do you really mean to tell me you walk up to a cannon's mouth without fear?" "Yes," was the prompt reply, "or Buchanan's either." And he did.

I say, Jones, how is it that your wife dresses so magnificently, and you always appear out at your elbows?" Jones, (impressively and significantly,) "You see, Thompson, my wife dresses according to the *Gazette of Fashion*, and I dress according to my Ledger."

A little girl, just past her fifth year, while chatting about the beaux that visited two of the sex in the same house, of more mature age, being asked, "What do you mean by beaux, Annie?" replied, "Why, I mean men that have not got much sense."

A gentleman was describing to Douglas Jerrold the story of his courtship and marriage—how his wife had been brought up in a convent, and was on the point of taking the veil, when his presence burst upon her enraptured sight, and she accepted him as her husband. Jerrold listened to the end of the story, and then quietly remarked, "She simply thought you better than *nun*."

Choice Miscellany.

THE WESTERN EMIGRANT.

BY J. NEGUS.

Far onward toward the setting sun,
We're bound upon our way,
Not till the lingering day is done,
Our toilsome march we stay.

We're traveling on—a pilgrim band,—
Another home to find,
Remote from that dear native land,
We now have left behind.

The clime we seek is rich and fair,
As blessed isles of yore;
And lovelier prospects open there
Than e'er were seen before.

Vast plains, spread out on every side,
Stretch to the sloping skies;
Broad rivers roll in tranquil pride,
And towering forests rise.

There smiling uplands catch the beams,
Of pearly morn serene;
Gay verdant meadows fringe the streams,
That silvery roll between.

Of every hue and sweet perfume,
Wild flowers luxuriant spring;
While birds of varied note and plume,
Mid bowers of nature sing.

But cherished home! 'tis painful still,
To quit the much-loved shore;
For fears our sorrowing bosoms fill,
We ne'er may see thee more.

Yet thy grand hills and sunny vales,
Those scenes of childhood all,
How oft, till recollection fails,
Fond memory shall recall.

For there are faithful friends endeared
By nature's tenderest ties;
Whose cordial smiles so oft have cheered
Life's burdening miseries.

Comrades whom first in youth we knew,
In that bright region dwell;
Friends whom we proved in perils true;
We bid them all farewell.

Yet sweet the hope, when we reflect
That in that distant land,
Our Father, who did us protect,
Still shields us with his hand.

Then onward to the distant west,
Our journey soon will close;
There shall we seek a place of rest,
And from our toils repose.

Springdale, Iowa, July 23, 1867.

DIRT.

"If we look upon the ground we shall certainly find dirt."

A quaint adage is it not? but how true in its general import and meaning. Just so surely as we *do* look on the ground do we find *dirt*. As a general rule it is covered by the fresh green of the grass. "But what of that?" The *dirt* some will see nevertheless. If we look again perhaps we may see the blue sky, floating clouds, all the beauties of hill, field and wood;—as we look and feel so shall we find. If we look on the character of an individual—stranger or friend—for glaring inconsistencies—for petty faults or large ones—for sins of mind and body—look for the evil in that person—so surely shall we find, for none are perfect. If we look for evil and find, what is our reward? Are we happier for it? We may find much good in that same person, if we will only look. Some—to their shame be it said—seem to be happier if they can speak evil of another. Of all on the earth the slanderer is the worst, and also the most contemptible and groveling of beings. Respect for themselves or others they cannot have, so when they chance to be together what a shriveling of character there is. None are good—all are evil as themselves. They look on the ground and find all *dirt*—no green grass or way-side flower.

They cannot say, like that noble Roman, "I am human, and thus all that is human touches me." *They* do not *feel* thus, therefore all humanity shrinks from them, because they see no good in humanity. There is beauty and goodness in this world, if we will only take the trouble to find it. There *is* purity and truth in every one's character, and the tide of "small talk" can easily be turned by one kind word for the seemingly characterless one. Why not speak it? 'Twill help, not harm you. There *is* a "well-spring" of kindness even in "They Says" heart, although crusted over by the scum and filth of so much small talk. Can we not try to reach it, by uttering kindly words for all poor mortals who come under the ban of her displeasure. Many a poor being has been kept from the depths of despair by a "word fitly spoken. Again we ask, Why not utter it? Why look on dirt when there are patches of blue sky for our eyes to rest upon? S. J. C.

Le Roy, July, 1867.

Is there Too Much Joking?—Old Thomas Fuller tells us of writers and speakers in his day, two hundred years ago, who carefully cultivated solemnity of manner, and "for fear their orations should giggle, will not let them smile." Dr. Thomas Brown, of our day, intimates that writers are wanting in seriousness. He says:—"It is too much the way with all of us now-a-days to be forever joking." The Christian Register remarks:—"It is said that the drawing up of the Declaration of Independence would have been committed to Benjamin Franklin if it had not been feared that he would 'put a joke into it.'" Nothing less than the martyrdom of Abraham Lincoln could have saved his memory in certain quarters from the taint of levity unbecoming his high position."

Amos Lawrence said, when asked for advice: "Young man, base all your actions upon a principle; preserve your integrity of character, and in doing this never reckon the cost."

AN ORIENTAL NIGHT.

It is impossible for those who have never visited the glowing East to form an adequate idea of the exceeding beauty of an Oriental night. The sky—which bends enamored over clusters of graceful palm trees fringing some slow-moving stream, or groves of dark, motionless cypresses rising up like Gothic spires from the midst of white, flat-roofed villages—is of the deepest, darkest purple, unstained by the faintest film of vapor, undimmed by a single fleecy cloud. It is the very image of purity and peace, idealizing the dull earth with its beauty, elevating sense into the sphere of soul, and suggesting thoughts and yearnings too tender and ethereal to be invested with human language. Through its transparent depths the eye wanders dreamily upward until it loses itself on the threshold of other worlds. Over the dark mountain ranges, the lonely moon walks in brightness, clothing the landscape with the pale glories of a mimic day; while the zodiacal light, far more distinct and vivid than it is ever seen in this country, diffuses a mild pyramidal radiance above the horizon, like the after-glow of sunset. Constellations, tremulous with excess of brightness, sparkle in the heavens, associated with classical myths and legends which are a mental inheritance to every educated man from his earliest years. There the ship Argo sails over the trackless upper ocean in search of the golden fleece of Colchis; there Perseus, returning from the conquest of the Gorgons, holds in his hand the terrible head of Medusa; there the virgin Andromeda, chained naked to the rock, awaits in agony the approach of the devouring monster; there the luxuriant yellow hair of Bereniee hangs suspended as a votive offering to Venus; while the dim misty track formed by the milk that dropped from Juno's breast, and which, as it fell upon the earth, changed the lilies from purple to a snowy whiteness, extends across the heavens, like the ghost of a rainbow. Conspicuous among them all, far up towards the zenith, old Orion, with his blazing belt, meets the admiring eye, suggestive of gentle memories and kind thoughts of home; while immediately beyond is seen the familiar cluster of the Pleiades, or Seven Stars, glittering and quivering with radiance in the amethystine ether, like a breastplate of jewels—the Urim and Thummim of the Eternal.

FIGHT YOUR WAY UP.

The many, who have taken the world rough and tumble are prone to envy those who roll through it in enshloned vehicles and on patent springs. The toiler, as he stumbles through its thorny thickets, and climbs over its foot-blistered gravel, is apt to curse the luck that placed him on such a hard road, and to sigh for a seat in one of the splendid equipages that slide so smoothly over fortune's macadamized turnpike. Born with a pewter spoon in his mouth, he covets the silver one which is the birth-gift of his do-nothing neighbor. The more fool he. Occupation is the "immediate jewel" of life. It is true that riches are no bar to exertion. Quite the reverse when their uses are properly understood. But the discontented worker, without being willing to work for it, regards the idleness in which it would enable him to live as the acme of temporal happiness. He has no idea of money as a great motive to be applied to enterprises which give healthful employment to mind and body. All that he desires is to live a feather-bed life—to loaf luxuriously.

We have no sympathy with such sensuous longings. People who indulge in them never acquire wealth. They lack energy to break their way to the wordly independence for which they yearn and whine. They do not know how much more glorious it is to tear affluence from opposing fate by main strength of will and inflexibility of purpose than to receive it as a windfall. There is infinitely more satisfaction in conquering a fortune with brain and muscle than was ever experienced by a "lucky heir" in obtaining a golden store that some thriftier hand had accumulated. Your accidental Croesus knows nothing of the pride of success—of earnest exultation with which the self-made man looks back upon the impediments he has overcome, and forward into the far future which he has earned a right to enjoy.

Proverbs.—A thousand probabilities will not make one truth. A hand-saw is a good thing, but not to shave with. Gentility, without ability, is worse than beggary. A man may talk like a wise man, and act like a fool. If we would succeed in anything, we must use the proper means. A liar should have a good memory. Charity begins at home but does not end there. An ounce of mother wit is worth a pound of learning. Short reckonings make long friends. Custom is the plague of wise men, and the idol of fools. Every one knows best where his own shoe pinches. A faint heart never won a fair lady.

Cheerfulness.—Persons subject to low spirits should make the rooms in which they live as cheerful as possible, taking care that the paper with which the wall is covered should be of a brilliant, lively color, hanging up pictures or prints, and covering the chimney-piece with beautiful china; a bay window, looking upon pleasant objects, and, above all, a large fire whenever the weather will permit, are favorable to good spirits: and the tables near should be strewed with books and pamphlets.

Lord Bacon beautifully said:—"If a man be gracious unto strangers, it shows he is a citizen of the world, and his heart is no island cut off from other lands, but a continent that joins them."

He that sedulously attends, pointedly asks, calmly speaks, coolly answers, and ceases when he has no more to say, is in possession of some of the best requisites in man.—*Lavater.*

Sabbath Reading.

"MARY STOOD THE CROSS BESIDE."

Jews were wrought to cruel madness,
Christians fled, in fear and sadness,
Mary stood the cross beside.
At its foot her feet she planted,
By the dreadful scene undaunted,
'Till the gentle sufferer died.

Poets oft have sung her story.
Pictures decked her brow with glory.
Priests her name have deified.
But no worship, song or glory,
Touches like that simple story.—
"Mary stood the cross beside."

And when under fierce oppression
Goodness suffers like transgression,
Christ again is crucified.
But, if love be there, true-hearted,
By no grief or terror parted,
Mary stands the cross beside.

Written for Moore's Rural New-Yorker.

WEEDS.

Yes, weeds, weeds everywhere, unless the husbandman is ever on the alert. Noiseless, active, thriving weeds, thrusting their unwelcome presence about the lately hoed currant bushes, between the rows of cabbages, peeping up among the flowers, everywhere that an unoccupied spot of earth is found they may be seen. Constant vigilance is required to keep them uprooted. Let the hoe and spade lie unused a few days and they take entire possession. Every inch of ground that man keeps for the growth of necessaries or flowers, has to be fought for most valiantly.

There is an obvious and oft-repeated moral connected with the weeds, which thus force themselves into our gardens and fields. The virtues which go to make up a good and noble life are likened to the useful plants, while the weeds represent the fallings into which poor human nature so easily falls, even with the best intentions. How easily we glide into the habit of back-biting. How hard to keep from growing worldly and selfish. How easy to become ungrateful to the Giver of all Good. What watchful spiritual eyes, and prayerful hearts, it needs to keep the soul free from such noxious weeds, and who is there that more than partially succeeds? yet it is good to take the lessons of nature to heart, for their effects are like the genial showers upon the thirsty earth, to freshen and quicken the growth of all that is good.

Elkhorn, Wis., 1867. B. C. D.

DEVELOPED HIMSELF.

If a young minister wishes to work for Christ he will find enough labor in any field to task his powers of mind and heart. But if one thinks of improving self, more than of winning souls to Christ, he is likely soon to loose both earnestness and power. Dr. Brainard tells this story:

We once introduced a young minister to a missionary congregation in the suburbs of a great city. The people were highly pleased with him, and invited him to settle among them. He came to consult me on the subject. As he was an unmarried man he regarded the salary as adequate. He had no fault to find with the number, the attendance, the attention and interest of the occasion. I urged him to give an affirmative answer. He hesitated.

"I am afraid," said he, "it is not the place for me to develop myself," alluding to the plainness of the people. I replied—

"It is an excellent place to develop the Gospel of the Lord Jesus Christ—but I know not whether it is the place for you to develop yourself."

He left the field, and has since "developed himself" by giving up the ministry. "He that exalteth himself shall be abased."

The little congregation, under the labors of better and purer men, has also "developed" itself into one of the most numerous, intelligent, affluent churches in the land. Are there not other young ministers corroding in idleness, rejecting difficult fields, and waiting for places to "develop themselves?"

CAST AWAY IDOLS.

During the progress of his recent labor in Jewett City, in Connecticut, Rev. J. D. Potter took occasion one afternoon to speak of the use of tobacco, in impairing Christian influence. At the commencement of the evening service, Dr. —— rose and said, "I owe my hope in Christ, under God, to Mr. Potter. I am satisfied my smoking injures my Christian influence. Here is my idol—(holding his pipe at arm's length)—I throw it away." Suiting the action to the word, he threw it near Mr. Potter's feet. "You may crush it," and the crackling was music in some ears. The next night a German, who was hopefully converted in the revival of 1858, rose, and in broken English, said, "when the Doctor threw away his pipe last night, it struck me flat in the face. My idol was in my pocket before. I got to the bridge, I threw away my tobacco; this morning I found my pipes and smashed them. I am determined not to chew or smoke any more while I am a living man. I keep my promise if I die."—*Boston Congregationalist.*

Beautiful Thoughts.—The same God who moulded the sun and kindled the stars, watches the flight of the insect. He who balances the clouds and hung the earth upon nothing notices the fall of the sparrow. He who gave Saturn his rings and placed the moon like a ball of silver in the broad arch of heaven, gives the rose leaf its delicate tint, and made the distant sun to nourish the violet. And the same Being notices the praises of the cherubim and the prayers of the little children.

Various Topics.

INDUSTRIAL INTERESTS.

At the late Anniversary exercises of the Chicago Theological Seminary, among the addresses was one by Rev. J. B. Norton of Janesville, Wis., which was listened to by a large audience with marked attention. His subject, somewhat novel for such an occasion, was "The Industrial Interests of the United States," and comprehended the duty of the Christian minister to seek for and aid in the development of the material prosperity of the country, as well as the moral and religious cultivation of the people—one being dependent to a great extent upon the other. We give some extracts:

"In addressing the Alumni of this Seminary, I realize that I am speaking to those who live in a section of our country unsurpassed by any other for natural resources of wealth, and among a people young, vigorous, and enterprising, embodying perhaps more working power than any equal number on the face of the globe. And while I do not forget that I am speaking to ministers of a spiritual Gospel, I remember that our souls dwell in bodies which have vital and manifold relations to this material world.

* * * * * * * *

"Next in importance to the subject of the soul's eternal salvation, and closely allied to it, stands this great question of labor. How shall we best develop the vast latent resources of nature and cause them to minister the utmost to the material and spiritual interests of mankind? How shall labor—at once the most perishable and the most valuable of all commodities—be freed from those unjust restrictions which have wasted, defrauded, enslaved it in every age, and take the position of the highest honor and reward which God assigned it?

"The subject is one which has never received the attention either of our legislators or scholars which its importance demands. We do not think enough about the laboring classes. * * Unfortunately for them, the great cities whence emanate the most influential of our newspapers, are centers of trade and politics, rather than of productive industry, and hence, in part, the undue importance given to trade over production.

* * * * * * * *

"As we look at the nations of the earth, we find that they may readily be divided into *two* classes—those who *diversify* pursuits, and those who are chiefly occupied in the *one* work of tilling the soil. As examples of the first class may be mentioned England, France, and Germany, and of the latter, India, Turkey, and the South American States. The simple recital of their names reminds us that the one class stand forth pre-eminent for wealth, power, and influence, and, though often styled manufacturing nations, it is in them the soil yields the richest returns to the husbandman, and there alone that agriculture, the highest of all sciences, attains any perfection worthy of note, while the other class, too poor even to furnish the ships which shall carry away their products, are little more than the bond-servants of the former. They enjoy few of the blessings which wealth, freedom, and Christianity afford, and though styled agricultural nations, they are the only ones which the destroying angel of Famine is wont to visit. Looking to our own nation we find it susceptible of like division. Northeastern States develop agriculture and manufactures side by side, and, as a natural result, control the commerce of the Union, while the South and West have thus far been chiefly engaged in agriculture alone. We have compelled our products in crude and bulky form to make long and expensive journeys to find the manufacturers, and then have brought them back again, generously paying not only for the manufacture of the same, but for the double transportation. Just in proportion as we release a people from this unnatural burden, diversify employments, and bring the producer and consumer nearer together, does man increase his power over nature, and do the masses rise to a higher plane of wealth and freedom; and so, on the contrary, in proportion as the men who till the soil are separated from those who work in the mine and the factory, do the traders and middle-men gain in wealth, while the masses tend toward slavery.

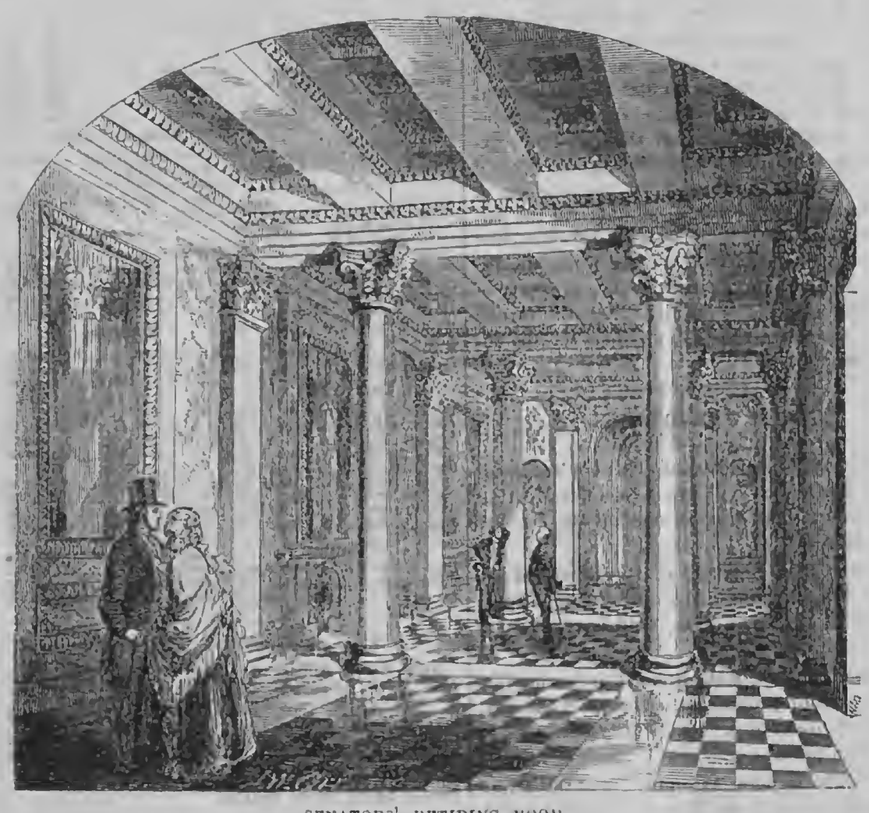
* * * * * * * *

It is plain that God never intended a whole nation or any large part of a nation, to confine themselves to a single pursuit,—for He has endowed mankind with tastes and capacities scarcely less varied than their complexion and feature. * * * We see the laboring classes of the Northwest gathered together in primary meetings to seek relief from railway extortions. The farmers take little pains to secure a nearer market, and are thus at the mercy of a few citizens and corporations who control the carrying trade.

Our British cousins like to flatter our vanity, while they find a market for their wares, by telling us that the Mississippi valley is the great granary of the world.

"Let us see how much of our wheat Great Britain proposes to take in exchange for her wares. With an area less than two of our wheat-growing States—Iowa and Minnesota—and with a climate unsuited to this crop, she has raised the average yield to 25 and 30 bushels to the acre, and now produces 128,000,000 bushels a year, so that she only needs to look abroad for 50,000,000 of bushels. In 1860, while she increased her exports to the United States, she called on us for the insignificant amount of only three per cent. of the wheat and five per cent. of flour she imported. * * * While our exclusively agricultural policy exhausts our lands, and makes our railroads little more than open veins for carrying away the life-blood of the nation, the manufactures of England furnish so valuable a home market to the farmer that he can afford to ransack all Europe for bones with which to dress his fields.

SCENES IN THE CAPITOL, WASHINGTON, D. C.



SENATORS' RETIRING ROOM.

The Retiring-Room of the Senate, sometimes called "the marble room;" is on the north side of the north wing of the Capitol, on the same floor with the Senate chamber, and only the ample passage-way between. It is 38 feet long, 21½ feet wide, and 19½ feet high. The flat ceiling is recessed, and of pure white Italian marble, as are the Corinthian columns, and pilasters that support it, with their exquisitely carved capitals. The walls are of finely polished variegated Tennessee marble, with spaces for mirrors between the windows. At either end are ample mirrors, and the effect of the whole is peculiar and beautiful. The Vice-Presidents' room, near by, is also very beautiful.

The painting in the Rotunda, by Powell, may be historically criticised—for when the Spaniards first saw the "Father of Waters" they were weary, soiled by travel, and only kept to their work by the indomitable courage of their leader, whereas, in the picture, they are in fresh garb as for some holiday at home; but execution, coloring, and landscape are excellent, and the great picture is worth seeing.

DISCOVERY OF THE MISSISSIPPI BY DE SOTO.

A RUSSIAN INCIDENT.

A young Russian recently had the misfortune, while promenading the streets of St. Petersburg, to step upon a lady's dress which was trailing before him upon the walk. The woman turned, and, in language more striking than elegant, applied the terms "clumsy," "loutish," to the young man. The latter preserved his politeness, and sought, as best he could, to appease her wrath, but in vain. The beautiful amazon waxed more and more angry, and applied such epithets, that he felt at last obliged to reply, in her own language, and remarked that if animals persist in dragging their tails upon the ground, they must expect to have them trodden upon. This inflamed the woman to such an extent that she demanded the way to the justice court, and compelled the unwilling criminal to accompany her. Once there, she demanded one hundred roubles for the injury done to her dress. It was observed, however, that fifty roubles would cover the original cost, and this amount the young man was sentenced to pay. The woman was walking off in triumph, when doubtless a remembrance of Portia and Shylock flitted across the young man's mind, and he said "wait a moment, young lady; you have my fifty roubles in payment for your dress, but the article itself you have not delivered. Will you have the goodness to hand over one part or the other of my property?" Blushes of shame now overspread the countenance of the female Shylock, and she turned again to the justice for advice. There was no help for her there; the young man's claim was good, and the money or the dress belonged to him. With a courage worthy of a better cause the woman sent for a hackney coach, went into an adjoining room, removed her dress and again attempted to leave, amid the shouts of the spectators. But her opponent was remorseless. He now indicted her on the charge of foul and abusive language on the street; the facts were proved by witnesses, and the unhappy and mortified creature was sentenced to pay a fine of one hundred roubles. She gave back the fifty lately received in triumph, and all the money and valuables which she had with her, withholding only enough to pay her coach-fare home.

The Advice of a Philosopher.—It is reported that the late Victor Cousin, just before he died, gave the following advice to the son of a friend, who was just entering upon life:—"You are young and inexperienced; take my advice—earn money and save it. If you do not you will prepare for yourself a dishonored old age, and when your hair is gray and your faculties fail, you will have no alternative but a hospital or the Senate!"

THE VICEROY OF EGYPT.

The Pall Mall Gazette says: "On Sunday last London society gave the Viceroy of Egypt a bitter taste of its quality. Everybody knows that, although it is wrong for the lower classes of London to go anywhere but to church on Sundays, or to wish to drink anything but water, the upper classes of the metropolis may with perfect propriety amuse and refresh themselves innocently at Richmond, Greenwich, Maidenhead, or in the Regent's Park, as much as they please. Consequently the approaches to the Zoological Gardens are crowded on Sunday afternoons with hundreds of private carriages, conveying to the gardens the wealth, beauty and fashion of London, fearfully and wonderfully attired. In a rash moment the Viceroy of Egypt was tempted by his cicerone to repair thither too; and as soon as his Highness was known to be in the gardens a commotion ensued much such as might have been expected had the lions escaped from their cages or the cobra capellas got loose. The unhappy Egyptian was mobbed, hustled and hunted up one walk and down another, until with difficulty he extricated himself by a somewhat undignified flight, and regained his carriage scared and breathless."

Salt Lake City is thus described by a correspondent:—"This singular town covers an area of about nine square miles, that is, three miles each way. It is one of the most beautifully laid out cities in the world. The streets are very wide, with water running through nearly every one of them. Every block is surrounded with beautiful shade trees, and almost every house has its neat little orchard of apple, peach, apricot and cherry trees. In fact, the whole nine square miles is almost one continuous orchard."

Queer Way of Voting.—At the recent election at Prague, a speaker, in proposing the candidate of the Bohemian Central Committee, concluded as follows:—"Now every one of you take a blank ballot and a shilling. Those who are in favor of B. will put their ballots in the box; those who are opposed, will put in the shilling." Result—unanimous election of B.

What shall be Done with Them?—In New York city they are trying to measure the terrible fact that there are 30,000 children of fit age who never are seen in any of the public schools,—the children of the poor, often of the degraded, who will grow up, if uneducated and uncared for, to recruit the "dangerous classes" in society.

Useful, Scientific, &c.

ANTICIPATED INSANITY.

An incident, singular yet full of warning, took place in Boston not long since, which a correspondent of the Chicago Tribune describes:

"I hear in private conversation a story of a curious instance of insanity, remarkable as showing the tendencies of our hard-working American life, and the possibility of foreseeing the coming of madness. A gentleman doing a large business in Lynn has for some time been greatly harrassed by business complications, which almost drove him to distraction. At last he took an account of stock, and decided to retire. All the details of his business were attented to and closed up with the most sedulous care; and when at last all was complete, the gentleman went calmly to the Insane Asylum at Somerville, and presented himself at its door in the character of a patient, saying he had staved off insanity as long as he could. In less than an hour he was a raving maniac, and the extreme expedient of a straight jacket had to be resorted to, to prevent him from committing the most violent acts of madness."

What taint of blood, what inherited tendency, or what load of business troubles brought this sad result we know not, but it is only a culmination of the tendencies of our life, not alone among business men, but professional men, students, editors, farmers—everywhere in short. An intense and ceaseless activity is the growing habit, to be arrested possibly only as its fearful results startle us by such lessons as this. We are not disposed to moralize with inane gravity on the evils of wealth,—for lands, mines, railroads and other solid acquisitions are not evil, but good, and their management is a part of the legitimate work of a man's life. So of official, or literary, or professional, influence and position. All are well, honorably sought, wisely used, and viewed as means of human growth, and enjoyment, and usefulness.

But we respectfully submit to all who can stop to think, whether it *pays* a man to work hard, drive constantly, hardly sleep nights, and never stop days, until, at fifty years old, he finds he has five hundred acres of land in fine order, house, barns, &c., and a body broken down, a brain racked and numb, a soul hardly developed, social affections dwarfed, and the power to enjoy his acquisitions well nigh gone. Is it profit, in any broad sense, for merchant, or lawyer, or writer, to keep the brain in constant tension, until he becomes a multiplication table, or a machine for John Doe *vs.* Richard Roe to play on, or a bundle of facts and fancies, labeled nicely for instant use?

We once heard a gifted woman, in narrow circumstances, say:—"My friends must come to me for what I *am*, not for what I have." It would be wise to stop and think of the wealth *within*, as well as that without,—of the character, the manhood and womanhood, the affections and sympathies, the quiet hours of thought, so needed by all, when what is highest and best comes sweetly to the soul, and the sacred fire burns on the inner shrine. We've lost the balance between inner and outer life too much. Put a noble and thoughtful life on the one side, and farm, or gold, or equipage and jewels on the other, and away go the young Americans after the last, and their elders hobble on in their wake, as best they may. Growth of the purse is well, if growth and breadth of character keep pace therewith, but when the purse grows fat and the soul lean, then comes the aching void—sickness of body, nervousness and insanity.

Cultivate all sides of our being. There's a good story told of a merchant who had failed.

Some one asked, "What will you do now?" He replied, "I think I'll go home and get acquainted with my family." So these fast workers with hands or brain, might just stop a little and get acquainted with themselves, send their thoughts into nooks of their souls where the cobwebs have grown, to bring back treasure therefrom, and the world would be better for it.

POISONS IN DAILY USE.

Pickles are often poisoned by being scalded in brass or copper kettles; it makes them look green, but that green renders them poisonous. Brass or copper vessels ought not to be used for any purpose, unless they are scoured very bright; it is better for health to avoid their use for cooking purposes. Brass wash dishes ought never to be used; they cause sore eyes, etc. Water is poisoned by being conveyed in lead pipes, or standing in pails painted on the inside. Milk is poisoned by using such pails for milking. Cheese is often poisoned in this way, and by using in its manufacture brass, copper, or wooden tubs painted inside.

Ignorance places a deadly weapon in our articles of food, but selfishness often conceals a greater. It manufactures poisons for others in many temptingly disguised forms. Cake ornamented with colored dust, candies colored in such nice style, toys so highly attractive to children, cause decayed teeth, canker, intestinal inflammation, nauseating headache, colic, spasms, and often convulsions. Confectionery may be prepared without coloring materials so as to be wholesome.

Wall-paper, ornamented with beautiful green, pretty yellow and lively red, often diffuses through sleeping and sitting-rooms, an atmosphere impregnated with poisonous vapor, that causes headache, nausea, dryness of the mouth and throat, cough, depression of spirits, prostration of strength, nervous affections, boils, watery swellings on the face, cutaneous affections and inflammation of the eyes. These occur in more serious forms in apartments that are not constantly and thoroughly ventilated.—*Home Journal.*

Reading for the Young.

ORIGIN AND SEALS OF THE STATES.

NUMBER TEN.

SEAL OF MICHIGAN.

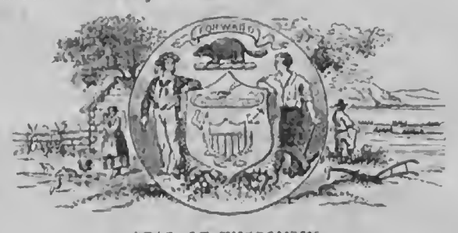
The territory of Michigan at one time included Wisconsin, but there were very few settlers there, and it was soon divided. Michigan was made a State in 1837, and has grown rapidly in population, counting 749,113 inhabitants in 1860, mostly settled on the southern half of the State. Settlers are now pushing up northward where there is yet room enough and good land. Its whole area is 38,000 square miles. Lake Michigan on the west, the Straits of Mackinaw and Lake Huron on the north, and Lakes Huron, St. Clair and Erie on the east, make Michigan almost an island, water being on three sides of it.

There are a few fine prairies in the southern part, and many "oak openings" in the south and center, with soil sandy, yet rich, and covered, in the wild state, with oak trees scattered about in pleasant groves. Thousands of men are in the pine woods further north every winter, cutting logs for lumber to send away for sale. There are many little lakes in some parts. The soil is good, and yields heavy wheat and other crops, and many sheep are kept. The great lakes have clear pure water. Rich mines of iron and copper are on Lake Superior. So many people from the East are in Michigan that it seems much like New York or New England.

The seal of Michigan has a Latin motto, between the deer, which means "If you seek a pleasant peninsula, behold it."

SEAL OF IOWA.

Until 1821, the territory of Missouri covered what is now Iowa, then it was included, first in Michigan and then in Wisconsin, but Iowa was made a territory in 1838, and a State in 1846. In 1833 a colony settled near Burlington, and there were then but few people in the wild and beautiful country; but in 1860 the emigrants had settled on the rich prairies and along the edge of the pleasant forests so rapidly that there were 674,948 in all, on an area of 50,914 square miles, which still leaves room for a million or two more. Its surface is undulating, with the prairies quite rolling, and hills and bluffs on the rivers, and far up in the north-west rocky ledges in some of the streams over which the waters rush, swift and clear. Grain, and sheep, and cattle, are plenty, and fine fruits—apples, grapes and peaches—abound. The seal and motto are easily understood.



SEAL OF WISCONSIN.

Wisconsin has an area of 56,000 square miles, and was made a State in 1848. Many settlers from the Eastern States are there, and in some parts are large German colonies, and also Norwegians. Lake Michigan spreads like an ocean along its eastern boundary and the great Mississippi is on its western side. It has many fine clear streams, and beautiful little lakes, and a rolling surface, pleasant and with good soil. There are beautiful prairies in the south and central parts, and rocky bluffs on some of the Western rivers. Wheat yields largely, corn is also raised, and sheep and cattle abound. A great deal of pine lumber is cut in the forests in the northern part, and floated down the river in rafts to St. Louis and other places. The population, in 1860, was 775,881.

The seal, with the beaver, the mechanic and sailor, and the motto over the shield in the center, and the cabin, fields and canoes on either side, tells of the past and present, and points "Forward."

EVIL COMPANY.

The following beautiful allegory is translated from the German:

Tophronius, a wise teacher, would not suffer even his own grown-up sons and daughters to associate with those whose conduct was not pure and upright.

"Dear father," said the gentle Eulalia to him one day, when he forbade her, in company with her brother, to visit the volatile Lucinda, "dear father, you must think us very childish, if you imagine that we should be exposed to danger by it."

The father took in silence a dead coal from the hearth, and reached it to his daughter, "It will not burn you, my child; take it."

Eulalia did so; and behold! her delicate white hand was soiled and blackened, and as it chanced her white dress also."

"We cannot be too careful in handling coals," said Eulalia, in vexation.

"Yes, truly," said her father; "you see, my child, that coals, even if they do not burn, blacken. So it is with the company of the vicious."

Two First-Class Journals for $3.50.

MOORE'S RURAL NEW-YORKER,

(The Leading Weekly of its Class—Price $3.00 a Year,)

AND

THE MARYLAND FARMER,

(A Standard Agricultural Monthly—Price $1.50,)

BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that now is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year (*when ordered together*) for only $3.50.

Address either

D. D. T. MOORE, Rochester, N. Y.

Or S. S. MILLS & CO., Baltimore, Md.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 17, 1867.

NEWS OF THE WEEK.

From Washington.

IN the Surratt case the testimony and arguments on both sides were completed last week and the case submitted to the Jury, who, being unable to agree, were discharged on Saturday, the 10th. It is published that the Jury stood four for conviction and eight for acquittal. They were "out" seventy-three hours. The trial cost the Government $100,000. Surratt was returned to prison.

Wm. E. McArthur of San Francisco, is Special Agent of the Post Office Department in charge of the mail steamers to Japan and China.

A Grand National Agricultural Exhibition and Horse Fair at the National Race Course, near Washington, is to begin Oct. 28th. Premiums in money and medals to the amount of $20,000, will be given. Managers who represent both Northern and Southern States are planning to have the most noted horses present, and fixing sheds for agricultural implements and machinery.

Secretary McCulloch has issued a circular notifying local inspectors of steamboats strictly, as the law demands, to make yearly inspection of each steamer's hull, boiler, machinery and equipments.

Secretary Seward has returned to Washington improved in health after his two week's sojourn at Auburn. His son Frederick, who met with a serious accident a few days ago in this State, is recovering from his injuries, and will soon return to Washington. Secretary McCulloch is again at his post.

President Johnson's request to Secretary Stanton to resign causes much excitement, and is the general topic of talk. The following is the correct text of the correspondence which recently passed between the President and Secretary of War:

EXECUTIVE MANSION, Washington, August 5, 1867.

SIR:—Public considerations of a high character constrain me to say that your resignation as Secretary of War will be accepted.

Very respectfully,
ANDREW JOHNSON.

To Hon. EDWIN M. STANTON, Secretary of War

To which the Secretary replied as follows:

WAR DEPARTMENT, WASHINGTON, August 5, 1867.

SIR:—Your note of this date has been received, stating that public considerations of a high character constrain you to say that my resignation as Secretary of War will be accepted. In reply I have the honor to say that public considerations of a high character which alone have induced me to continue at the head of this Department, constrain me not to resign the office of Secretary of War before the next meeting of Congress.

Very respectfully yours,
EDWIN M. STANTON.

To the President.

Nothing further in regard to the emente between the President and Mr. Stanton has been made public.

Indian Affairs.

ST. LOUIS, Aug. 8.—The following proceedings of the Indian Commissioners yesterday have been made public:

It was agreed that Gen. Sherman and Col. Tappan, Commissioners of Indian Affairs, should communicate with the officers and agents under their control, directing them to send runners to the Indians in the vicinity of their respective posts and agencies, to ask the Northern tribes to meet the Commissioners at Fort Laramie at full moon in September next, all the tribes south of the Platte River to assemble at Fort Larned, on the Kansas River, at "full moon" in October.

The annuity goods now in transit for the Cheyennes, Arrapahoes and Camanches were ordered to be sent to the agents of these tribes to await the instructions of the Commissioner on Indian Affairs.

Gen. Sanderson and Col. Tappan were made a purchasing Committee of Supplies.

The Board then adjourned to meet in Leavenworth on Monday next, and then proceeded to Omaha, whence they will ascend the Missouri River to its highest accessible point to confer with all the Indians they can meet, and examining lands for the Northern Reservation.

Gen. Sherman has telegraphed to Gens. Hancock and Augur in accordance with the above, and Col. Tappan sent the same instructions to Superintendents Murphy, at Chison, and Derman, of the Northern Agency.

Gen. Sherman also instructed Gens. Hancock and Augur to confine their military operations pending the action of the Commissioners to the protection of the routes of travel, and the settlements; and to Gen. Hancock he says:—Do not invade the country south of the Arkansas River, except in the pursuit of parties guilty of hostile acts. I want the deliberations of this Commission to be as little disturbed by the acts of our troops as possible, so that this effort to settle the Indian question peacefully may have a fair chance for success.

Dispatches say that Capt. Wyck's party of Engineers was attacked by a large band of Indians at Fort Hays station, and had to call on them for assistance.

The Indians got between the Engineers and the fort, and heavy fighting was anticipated.

Quite a number of Indians, with painted white men as interpreters, appeared at Rock Spring, ten miles east of Fort Harker recently, and made particular inquiries regarding the railroad and wagon trains, whether they were guarded, &c., but receiving unsatisfactory answers, they departed. There is no doubt that many of these Indian bands are headed by white men for purposes of plunder.

The St. Louis Republican's special dispatch dated at Fort Hays on the 3d inst., says that Capt. Ames with fifty men who went in pursuit of the Indians who murdered the seven men yesterday, and stole the stage stock, caught the savages on Saline River and fought them eight hours. The Indians numbered two hundred. They had two white men for leaders, evidently deserters from the United States service. We lost one man killed, and Captain Ames was wounded. Five Indians were slain, but the balance of the savages escaped with the stolen stock. They were all armed with rifles, and used no arrows. Two large bodies of Indians appeared near the fort this morning.

From the South.

A JURY OF INQUEST, Aug. 8th, at Wilmington, N. C., was half whites and half blacks.

By an order of Gen. Schofield at Richmond, Va., all the poor are to be handed over to the civil authorities by the military, the 26th inst. Freedmen's bureau rations will no more be issued.

Eight deaths a day in New Orleans of yellow fever, from the 4th to the 8th.

The following are extracts of Special Order No. 111, dated New Orleans, Aug. 8:

SECTION 4.—For denying the supremacy of the law of Congress, stating that he would not obey them when conflicting with the laws of the State of Texas; and openly denouncing the Government of the United States in the office and presence of Brevet Major-General J. J. Reynolds, commanding sub-district of the Rio Grande, Edward Dougherty, Judge of the Twelfth Judicial District of the State of Texas, is hereby removed from that office, and Edward Basse appointed in his stead.

SEC. 4.—At the request of His Honor, Mayor Heath, of the city of New Orleans, Thomas E. Adams, Chief of Police of that city, is hereby removed from his office, and J. J. Williamson appointed in his stead.

By command of
Maj.-Gen. P. H. SHERIDAN.
GEO. L. HARTZUFF, A. A. G.

The troops have been withdrawn from Franklin, Tenn. Full returns give Brownlow over 40,000 majority for Governor.

The Kentucky elections were Democratic by large majorities.

A Mass Meeting was held in Lafayette Square at New Orleans, approving of Sheridan's course. Whites and colored were present, and all quiet.

Gov. Worth of North Carolina, urges the people, by a letter in the newspapers, to register under the Reconstruction Act, and vote on a State Constitution to be presented by the Convention.

The caterpillar or army worm, has made its appearance among the cotton on several of the Sea Islands between Savannah and Charleston.

Latest European News.

THE revenues of Prussia exceed the expenditures, and no new taxes will be made.

The city of Hamburgh agrees to sign a military treaty with Prussia.

The French squadron which sailed recently for the island of Candia to relieve the suffering families of the Cretans, took on board fifteen hundred refugees, mostly women, children and old men, and conveyed them to a place of safety.

The Russian loan is being more readily taken at Paris on the Bourse than was at first expected, and its success may now be said to be established.

Denmark will not sell the island of St. Thomas to this country or any other.

Thirty-three Fenians were convicted of treason recently at Dublin.

Kossuth declines a seat in the Hungarian Parliament. Garabaldi gives up for the present, the movement against Rome.

Prominent men of the Liberal party of South Germany urge its union to the North German Confederation.

There will be a large surplus of Russian wheat for exportation.

PARIS, Aug. 11.—A large fire has occurred at Bordeaux, and 80 persons killed or injured.

MORMONISM IN ENGLAND.—It is evident, from late reports, that Mormonism in England is collapsing. In Liverpool, where, in 1861, there was a church of one thousand persons, there are not now twenty members. And so it is all through the country. Poverty has settled upon them all. The President of a Conference was once maintained in fine style. But now he is scarcely able to maintain himself. The "Saints" possessed of the means have emigrated to Salt Lake, and no new recruits are being obtained. "There are hundreds of unmarried sisters," writes an apostle, "waiting for the day of their deliverence, and looking to the mountains for help."

A STATEMENT of the oil product shows that, during the past six years there have been sunk, up to Jan. 1, 1867, 7,920 wells in the United States, and there have been produced a total of crude oil equal to about 11,640,670 barrels.

THE AMERICAN EXPRESS CO.—SYRACUSE, Aug. 7TH.—The examination of E. B. Judson to-day before James S. Leach, Referee, appointed to take testimony in the case of Norris Winslow against the American Express Company and others, elicited the following facts:—That the nine millions of dollars capital of the present American Express Company was made up as follows:—The members of the Bankers' Express Company paid in $1,800,000, and the old Express Company turned in of the property of the Company to the same amount and the balance of the $2,000,000, viz.: $7,100,000 was issued in stock to members of the old Company for their good will, the balance of the property of the old Company after the $1,800,000 were turned over to the new Company, was held for the old members.

NEWS PARAGRAPHS.

THE New York State Sunday School Teachers' Association holds its Twelfth Annual Meeting at Lockport, the 20th of this month, to last three days.

THE Salt Lake Vidette recently chronicled the exodus of 130 wagons loaded with "Josephites," who have "sonred on Zion," and have returned to America.

THE Michigan Constitutional Convention carried the liquor prohibition clause on Thursday, the eighth inst., by a vote of forty-four ayes to thirty-two nays.

THE Fifth General Assembly of all the Evangelical Societies from all parts of the world, is to be held at Amsterdam, Holland, from the 18th to the 28th inst.

THE ram "Dunderberg" reached Cherbourg, France, in fourteen days and seventeen hours from New York, proving to be a splendid sea boat in rough weather.

TEN thousand pounds were taken from the India fund and spent for a grand ball in honor of the Sultan at London. At the same time thousands of persons are starving to death in India.

THE abolition of imprisonment for debt is gradually conquering a place in the legislation of every European country. Even Imperial France, so timid of liberal laws, has now adopted the reform.

THE great elms of Boston Common—the pride of New England—are being devastated by worms. A few years since the Mayor put in a host of squirrels, and soon the birds left and the destroying worms came.

THE United States Railroad Commissioners have accepted another section of 25 miles of the Union Pacific Railroad, Kansas branch, extending 235 miles west of the Missouri River. There were 12 deaths from cholera at Fort Lyon July 26.

WORKMEN are engaged in laying the third rail for the broad gauge on the Syracuse and Oswego Railroad, which, when completed, will bring Oswego in direct railroad connection with the Pennsylvania coal regions, and afford another communication with New York city.

A PARTY of students from Brown University, R. I., have started on a pedestrian tour. Their route lies direct to the White Mountains, thence across Vermont, and then across Lake George to Saratoga and down the Hudson to the Catskill Mountains and home. They will "camp out."

MR. HORACE GREELEY is, we learn, to contribute his autobiography to the New York Ledger, in a series of papers, with the title, "Recollections of a Busy Life." The first of these papers will appear in a few weeks, after the last of the series of papers by College Presidents has been printed.

THE great tunnel of the Central Pacific Railroad at the summit of the Sierra Nevada Mountain is nearly completed, only sixty-four feet remaining uncut on the 3d inst. The rails are being laid on the eastern slope, where 20 miles of the track are graded. It is expected that the locomotive will pass through the tunnel by the 15th inst., and that the line will be completed to the Nevada line in September next.

A COMPANY has just been formed in France, with a capital of 3,000,000f., to search for three Spanish galleons which were sunk by the English fleet at the commencement of the last century. The galleons in question were returning from Mexico, and had on board about 500,000,000 piasters. They are still at the bottom of the sea, and several attempts to come at the treasure have failed. Powerful machinery is being constructed at Bordeaux.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE, ROCHESTER, August 13, 1867.

GOLD is firm; sales in New York were made yesterday at 140¼. Government securities advanced somewhat in the early part of last week, but for a day or two prices have been weaker. There are many points of similarity just now between the condition of mercantile and monetary affairs in Great Britain and in this country. Manufacturing and general business is usually dull in both countries. In London and New York, the great financial centers of the two countries, money is a drag in the market, and rates of interest very low. Money in London is quoted at 1½@2 ₱ cent., which is equal to about 3@4 ₱ cent. in New York. The New York quotations for a few days have been 3@4 ₱ cent. on Governments, and 5 ₱ cent. on mixed collaterals. In fact, there seems to be a plethora of money in all the commercial towns of Europe, and the trade reports show great stagnation. The comparison might be extended to the crops, which are excellent in Europe as well as the United States. As with us the hay crop on the other side of the Atlantic is more abundant than the average, and was never secured in better condition.

WHEAT.—Farmers continue to sell freely. The price in this city, yesterday, for red wheat was $2@2,07; white Michigan, $2@2,25. Soules wheat is rather scarce and would bring $2,25@2,50. There is no great change in the price of flour. Prices are rather unsettled and will be for some days to come.

WOOL.—There is very little doing in wool in this locality. Prices remain as heretofore, the range being from 25@40c, though for some days buyers, in this city, have not paid over 37½c.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		Fruits, Vegetables, Etc.	
Flour, w't wh't	$15,50@16,00	Apples, green,	$1,00@1,25

Special Notices.

APPRECIATING THE STUMPER.

IN a friendly letter written to Mr. WILLIS, dated, Sheridan, Aug. 3d, is the following appreciative notice of his stump puller:—"I am glad to learn you are having such good success with your machine, for I do not think one can praise it too highly. When I look at our nice cornfield, so free from those ugly stumps, I can but think of you and the machine."

THE ONLY GOLD MEDAL

Awarded to AMERICAN SEWING MACHINES at the Paris Exposition of 1867, was given to the Machines manufactured by this Company, of which ELIAS HOWE, JR., is President.

THE HOWE MACHINE CO.
914-4t 699 BROADWAY, N. Y.

OFFICE OF THE HOWE MACHINE CO., 699 BROADWAY, N. Y., July 17, 1867.

OFFICIAL.

PARIS EXPOSITION, 1867.

ADVICES just received by mail enable us to announce positively that the only gold medal for American sewing machines was awarded to ELIAS HOWE, JR., as the manufacturer of the best sewing machine that was exhibited. There were eighty-two different machines in competition for the prize, and Mr. HOWE received the additional award of the Cross of the Legion of Honor, as manufacturer and inventor. The exact wording of the award is as follows:

HOWE MACHINE.	WHEELER & WILSON.
"Co-operateur Elias Howe, Jr., promoteur de la machine a coudre. *Medaille d'or.*	"Wheeler & Wilson pour la machine a boutonniere. *Medaille d'or.*

The official list of those who were made Knights of the Legion of Honor, as published in the Paris papers, reads thus: "MONS. ELIAS HOWE, JR., *fabricant de machines a coudre, exposant;*" which translated into English, reads: "Mr. ELIAS HOWE, JR., maker of sewing machines, exhibiting."

From this it will be seen that the medal awarded to Wheeler & Wilson was for a "Buttonhole Machine," *and not for the Sewing Machine.*

GOOD READING VERY CHEAP!

WE have a few extra copies of Volume XII of the RURAL NEW-YORKER, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. BELLS. BUCKEYE Bell Foundry, Established 1837.

VANDUZEN & TIFT, 102 & 104 East Second St., Cincinnati, O., manufacturers of Bells for Churches, Academies, Plantations, etc., made of the Genuine Bell Metal, and mounted with our Patent Improved Rotary Hangings. All Bells warranted in quality and tone. Catalogue and Price List sent on application. 1917-6teo

A FARM FOR SALE—Consisting of 400 acres of choice land in Whiteside Co., Ills., 10 miles east of Albany on Miss. River, and 10 miles south of Morrison Depot, on line of Union Pacific RR.; 320 acres enclosed with 3-board fence, cedar posts; 100 acres under cultivation; good house, stables and other outbuildings; 2 good wells; an abundance of water can be had by digging from 10 to 25 feet. Rich soil, adapted to raising grain, and unsurpassed for grazing. Natural soil for Blue Grass and White Clover. Stone Quarry and heavy Timber within two miles; 40 head of cattle and horses will be sold with place if desired.

For terms of sale, &c., address FRANK CLENDENIN, Real Estate Agent, Morrison, Whiteside Co., Ills.

TESTIMONIALS IN FAVOR OF MONROE'S ROTARY HARROW, the engraving of which was in our paper of Aug. 3d, page 915.

The Ohio Statesman says:—"It is seldom that we meet with a machine that so strongly recommends itself by its own work as does this harrow. Its success is certain. For pulverizing and leveling the soil and putting in grain it has no equal on the face of the earth."

The Rockland, Me., Gazette calls it "a great labor-saving machine, doing from two to four times more work than the ordinary harrow."

The Committee of the Maine, Lincoln and Knox County Fair report:—"H. H. Monroe & Co., Rotary Harrow, 1st premium. This machine needs no commendation from us, for a man need but use it to know its merits."

Manufactured and sold by BRADLEY, BRIGGS & CO., 195 & 197 Niagara Street, Buffalo, N. Y. Agents Wanted to sell the above.

HORACE GREELEY'S OWN LIFE, WRITTEN BY HIMSELF, FOR THE

NEW YORK LEDGER.

Something for Fathers to Buy for their Sons to Read.

In this week's LEDGER we begin the publication of the Autobiography of the Hon. HORACE GREELEY, which Mr. Greeley is now writing expressly for the NEW YORK LEDGER. The title of it is

Recollections of a Busy Life.

BY HORACE GREELEY.

It will appear in successive issues of the LEDGER. Probably no work more instructive to the young, in the formation of character, has ever been published; at the same time it will possess all the interest of a novel. The poor boy, rising, by his own exertions, to be the distinguished man, is a theme which cannot fail both to entertain and instruct, especially when the whole story is told with the fascinating charm of simple truth.

Mr. Beecher's Great Work,

NORWOOD,

A STORY OF NEW ENGLAND LIFE,

BY HENRY WARD BEECHER,

Is now being published in the NEW YORK LEDGER.

The Presidents of the principal Colleges, the greatest Wits, Scholars, and Statesmen, write for the NEW YORK LEDGER.

CHARMING STORIES—The short stories in the LEDGER, begun and finished in the same number, are the most delightful stories contained in any publication in the world.

You always get more than your money's worth in the NEW YORK LEDGER.

The NEW YORK LEDGER is for sale at all the bookstores, at 6 cents a copy; and mailed to subscribers at $3 a year, or two copies for $5.

Address all communications to

ROBERT BONNER, Publisher,

No. 90 Beekman Street, New York.

SATTERLEE'S COLLEGIATE INSTITUTE. For the last ten years the most popular and successful school in Western New York, will re-open on Monday, Sept. 2d. Twelve Professors and Teachers are employed and every facility provided for a thorough and finished education. Boarding Department for Young Ladies. L. R. SATTERLEE, A. M., Principal, Rochester, N. Y.

ELMIRA FEMALE COLLEGE, Next Session Opens Sept. 4th. This College presents superior inducements to those who desire a thorough practical Christain education at a moderate cost. All students share in the lighter domestic labors of the family. For Circulars address REV. A. W. COWLES, D. D., President.

DR. NICAISE
STRAWBERRY PLANTS.
We are now ready to deliver fine grown plants of this
Celebrated European Strawberry.
The fruit is of enormous size, berries having been picked this season (from plants set last Sept.,) that measured 6¾ inches in circumference and weighing from 1¾ to 1¾ ounces. It is early, of a bright red color, very glossy, flesh white and of the first quality. In Europe it is considered one of their finest varieties. On account of the limited number in the market and the great demand for them, it would be well for those who wish them to *order early*. Price by mail, postage free, $1 ₱ plant; $10 ₱ dozen; $75 ₱ 100. Address GOULD, BECKWITH & CO., Monroe Co. Nurseries, Rochester, N. Y. 917-4t

THE
UNION PACIFIC
RAILROAD CO.
THEIR FIRST MORTGAGE BONDS
AS AN INVESTMENT.

The rapid progress of the Union Pacific Railroad, now building west from Omaha, Nebraska, and forming, with its western connections, an unbroken line across the Continent, attracts attention to the value of the First Mortgage Bonds which the Company now offer to the public. The first question asked by prudent investors is, "Are these bonds secure?" Next, "Are they a profitable investment?" To reply in brief:

1st. The early completion of the whole great line to the Pacific is as certain as any future business event can be. The Government grant of over twenty million acres of land and fifty million dollars in its own bonds practically guarantees it. One-fourth of the work is already done, and the track continues to be laid at the rate of two miles a day.

2d. The Union Pacific Railroad bonds are issued upon what promises to be one of the most profitable lines of railroad in the country. For many years it must be the only line connecting the Atlantic and Pacific; and being without competition, it can maintain remunerative rates.

3d. 425 miles of this road are finished, and fully equipped with depots, locomotives, cars, &c., and two trains are daily running each way. The materials for the remaining 93 miles to the eastern base of the Rocky Mountains are on hand, and it is under contract to be done in September.

4th. The net earnings of the sections already finished are *several times greater* than the gold interest upon the First Mortgage Bonds upon such sections, and if not another mile of the road were built, the part already completed would not only pay interest and expenses, but be profitable to the Company.

5th. The Union Pacific Railroad bonds can be issued only as the road progresses, and therefore can never be in the market unless they represent a *bona fide* required.

6th. Their amount is strictly limited by law to a sum equal to what is granted by the U. S. Government, and for which it takes a *second* lien as its security. This amount upon the first 517 miles west from Omaha is only $16,000 per mile.

7th. The fact that the U. S. Government considers a second lien upon the road a good investment, and that some of the shrewdest railroad builders of the country have already paid in five million dollars upon the stock (which is to them a third lien,) may well inspire confidence in a first lien.

8th. Although it is not claimed that there can be any better securities than Governments, there are parties who consider a first mortgage upon such a property as this, the very best security in the world, and who sell their Governments to re-invest in these bonds—thus securing a greater interest.

9th. Union Pacific Railroad bonds are offered for the present at 90 cents on the dollar and accrued interest, they are the cheapest security in the market, being 15 per cent. less than U. S. Stocks.

10th. At the current rate of premium on gold, they pay

Over Nine per Cent. Interest.

The daily subscriptions are already large, and they will continue to be received in New York by the
CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & Co., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,
and by BANKS AND BANKERS generally throughout the United States, of whom maps and descriptive pamphlets may be obtained. They will also be sent by mail from the Company's Office, No. 20 Nassau Street, New York, on application. Subscribers will select their own Agents in whom they have confidence, who alone will be responsible to them for the safe delivery of the bonds.
JOHN J. CISCO, Treasurer,
916-2t NEW YORK.

Send for Catalogue of New and Practical Architectural Works, enclosing stamp to
A. J. BICKNELL, No. 282 River St., Troy, N. Y.

YOUNG LADIES' INSTITUTE, AT MAPLEWOOD, PITTSFIELD, MASS. One of the oldest and most successful schools in the country, widely known for its superior facilities and splendid location. Commences its Fall Session Sept. 19th, 1867.
916-4t C. V. SPEAR, Principal.

THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₱ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER $1,25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges,** by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to
GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

906-13t RUSSELL & CO., Watertown, N. Y.

WANTED—AGENTS FOR BOSTON, Philadelphia, Cincinnati, Chicago, with $150 to locate. Also, 20 Traveling Agents can make $2,500 per annum, selling Prof. JOHNSON'S Wash Crystals, Prepared Starch, and Improved Indigo Blue, &c. Address, with postage stamp for Circulars, or send 50 cts. for samples. I. T. JOHNSON, 346 Greenwich St., N. Y. 907-tf.

THE HARRIS HOP PRESS, (ILLUSTRATED and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that four-fifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.
Messrs. RAMSEY & HANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.
BUCKINGHAM, WALSH & CO.,
911-9t Waterville, Oneida Co., N. Y.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

MANUFACTURERS of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising
"Star" Cotton Gins and Condensers,
"Star" Railway Powers, (Emery Patent,)
"Star" Lever Powers, "Star" Threshers & Cleaners,
Threshers and Separators, Circular and Dragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c.

OUR "STAR" THRESHER AND CLEANER
as now made by us, unites more valuable features and possesses qualities far more superior than were ever before combined in such a machine. Comparatively small, compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw*, so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be threshed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.
We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power. With regard to
OUR RAILWAY POWER,
we may say that everywhere the "EMERY POWER" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as
THE "STAR" RAILWAY POWER,
it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c.
OUR "STAR" LEVER POWER,
though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.
Our extensive works are under the immediate Superintendence of Mr. WM. B. EMERY, (Survivor of EMERY BROTHERS,) which fact, from his long personal experience in the Manufacture of Agricultural Machines, gives additional guarantees of the superior character of the machines made by this Company, and confident, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Dealers and others, assuring such that all orders with which we may be favored shall be executed with the utmost promptness and fidelity.
☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge*, on application, and all information cheerfully furnished.
Agents, both Traveling and Local,
are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 913

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY*,
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.
The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of
Pulverized Slate and Viscous Matter,
(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.
AS A ROOFING MATERIAL IT STANDS UNRIVALLED.
A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.
FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.
The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and
PERFECTLY FIRE-PROOF.
It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

PRINCE & CO'S.
AUTOMATIC ORGANS
AND MELODEONS.
Forty thousand are now in use
BUFFALO, N.Y. CHICAGO, ILL.

THE CHAMPION.
HICKOK'S PATENT PORTABLE.
KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.
This admirable machine is now ready for the fruit harvest of 1867, is made in the most perfect manner with either one or two tubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.
FOR SALE BY ALL RESPECTABLE DEALERS.
I also make two sizes of superior
PRESSES FOR BERRIES, &c., &c.
If your merchant does not keep them, tell him to send for one for you, or write for one yourself. Address the manufacturer, W. O. HICKOK, Harrisburg, Pa.

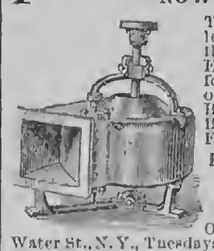
PORTABLE STEAM ENGINES—Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
904-26t J. C. HOADLEY & CO., Lawrence, Mass.

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf DRS. BABCOCK & SON, 700 Broadway, N. Y.

WANTED—A GOOD EXPERIENCED Canvasser in every county in the U. S. To such, male or female, will guarantee $300 per month. Apply at once to C. RICH & CO., Poughkeepsie, N. Y. 901-tf

CHARLES W. IDELL,
COMMISSION DEALER
IN FRUITS AND PRODUCE,
WEST STREET, FOOT OF DEY, NEW YORK.
Farmers' Produce of all kinds, Pork, Poultry, Butter Eggs, Game, Furs, Flax, Hops, Beans, &c. Maple Sugar and Syrup, Green, Dried and Canned Fruits.
In the Fruit Season, particular attention paid to the sale of all kinds of DOMESTIC FRUITS, such as Apples, Pears, Peaches, Grapes, Strawberries, Raspberries, Whortleberries, Cranberries, Cherries, &c., &c.
[Established 1838.] ☞ Consignments solicited.

PRESSURE TURBINE WATER WHEEL NOW READY.



The best Wheel in market, using less water and selling for less than any other first-class Wheel. Every Wheel warranted. Send for a descriptive Circular. Also, our Improved Brick Machine and Brick Machinery, Engines and Boilers, Cane Mills, Portable Forges, and all other machinery.
PEEKSKILL MANUFACTURING COMPANY,
PEEKSKILL, N. Y.
D. L. SEYMOUR will be at the Office of Packard & Hill, No. 195 Water St., N. Y., Tuesdays, Thursdays, and Fridays, from 11 to 1 o'clock, to receive specifications and make contracts for Machinery and Castings of all kinds. [893-13teo

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candies, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 907-tf

CHESTER WHITE PIGS FOR SALE—For price list address H. TEMPLE & CO., Marshallon, Chester Co., Pa. 915-2tom.

AGENTS WANTED.—Another Great Work by E. A. POLLARD, the acknowledged Historian of the South; entitled "LEE AND HIS LIEUTENANTS," comprising a life of GEN. R. E. LEE, replete with facts never before published, including Biographies of every Southern General of distinction.
In one large volume—30 steel portraits. A companion volume to "THE LOST CAUSE," a Standard Southern History of the War, which has already obtained half a million of readers. A new and enlarged edition is now ready. One Agent sold 220 the first week. These two works form a complete library of the War from the other side. E. B. TREAT & CO.,
914-7teo Publishers, 654 Broadway, N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd,** the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, illustrated. Price $2—sent post-paid.
Address D. D. T. MOORE, Rochester, N. Y.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

THIS MEDALLION IS EMBEDDED IN EVERY GENUINE HOWE SEWING MACHINE.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.
For Families and Manufacturers.
THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.
THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are
WORLD RENOWNED.
They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world
These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.
They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton goods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.
The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*
SEND FOR CIRCULAR.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.
This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.
WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.
"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*
☞ The SENECA FALLS CHURN MANUFACTURING Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

50 MAKE YOUR OWN SOAP PER CENT SAVED BY
USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the stength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 893-39t

Written for Moore's Rural New-Yorker.

THROUGH THE LEAVES.

While sitting to-day 'neath a noble old tree,
Through the foliage above the bright sky I could see;
I could catch but a glimpse, but by that glimpse I knew
That beyond the green leaves gleamed the glorious blue,

And thus it is ever with all of our race,—
Through the foliage of earth each sees gleams of God's face;
And none of us mortals may e'er hope to see
All His glory revealed through the leaves of *one* tree.

Through books, and by calm thought, the one gets a view,
Through sorrow and anguish another, as true;
But, though one may joy while another one grieves,
We are all of us looking at heaven through the leaves.

Carlton, N. Y., June 20th, '67. L. G. T.

The Story Teller.

[From the Cornhill Magazine.]

BEAUTY AND THE BEAST.

BY MISS THACKERAY,

AUTHOR OF "THE VILLAGE ON THE CLIFF," ETC.

PART I.

[Continued from page 260, last number.]

Mr. Barly breakfasted by himself again next morning. Mr. Griffiths had not returned all night. In his secret heart Mr. Griffiths' guest was almost relieved by the absence of his entertainer; it seemed like a respite. Perhaps, after all, everything would go well, and the confession which he had contemplated with such terror the night before need never be made. For the present it was clearly no use to wait any longer at the house. Mr. Barly asked for a cab to take him to the station, left his compliments and regrets and a small sum of money behind him, and then, as the cab delayed, strolled out into the front garden to wait for it.

Even in the front court the roses were all abloom; a great snow cluster was growing over the doorway, a pretty tea-rose was hanging its head over the scraper; against the outer railing which separated the house from the road rose trees had been planted. The beautiful pink fragrant heads were pushing through the iron railings, and a delicious little rose-wind came blowing in the poor old fellow's face. He began to think—no wonder—of Belle and her fancy for roses, and mechanically, without much reflecting upon what he was about, he stopped and inhaled the ravishing sweet smell of the great dewy flowers, and then put out his hand and gathered one; and as he gathered it, a sharp thorn ran into his finger, and a heavy grasp was laid upon his shoulder.....

"So it is you, is it, who sneak in and steal my roses?" said an angry voice. "Now that I know who it is, I shall give you in charge."

Mr. Barly looked round greatly startled. He met the fierce glance of two dark brown eyes under shaggy brows, that were frowning very fiercely. A broad, thick-set, round-shouldered young man of forbidding aspect, had laid hold of him. The young man let go his grasp when he saw the mistake he had made, but did not cease frowning.

"O! it is you, Mr. Barly," he said.

"I was just going," said the stockbroker, meekly. "I am glad you have returned in time for me to see you, Mr. Griffiths. I am sorry I took your rose. My youngest daughter is fond of them, and I thought I might, out of all this garden full, you would not,—she had asked—"

There was something so stern and unforgiving in Mr. Griffiths' face that the merchant stumbled in his words, and stopped short surprised, in the midst of his explanations.

"The roses were not yours, not if there were ten gardens full. I won't have my roses broken off," said Griffiths; "they should be cut with a knife. Come back with me; I want to have a little talk with you, Mr. Barly."

Somehow the old fellow's heart began to beat, and he felt himself turn rather sick.

"I was detained last night by some trouble in my office. One of my clerks, in whom I thought I could have trusted, absconded yesterday afternoon. I have been all the way to Liverpool in pursuit of him. What do you think should be done with him?" And Mr. Griffiths, from under his thick eyebrows, gave a quick glance at his present victim, and seemed to expect some sort of answer.

"You prosperous men cannot realize what it is to be greatly tempted," said Mr. Barly, with a faint smile.

"Do you know that Wheal Tre Rosas has come to grief a second time?" said young Mr. Griffiths, abruptly holding out the morning's Times, as they walked along. "I am *not* a prosperous man; I had a great many shares in that unlucky concern."

Poor Barly stopped short and turned quite pale, and began to shake so that he had to put his hand out and lean against the wall. Failed! Was he doomed to misfortune? Then there was never any chance for him—never. No hope! No hope of paying back the debt which weighed upon his conscience. He could not realize it. Failed! The rose had fallen to the ground; the poor unlucky man stood still, staring blankly in the other's grim, unrelenting face. "I am ruined," he said.

"You are ruined! Is that the worst you have to tell me?" said Mr. Griffiths, still looking piercingly at him. Then the other felt that he knew all.

"I have been very unfortunate,—and very much to blame," said Mr. Barly, still trembling; "terribly to blame,—Mr. Griffiths. I can only throw myself upon your clemency."

"My clemency! my mercy! I am no philanthropist," said Guy, savagely. "I am a man of business, and you have defrauded me"

"Sir," said the stockbroker, finding some odd comfort in braving the worst, "you refused to let me take what was my own;—I have sold out some of your money to invest in this fatal concern. Heaven knows it was not for myself, but for the sake of—of—others; and I thought to repay you ere long. You can repay yourself now. You need not reproach me any more. You can send me to prison if you like. I—I—don't much care what happens. My Belle, my poor Belle,— my poor girls!"

All this time Guy said never a word. He motioned Mr. Barly to follow him into the library. Mr. Barly obeyed, and stood meekly waiting for the coming onslaught. He stood in the full glare of the morning sun, which was pouring through the unblinded window. His poor old scanty head was bent, and his hair stood on end in the sunshine.

His eyes, avoiding the glare, went vacantly traveling along the scroll-work on the fender, and so to the coal scuttle and to the skirting on the wall, and back again. Dishonored,—yes. Bankrupt,—yes. Threescore years had brought him to this,—to shame, to trouble. It was a hard world for unlucky people, but Mr. Barly was too much broken, too weary and indifferent, to feel very bitterly even against the world. Meanwhile Guy was going on with his reflections, and like those amongst us who are still young and strong, he could put more life and energy into his condemnation and judgment of actions done, than the unlucky perpetrators of the deeds themselves. Some folks do wrong as well as right, with scarcely more than half a mind to it.

"How could you do such a thing?" cried the young man indignantly, beginning to rush up and down the room in his hasty, clumsy way, knocking against tables and chairs as he went along. "How could you do it?" he repeated. "I learnt it yesterday by chance. What can I say to you that your own conscience should not have told you already? How could you do it?" Guy had reached the great end window, and stamped with a mixture of anger and sorrow. For all his fierceness and gruffness, he was sorry for the poor feeble old man whose fate he held in his hand. There was the garden outside, and its treasure and glory of roses; there was the rose lying on the ground that old Barly had taken. It was lying broken and shining upon the gravel,—one rose out of the hundreds that were bursting, and blooming, and falling on their spreading stems. It was like the wrong old Barly had done his kineman,—one little wrong Guy thought, one little handful out of all his abundance. He looked back, and by chance caught sight of their two figures reflected in the glass at the other end of the room,—his own image, the strong, round-backed, broad-shouldered young man, with gleaming white teeth and black bristling hair; the feeble and uncertain culprit, with his broken wandering looks, waiting his sentence. It was not Guy who delivered it. It came,—no very terrible one after all,—prompted by some unaccountable secret voice and impluse. Have we not all of us sometimes suddenly felt ashamed in our lives in the face of misfortune and sorrow? Are we Pharisees, standing in the market place, with our phylacteries displayed to the world? We ask ourselves, in dismay, does this man go home justified rather than we? Guy was not the less worthy of his Belinda, poor fellow, because a thought of her crossed his mind, and because he blushed up, and a gentle look came into his heart,—a shame of his strength and prosperousness, of his probity and high honor. When had he been tempted? What was it but chance that he had been born what he was? And yet old Barly, in all his troubles, had a treasure in his possesion for which Guy felt he would give all his good fortune and good repute, his roses,—red, white, and golden,—his best heart's devotion, which he secretly felt to be worth all the rest. Now was the time, the young man thought, to make that proposition which he had in his mind.

"Look here," said Guy, hanging his great shaggy head, and speaking quickly and thickly, as if he was the culprit instead of the accuser. "You imply it was for your daughter's sake that you cheated me. I cannot consent to act as you would have me do, and take your daughter's money to pay myself back. But if one of them —Miss Belinda, since she likes roses—chooses to come here and work the debt off, she can do so. My mother is in bad health and wants a companion; she will engage her at,—let me see, a hundred guineas a year, and in this way, by degrees, the debt will be cleared off."

"In twenty years," said Mr. Barly, bewildered, relieved, astonished.

"Yes, in twenty years," said Guy, as if that was the most natural thing in the world. "Go home and consult her, and come back and give me the answer."

And as he spoke the butler came in to say that the hansom was at the door.

Poor old Barly bent his worn, meek head, and went out. He was shaken and utterly puzzled. If Guy had told him to climb up the chimney he would have obeyed. He could only do as he was bid. As it was, he clambered with difficulty into the hansom, told the man to go to the station for Dumbleton, and he was driving off gladly when some one called after the cab. The old man peered out anxiously. Had Griffiths changed his mind? Was his heart hardened like Pharaoh's at the eleventh hour?

It was certainly Guy who came hastily after the cab, looking more awkward and sulky than ever. "Hoy! Stop! You have forgotten the roses for your daughter," said he, thrusting in a great bunch of sweet loam and freshness. As the cab drove along, people passing by looked up and envied the man who was carrying such loveliness through the black and dreary London streets. Could they have seen the face looking out behind the roses they might have ceased to envy.

Belle was on the watch for her father at the garden gate, and exclaimed with delight, as she saw him toiling up the hill from the station with his huge bunch of flowers. She came running to meet him with fluttering skirts and outstretched hands, and sweet smiles gladdening her face. "O papa, how lovely! Have you had a pleasant time?"

Her father hardly responded. "Take the roses, Belle," he said. "I have paid for them dearly enough." He went into the house wearily, and sat down in the shabby arm-chair. And then he turned and called Belinda to him wistfully, and put his trembling arm round about her. Poor old Mr. Barly was no mighty Jephthah; but his feeble old head bent with some such pathetic longing and remorse over his Belle, as he drew her to him, and told her, in a few simple, broken words, all the story of what had befallen him in those few hours since he went away. He could not part from her. "I can't, I can't," he said, as the girl put her tender arms about his neck.

* * * * * *

Guy came to see me a few days after his interview with old Mr. Barly, and told me that his mother had surprised him by her willing acquiescence in the scheme. I could have explained matters to him a little, but I thought it best to say nothing. Mrs. Griffiths had overheard, and understood a word or two of what he had said to me that night, when she was taken ill. Was it some sudden remorse for the past? Was it a new-born mother's tenderness stirring in her cold heart, which made her question and cross-question me the next time that I was alone with her? There had often been a talk of some companion or better sort of attendant. When the news came of poor old Barly's failure, it was Mrs. Griffiths herself who first vaguely alluded again to this scheme.

"I might engage one of those girls,—the—the Belinda, I think you called her?"

I was touched, and took her cold hand and kissed it.

"I am sure she would be an immense comfort to you," I said. "You would never regret your kindness."

The sick woman sighed and turned away impatiently, and the result was the invitation to dinner, which turned out so disastrously.

PART II.

V.

When Mr. Barly came down to breakfast the morning after his return, he found another of those great square official-looking letters upon the table. There was a check in it for £100. "You will have to meet heavy expenses," the young man wrote. "I am not sorry to have an opportunity of proving to you that it was not the money which you have taken from me I grudged, but the manner in which you took it. The only reparation you can make me is to keep the enclosed for your present necessity."

In truth the family prospects were not very brilliant. Myrtle Cottage was resplendant with clean windows and well-scrubbed door-steps, but the furniture wanted repairing, the larder refilling. Belle could not darn up the broken flap of the dining-room table, nor conjure legs of mutton out of bare bones, though she got up ever so early; sweeping would not mend the hole in the carpet, nor could she dust the mildew stains off the walls, the cracks out of the looking-glass.

Anna was morose, helpless, and jealous of the younger girl's influence over her father. Fanny was delicate; one gleam of happiness, however, streaked her horizon; Emily Ogden had written to invite her to spend a few days there. When Mr. Barly and his daughter had talked over Mr. Griffiths' proposition, Belle's own good sense told her that it would be folly to throw away this good chance. Let Mrs. Griffiths be ever so trying and difficult to deal with, and her son a thousand times sterner and ruder than he had already shown himself, she was determined to bear it all. Belinda knew her own powers, and felt as if she could endure anything, and that she should never forget the generosity and forbearance he had shown her poor father. Anna was delighted that her sister should go; she threw off the shawl in which she had muffled herself up ever since their reverses, brightened up wonderfully, talked mysteriously of Fanny's prospects, as she helped both the girls pack, made believe to shed a few tears as Belinda set off, and bustled back into the house with renewed importance. Belinda looked back and waved her hand, but Anna's back was already turned upon her.

Poor Belinda! For all her courage and cheerfulness her heart sank a little as they reached the great bronze gates in Castle Gardens. She would have been more unhappy still if she had not had to keep up her father's spirits. It was almost dinner-time, and Mrs. Griffiths' maid came down with a message. Her mistress was tired, and was just going to bed, and would see her in the morning; Mr. Griffiths was in town; Miss Williamson would call upon Miss Barly that evening.

Dinner had been laid as usual in the great dining-room, with its marble columns and draperies, and Dutch pictures of game, and of birds and flowers. Three servants were in waiting, a great silver chandelier lighted the dismal meal, huge dish-covers were upheaved, decanters of wine were handed round, all the *entrees* and delicacies came over again. Belle tried to eat to keep her father in company. She even made little jokes, and whispered to him that they evidently meant to fatten her up. The poor old fellow cheered up by degrees; the good claret warmed his feeble pulse, the good fare comforted and strengthened him. "I wish Martha would make us ice puddings," said Belle, helping him to a glittering mass of pale-colored cream, with nutmeg and vanilla, and all sorts of delicious spices. He had just finished the last mouthful when the butler started and rushed out of the room, a door banged, a bell rang violently, a loud scraping was heard in the hall, and an echoing voice said, "Are they come? Are they in the dining-room?" And the crimson curtain was lifted up, and the master of the house entered the room, carrying a bag and a great-coat over his arm. As he passed the side-board a button of the coat caught in the fringe of a cloth which was spread upon it, and in a minute the cloth and all the glasses and plates which had been left there came to the ground with a wild crash, which would have made Belle laugh, if she had not been too nervous even to smile.—[To be continued.

WIT AND HUMOR.

Two old friends met, not long since, after a separation of thirty-five years. "Well, Tom," said one, "how has the world gone with you, old boy? Married yet?" "Yes, and I've got a family you can't match—seven boys and one girl." "I can match it exactly," was the reply, "for I have seven girls and one boy."

A little boy having asked his mother what "blood relations" meant, and being told it meant near relations, said, after a moment's thought, "Then, mother, you must be the bloodiest relation I've got."

A drunken fellow sitting on the steps of a church in Boston, the cold wind blowing chillingly round the corner, exclaimed:—"If heaven (hic) tempers the wind to the shorn lamb, I wish the lamb (hic) was in the corner."

A crusty old doctor declined to pay his paver's bill, saying "his pavement had been spoiled and then covered up with earth to hide the bad work." "Doctor," was the reply, "mine is not the only bad work they put earth over."

Edmond About says:—"Interpose a little head in a tiny cap between the world and you; you will witness a most beautiful phenomenon which astronomers have not yet studied—the total eclipse of the world."

An Indiana paper refused lately to publish eulogiums gratis, but added, "We will publish the simple announcement of the death of any of our friends with pleasure."

A gentleman having presented his church with the "Ten Commandments," it was wittily said that he gave them away because he could not keep them.

What is that word in the English language of one syllable, which, if two letters be taken from it, becomes a word of two syllables?—*Pl-ague.*

Spell the Grecian Archipelago in three letters. You can't? Why, E. G. and C., of course.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 40 letters.
My 4, 11, 19, 9, 34 is an animal that eats my 14, 30, 24, 21 and my 33, 15, 40, and is useful to 35, 2, 16 for his 10, 5, 22, 11, 27.
My 25, 36, 32, 10, 18 is an appellation.
My 17, 16, 22, 8, 24 are domestic fowls which are very fond of my 12, 30, 39, 26, 19.
My 28, 1, 20, 31 is an adverb.
My 37, 31, 5, 3 is a small insect which has a 21, 6, 7, 16, 37 for its defense.
My 10, 15, 13, 38 is a very useful article for building purposes.
My 29 is a consonant.
My whole is a passage from the Bible.

Enterprise, Wis. C. L. Wood.

A RIDDLE.

I often murmur, yet I never weep,
I always lie in bed, yet never sleep;
My mouth is wide, and larger than my head,
And much disgorges though it ne'er is fed;
I have no feet, no legs, yet swiftly run,
And the more falls I get, move faster on.

ANSWERS TO ENIGMAS, &c., IN No. 915.

Answer to Miscellaneous Enigma:—Choice Miscellany.

Answer to Anagram:

All within and all without me
Feel a melancholy thrill,
And the darkness hangs about me—
Oh, how still!
To my feet the river glideth
Through the shadow's sullen dark,
On the stream the white moon rideth
Like a barque;
And the linden leaves above me
'Till I think some things there be
In this dreamy world that love me,
Even me.

Answer to Algebraical Problem:—Eight cows.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

PURE WATER.

PURE WATER.—Health and economy. Patent Lead Encased Tin Pipe, recommended by the Medical Faculty and approved by Water Commissioners. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply THIS Pipe at a LESS price per foot than common Lead Pipe. To furnish the cost per foot please state the head or pressure of water and bore of pipe. Pamphlets sent FREE on application. Address THE COLWELLS, SHAW & WILLARD MANUFACTURING COMPANY, foot of West 27th-st., New York. 916-4t

Each Certificate of Stock is accompanied with a

Beautiful Steel-Plate Engraving,

WORTH MORE AT RETAIL THAN THE COST OF CERTIFICATE,

And also Insures to the holder a PRESENT IN THE GREAT DISTRIBUTION.

THE WASHINGTON LIBRARY COMPANY

Is chartered by the State of Pennsylvania, and Organized in aid of the

RIVERSIDE INSTITUTE

FOR

Soldiers' and Sailors' Orphans,

Incorporated by the State of N. J., April 8, 1867.

THE RIVERSIDE INSTITUTE,

Situate at Riverside, Burlington County, New Jersey, is founded for the purpose of gratuitously educating the sons of deceased Soldiers and Seamen of the United States.

The Board of Trustees consists of the following well-known citizens of Pennsylvania and New Jersey:—Hon. WM. B. MANN, District Attorney, Philadelphia, Pa; Hon. LEWIS R. BROOMALL, Ex-Chief Coiner U. S. Mint, and Recorder of Deeds, Philadelphia, Pa.; Hon. JAMES M. SCOVEL, New Jersey; Hon. W. W. WARE, New Jersey; HENRY GORMAN, Esq., Agent Adams' Express, Philadelphia, Pa.; J. E. COE, Esq., of Joy, Coe & Co., Philadelphia.

Treasury Department, Washington, April 18, 1867.—Office of Internal Revenue:—Having received satisfactory evidence that the proceeds of the enterprise conducted by the "Washington Library Company" will be devoted to charitable uses, permission is hereby granted to said Company to conduct such enterprise exempt from all charge, whether from special tax or other duty.

E. A. ROLLINS, Commissioner.

The Washington Library Company,

In order that the benevolent object set forth in this circular may be successfully accomplished, have issued five series of

FINE STEEL-PLATE ENGRAVINGS,

which are put on subscription at prices much below their retail value.

CERTIFICATES OF STOCK IN THE WASHINGTON LIBRARY COMPANY

will be issued, stamped with the seal of the Company, and signed by the Secretary. (None others genuine.)

Any person sending us ONE DOLLAR, or paying the same to our local Agents, will receive immediately a fine Steel Plate Engraving, at choice from the following list, and One Certificate of Stock, insuring One Present in our published schedule.

ONE DOLLAR ENGRAVINGS.

No. 1—"My Child! My Child!" No. 2—"They're Saved! They're Saved!" No. 3—"Old Seventy-Six; or, the Early Days of the Revolution!"

Any person paying TWO DOLLARS will receive either of the following fine Steel Plates, at choice, and Two Certificates of Stock, thus becoming entitled to Two Presents.

TWO DOLLAR ENGRAVINGS.

No. 1—"Washington's Courtship." No. 2—"Washington's Last Interview with his Mother."

THREE DOLLAR ENGRAVINGS.

Any person paying THREE DOLLARS will receive the beautiful Steel Plate of

"HOME FROM THE WAR,"

and Three Certificates of Stock, becoming entitled to Three Presents.

FOUR DOLLAR ENGRAVINGS.

Any person paying FOUR DOLLARS shall receive the large and beautiful Steel Plate of

"THE PERILS OF OUR FOREFATHERS,"

and Four Certificates of Stock, entitling them to Four Presents.

FIVE DOLLAR ENGRAVINGS.

Any person who pays FIVE DOLLARS shall receive the large and splendid Steel Plate of

"THE MARRIAGE OF POCAHONTAS,"

And Five Certificates of Stock, entitling them to Five Presents.

The Engravings and Certificates will be delivered to each subscriber at our Local Agencies, or sent by mail, post-paid, or express, as may be ordered.

The Washington Library Company

WILL AWARD

THREE HUNDRED THOUSAND DOLLARS IN PRESENTS TO THE SHAREHOLDERS,

On Wednesday, Sept. 25, 1867, at Philadelphia, Pa., or at the Institute, Riverside, N. J.

SCHEDULE OF PRESENTS.

1 Cash Present	$10,000
1 Cash Present	20,000
1 Cash Present	10,000
1 Cash Present	5,000
2 Cash Presents of $2,500 each	5,000
1 Handsome Country Residence, Stable, Grounds, &c., Germantown, Philadelphia	18,000
1 Double Residence, three-story brick, Camden, N. J.	15,000
1 Coal Depot, Offices, Sheds, Ground, with business established, No. 1314 Washington Avenue, Philadelphia	15,000
1 Country Residence, Riverside, N. J., with the Ground, Fruits, &c.	10,000
1 Three-story Cottage, Lot, &c.	5,000
5 Valuable Building Lots, Riverside, $200 each	5,000
1 Elegant Turnout Family Carriage, Harness, Span of Horses, &c., complete	5,000
10 Valuable Building Lots, Riverside, $300 each	3,000
1 Beautiful Silver-gray Horse, 15½ hands high, sired by the celebrated imported Arabian Horse "Caliph;" also, a light Road Wagon, weight 140 pounds, with set of superior Single Harness, &c., making a first-class establishment	5,000
20 Pianos, $500 each	10,000
20 Melodeons, $225 each	4,500
5 Rosewood Sewing Machines, $200 each	1,000
10 Family Sewing Machines, $100 each	1,000
50 Fine Gold Watches, $200 each	10,000
100 Oil Paintings, by leading artists—aggregate value	10,000
3 Camel's Hair Shawls, $1,000 each	3,000
2 Camel's Hair Shawls, $3,000 each	6,000
3 Handsome Lace Shawls, $250 each	750
10 Cashmere Shawls, $50 each	500
20 Silk Dress Patterns, $75 each	1,500
50 City Building Lots, $175 each	8,750
The remainder will consist of Silverware, Musical Boxes, Opera Glasses, Pocket Bibles, and different articles of ornament and use, amounting to	82,000
Total	$300,000

All the properties given clear of incumbrance.

HOW TO OBTAIN SHARES AND ENGRAVINGS.

Send orders to us by mail, enclosing from $1 to $20, either by Post-Office orders or in a registered letter, at our risk. Larger amounts should be sent by draft or express.

10 shares with Engravings	$ 9,50
25 shares with Engravings	23,50
50 shares with Engravings	46,50
75 shares with Engravings	69,00
100 shares with Engravings	90,00

Local AGENTS WANTED throughout the United States.

The Association have appointed as Receivers, Messrs. GEORGE A. COOKE & CO., whose well known integrity and business experience will be a sufficient guarantee that the money intrusted to them will be promptly applied to the purpose stated.

PHILADELPHIA, PA., May 20, 1867.

To the Officers and Members of the Washington Library Co., N. S. REED, Secretary:

Gentlemen:—On receipt of your favor of the 15th inst., notifying us of our appointment as Receivers for your Company, we took the liberty to submit a copy of your Charter, with a plan of your enterprise, to the highest legal authority of the State, and having received his favorable opinion in regard to its legality, and sympathizing with the the benevolent object of your Association, viz: the education and maintenance of the orphan children of our soldiers and sailors at the Riverside Institute, we have concluded to accept the trust, and to use our best efforts to promote so worthy an object.

Respectfully, yours, &c., GEO. A. COOKE & CO.

Address all letters and orders to

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

MANURING THE WHEAT CROP.

MANURE holds the same relation to the farm that steam does to the engine; it is the force used to accomplish the desired result. Let the one fail in the engine and the wheels stop, let the other be withdrawn from the soil and its useful products rapidly and constantly diminish. If the farmer cannot manure every crop, then he should consider from which he can best afford to withhold the fertilizers. If he designed growing a crop of oats, followed by one of wheat, it would not be wise to apply the manure to the oat crop and give none to the wheat. It would not pay as well; the crop of manure would be sold in a cheap market. So, too, it might be injudicious to manure a crop of potatoes and have none to apply to the succeeding grain. The season in which manure should be applied, the stage of the crop, and the depth at which it should be placed, are also topics which the farmer should think much about. Many consider that if manure is only buried in the soil it is enough, no matter whether it be deep or shallow, whether the subsoil be firm or leachy, if the manure is in the earth the crops, they argue, will get the full benefit of it—some time or another. But this is not always true, and it is certainly more scientific and profitable farming to apply manure—not to increase the general fertility of the soil with a view to benefiting several crops in succession—but to directly augment the yield of a specified crop. This course will bring the most profit, for products which command the highest prices are thus largely increased.

Doubtless most farmers will assent to the assertion that the wheat crop needs manure as much as any other one, and pays as well for its liberal application. But the profits of this operation may be greatly varied by the manner in which it is done. Plowing in manure deeply will not give as good results as placing it on, or just under, the surface. It is less labor for the farmer to plow in the manure, for it is easier to haul it on a hard surface than over freshly plowed ground. And then it is out of the way of the harrow and the drill; but when buried deep it does not nourish the young plant in its first growth, and impart to it strength and size to endure the approaching winter. Nor does it mulch the surface and protect the tender plants from heaving frosts and blighting winds. The rains in their descent wash the soluble elements downwards and away from the searching roots. Surface manuring reverses these processes, and is more rational and productive of more immediate and visible results.

Well fermented farm-yard manure is good enough for any crop, and the best manure for all, but the trouble is we can't get enough of it. Whether the wheat grower can afford to purchase and use fertilizers is a question which he must settle by experiment and observation. Lime may often be used with great profit; plaster is beneficial in some seasons, and salt returns a liberal profit if sown on land rich in humus. Fertilizers for the wheat plant should be applied before the seed has germinated, as a general rule, at least before the spring growth begins. The preferable time is just before sowing.

RYE AS A FARM CROP.

THIS grain is little cultivated in regions well adapted to those more valuable and of more general use. It belongs more properly to cold, heavy highlands, where Indian corn is in yearly danger from frosts at both ends of the season, and grass is the main crop. If grown exclusively for the grain it is an unpleasant and somewhat expensive crop to handle, on account of the bulkiness of straw, and the grain itself does not bring a comparatively high price in the market. But the straw is far more valuable than that of any of the cereals. The farmer has many uses for it. For thatching purposes it excels, and a roof of this material well put on, will last twenty-five or thirty years. Why should not farmers use straw roofs in preference to expensive ones, or humbugging patent rights? Rye straw is excellent for cutting and mixing with more nutritious food, and for many purposes around the farm it is convenient. It makes cheap and good protection for fruit trees. But the paper makers will pay the most money for it, and farmers will find it profitable to grow rye straw to supply their demands wherever paper mills are in operation within convenient distances. The Utica Herald gives some information respecting the value of rye straw in the central part of this State, which we copy:

"The making of white print paper from rye straw was commenced at Fort Edward, N. Y., in 1857. At that time, rye straw could not be procured in sufficient quantities to keep one mill running. It takes two tons of straw for a ton of paper. The farmers began to grow the crop in Washington and Saratoga counties, and now ten large mills are in operation, using in the aggregate 15,000 tons annually. The straw at these mills, for the past five years, has averaged less than $15 per ton, and $225,000 are brought into these counties for straw alone. Then there is the value of the grain. It was a poor farming district before the introduction of rye growing, and now the farmers are making good incomes. The mills at Herkimer are now using six tons of rye straw per day. MATTHEW SMITH of Frankfort, grew last year on an acre of land and from two bushels of sowing, 47 bushels of rye, for which he got $1.20 per bushel, and two tons of straw which were sold at $24. This makes $80.40 as the yield from one acre, which may be considered a very profitable crop. Probably the farmers of Herkimer would find it to their advantage to grow rye in connection with the dairy. The Herkimer mills are using 2,000 tons of straw annually, and are forced to get their supply from Schenectady. It comes in bales. Rye straw is worth from $24 to $30 per ton in New York city, and is of ready sale. At the mills East they pay $20 per ton for it. The business is confined to the States of New York, Massachusetts, Pennsylvania, Maryland, Delaware and Illinois. Nine-tenths of the printing paper made of straw is produced in New York."

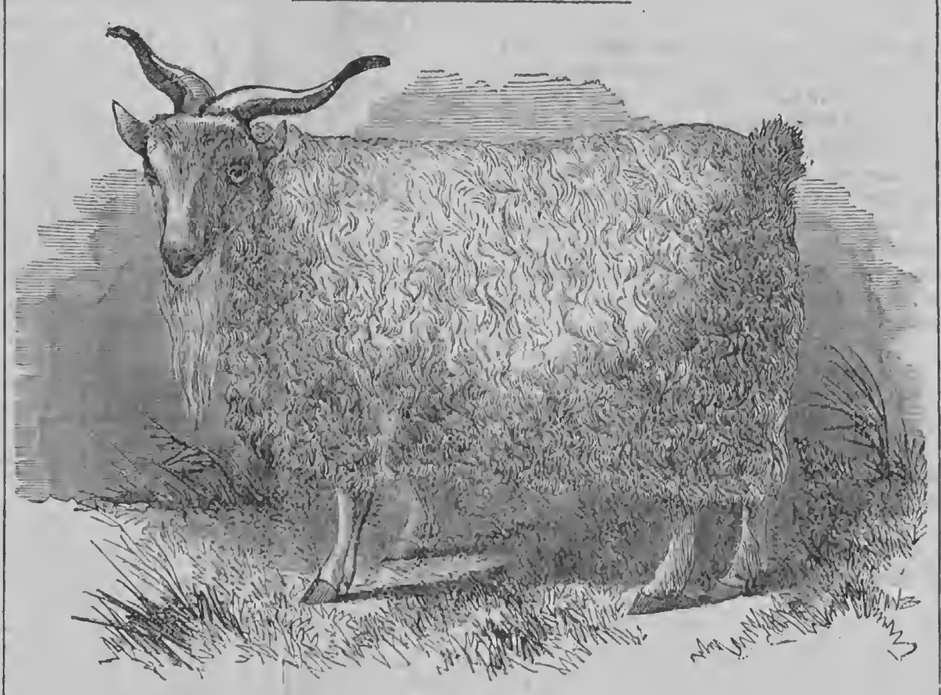
ABUSING HORSES.

IT is doubtless true that occasionally a horse may be found so naturally or inherently vicious as to try severely even the patience of a saint. But as a general thing the horse is the saint and his manager the sinner where trouble occurs between them. In too many instances the horse is abused and rendered disinclined to work in consequence of a lack of suitable food and proper grooming after the day's labor is performed. This results often from carelessness rather than from a disposition to maltreat the animal, but in too many instances ill-treatment flows from a cruel disposition on the part of the manager. A morose, fractious person is not fit to have the charge of a horse.

A few days since we saw a practical illustration of this. A man was passing along the street with a loaded wagon. One of the wheels struck a stone, causing a portion of the load to topple off and fall to the ground. The horses were not to blame for this, yet the driver beat them most unmercifully because of the mishap. Such a man ought not to be intrusted with the control and care of horses, nor indeed of any thing else, except, perhaps, a wheelbarrow with a ball and chain attachment.

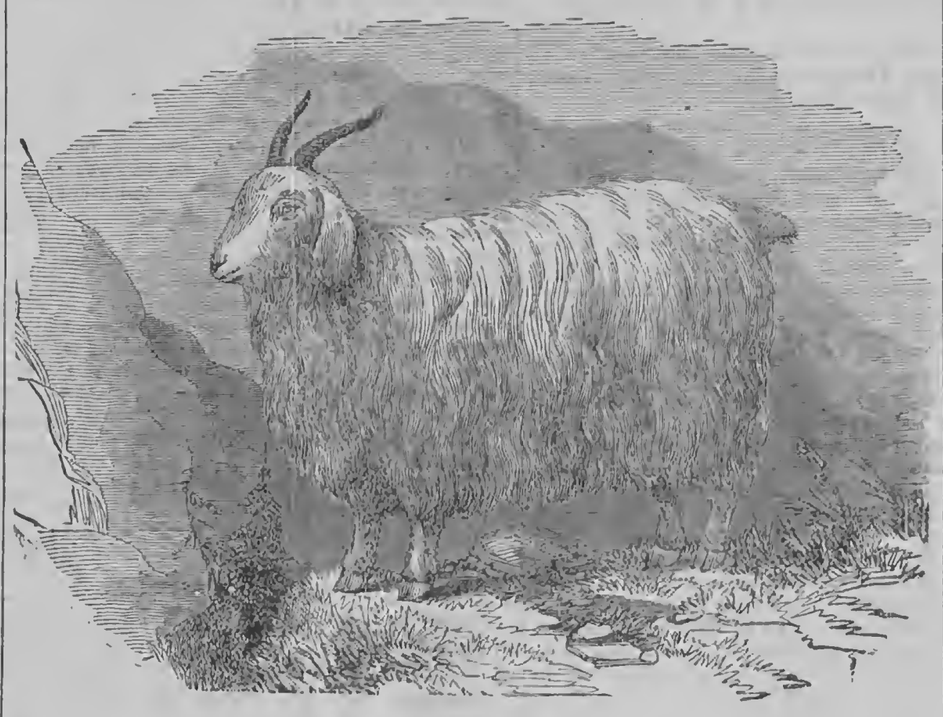
The horse is one of the most ambitious and useful of the domestic animals. He is possessed of great physical power, and equal to the performance of a vast amount of labor provided proper food and care are bestowed upon him. But if these are withheld, or, but scantily supplied, he soon becomes weak and dispirited and comparatively worthless. To make the horse what he should be, elastic in limb and docile in temper, good grooming is indispensable. He should be thoroughly cleaned every day, or at the close of every exertion of labor or speed which may have called into action his muscular powers for any considerable time. Timely feeding and proper food are essential, but next to these in importance is proper and seasonable grooming.

ANGORA AND CASHMERE GOATS.



THE ANGORA GOAT.

THIS goat derives its name from a province of Anatolia, the ancient Coppadocia, in Asia Minor, and the principal place where the wool is bought, sold and manufactured. It is an improved variety of the *Capra hircus*, or common goat, and closely allied to the Cashmere, but distinguishable from it, by the size of its ears. It is reputed the most valuable of all the goat family. It is covered with ringlets of beautiful wavy hair of silvery whiteness with a base of fine downy wool. The most approved breeds have large ears, the limbs slender and cleanly formed, the horns not spirally twisted, and, above all, the fleece being long, straight, fleecy and white.



THE CASHMERE GOAT.

THIS is sometimes denominated the "Shawl goat," and is spread over the region of Thibet, Northern India, and to the coast of the Caspian Sea. It is smaller than the Angora and is covered with long, white straight hair, of a silky texture and in winter with an under coat of delicate greenish wool, of two or three ounces to each, which alone constitutes the fabric from which the celebrated Cashmere shawls are made. The hair or wool often sweeps to the ground, and is from five to twelve inches long, especially in the older bucks, but then not so fine.

ABOUT REAPERS AND MOWERS.*

IT is not every common farmer's boy that is calculated to run a machine successfully. There are many beginners coming on the stage of action; and for such a few words may not be amiss as to how they should be used. It is presumed every one knows the value of shelter for all kinds of implements and machinery when not in use. One used to running a machine should be the one to make the purchase. Select the best, regardless of cost, and manufactured by those who can be relied on to use good materials.

A machine having two main driving wheels I consider the best for all purposes, because in reaping they are as good as the best single driving wheel, and in mowing far excel any rigid bar machine. In mowing they save more grass on all rough land; as, when mowing lengthwise of lands in the center, and in the furrows, and especially going crosswise of the furrows the knives cannot gouge in the dirt as some other machines. Of all two main driving wheel machines, I consider BALL'S patent, manufactured by DODGE, STEVENSON & CO., Auburn, N. Y., the best,—not because they advertise the most, but because they do good work in any and every place. They stand the wear and tear and jams the best, are easy to oil, readily taken apart, and may be stored away for winter in small compass.

Any machine cuts good while new, but to keep them doing so is the point. It is never good policy when there is heavy dew on grass or grain to commence cutting until it is nearly dry. It runs harder for the team, and wears out the machine very fast. A mass of blades and undergrowth collects on the guards, under the knives. To illustrate:—Take the shears and cut a piece of dry paper, and then wet the paper and try it. When running a machine on the road it should be kept out of the dust or mud, as the grit accumulating in the journal boxes soon wears them out. A machine cutting on the right hand should never be turned to the left in gear when in standing grass. Journal boxes should be kept well filled with Babbit metal. As soon as a journal wears loose a piece of copper may be inserted, or something may break. A shaft may have play endwise without damage. Do not be stingy of the oil. Each end of the pitman should be oiled every half hour; other parts according to the motion and work required. If it costs much for repairs, you should drive yourself, as it may save a number of hands considerable delay. When reaping, the guards should be fastened in a position so that the points may tend a little upward; in mowing, the same position of the guards, only that they should be allowed free play up and down. The tongue when mowing should be adjusted to the right, when reaping to the left. The reason is, the weight of the table is carried very easily by the outer wheel attached, and there is the weight of the extra man to rake off. It takes less power to reap than to mow. The knives should always be so adjusted whether reaping or mowing that the point of the knives shall play from center to center of the guards. This, in some machines, may be done better by altering the pitman by inserting a piece of leather, or taking one out near the brass boxes. The knives should be kept sharp by grinding from the heel toward the point; do not grind against the edge, as it will waste the water, and does not make as good an edge for cutting. To save the grindstone have plenty of water in a trough under; the stone may be very much injured grinding one knife when a little too dry. Don't go to the blacksmith every time you want in a new knife. Set the punch on the rivet on the upper side of the knife rod, and with the riveting hammer drive out the old rivet. Insert the new ones from the underside of the rod. Do the battering on the knife. PETER WYKOFF.

Romulus, N. Y.

* The practical hints in this article [illegible] publication, although the machines are the [illegible] way for the present year.

SEED GRAIN—WHEAT.

DIFFERENT opinions prevail among farmers upon the subject of seed grain, as also upon most other subjects connected with agriculture. It is frequently contended that shrunken wheat, which is of little value for grinding, will do as well for seed as more perfect grain. This position is taken by some from what they suppose to be the proof of experiment. They have seen good wheat raised from poor seed, and thence they infer that any seed that will grow is equally good, whether perfect or imperfect. But let us look at the matter in the light of vegetable physiology.

How does the seed grow? What are the agencies concerned in its growth? Heat, moisture and air are requisite for the germination of a seed. Sunlight is also necessary to a healthy growth. The seed contains within itself all the elements requisite to form the organs of the young plant. These organs must be formed before any food can be taken up from the air or soil. The elements which form these organs consist of nitrogenous substances, and also starch, fat, gum, earthy phosphates, &c. The seed will put forth its roots and leaves in pure water, and will grow till the plant has absorbed all the nourishment contained in the seed. Thus it will be seen that the earth is not necessary to the germination of the seed, but that it depends entirely upon its own elements to form the young plant. After its formation the roots absorb from the soil and the leaves from the air its nourishment. The health and vigor of the plant depend upon the proper development of the first root, and it is most evident that this first radiation will depend upon the perfection of the seed. A feeble, sickly plant cannot avail itself of the abundance of fertility in the soil any more than an invalid can appreciate the pleasures of a good dinner. What cattle breeder chooses his poorly formed calves to rear? Or chooses poorly formed animals from which to breed an improved stock? But this would be as good sense as sowing poor grain. Sometimes a scrawny young animal, with great care, becomes well developed, and sometimes defective seed, in good soil and long and very favorable season, produces a fair crop; but these are exceptions and not the rule. As a large and well formed young animal develops more rapidly and gets its growth earlier, so vigorous young plants grow more rapidly and mature earlier, and thus escape rust, when later

grain is ruined by it. Where seeds of various qualities are sown in the same field you will see much difference in the time of ripening and in the quality of the grain.

The well developed seed produces a well developed plant, and more numerous ramifications of the root, and the root takes up nourishment in proportion to its extent. It will be seen by these facts, that instead of sowing poor seed, great care should be taken to separate all the defective grain, leaving only the very plumpest and best for seed. If the soil is uniform and equally dry, your crop will then be uniform and ripen evenly over the whole field. The same wheat may be much improved by selecting the most perfect heads each year, and propagating from these. Like produces like, but imperfection does not produce perfection. E. W. S.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

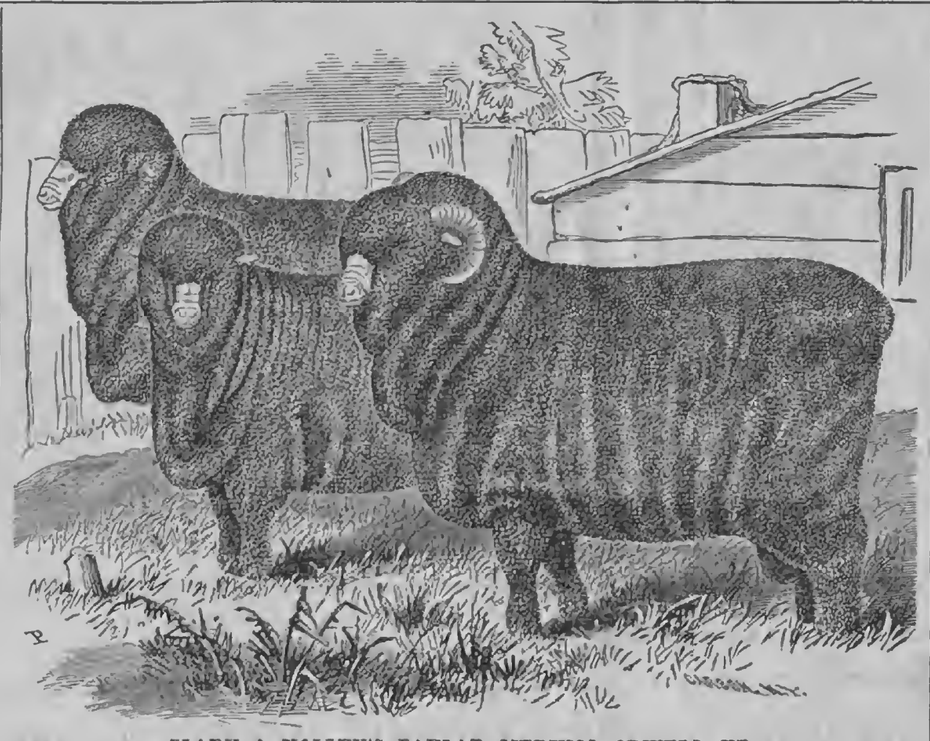
LONG WOOLED SHEEP.

A. C. BRUNDAGE, Bath, Steuben Co., N. Y., addresses us a letter, from which we make the following extracts:

"Are the Cotswold or Leicester sheep profitably adapted to general breeding in this State, either for wool or mutton? Is there a prospect of sufficient demand for them to warrant raising them to sell for breeding purposes? Where can I find the best, with reliable pedigrees, and at reasonable prices? * * * My reasons for these inquiries are that I have made an almost entire failure in raising fine wooled sheep, while other and better sheep men than myself have had more or less poor success."

It is difficult to say what should make the fine, dry, gravelly, and we should say, for human beings, entirely healthy, plains about the beautiful village of Bath unhealthy for fine wool sheep; but this is not the first time we have heard they were so, and we knew a practical shepherd there, of much experience, who gave up the business of raising Merinos on that account. He stated to us that he could not raise lambs with any reasonable degree of success, owing to the prevalence of goitre. We have hitherto supposed, and are still inclined to suppose, that this was rather due to some epizoolical (epidemical) influence, chancing to recur for an unusual number of seasons in succession, than to anything peculiar in the soil, climate or other natural circumstances. In other parts of Steuben county, apparently no more healthily situated in any particular for sheep, we never have heard of any uncommon mortality among them, either when lambs or afterwards. Fine wool sheep were early introduced into the county, and have been constantly grown there in large numbers. Our old friend Gen. MARSHALL has bred Merinos, in the town of Wheeler, for a great number of years; and he and his son, FRANKLIN J. MARSHALL, still ardently pursue the business. GRATTAN H. WHEELER, Esq., has long had large, and Messrs. LARRABEE, MATTOX, BIGELOW and others, considerable flocks of them in the same town. The extensive flock of AARON Y. BAKER, Esq. of Hammondsport, was commenced thirty or forty years since by his father. Messrs. CHAMPLIN, FAULKNER, YOUNGLOVE, &c., in the same vicinity, have bred Merinos for different periods,—but we are not informed how long. Mr. ARNOLD has an old established flock at Avoca, and Mr. ROBIE at Savona. We might much extend this enumeration of Steuben county flocks which we have seen—some of them repeatedly—and we have always found them healthy, thrifty, and with the full ordinary proportion of good, strong lambs. Indeed, had we been called upon to name the best sheep and wool growing counties of the State, we should have placed Steuben high on the list.

All this, however, proves nothing in regard to Mr. BRUNDAGE'S farm, or other particular farms in the same neighborhood,—and whether the causes of his failure are natural and permanent, or only incidental and transient, it is perfectly reasonable, and perhaps expedient, that he make experiments in other directions. The Long Wool varieties are certainly not hardier or less subject to disease than Merinos; they will not herd as well or safely in large numbers; they require more and better feed and care. But, if successfully kept, they will pay well for this extra feed and care; and they may escape the special local diseases to which Mr. BRUNDAGE has found his fine wool sheep subject. In answer to our correspondent's inquiries we reply:—1st. We do consider Cotswolds and Leicesters (i. e., Leicesters with the almost universal Cotswold cross,) well adapted to profitable breeding in this State, for mutton and wool combined, in situations where the lands are rich, unsubject to drouth, and adapted to root culture,—and where good, city mutton markets are easily accessible. We presume Mr. BRUNDAGE has the first requisites; and he has ready access by railroad to every city in the State. 2d. The establishment of manufactures of combing wools has greatly increased the domestic demand for them, while the abrogation of the Reciprocity Treaty and the passage of the wool tariff, will prevent untaxed Canada combing wools from longer driving our own heavily taxed ones out of market. This will, and should, excite an increased demand for Long Wool sheep; and, if the tariff continues, will, we have no doubt, render it profitable to raise choice ones "to sell for breeding purposes." There is, indeed, a pretty active demand for them already. They are great favorites with dairy farmers and with grain growing farmers who do not keep but a few sheep and who do not wish to engage in wool growing to any considerable extent. 3d. It would be invidious to give our opinion where "the best" are to be found,—but we will give the names of a few breeders of reputation, whom, we presume, sell at "reasonable prices." The recently



CLARK & HOLLEY'S PAULAR MERINOS, ORWELL, VT.

GOT BY EDSON BIRCHARD'S ROBINSON RAM OUT OF EWES OF THE ROBINSON FLOCK, GRAND DAMS BRED BY MR. ROBINSON.

imported Cotswolds of JOHN D. WING, Washington, Dutchess Co., N. Y., were alluded to by us recently. E. GAZLEY, Pleasant Plains, in the same county, has repeatedly won first prizes on Cotswolds at the Fairs of the N. Y. State Sheep Breeders' and Wool Growers' Association. ISAAC AIKEN, Beekman; S. T. DEUL, Little Rest; STEPHEN HAIGHT, Washington; BARCLAY HAVILAND, Hart's Village,—all in Dutchess Co., N. Y.,—are Cotswold breeders of reputation. BURDETT LOOMIS, Windsor Locks, Conn., is an eminent importer and breeder of Cotswolds. Hon. N. L. CHAFFEE, Jefferson, Ohio, breeds choice Cotswolds, and, we believe, also Leicesters. Hon. NORTON S. TOWNSHEND, Avon, O., and Hon. T. C. JONES, Delaware, O., are old and very eminent breeders of Leicesters. JOHN M. MILLIKEN, Hamilton, O., L. CONVERSE, Bucyrus, O., JOY & HILLS, Delaware, O., J. J. DODGE, New Lyme, O., Capt. JAS. M. BROWN, Berlin, Ill., R. A. ALEXANDER, Spring Station, Ky., E. G. BEDFORD, Paris, Ky., WM. WARFIELD, Lexington, Ky., are Long Wool breeders of high standing,—but whether they breed Cotswolds or Leicesters we do not distinctly remember. We think nearly all of them breed both varieties. WALCOTT & CAMPBELL, New York Mills, N. Y., have recently imported a flock of choice improved Lincolns, whose unsurpassed *luster* wool we have given some description of in these columns.

These are the names of such American breeders as most readily occur to us. There are many others worthy of notice, which we do not chance to recall, or which we are unacquainted with.

NEW IMPORTATION OF COTSWOLDS.

WE have received the following letter from an eminent American breeder, of Windsor Locks, Conn., now in England:

LONDON, July 29, 1867.

MY DEAR SIR:— * * * I have been about ten days in Gloucestershire, looking at Cotswold sheep, and have had a good, thorough view of all the best flocks. When the sales came on I bought the best ram I could find and paid the highest price that any Cotswold ram has sold for this year. I paid 130 guineas, gold, for him here, which will make him cost at home, in greenbacks, over $1,000. He was bred by ROBERT GARNE, Northleach, Eng., and got by his celebrated ram "The Emperor," out of a ewe got by the ram that won the first prize at the Royal Show at Worcester, in 1863, and is of the best Cotswold blood. I also bought two other rams. I purchased of Mr. GARNE ten ewes that were sent in June—ten to go in September—and ten a little later. I have carefully examined all the best sheep here, and I like his blood and style the best for our country. His sale of fifty rams at auction brought an average of about £25. There have been over four thousand Cotswold rams let and sold this summer in the hills, at a price from £5 to £130. A great many are used to cross for mutton and lambs. I am in hopes to get mine out safely, and they will make my Cotswold flock something over two hundred, all bred directly from the best flocks in England. * * *

Yours respectfully. BURDETT LOOMIS.

SPRINGFIELD (VT.) WOOL SCOURING.

WE have received from C. HORACE HUBBARD, Esq., President of Springfield (Vt.) Agricultural Society, the following report of the Committee on Scoured Fleeces appointed by that Society It is a highly creditable one to the wool growers of the region. President HUBBARD sends us a sample of the scoured wool, to enable us to judge whether the scouring was properly performed. It looks very clean, but we can form no definite opinion from a single small sample. It is the better way generally, we think, for the manufacturer to state his process of cleansing to the public.

REPORT.

The Committee appointed to superintend the shearing and scouring of fleeces have attended to the duty assigned them. The sheep, twenty-six in number, were all shorn in public, April 25th, 1867—the owners making certificates under oath of the time and manner of previous shearing, &c. The sheep were weighed to half a pound, and the fleeces to half an ounce. Care was taken in tying the fleeces to use a uniform quantity of twine, which was included in the gross weight of fleeces but not in those of scoured wool. Six of the fleeces were scoured at the mill of HOLMES, WHITMORE & Co., in this town, when, on account of a previous misunderstanding between one of the members of that firm and the Society, the work was suspended, and the other twenty were scoured at the mill of JAMES FILTON, Esq., in Cavendish.

The fleeces were all scoured and dried under the immediate personal supervision of H. M. ARMS of the Committee, and weighed by B. F. DANA, H. M. ARMS and L. R. WHITE.

OWNERS' NAMES.	Age of animal.	Weight of carcass.	Weight of fleece, unwashed.	Weight of fleece, scoured.	Age of fleece in days.	Amount of wool grown in 1 year.	Amount of wool grown in 1 year to 1 pound of carcass.	Per cent. of shrinkage in cleansing.

C. & L. G. Ellis	1	60 8	7 8	3 10½	375	3.741	.0668	51.25

It is found that the average shrinkage of Merino rams' fleeces shorn "in the dirt" is 67 76-100 per cent., and of Merino ewes' fleeces is 51 32-100 per cent.; that of grade ewes is 52 25-100 per cent.

In closing the report, we congratulate the Society upon the result of this, our first effort in this direction. Comparing the weight of our *scoured* fleeces with those of other Societies shows that the breeders of our town make at least a respectable figure.

For the purpose of showing to the Society the relative standing of its sheep for the production of "real wool," we take the liberty to compare a few of the fleeces with those of the New York State Society, at Rochester, in 1866. The heaviest rams' fleece of that Society is 6.653 lbs. scoured wool. WILEY & BOSWORTH'S fleece, above, is 7.449 lbs., and Mr. PIPER'S is 6.94 lbs., and Messrs. LOCKE'S is more than 47-100 of a pound heavier than any of the fourteen New York ram fleeces, with the one exception above. Mr. HUBBARD'S heaviest ewe fleece is 64-100 of a pound heavier than any of the New York ewe fleeces.

In analyzing the tables showing the product of scoured wool in proportion to time of growth and live weight, we find the greatest weight of wool in one year by one pound of animal at the New York shearing to be .083 of a pound. Messrs ELLIS' fleece gives .088; Mr. HUBBARD'S, .099, and Mr. BROWN'S, .104—or more than one pound of wool to every pound of carcass.†

All the sheep except those of Mr. WILLIAMS were owned in this town.

J. W. COLBURN,
B. F. DANA,
HENRY M. ARMS,
LEVI R. WHITE,
Springfield, Vt., Aug., 1867. Committee.

* The first five fleeces in the ram list and the first twelve in the ewe list are from thorough-bred Spanish Merinos, the others from grades. The weights of carcass, of fleeces unwashed and scoured, are stated in pounds and ounces, the other weights in pounds and decimals.

† This is manifestly an error, which we leave the Committee to correct.—PROOF READER.

Condensed Correspondence, Items, &c.

WINNER OF THE BRONZE MEDAL.—RICHARD RICHARDS, Racine, Wis., exhibited a fleece of wool at the Paris Exposition, and was awarded a bronze medal. He informs us that it was one of the fleeces, samples of which were favorably noticed in this paper June 9th, 1866. Mr. RICHARDS has received the following letter from J. W. HOYT, Esq., Secretary of the Wis. State Agricultural Society, and Pres't Wis. Com. to Paris Exposition, dated at Paris, July 15th, 1867:

"I am pleased to be able to inform you that in a contest with competitors from all parts of the world, you have won a Bronze Medal on your Merino wool. The fleece was very much admired by the best judges, and had it been in place earlier so that the Jurors could have seen it before their decision was already more than half made, it is highly probable that the silver or even the gold medal would have been yours. In view of all the circumstances the result is very highly creditable to you, and you may well be proud of the award. If you desire you are at liberty to publish my letter."

LIFE MEMBERS.—The following persons have become Life Members of the N. Y. State Sheep Breeders' and Wool Growers' Association, since last report:

STEPHEN FRANCIS, ...Bristol, N. Y.
JAMES BUSH, ...Jamesville, N. Y.
J. N. & D. D. JOHNSON, ..Ovid, N. Y.
WILLIAM HAYNES, ...Hoosick, N. Y.
E. MUNGER, ...Tyre, N. Y.
ALVA FREEMAN, ...Scipio, N. Y.
WM. H. HIBBARD, ...Cortland, N. Y.
GEORGE H. CHASE, ...Union Springs N. Y.
JOHN LYNCH, ...West Brighton, N. Y.
S. L. STEPHENS, ...Greenwich, N. Y.
J. D. WING, ...Washington, N. Y.

Dairy Department.

COWS SUCKING THEMSELVES.

"H. T.," Pooleville, Madison county, N. Y., writes:—"How can you prevent cows from sucking themselves? I have one that sucks herself dry every night. Can you, or some of your readers, inform me, and perhaps benefit others?"

REMARKS.—This is a freak—we can give it no better designation—of rare occurrence among cows. In an experience, embracing several lustrums, among dairy stock, we can call to mind only three instances in which cows undertook to do their own milking. In each of these cases the cows when young were allowed to do pretty much as they pleased about sucking—running with their dams at will, or nearly so. As preventive we have known the teats to be daily smeared with some offensive compound in the shape of a salve, but this is difficult to manage, since, without great care, the offensive matter will get mingled with the milk as it is being drawn from the udder. A sure preventive is found in placing upon the neck of the cow a frame made of light plank about twenty inches long, with protruding corners, fitting the neck well, and fastened either with a spring or string. These projections at the corners of the yoke will prevent the cow from reaching her teats with her mouth and of course stop the self-milking business. This yoke or frame is not very ornamental to a cow, nor likely to be worn with much complacency, but it will be found an effectual barrier to self-milking.—ED.

THE GREAT CANADA CHEESE.

Our readers will recollect a notice of a mammoth cheese exhibited at the State Fair, Saratoga, manufactured by JAMES HARRIS at the factory located near Ingersoll. Thirty-five tons of milk were used in manufacturing this cheese, which weighs 7,000 pounds. It is now about one year old and in a good state of preservation, notwithstanding its trip to Saratoga. Mr. WILLARD, who recently visited Ingersoll, alludes to the "big cheese" thus:—"As there are no giants in Canada capable of picking up a 7,000 pound cheese and turning it upon its range, there is an arrangement for this purpose. The hoop is placed around the cheese, and the planks above and below, upon which it in turn rests, are securely bolted together; then the arms on either side are pushed into iron sockets attached to the hoop, the blocking below removed, and the big cheese stands suspended upon pivots, and is turned with ease; but this operation is now not performed very often."

The testing iron was inserted and came out filled with a solid mass, uniform in color and excellent in texture. The flavor was sharp, resembling the brandy-cheese so popular with many. It is not likely that this style of cheese will be imitated very often, as the size is much too great for safe commercial handling or profitable cutting up for use.

DAIRY ITEMS.

Good Buttery Cheese—To Make.—In FLINT'S "Milch Cows and Dairy Farming" is a communication from Mrs. WILLIAMS of Windsor, Mass., on the subject of cheese making. Having received the first premium at the Franklin County Fair, it is safe to assume that she is at home in cheese making. She directs as follows: "My cheese is made from one day's milk of twenty-nine cows. I strain the night's milk into a tub, skim it in the morning, and melt the cream in the morning's milk; I warm the night's milk, so that with the morning's milk, when mixed together, it will be at the temperature of ninety-six degrees; then add rennet sufficient to turn it in thirty minutes. Let it stand about half or three-quarters of an hour; then cross it off and let it stand about thirty minutes, working upon it very carefully with a skimmer. When the curd begins to settle, dip off the whey, and heat it up and pour it on again at a temperature of one hundred and two degrees. After draining off and cutting up, add a teacup of salt to fourteen pounds. The process of making sage cheese is the same as the other, except adding the juice of the sage in a small quantity of milk."

Dairymen's Convention — Canada.—On the 31st of July from two to three hundred persons assembled at Ingersoll, Oxford county, Canada, for the purpose of forming a dairymen's association similar to those existing in this State. An association was formed, of which C. E. CHADWICK, Esq. of Ingersoll, was chosen President. Twenty-one Vice Pres'ts were chosen. JAMES NOXON was made Secretary and R. A. JANES, Treasurer. An address of an hour's duration was made by X. A. WILLARD, Esq. of Herkimer, which elicited marked and warm approval. Speeches were also made by F. W. CLASH of the Canada Farmer, Hon. DAVID REESOR, Messrs. FAULKNER and HARRINGTON of this State, and several Canadian gentlemen. The movement seems to have commenced auspiciously, and will no doubt eventuate in good to the dairying interests of Canada.

Little Falls Cheese Market.—The Utica Herald reports that cheese sales were a little more brisk on Monday, August 12th, but no advance of prices over those of the previous week was obtained. The delivery was wholly from farm dairies, and of an average character and sold at from 11 cts. to 13 cts.—the latter the extreme for best grades. Several lots of factory-made were sold recently at an average of 12¾ cts. A considerable purchase of Lewis county factory, for parties in London, was reported at 14 cts. The Herald is of the opinion that the dry weather prevalent in the dairy regions for some weeks past must materially diminish the cheese product. At present rates of cheese the business of manufacturing is considered a losing one.

Rural Notes and Items.

THE SEASON.—The East and South were more than favored, even damaged, by heavy rains last week—causing much injury to crops, railroads, etc., in some localities. In this region, however, a dronth is prevailing, the earth being very dry and parched, as but little rain has fallen this month—for some three weeks. The crops must be suffering, and unless rain is soon vouchsafed, more or less damage will result from the drouth. Taking the whole country into the account, however, our reports of the weather, crops, and crop prospects, are generally favorable.

THE FOOD CROP OF 1867.—According to the Department estimates the wheat crop of the present year is equal to about six bushels for every man, woman and child in the United States; of corn, 35 bushels; rice, 2 lbs.; beans and peas not estimated. Rye, barley, and buckwheat, about 2½ bushels. Of provisions, the estimate includes only butter, 16 lbs; cheese, 4 lbs. Of root crops, potatoes only are considered, giving 5 bushels to each person. Taking into account the various other sources of supply, meat and vegetables, it is safe to assume that a scarcity of food for the ensuing year is not to be apprehended.

FROM IOWA.—A business letter from Clinton Co., Iowa, dated Aug. 14, says:—"The RURAL now comes regular. I like to see the good old friend; it is like a brother—I was lonely without it. We are having splendid weather and crops. The wheat is secure. The corn is farther advanced than for the last four years at this time of year. The oats are being harvested. We are to have the State Fair here this year; great efforts are being made to insure success. We expect to have the largest and best exhibition of all Agricultural and Horticultural implements and products of any year yet. May it prove successful."

BLOCK TIN PIPE LEADEN-CASED.—Many people are afraid, and it may be with good reason, of the bad, even poisonous effects of lead pipe; but this is free of that damage. A lead pipe, lined heavily with block tin, is made at the foot of West 27th St., New York, by COLWELLS, SHAW & WILLARD, by a patented process. It is highly commended by Prof. DRAPER, Dr. ANTISELL, and other men of science and skill, and is turned out in large quantities for the uses to which pipe, large and small are applied. It is flexible, clean and pure. See advertisement in this paper.

CATTLE—SOILING—PASTURING.—In the discussions of the Institute Farmers' Club the question of pasturing and soiling cattle was remarked upon with reference to their cost and advantages. J. C. BRETSNIELS, North Evans, Erie Co., said where land is worth $100 per acre pasturing will not pay. If worth only $35 or $40 per acre soiling will not pay as well as pasturing. Has not the adaptability of the land for certain crops something to do with the solution of the question?

FAIR AT ONEIDA.—The annual Fair of the Farmers' and Mechanics' Association of the town of Lenox, Madison Co., will be held at Oneida on the 3d, 4th and 5th days of October. A "sweepstakes" open to all is offered as follows:—Best Stallion, for all work, $15; best Short-Horn, Devon and Ayrshire bulls, each $10; best Spanish Merino, South Downs and Leicester bucks, $8 each. Competition from abroad is invited.

WHEAT CROP IN EUROPE.—It is stated in correspondence from London and Paris that the wheat crop has been badly injured all over Europe by prolonged wet weather during the harvesting period. These reports embrace England, France, Holland, Germany, Hungary, Odessa, Gallacia and Russian Poland. There is one consolation connected with this and that is reports of harvest failures usually exaggerate the loss.

THE KANSAS FARMER.—In the last issue of the Kansas Farmer, JOHN S. BROWN bows himself out of the editorship and GEORGE A. CRAWFORD salaams himself in as corresponding editor, while GEORGE T. ANTHONY assumes the chair vacated by Mr. BROWN. Mr. C. mildly insinuates that the people of Kansas spend too much time on politics, Indians and grasshoppers, and too little in profitable enterprises.

A GOOD TEAM.—The Fredonia Censor states that a span of horses belonging to Messrs. WHITE & ELLIS, tanners at Laona, drew at one load from Dunkirk to the former place, a load of hides weighing ten thousand two hundred and four pounds! Five tons and over is a pretty tall load for a span of horses to draw several miles during the hot weather prevalent last week.

CATTLE DISEASE.—A disease, resembling in its symptoms the Rinderpest of Europe, has appeared in Bucks Co., Pa., confined principally to two sections of Salisbury township. Several cattle have been attacked, and several deaths resulted therefrom. The cause of its appearing there is referred to a drove of cattle from Philadelphia which passed through that place.

PETROLEUM FOR FUEL.—A Board of Naval Engineers has been experimenting in Boston with crude petroleum as fuel for generating steam on sea-going vessels. So satisfactory has been the result that application to the Navy Department for permission to make a trial trip at sea with this substitute for coal is to be made by Commodore ROGERS.

DECREASE OF THE REVENUE.—The N. Y. Herald publishes the returns of the internal taxes assessed on manufactures in the principal districts of New York, Pennsylvania, New Jersey and Massachusetts for the present year. As compared with 1866 there is a falling off of quite 40 per cent.

STEUBEN COUNTY FAIR.—The Committee on Regulations for the Steuben County Fair, to be held at Bath Sept. 25th—27th, extend an invitation to clergymen and editors of public journals to be present on the occasion. They will please report themselves to the Secretary.

POTATOES IN FIFTY-SIX DAYS.—The Woonsocket (R. I.) Patriot mentions having received some fair-sized Zebeck potatoes grown from seed in the open field 56 days from planting. The ground was surface-manured, but none was put in the hills.

THE RIVERSIDE MAGAZINE for June comes from Hurd & Houghton, New York, fresh and bright with stories, poems, pictures, and facts to delight and instruct the "young people," not void of interest for "children of larger growth," even.

OHIO STATE FAIR.—We have received a fine poster of the Ohio State Fair, to be held at Dayton, commencing on the 23d of September and to continue five days.

HORTICULTURAL.

THE COMMITTEE ON NATIVE FRUITS.

WHAT can be done to get the Committee on Native Fruits of our Western New York Horticultural Society to do their duty? Last September I published a long article in the Horticultural page of the RURAL, setting forth the claims of two new raspberries. At the late meeting of the Society a letter from me was read, inviting said Committee and all others to investigate said claims. Still later I put a prominent advertisement in the RURAL, appointing a day when both berries would be in their prime. But failing to get any of the Committee on that day I made a trip to Rochester, and after getting a promise of attendance from one of the Committee, whom I found there, I wrote to all the others, appointing a day when I would meet at the cars—but did not succeed in getting any of them on the ground.

J. J. THOMAS writes he was gone from home; have not heard from the others.

Now what more could have been done? If this Committee is appointed as a safeguard to the public, do they not owe fruit growers an apology? Can we be blamed if after this we put our plants in market as being in fact all we claim for them? H. H. DOOLITTLE.

Oaks Corners, Ont. Co., N. Y.

REMARKS.—Our correspondent has cause for serious complaint. The Horticultural Society of Western New York has officially expressed its conviction that new seedling fruits should be examined by a committee composed of competent horticulturists, before their claims to favor should be urged by the originators or accepted by the public. There is a Standing Committee for this purpose, composed of the following prominent horticulturists residing in Western New York:—J. J. THOMAS, Union Springs; T. G. YEOMANS, Walworth; W. S. LITTLE, Rochester; S. B. GAVITT, Lyons, and JOHN CRAINE, Lockport. It seems to us that the duty which this Committee owes, not only to the possessors of seedlings, but to the Society which it represents and to the fruit growing public, should be more faithfully discharged. Gentlemen should not suffer their names to appear on this Committee if they are unable or unwilling to encounter its labors and responsibilities.—ED.

HEADING OFF THE CURCULIO.

IN a recent number of the Ohio Farmer there was an account of a meeting of the Cincinnati Horticultural Society, at which a letter was read from P. S. BUSH of Covington, Ky., detailing his method of heading the curculio from his plum trees. It consists in removing the turf from around the trees, if any there be, over a space somewhat larger than that covered by the top or branches, and covering the ground a half an inch thick with marble dust, leached ashes, blue clay or gravel well composted or beaten down. This forms a coating impenetrable to worms and insects. The experiments tried were confined to the gravel and marble dust, used singly, but the other materials mentioned, it is supposed, will answer the purpose. Trees, upon ground thus prepared, have borne a full crop of plums ever since. J. W. RUST, residing also in Covington, saves his plums by burning tobacco stems under the branches of his trees every morning. He was induced to do this by noticing the fact that a plum tree, under whose shade he was accustomed to enjoy his pipe daily, produced a fine lot of fruit, while all the rest cast theirs from the action of the curculio. Acting on this hint, he fumigated his trees, with the smoke of burning tobacco stems, and saved his plums.

GRAPES—SOUTH SHORE, LAKE ERIE.

A DISTANCE east of Cleveland, Ohio, of say twenty miles, and west seventy miles, or thereabouts, embracing Sandusky and ranging the Lake Shore just so far back from it as to benefit from its influence, is claimed at this time to be, perhaps, as favorable for the growing of the grape as any section of the United States. A visit through the vineyards, however, is only requisite to convince any observing one that all of this section is not, in a strict sense, grape land; for while the vine thrives in all the soils of sand, loam, gravel, and clay, the latter, when resting on a yellow soap-stone clay shale, which, with its crevices, is almost a natural drainage, although slow, is found to give the finest bunches with the least surplus of wood.

Recently having visited many of the vineyards within the range above noted, it may be of interest to many readers of the RURAL to know that the vines are all healthy, and the fruit crop now a promise of perfection. In some few cases a little mildew was found on vines of Delaware and Concord on sandy loam, and one case of rot in Catawbas on gravel clay,—but otherwise no disease or injury as yet has exhibited itself; and now, as the process of stoning is nearly completed, there can be little fear of the crop. Among the best vineyards, that of GEO. LEICK, at Collamer, of about thirty acres, one-half of which is bearing, exhibits, perhaps, as good management and as judicious a course of pruning as any,—although the vineyards in charge of E. BOYD, Esq., at Avon Point, numbering some 115 acres, exhibit a similar course of management and a like vigorous, healthy condition. The laterals are not cut out or the canes for next year's fruiting headed back,—but the bearing wood of this year has the laterals stopped at one, two or three leaves, according to the vigor of the vine, and the main canes stopped at about three or four leaves beyond the fruit.

Norton's Virginia, in the grounds of Mr. LEICK, exhibits the value of long pruning, as some vines that were pruned short, after the old manner of Catawba and Delawares, are making an immense amount of wood but no fruit, while those long pruned, even to leaving some laterals, are bearing profusely. This is also the case with the same variety in the vineyard of JOHN HOYT, Esq. The Delaware everywhere tells the story of its want of rich soil or strong manures, as in all such positions its growth is fine and its fruit abundant, while everywhere that it is planted in poor or ordinary soil, such as suits well the Catawba, it fails to grow satisfactorily. F. R. ELLIOTT.

THE NICANOR STRAWBERRY.

THIS new seedling, originated by Messrs. ELLWANGER & BARRY, has been briefly noticed heretofore in these columns. It has been fruited for six years, part of the time on a large scale as a market berry, and its qualities, so far as they can be tested by one grower, should certainly be well known by this time. Messrs. E. & B. say "it commences to ripen a few days before the Early Scarlet, has proved more productive with us than Wilson's Albany, keeps longer in bearing, and for hardiness is unequaled. Fruit, bright scarlet, about the same size as the Wilson's, but more uniform, and of much better quality; conical, with an occasional flattened berry."

THE GRAND TRAVERSE BAY REGION.

EDS. RURAL:—I wish to call attention to this country for the benefit of that class of people who are seeking homes where land is *cheap* and soil is *good*. I will give some of my reasons. The soil and climate are such that the country is very healthy, entirely free from fever and ague, and billious diseases are unknown. The extremes of temperature are less than almost any other part of North America. The thermometer never reaches a point at which peach buds are injured during the winter, and autumnal frosts are delayed by the influence of the waters of Lake Michigan and Grand Traverse Bay until late in the fall, generally from the 25th of October to the 1st of November. Last year the melon and tomato vines were not injured on the Peninsula until the first of November. Land is cheap; price of wild land is from three to ten dollars per acre, heavy-timbered with maple; farms partly cleared, from seven to twenty, with log house and barns and fences. There are no Government lands for sale, having all been purchased or taken as homesteads, except it be back in the country, where there is more exposure to frost. Several townships in Lelanaw Co. that I visited have a settler on nearly every quarter section, where two years ago only two families lived in a distance of several miles around. The emigrants that came in this season are mostly from New York and Ohio; some from the southern part of Michigan. Several men from St. Joseph, Mich., have purchased on the Peninsula and are preparing to plant hops and peaches extensively. One gentleman who sold a peach farm at St. Joseph, at prices ranging from three to five hundred dollars per acre in small pieces, intends planting two hundred acres to fruit as fast as he can fit the ground; others are planting smaller amounts.

The markets must always be good for fruit as Northport is a fine harbor, and many of the Chicago, Milwaukee, Racine and Detroit boats call there for wood, sometimes two or three per day, beside the regular boats. All of the northern part of Wisconsin and the copper region of Lake Superior (a section too cold for raising fruit) can be supplied from Grand Traverse cheaper than from any other point.

Having had considerable experience in fruit growing and shipping in Monroe Co., N. Y., I have no hesitation in saying that for growing winter apples, and facilities for shipment, the Grand Traverse region has no equal in the Northern States. As for peaches I have several times noticed props under the branches, left there from last year, where the trees are full of fruit this year. And the people tell me they bear every year. The canker or measuring worm, spoken of by Prof. WINCHELL has entirely left the region.

Yours, &c., C. P. AVERY.

Traverse City, July 27th, 1867.

ROOT PRUNING.—(P. H., Waterville, N. Y.) Root pruning, for the purpose of inducing fruitfulness, should be done late in the fall, in the winter, or *very early* in the spring. Prune your neglected grape vine as close as may be desirable at the beginning of winter.

HORTICULTURAL GLEANINGS.

The Wilson Strawberry at the West.—M. L. DUNLAP says:—"Whatever may be thought of the Wilson at the East, here at the West it is not only the market-berry, but is rapidly becoming almost exclusively the one for family use. Our hot suns appear to elaborate its rich acid juice; and although it may require more sugar than the soft varieties, yet it suits the taste of our people."

A Southern Nursery.—Some three miles from Augusta, Ga., are the Fruitland Nurseries, comprising several hundred acres. The grounds border upon and overlook the Savannah River, and are stocked with apple, pear, peach, and other varieties of fruit—especially grapes. The stock of peaches is from 80 to 90 thousand trees, with apples, &c., to match. It is supposed to be the most extensive establishment of the kind in the Southern country.

Champion Muscat Grape.—A new variety is offered for sale under this name. It was raised by Mr. Melville of Dalmeny Park, from the Champion Hamburg crossed with Cannon Hall Muscat. It is a very free setting variety, and succeeds perfectly under the same treatment as the Black Hamburg. The bunches are large, well shouldered, and the berries of great size, resembling in every respect the Champion Hamburg, but with the most exquisite and powerful Muscat flavor.

Thornless Black Cap Raspberry.—We have received from Mr. JOSEPH SINTON, Angola, Erie Co., N. Y., samples of the fruit and branches of this plant. The berry is like that of the Doolittle; the branches and main stem are stocky, of good habit, and the foliage vigorous. The canes are without thorns, and may be handled with impunity. It propagates from the tips of the canes, and does not spread from the roots. Mr. S. informs us that it ripened its fruit this season eight days earlier than the Doolittle.

New Seedling Strawberry.—The new variety raised by Hon. M. P. Wilder, and shown last year, has been again exhibited the present year, and appears to be one of the best of the new seedlings introduced for several years. In general appearance it resembles La Constante, from which it is believed to be a cross between that sort and the Hovey. The size is large, the form regular, the flavor good, and though a little hollow in the center it appears to possess many good properties. It is a more vigorous grower than La Constante, but not quite so glossy and rich in color.

Robins in the Vineyard.—It is a serious question with the growers of some of the earliest and sweetest grapes, especially the Delaware, how to keep them from the robins. The law in this State is against the shooting of birds, but the opinion is gaining ground that the robin should be outlawed. He is a great thief of fruit, and his claims to immunity as benefactor in the way of eating insects is growing weaker every year. If it really comes to the necessity of choosing between the robins and the fruit, the birds will have to go. We shall hear more of this matter when the Horticultural Societies meet next winter.

Tomatoes.—F. R. ELLIOTT, Cleveland, Ohio, writes us as follows:—"Among tomatoes, I have now growing Powell's Early, Keyes' Early, Early York, Vinewood, Stockton, Howe, Tilden, and several others, but one under name of "Alger" has matured its fruit as early as the earliest, and not only one or two fruits and then a lull or period of not ripening, but it has continued to ripen right along. The vine has a strong, broad leaf, something like Keyes', but without the curling, as if about drying up, which that variety has, and its fruit is large and even, and of the best quality."

The Catawissa Raspberry.—C. D. COPELAND of Lima, N. Y., writes thus concerning this fruit:—"It is now, with us, in its blossoming stage for the autumn crop. This is produced by the canes of this year's growth. The first crop, which is on the old canes, continues to redden the bush at this date—Aug. 10th. A gentleman living in the town of Catawissa, Pa., where the bush originated, in a private letter now before me, says:—'In an experiment made by himself, 40 hills that were three years old, yielded upon an average, from July until October, weekly, a quart to each hill.'"

Strawberries—Northern Green-Houses vs. Southern Climate.—The editor of the Gardeners' Monthly says:—We should like to see the experiment fairly tried between strawberries from the house and fruit ripened a long way off. We have expense from transportation, and injuries from decay, against growth on the spot and prime quality. It is not always the *mere strawberry* which pays. When we were in New York, last month, poor strawberries found no buyers, though offered at 5 cents per quart. They were pronounced a drug, and many were being thrown into the river. At the same time KNOX's glorious Jucundas were sought after at 35 cents per quart. We note this to show that there are many points in strawberry growing for profit to be considered besides mere earliness in ripening.

The Walter and Modena Grapes.—Since publishing the illustration of the Walter Grape, Mr. CAYWOOD of Poughkeepsie has written us that they have no plants for sale at present. He also forwarded a description of the Modena, "a seedling of the Concord, of the same age of the Walter, and originating at the same place. The leaf is a little darker green than the Concord, and considerably wrinkled in the center, which cups it slightly. The vine in every other respect so nearly resembles the Concord that a further description is unnecessary. The cluster is not often shouldered, broad at the base and tapering. The fruit is much sweeter than the Concord, has less of the American aroma and foxiness than its parent, and ripens with the Hartford Prolific."

New Caladiums.—The process of hybridization is now practiced with all classes of plants. Mr. Bleu of Paris, has been particularly successful in raising seedling caladiums, which far surpass any of the original varieties introduced into our gardens. A writer in the Gardeners' Chronicle, in noticing the plants at the Paris Exhibition, says that the seedlings of Mr. Bleu were a "Wonderful collection. Anything like the exceeding variety and beauty of color in some of them it would be impossible to find in any other family of seedling varieties. Some of the noblest among them are suffused with livid red, which intensifies toward the center, the margin being quite green, while in one or two with very large leaves the central color is of a delicate violet rose; but it is vain to hope to say anything about them in limited space—suffice it to say, a more interesting result of cross breeding could not be seen. Many of the kinds have not yet been named."

Horticultural Notes and Queries.

ILLINOIS STATE HORTICULTURAL SOCIETY.—The Twelfth Annual Meeting of the Illinois State Horticultural Society, will be held in the Hall of the South Pass Horticultural Society, at South Pass, Tuesday, Wednesday, Thursday, and Friday, September 3d, 4th, 5th and 6th, 1867, commencing at 9 A. M., on Tuesday. State and local Horticultural Societies are invited to send delegates; and it is hoped the friends of horticulture throughout the State will be present and contribute their mite of knowledge to the common fund. Our Eastern Horticultural friends who propose to attend the meeting of the American Pomological Society, at St. Louis, on the 11th of September, are especially invited to take South Pass in their way, and enliven our meeting by their presence.

The Fruit Growers' Association of Southern Illinois will hold an exhibition of fruits, &c., at the same time and place, for which the contributions of members and delegates are solicited. It is expected that the Illinois Central, and perhaps other railways, will return members free. The hospitalities of the citizens of South Pass are freely proffered to all who attend, and will be hearty and sincere. Persons unable to attend can become members by remitting the sum of two dollars. ELMER BALDWIN, Pres't,

W. C. FLAGG, Secretary.

GRAPE GROWERS' MEETING.—We again remind our readers that the summer meeting of the Lake Shore Grape Growers' Association is to be held at North East, Penn., on Tuesday, the 27th inst.—(not 28th, as formerly printed.) A large attendance of members, and other persons interested in grape culture is anticipated. On the 28th a party will be made up for an excursion to Cleveland, Sandusky, Put-in-Bay and Catawba Island. Persons intending to participate in this excursion are requested to notify the Secretary, M. B. BATEHAM, Painesville, O., as early as the 23d. The prospects of the grape crop are generally very favorable throughout the Lake Shore region, and also in the interior of Ohio and about Pittsburg.

TRANSPLANTING OLD GRAPE VINES.—"E. L." writes from Egypt, Ill., that he has a "row of grape vines which are planted five or six feet from where he wants the trellis. Would it be best to layer them so they may reach the trellis, or take them up and plant next spring? Will the vines have too much root if layered? They are 12 to 15 feet apart, planted last spring." If the vines have been planted out only one year we should think best to *transplant* them. They can be layered over to the trellis very easily, however, and will not get too much root.

THE DORCHESTER BLACKBERRY.—(T. T. C., Onondaga, N. Y.) This blackberry does not attract much attention at present. There are superior varieties. The Dorchester is hardy enough, and an excellent table berry, but it is a shy bearer, and its season is short.

KEEPING GRAPES.—"A Subscriber" asks the readers of the RURAL what is the best method of keeping grapes through the winter.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

EDS. RURAL:—I noticed in your paper a request from "Farmer's Wife," and another from "Farmer's Daughter," for recipes for nice Corn Starch Cake and Tapioca Pudding. I venture to send you mine for insertion in your valuable paper. The recipe for Corn Starch Cake is most excellent and never fails. It is always in demand for festivals, fairs, &c., as well as at home:

CORN STARCH CAKE.—1 cup of butter; 2 cups of sugar; 1 cup of sweet milk; 1½ cups flour; 1½ do. corn starch; ½ teaspoon soda; ¾ teaspoon cream tartar; the whites of 7 eggs beaten to a froth added last; flavor with vanilla or almond.

CRULLERS.—½ cup of butter; 2½ do. of sugar; 1½ cups sour milk: 2 eggs; 1 teaspoon saleratus. Knead soft.

SPONGE CAKE.—2 cups of sugar; 2 of flour; 6 eggs; 1 teaspoon of soda; 2 of cream tartar; rind of lemon grated and juice. Lemon added last.

KNEAD GINGER NUTS.—1 cup of molasses; 1 do. of sugar; 1 do. of shortening (part butter and part lard;) 1 tablespoon of saleratus; 1 do. of ginger. Knead stiff, make thin, and bake in a quick oven.

BOSTON PUDDING.—2 cups fruit; 1 cup of chopped suet; 1 do. of sweet milk; 1 do. of molasses; 4 do. of flour; a little salt; 2 teaspoons of soda. To be boiled two hours. A sauce of flour and butter mixed together, thinned with boiling water, wine, sugar and spices added and boiled a few moments, is very nice with it. To be served hot.

APPLE TAPIOCA PUDDING.—1 teacup of tapioca and a little salt in 1½ pints of water; let it soak over night. Two hours before dinner pare 6 apples; take out the cores (leaving them whole;) put them in a pudding dish; fill the space in the apples from which the cores were taken with sugar; grate nutmeg over them; add a teacup of water; bake the apples an hour; then add tapioca and bake an hour. Milk may be used instead of water and the apples, using a little more tapioca in the place of apples.

BOSTON CREAM PIE.—1 cup of sugar; 1 do. of sweet milk; 1 tablespoon of butter; 2 cups of flour. Bake thin in two pans. When cold slice them open once and put the cream between. Spice to the taste.

For Making the Cream.—1 pint milk, boiled; 2 tablespoons of corn starch or flour mixed with milk; 1 egg; salt; sugar to the taste; flavor with vanilla or lemon.—MRS. S. S. STEVENS, *Blairstown, N. J.*

EDS. RURAL:—If "Rural Friend" will give the following recipe a trial, she will find just what she so much desires:

A BEAUTIFUL RED FOR COTTON OR LINEN.—For one pound of cotton or linen—Fill your copper kettle with rain water, and add 1 oz. of alum; ½ oz. cream tartar; dip one hour and air. Then take 4 oz. copperas in a ladle, burn it with a red hot iron until it becomes fine and red; add the copperas to 1 qt. of sharp vinegar; put it into a glass bottle; cork tight and shake well several times for twelve hours; uncork while shaking, and it will be fit for use. The copperas and vinegar should be prepared the day before you wish to color. Now have your alum liquor at a blood heat, add the clear part of the vinegar and copperas to it, and mix it well. Dip the cotton fifteen minutes, stirring it attentively; air, dip, and air until it suits. This will be a permanent red on cotton or linen.—A SUBSCRIBER, *Whitney's Crossing, N. Y.*

INQUIRY.—Will some of your readers give a recipe for making Raspberry Sirup, for flavoring soda water, &c.?

HOT ROLLS.—Seeing an inquiry in the Domestic Column about making hot rolls, I will send you my recipe, which is very good:

To 1 pint of water or new milk add 3 potatoes boiled and sifted, 1 teaspoon of salt, 2 tablespoons hop yeast and flour sufficient to make a thick batter. When light knead hard as for bread. Let it stand over night. Add 2 tablespoons of butter; make into small rolls; place on tins a few minutes by the fire until light, and bake quickly.—MRS. W. W. CURTIS, *Macon City, Mo.*

KEEPING CIDER SWEET.—The Utica Herald states that A. G. WILLIAMS of Hampton, Oneida Co., has a method of preserving cider worthy of being generally known:—Allow the cider to work until it has reached the state most desirable to the taste, then add grated horse-radish in the proportion of a tumbler and a half to the barrel of cider, and shake up well. This arrests further fermentation, and after remaining a few weeks may be racked off in clean casks, and the air excluded by closing the bung. Cider preserved in this way has a pleasant, agreeable flavor.

TO COOK SALSIFY OR VEGETABLE OYSTERS.—Wash clean, scrape them, and cut into small pieces; boil in clear water till tender, season with salt, pepper and butter, and add a teacup of thin cream or good sweet milk; let it boil up and pour it over a plate of crackers or toasted bread. This makes an excellent dish.—A. T. T., *Washington, Wis.*

GREEN CORN—HOW TO CAN IT.—Mrs. J. R., Terre Coupee, Ind., wants to know how to can green corn. She has tried it, in the way fruits are prepared, and failed every time. Can any of our readers explain the process by which green corn can be preserved as proposed?

Ladies' Department.

WOMAN.

She was a Phantom of Delight
When first she gleamed upon my sight;
A lovely Apparition, sent
To be a moment's ornament;
Her eyes as stars of twilight fair;
Like twilight's too, her dusky hair;
But all things else about her drawn
From May-time's brightest, liveliest dawn;
A dancing Shape, an Image gay,
To haunt, to startle and way-lay.

I saw her upon nearer view,
A spirit, yet a woman too!
Her household motions light and free,
And steps of virgin liberty;
A countenance in which did meet
Sweet records, promises as sweet;
A creature not too bright or good
For human nature's daily food;
For transient sorrows, simple wiles,
Praise, blame, love, kisses, tears and smiles.

And now I see with eye serene
The very pulse of the machine;
A Being breathing thoughtful breath,
A Traveler between life and death;
The reason firm, the temperate will,
Endurance, foresight, strength and skill;
A perfect Woman, nobly planned,
To warm, to comfort and command;
And yet a Spirit still, and bright
With something of an angel-light.

[*Wordsworth.*

FINGER RINGS.

Let us close our cabinet by a few more specimens, old and new, English, Venetian and Egyptian.

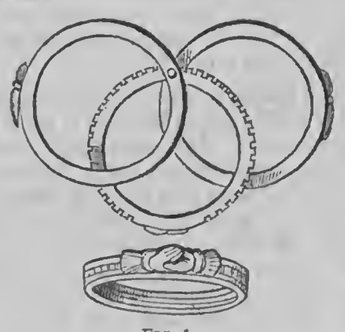

Fig. 1.

Here is a "gimmel ring" from the Londesboro collection, both open and closed.

Fig. 2.

Fig. 3.

Fig. 2 is an exquisite Venetian ring of the Sixteenth Century,—three raised stones with gold ornaments pendent from each, and set with garnets, that the gold and stones may move freely and glitter with every motion of the hand. Fig. 3 is an East Indian ring with pear-shaped silver drops, beautifully wrought, affixed to its center, which make a soft, jingling noise, as the hands move.

Fig. 4.

Fig. 5.

Here is a memorial ring, a fine diamond set in oval rim, with a concealed spring, which being pressed flings back the stone and reveals beneath an enamel portrait of Charles I. This might have been worn by some faithful royalist in Cromwell's days. Fig. 5 is a lugubrious device. Skeleton figures support a sarcophagus, the lid of which slides off and reveals a minute skeleton within. The skeletons are covered with white enamel, and the lid has a Maltese cross in red, on a black ground. These doleful decorations were a French caprice when Diana de Poictiers became the mistress of Henry II. She was a widow, and thus obsequious flattery paid court to a gilded courtesan.

Fig. 6.

Fig. 7.

Modern Egyptians wear many rings. Fig. 6 being a specimen of those among men of middle class; usually of silver, set with stones and made at Mecca, the sacred city, sharing, it is thought, of its sanctity. Fig. 7 is a hoop of gold with pendent ornaments of coral and gold, worn by Cairene fashionables.

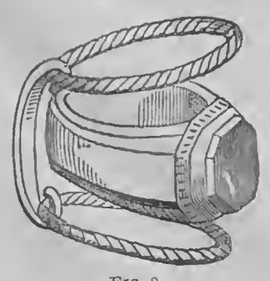

Fig. 8.

Fig. 8 is solid cast silver with a stone, and on either side twisted wire rings or "keepers," through which the Egyptian finger passes to hold all more secure. "Regard rings" were in vogue in Europe not long ago, the stones so selected and arranged as to spell the word thus:

R—Ruby.
E—Emerald.
G—Garnet.
A—Amethyst.
R—Ruby.
D—Diamond.

These were of French origin, and sometimes spelled names. Princess Alexandra of Wales, is said to have one with her familiar name, "Bertie," thus spelled.

THE CHILDREN.

Not without design has God implanted in the paternal breast that strong love of their children which is felt every-where. This lays deep and broad the foundation for the child's future education from parental hands. Nor without design has Christ commanded, "Feed my lambs,"—meaning to inculcate upon his Church the duty of caring for the children of the Church and the world at the earliest possible period. Nor can parents and all well-wishers to humanity be too earnest and careful to fulfill the promptings of their very nature and the command of Christ in this matter.

Influence is as quiet and imperceptible on the child's mind as the falling of snow-flakes on the meadow. One cannot tell the hour when the human mind is not in the condition of receiving impressions from exterior moral forces. In innumerable instances, the most secret and unnoticed influences have been in operation for months and even years to break down the strongest barriers of the human heart, and work out its moral ruin, while yet the fondest parents and friends have been unaware of the working of such unseen agents of evil. Not all at once does any heart become utterly bad. The error is in this: that parents are not conscious how early the seeds of vice and virtue are sown and take root. It is as the Gospel declares, "While men slept, the enemy came and sowed tares, and went his way."

If this then is the error, how shall it be corrected, and what is the antidote to be applied! Why this—if we have "slept" over the early susceptibility of children's minds to the formation of character, we must wake up from our sleep, and acknowledge our error. And the antidote and remedy is simple and plain—we must preoccupy the soil; sow in the soil of these minds and hearts the seeds of knowledge and virtue, before the enemy shall sow there the tares of vice and crime. This is the true doctrine of our duty to the children around our tables and in our streets.

Up, then, ye workers, and sow your seed in the morn of childhood. Withhold not the hand from earnest culture and honest toil. No labor here shall be in vain.—*Morning Star.*

MOSLEM MANNERS.

The Paris correspondent of the New York World says that the Sultan is very remiss in those *petits soins*, which civilized cavaliers render to the female sex. In the course of the proceedings it became proper that he should offer his arm to the Empress, instead of which he turned her the most frigid of cold shoulders, and sauntered away solitary from her, a manner of proceeding more cavalier than chivalric. An officious Embassador pursued the saunteriug Sultan, to recall him to a sense of propriety, but Abdul became suddenly deaf, and wouldn't be recalled. And when the Sultan came to the dais, he mounted to that eminence slowly and alone, utterly careless that the Empress was coming up several steps behind him. Perhaps it was a knowledge of these little social idiosyncracies which modified the preparations made in England for the Sultan's reception. The same correspondent thus describes the Commander of the Faithful:—He is a very corpulent man, with a small head and diminutive features, and his people are afraid he will die of apoplexy before he can reach his native kingdom—a frightful catastrophe.

A Bonnet!—In Philadelphia on Tuesday last, at Adams' Express Office directed to the United States Hotel, Atlantic City, was a box made of larchwood, light almost as pasteboard, thus tenderly inscribed:

"TO THE EXPRESS AGENT.

"This package contains a duck of a bonnet;
Expressman, I pray you, place nothing upon it.
'Tis made of a ribbon, a straw, and a feather,
The whole with a postage stamp fastened together.
Its owner, a damsel, is youthful and fair;
But, like Flora McFlimsey, has 'nothing to wear.'
Beware, then, Expressman! I warn you take heed.
And forward this bonnet with care and with speed."

Mount Hosmer, on the Upper Mississippi, was, it is said, named in honor of Harriet Hosmer, who challenged a number of athletic young men, on board of the steamboat on which she was passing up the river, to beat her in a race to the top of the bluff, until then not named. They accepted the "gage of battle," and exerted their best efforts to leave her in the rear, but she reached its summit in advance of all of them, though only after a sharp contest; and so the admiring citizens of Lansing gave her name to this cliff, in honor of the deed she had performed.

Quite a number of women, most of them old maids, have issued a call for a convention, stating their object to be "to gain a true knowledge of the nature and attributes of men." We respectfully suggest to them that they are not going the right way to work. Why don't they get married?

Young man, are you waiting for some door to open into a broad and useful future? Don't wait. Select the door and pry it open, even though you get your fingers pinched.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

USELESS.

BY LEWIS DAYTON BURDICK.

Dreaming anywhere on earth to find
Sweetness save with bitterness combined.

Thinking confidence of man is gained
By betraying confidence obtained

Envying riches that your neighbor shares
Whilst you would not take his wealth and cares.

Letting precious years go idly round
Whilst the richest labor-fields abound.

Grumbling over adverse, cruel fate,
Lacking heart to labor and to wait.

Wasting present hours that flee so fast,
Grieving over misspent moments past.

Longing for that which beyond you lies,
Whilst that in your reach you do not prize.

Trusting that your sin shall bring no curse,
Since another mortal has done worse.

Thinking that yourself you glorify,
If another's faults you magnify.

Seeking greatest happiness in life,
By among your neighbors kindling strife.

Playing Christian in your Sunday talk,
Whilst you cheat men in your daily walk.

Vainly boasting of the golden store
Lucky wind has wafted to your door,

Which, upon some coming evil day,
Adverse wind may bear as quick away.

Looking with a hateful, haughty pride
On some humbler mortal at your side;

For, beneath a coat most soiled and torn,
Who knows but a manly heart is borne?

Written for Moore's Rural New-Yorker.

COUNTRY SKETCHES.—No. IV.

Swiftly the flying reapers sped over the undulating country, and the broad golden fields were shorn of their rich harvest, quickly by busy hands were the sheaves gathered together, merrily the great wagons creaked under their weighty burdens, and anon the garners of the land were filled to overflowing. Never before was there a more bounteous bestowal of the gifts of produce—never before was there a more prosperous season to secure these abundant stores.

Oh, ye who have thus been generously dealt with, consider that the Hand that has given unto you is broad, and free and unsparing of its blessings, and learn a lesson!

When the gladness in your hearts wells up into a tribute of thanksgiving, think that as our Father hath accompanied our labor with good gifts, perhaps it may be our duty, when it lies in our power, to give gladness to the hearts of our fellow-travelers in the journey of life, and not turn aside our best impulses and coldly say, "I have little for myself and none to spare."

Life in a country home is somewhat monotonous, but our young friends in the little Anson farm-house were too buoyant with the glad spirit of youth, and too much absorbed by the novelty of their new duties to feel that the days were long and tedious, or be preyed upon by that bane of fashionable idlers—*ennui*. Everything did not move in perfect harmony. There were rats in the cellar, and mice in the cupboards, and the cat caught the chickens, and the bread wouldn't rise, and Susan looked sour, and Jane scolded. Then again the clouds lifted, the atmosphere brightened, and there was sunshine.

Mary was the presiding genius of the establishment. I wish I could make you acquainted with her as we knew her. But even if I could paint a true picture it would be little like the living, breathing reality. She possessed the rare faculty of doing everything without *seeming* to do it. She made no bustle or splutter about anything, but what she set to do was speedily accomplished. Let her be in a topsy-turvy room half an hour and the dust fled, everything assumed its proper place, and order reigned throughout,—a kind of quiet, graceful order that never repelled—and meanwhile you would hardly know there was anything going on in the house, while if Jane had arranged the same room, all the windows would have gone up with a squeak, the doors opened with a slam, every chair been set down so as to make a noise, and there would have been a kind of general confusion of things, until finally it would have all come back to its original condition.

Out on the farm Robert's work of improvement went steadily ahead. Besides doing the necessary work of the season, a nice piece of new wall made its appearance in place of an old rickety fence. The barns were new-sided and shingled, the apple orchard grafted, the weeds trimmed out of the fence corners, and the place began to assume a more thrifty aspect even in this short time. And the neighbors, riding past, nodded their heads, and pointed their fingers that way,—some to praise his industry and calculation, others croaking that young farmers thought too much of looks, and did not keep steadily enough in view the almighty dollar.

On the little low porch over which ran a Virginia creeper, clinging its tendrils to the mossy shingles and swaying down its shining, fingered leaves in graceful clusters, the family group gathered together to spend the pleasantest of all hours—the summer twilight. Bert, extended at full length on the floor, played with a little frolicsome Maltese kitten, and the others laid away their sewing and their books and joined their voices in singing some sweet sad song. But their glad young hearts had never felt the keen, bitter edge of grief and suffering cut down into their depths, and though their singing floated clear and melodious out upon the summer air, yet they could never stir the pathos that inspired the author of the song.

Home, Aug. 1867. Erie.

WELL BORN PEOPLE.

Parents transmit their organization and character to their children. What father or mother is there who would not wish to leave his issue a great estate of human virtue,—in their bone and muscles, health, strength, longevity, beauty, and in their soul, wisdom, justice, benevolence, piety, rather than the opposite of all these? Everything must bear fruit after its kind, year after year. Men do not gather grapes of thorns nor figs of thistles. Men talk of good birth and blood. No man honors the well born more than I; but who are they? In America we say the sons and daughters of the rich; wealth is nobility; its children are well born. In Europe we are told they are the children of Lords and Kings. O foolish men! Of all the children of European royalty for eighty years there has not been born one who, in common life, would have won the smallest distinction.

Among the decent people of Europe, kings of all others, are the most ill-born. Where do the rich families of New England go in the third generation? Look over Boston and see whence come the noble talents, the great virtue, the poetry, the science, the eloquence, the literature, which adorn the land? They are not rocked in golden cradles. It is not royalty in Europe or wealth in America, which is father and mother to the great masterly talent which controls and urges on the great mass of the people with its mind and conscience, heart and soul. No! it is the children of wholesome industry, of intelligence, morality and religion, who are the well-born. Virtue is nobility; all else is but the paint men write its name with. Health, strength, beauty—still more, wisdom, integrity, philanthropy, religion—these are well-born, noble, yes, royal if you will, for they are the kingly virtues of humanity, and whoso has them, though he be cradled amongst cattle, he only is the best born of men. Who is there who would not covet that royalty for himself, and still more achieve it for his daughter and his son, that, when his bones are crumbling in some obscure churchyard, in his children the strong and flame-like flower of virtue may blossom fair and ripen its seed, and sow the green earth gladsomely withal?—*Parker.*

THE BEAUTY OF YOUTH.

How beautiful is youth,—early manhood, early womanhood, how wonderfully fair! What freshness of life, cleanness of blood, purity of breath! What hopes! There is nothing too much for the young man or maid to put into their dreams. No picture of ideal excellence of manhood or womanhood that I ever drew that seems too high or beautiful for these young hearts. What aspirations! How beautiful the instinctive affections with their purple prophesy of new homes, and generations yet to be.

The high instincts of reason, conscience, love, religion,—how beautiful and grand in the young heart. I love to see the pure eyes beaming with goodness and hope, to see the unconscious joy of such young souls, longing for the heaven we are to fashion here.

So have I seen in early May, among the New England hills, the morning springing in the sky, and gradually thinning off the stars that hedge about the cradle of the day; and all cool, and fresh, and lustrous came the morning light, and a few birds sang, prophets of many more; and ere the sun was fairly up you saw the pink buds of apple trees and scented the violets, and thought what a fresh and lordly day was coming up the eastern sky.—*Selected.*

FRIENDSHIP.

Life is to be fortified by many friendships. To love and to be loved is the greatest happiness of existence. If I lived under the burning sun of the equator it would be a pleasure to me to think that there were human beings on the other side of the world who regarded and respected me; I could not and would not live if I were alone upon the earth and cut off from the remembrance of my fellow-creatures.

It is not that a man has occasion to fall back upon the kindness of his friends. Perhaps he may never experience the necessity of doing so; but we are governed by our imaginations, and they stand there as a solid bulwark against all the evils of life. Friendship should be formed with persons of all ages and conditions, and with both sexes. I have a friend who is a bookseller, to whom I have been very civil, and who would do anything to serve me; and I have two or three small friendships among persons in much humbler walks of life, who, I verily believe, do me a considerable kindness according to their means. I am for a frank explanation with friends in cases of affronts. They sometimes save a perishing friendship, and even place it upon a firmer basis than at first; but secret discontent must always end badly.—*Sidney Smith.*

How to Cure Calumny.—"If any one speaks ill of thee," said Epictetus, "consider whether he hath truth on his side; and if so, reform thyself, that his censures may not affect thee." When Anaximander was told that the very boys laughed at his singing, he said, "Ah, then I must learn to sing better." Plato, being told that he had many enemies who spoke ill of him, said, "It is no matter; I shall live so that none will believe them." Hearing at another time that an intimate friend of his had spoken detractingly of him, he said, "I am sure he would not do it if he had not some reason for it." This is the surest as well as the noblest way of drawing the sting out of a reproach, and the true method of preparing a man for that great and only relief against the pains of calumny.

Be not aggressive in your expressions of regard; a dog is never more troublesome than when he springs joyfully at his master's return.

Sabbath Reading.

TRUE PIETY.

To be the thing we seem,
To do the thing we deem
Enjoined by duty;
To walk in faith, not dream
Of questioning God's scheme
Of truth and beauty.

Casting self-love aside,
Discarding human pride
Our hearts to measure!
In humble hope to bide
Each change in fortune's tide,
At God's own pleasure.

To trust, although deceived;
Tell truth, tho' not believed;
Falsehood disdaining;
Patient of ills received;
To pardon when aggrieved;
Passion restraining,

With love no wrong can chill,
To save, unwearied still,
The weak from falling;
This is to do God's will
On earth, and to fulfil
Our heavenly calling.

Written for Moore's Rural New-Yorker.

JEWISH FIDELITY TO DUTY.

A gentleman being lately a passenger on one of the railroads of our State, was compelled to journey through the night. As daylight began to spread abroad he noticed, seated in front of him, two men, evidently foreigners, with the peculiar swarthy appearance of the Portuguese, to which nationality he immediately assigned them. But a little time elapsed ere each of the two drew from a small traveling sack beside him a long, leathern strap, covered with strange characters and terminating with a small block of wood similarly carved, which he proceeded to wind first about his wrists and arms, and so trailed over his shoulders that the strap passed up the back of his head and permitted the block to be brought directly upon his forehead. This arrangement consummated, he began earnestly to repeat, in a suppressed voice, with closed eyes, words of unknown import, but which were readily inferred to be his morning prayer. The exercise was continued for quite a length of time, but finally ceased; the strap was unwound and again deposited in its place, an easy posture assumed, and a long breath drawn, as of satisfaction at having faithfully discharged a duty, as he turned his eyes to see what passed outside the window.

Our traveler, having viewed the whole scene with emotions of surprise and curiosity, now ventured respectfully to address one of the pair, and in answer to his questions was told, "I am an Hebrew, and these were my morning devotions." The whole ceremony now was plain, and the *literal* fulfillment of the law of Moses apparent:—"Ye shall lay up these my words in your heart and in your soul, and *bind them for a sign upon your hand, that they may be as frontlets between your eyes. And ye shall teach them to your children, speaking of them when thou sittest in thine house and when thou walkest by the way, when thou liest down and when thou risest up.* And thou shalt write them upon the door-posts of thine house and upon thy gates."

None could fail to respect the earnestness and fidelity with which these traveling Israelites, in a foreign land, among strangers, in a public conveyance, exposed to the gaze of the curious and unconcerned, maintained the duties of their faith and the practices which have come down to them from their fathers of the remotest periods. And to their fellow traveler, a believer in that Messiah whom these Hebrews reject, was conveyed a lesson which taught him to be as prompt, as unfailing and sincere in rendering homage and thanks to the Divine Being, who, at home or abroad, while traveling or at rest, equally protects and blesses the Hebrew and the Christian.

In further conversation our traveler repeated to the Hebrew the first verse of Genesis—"In the beginning God created the heaven and the earth"—and asked to hear pronounced the Hebrew name of Deity. "That is a sacred word, and I may not pronounce it all alone; I may read or speak it only with other words." What Christian, with his boasted superior light, and under the advanced gospel dispensation, will claim that *he* equally reverences the sacred name of Him who spake the universe into existence? Though we lament that these dispersed descendants of the Patriarchs refuse the prophet like unto Moses, whom their great Lawgiver foretold, and will not have him for their Saviour, yet let us acknowledge their distinguishing reverence and regard for the God of Jacob and His worship. Benj. W. Scobey.

Watkins, N. Y., August, 1867.

FACTS ABOUT SABBATH SCHOOLS.

There is said to be in the library of a Dunker in Pennsylvania, a printed manual of Sabbath school instruction, compiled by John Wener, in 1545. The Dunkers came to Pennsylvania in 1734, and settled in Montgomery county, and there John Weisz established a Sabbath school in 1735. Whether the schools established in Germany and Pennsylvania were the enterprises of individuals or associations does not appear. Robert Raikes, generally supposed to be the founder of Sabbath schools, opened one in London in 1780. Peter Thompson, a Quaker, established one in Philadelphia 1791. Samuel Slater, an Englishman, who built the first cotton factory in America, established one in Pawtucket, Rhode Island, in 1795. In March of this same year, Mrs. Mary Lake, wife of Archibald Lake, an Englishman, established a Sabbath school in Campus Martins, Marietta, Ohio, and sustained it several years.

The Traveler.

UP THE SAGUENAY—No. I.

BY GULIELMUM.

THE river scenery of America is not surpassed by any other in the world. A broad statement, but we think facts will substantiate it. Go through the whole catalogue of rivers, as you used to do in your school days, and those whose beauties are the most famous, and really the most fascinating, flow through some part of this American continent.

Where can be found another trio equal to the Hudson, the St. Lawrence and the Saguenay? Each has its distinctive features; each, alone considered, would satisfy as to the truth of my first assertion. Of the three, the Hudson is the best known. It is the most poetical, the most dreamy and classical. Along its shores for many miles Art has added its charms to those of Nature, and the sweep of silver waters is bordered with lovely villas, embowered in richly wooded recesses. No more beautiful reach of woodland and lawn, vale and hill, sloping field and cultivated garden, than the east bank, up as far as Tarrytown, can anywhere be found. Opposite, during a portion of the distance, the Palisades give a touch of wild picturesqueness to the scene. But there is nothing of grandeur along the river save at the Highlands. And there the beautiful detracts somewhat from the grand effect.

The St. Lawrence is the noblest stream; there is the most majesty in its flow. Bearing the waters of the great lakes out to sea—sweeping on in stately rhythm or in madly leaping rapids a distance of nearly eight hundred miles—it as well deserves the title of "Father of Waters" as does the Mississippi. It has a breadth of grandeur, if grandeur may be said to have breadth, which is not possessed by either of the others. Nor does it lack for beauty. It is the most varied of the trio, and the last to be wearied of. Its myriad channels among the Thousand Islands are beautiful as the mazes of the most tranquil dream. Lake St. Francis—its broad and placid reach of forty miles—is as serenely fair as any summer sea that ever glistened in the sunlight. Its Rapids have their own peculiar charm—a charm of almost terrible wildness; and its lower extent, lake-like in breadth, seems to bear upon its bosom the memories of all the beauty it has seen and been a part of.

The Saguenay is the most wonderful, and has the most remarkable scenery. Art lends nothing to it. Its beauties are wholly those of Nature. And where beauty ceases to fascinate, sublimity begins to awe the beholder. But though it is the most wonderful, it is the least known of the three. Flowing from Lake St. John—a body of water about forty miles in length, into which a number of large rivers flow, and of which it is the only outlet—about one hundred and twenty miles through the wildest and most barren portion of Northern Canada, and emptying into the St. Lawrence far down towards the ocean, it is remote from all the common avenues of travel, and is visited only as a specialty. A majority of tourists having seen the upper St. Lawrence, proceed from Quebec directly to the White Mountains, thereby leaving out one of the most delightful experiences which rambling affords. Very many, however, are coming to know that Quebec—the "Walled City"—is not the *ultima thule* in that direction for the pleasure seeker, and the number who go thence up the Saguenay is yearly on the increase.

During the three months of the summer a steamer makes semi-weekly trips from Quebec to the Saguenay, and return. The "Maguet" is a fine, staunch iron boat, of good size, and supplied with everything necessary to comfort and convenience. The two days and nights which the trip occupies can be spent pleasantly on board, and Captain FAIRGRIEVES—her commander—seems to delight in doing all in his power to enhance the enjoyment of those who sail with him.

A LOVELY DAY'S SAIL.

At seven o'clock of a beautiful morning we passed without the walls of Quebec, through St. John's Gate, and adown the steep descent leading to the Lower Town. There, at the wharf, lay the "Maguet," and going on board we were soon steaming the St. Lawrence. Throughout the long summer day we glided down the broad-reaching river. The frowning Citadel, perched on the rocky cliff, and the bright tin roofs of the quaint old city, receded behind us; and away before gleamed the ever-widening belt of silver. Montmorenci's airy curtain of whitest lace, fringed with glistening pearls, hung over the giddy precipice at our left, as it has hung, bleaching there, for ages. Viewed in the shimmering sunlight of the early morning, as we floated by, the lovely waterfall appeared more lovely than ever. I pen-sketched Montmorenci last year, for RURAL readers. Since then I have visited it again, and have found it bewitching as ever.

Just opposite Montmorenci—about nine miles below Quebec—the Isle of Orleans commences, dividing the St. Lawrence into two channels. It is twenty miles in length, and contains much good, arable land, which is quite productive. The little farms of the *habitans*, with their neatly kept cottages, present an aspect of thrift, scattered, as they are, along much of its extent. Below Orleans the river grows more broad, and the adjacent country more rugged and unimproved. There are other islands, but they are mainly without inhabitants, and rather sterile in appearance. The farther down we proceed, the more marked is this sterility. If the fir tree did not light up the landscape with its attractive green, the barrenness would be almost without relief.

The steamer makes it first landing at Murray's Bay, ninety miles from Quebec. Here the width of the river is probably ten miles, and the left-hand shore rises up in bold headlands of considerable height. From the landing only one building can be seen, and this is in the foreground of a picture made up of barren rocky landscape, and a bald, dreary looking bluff. A bit of a village lies around the point, on the curve of the bay. The place is somewhat frequented, as a summer resort, but it is rather too dreary to possess many attractions.

Below Murray's the river widens out more rapidly than before, until at the next landing, thirty-five miles farther on, its width is twenty-two miles. The intervening distance is a noble expanse of water, affording scope enough to operate a goodly-sized storm in. Sometimes they are favored with such there, and then the voyagers get a touch of rough

"Life on the ocean wave."

For the water is as salt, after getting twenty miles below Quebec, as the sea itself. But only a slight breeze rippled the surface on that wonderfully clear afternoon which, in our memory, is set like a brilliant amethyst, amid the circlet of perfect summer days. We sat upon the forward deck hour after hour, breathing the pure air so full of invigorating life—looking away over the shining ripples to the bluffs lining the water's edge, which were set out boldly in relief against the blue sky; or now and then watching, with the curiosity of inland voyagers, the sportive white porpoises that showed their glistening sides here and there on all sides of us. These are abundant on this portion of the river, and grow to a large size, not unfrequently attaining a length of eighteen or twenty feet. Catching them is one of the amusements peculiar to the section. BARNUM'S famous "white whales," which were roasted before their time, when his Museum burned, were specimens of the same, and were caught just below Murray's Bay, and taken up the river on the "Magnet."

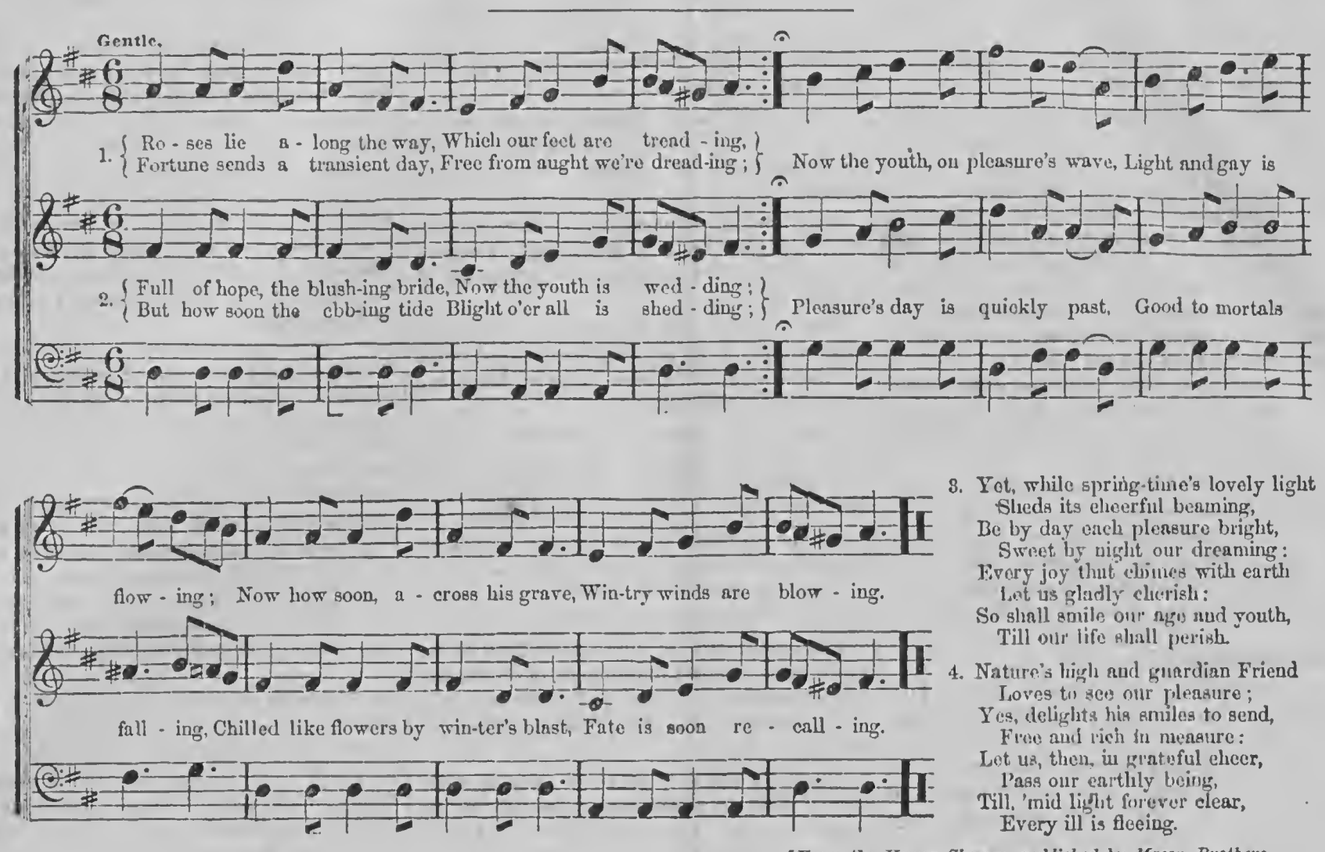
Rivere du Loup, the next landing, on the right hand shore, is a little town numbering two or three thousand inhabitants, and looking very Frenchy. It stands upon the upland, about three miles from the long wharf to which our boat makes fast, and presents a curious appearance. Cocouna, six miles distant from the landing, is celebrated throughout Lower Canada as a watering place. It is to Montreal and Quebec people what Newport is to dwellers in New York and Boston, rather ranking Tadousac as a fashionable resort. There is a liquidness about the name,—it ought to be a very pretty watering place.

From Rivere du Loup we steamed across the river, a little diagonally, twenty-four miles, to Tadousac Bay, a beautiful little haven situate at the confluence of the famed Saguenay with the St. Lawrence. It was six P. M. when we reached this point, and landed at the wharf. Here our steamer would lie to until midnight, before proceeding up the river whose beauties we were to see on our downward voyage, next day. Therefore we had ample opportunity to go ashore, and look about the rival of Cocouna—Tadousac—the most curious, the most quaint, to me the most unlooked for, and really the most fascinating little watering place that ever I saw. Who would dream of such a charming locality so far up in the Canadian wilderness?

NIAGARA BY MOONLIGHT.—People going to Niagara Falls should time their visits so as to be there when the moon is full. A more romantically beautiful sight there is not in the world, perhaps. At night, too, everything but the water is hushed and still. The mills are not in operation; the quiet is not disturbed by the noise of hackmen or their carriage wheels; and last, but not least, you can stand and enjoy the awful magnificence of GOD'S wonder, and take in, as it were, the poetry of the picture without being elbowed and pestered by the hucksters and peddlers, who, in mid-day, follow you everywhere, importuning you to purchase their knick-knacks and so-called "curiosities."

SANTIAGO, Chili, has a principal street, 350 feet wide, with a mountain stream running through in two brooks. The street is adorned with statues, made comfortable by seats, and boasts the modern improvement of a railway.

ROSES LIE ALONG THE WAY.



3. Yet, while spring-time's lovely light
Sheds its cheerful beaming,
Be by day each pleasure bright,
Sweet by night our dreaming:
Every joy that chimes with earth
Let us gladly cherish:
So shall smile our age and youth,
Till our life shall perish.

4. Nature's high and guardian Friend
Loves to see our pleasure;
Yes, delights his smiles to send,
Free and rich in measure:
Let us, then, in grateful cheer,
Pass our earthly being,
Till, 'mid light forever clear,
Every ill is fleeing.

Various Topics.

DOG DAYS.

THE mercury stands almost at 90° in the shade beside our desk; how high it *would* go in the sun one can guess. Once we saw a man try the heat by seating himself in a sandbank, thermometer in hand, and sweating patiently in the blazing sunshine until he cried out "its up to 128°." He wasn't any kin to us, and we shant try it. Probably the mercury would go up as high as the length of the tube would allow. JACK DOWNING in one of his famous letters, telling of a cold time, said "it would have been colder if there had been room in the tube for the mercury to go down lower;" and its a poor rule that wont work both ways.

Learned men, after studying Ethnology, Archæology, Psychology, &c., and History also, have decided that greatness, especially intellectual, culminates in the temperate zones, and is rare in the tropics. We agree with them, without any study; for the torrid zone has emigrated for today, and is right here, making mental greatness impossible. How *can* one be learned, or profound, or intuitive, or philosophical in a furnace? By-and-by, when dog days are over, and cool breezes come, and the air gets full of electricity and oxygen, something full of power and genius may appear in about this same part of the RURAL, but don't look for it now. We mention this to save trouble and disappointment. To be sure a good deal of work of any kind can be done even in dog days, by just *putting in* with firm purpose to keep all moving. That's the way we have to do in this working world, and it's a blessed privilege to have will and strength for these daily labors; but it's only a dead pull, and a little lag with the best, when we are in the Desert of Sahara, or Hindoston, or the heated *pampas* of Brazil,—and if we are not exactly there, the burning air of those arid regions has reached us and closed all in, as by a wall of fire.

Are not all the *literati* away in some cool sequestered shades? On Lake George, or breathing the pure air and floating on the chrystal waters of Lake Superior, or on the noble St. Lawrence, or in the welcome shade of granite rocks six hundred feet high along the wonderful Saguenay, or inhaling the sharp air, salt as sea spray, and tumbling about like "mermen bold" in gold spectacles, in the surf at Newport or Nahant, will you find these "knights of the quill," we were going to say—but being strictly truthful must substitute, scribblers with the steel or gold pen. And all the grave College Professors, too, are in such places—all the heavy artillery of the learned world, who discharge "words of ponderous length and thundering sound" at their pupils and at the general public, with as much noise and confusion as though they were "Paixhans," and "Armstrongs," and 120 pound rifled guns. (In some cases, good reader, let us confidentially inform you, the result of both iron and wordy missiles is noise and nothing more.)

But we hold on, and pull through until cool weather comes, right at our post, for an editor must be tough and persistent. As for literature and learning is not a RURAL editor a walking encyclopædia? Roots, herbs, grains, cattle, science, art, classic lore, polite life and behavior, history, from the days of which the question was asked,

"When ADAM delved and EVE span,
Who was then the gentleman?"

down to Sadowa, and the Paris Exposition, and the medals there given to American reapers, all these he must know of. So be patient, until the west wind is sharp, and the white frost sparkles, and the chestnut burrs open, and the corn is yellow, and the said encyclopædia shall reveal its riches, and meanwhile, even in the heated summer, there shall be something.

Strange as it may be, there is one realm of life intensely active to-day. In old times—when New Haven drove a brisk trade with Jamaica in horse flesh, sugar, rum, and molasses, sending out horses to grind in the cane mills, (before mules were invented probably) and bringing back the useful commodities above named—sailors used to follow the track of the offal thrown overboard and reach port without use of compass, and called those marine regions "the horse latitudes." We are in the horse latitude; a great "agricultural hoss trot," as Josh BILLINGS calls these affairs, is going on at the Fair Grounds, and where the horses are there will the *humans* gather together in multitudes. It's worth seeing, but we cant describe it, for the effort would be dangerous.

BURNS began one of his effusions by honestly saying he knew not what it was to be.

"Perhaps it may turn out a sang,
Perhaps turn out a sermon,"

said the bard.

When he finished he knew what it was, but we don't know what or which this is, or where it belongs. Lucky thought! It's *various* enough, and so we put it in the "various topics" department. One serious, fact to close with: *its hot—mercury at 90°.*

A FACT NOT GENERALLY KNOWN.—The origin of the portrait for the Goddess of Liberty upon our coins is of great interest. Mr. Spencer, the inventor of Spencer's lathe, used by the American Bank-note Company, was the artist who cut the first die for our American coin. He cut an exact medallion of Mrs. Washington, the wife of Gen. Washington, and the first few coins were struck with her portrait. When Gen. Washington saw them he was displeased. Mr. Spencer altered the features a little, and putting a cap upon its head called it the Goddess of Liberty. If future artists will bear this in mind, they will always take Mrs. Washington's portrait for their guide when wishing to produce the goddess.

A PLEASANT SCENE IN A NEWSPAPER OFFICE.—A short time ago the employés of the Public Ledger establishment, Philadelphia, waited upon the proprietor, Mr. Geo. W. Childs, and presented him a memorial setting forth the high estimation in which he was held by the donors, and expressing heartfelt thanks for his innumerable kindnesses toward them during a period of 25 or 30 years. The document was signed by the foreman of each of the eleven departments into which the establishment is divided. Many of the employés have been connected with the establishment from 20 to 25 years and most of them have been connected with it for several years,—all long enough to appreciate the kindness of Mr. Childs, as they state.

NIGHT WORKERS.—New York never sleeps, it is said, and there is much truth in the remark. Nine hundred thousand of its population sleep o' nights, but the other one hundred thousand, about one-tenth of the population, must be hard at work. So that while nine hundred thousand are pushing through the cares and business of life by day, one hundred thousand are equally active by night. So there is one continued rush, stir and bustle; no cessation; one continued scene of activities. What a strange, curious picture does New York life present! It is humanity in active motion, and that all the time.

CURE FOR THE BITE OF A MAD DOG.—A writer in the National Intelligencer says:—"Spirits of hartshorn is a certain remedy for the bite of a mad dog. The wound should be bathed constantly with it, and three or four doses taken inwardly during the day. The hartshorn decomposes chemically the virus insinuated into the wound, and immediately alters and destroys its deleteriousness." The gentleman who left this recipe with the Intelligencer vouches for its efficacy. It is simple, to say the least.

A LARGE number of monks and priests in Italy have taken advantage of the privileges conferred upon them by the new law for civil marriages, and have rushed into wedlock with unexpected alacrity. Even the nuns have caught the infection, and the matrimonial mania threatens to complete the abolition of the convents begun by the civil law. Human nature will stick out, even in nuns and priests, despite all laws and vows.

Reading for the Young.

WEIGHING THE BABY.

"How many pounds does the baby weigh—
Baby, who came but a month ago?
How many pounds from the crowning curl
To the rosy point of the restless toe?"

Grandfather ties the 'kerchief's knot,
Tenderly guides the swinging weight,
And carefully over his glasses peers
To read the record, "only eight."

Softly the echo goes around:
The father laughs at the tiny girl;
The fair young mother sings the words,
While grandmother smooths the golden curl.

And stooping above the precious thing,
Nestles a kiss within a prayer,
Murmuring softly, "little one,
Grandfather did not weigh you fair."

Nobody weighed the baby's smile,
Or the love that came with the helpless one;
Nobody weighed the threads of care
From which a woman's life is spun.

No index tells the mighty worth
Of a little baby's quiet breath—
A soft, unceasing metronome,
Patient and faithful until death.

Nobody weighed the baby's soul,
For here on earth no weights there be
That could avail; God only knows
Its value in eternity.

Only eight pounds to hold a soul
That seeks no angel's silver wing,
But shrines it in this human guise,
Within so frail and small a thing!

Oh! mother, laugh your merry note;
Be gay and glad, but don't forget
From baby's eyes looks out a soul
That claims a home in Eden yet.

Written for Moore's Rural New-Yorker.

SPEAK KINDLY.

MUCH of the unhappiness in this world arises from giving utterance to hasty, unkind words. Many a sorrowful hour and sleepless night have been spent brooding o'er some harsh or angry word, which has dropped from the lips, in a moment of unguarded passion. How much pain we would save ourselves and others, if we would guard all our ways and actions. Kind words, spoken in the right time and place, do more to heal the wounded spirit than all the gold which this world can give. They cost nothing while they enrich the heart and scatter sunshine all around, winning many true and faithful friends.

A little word in kindness spoken,
A smile, perhaps a tear,
"Has often healed a heart that's broken,
And made a friend sincere."

How indelibly does a little act of kindness, performed at the right moment, impress itself upon the mind.

Many years ago a little child stopped to admire the flowers in a beautiful garden. It was an orphan, and already had felt the hard and bitter pangs of an orphans' lot. The owner of the garden noticed the child and spoke kindly to him.

"Do you love flowers?" said he.

"O, yes. We used to have beautiful flowers in our garden."

The man gathered some and handed them to the boy, saying as he did so, "here is a nice little bunch for you." The child took the flowers in a manner that plainly told his gratitude. It was an act of spontaneous kindness, and scarcely thought of again. Years went by, and through toil and poverty the child grew to manhood. It is said from ordeals like this sometimes come our best men. So it proved in the case of this orphan. We now find him respected and beloved by all who know him. Through all these years he has never forgotten the man who so long ago spoke that kind word. When he again met him it was not in the beautiful garden, cultivating the fragrant flowers, but in the cold and dismal abode of poverty. Then his was the hand stretched forth to help the white haired old man in his hour of need. Thus the little act of kindness was doubly repaid, bringing to our mind the words of the beautiful hymn, "Kind words can never die."

Empire, Wis., July, 1867. JEANNIE.

AN ELEPHANT STORY.

A GENTLEMAN who had been for many years a resident in India had a very fine elephant of noble size, which we will call Indra. It was under the care of two keepers, named Selim and Saadi, who alternately took care of it. During the month that it was under the care of Selim, the younger keeper, Indra had plenty of food and was kindly treated. On the other hand, Saadi, the other keeper was a drinking man, and spent the money allowed for Indra's food in arrack and bang, a spirit extracted, I believe, from hemp. The elephant was of course neglected during the month that he was under the charge of Saadi.

One day both the keepers happened to be upon his back when he was taken to the river; before he left the water he suddenly turned up his trunk, and passing Selim, who was seated nearest to his ears, he seized Saadi round the waist, and plunging the wretched man into the river, held him under the water till he was drowned. Selim trembled, for he thought he also should be a victim to the animal's anger, but Indra knew who had been kind to him, and quietly suffered himself to be led home apparently satisfied with the vengeance he had taken.

This account shows how sensible to kindness is the poor half-reasoning elephant.

USUALLY, the worst of men have most of all outward things, and the best of men have least of earth, though most of heaven.

Two First-Class Journals for $3.50.

MOORE'S RURAL NEW-YORKER,

(The Leading Weekly of its Class—Price $3.00 a Year,)

AND

THE MARYLAND FARMER,

(A Standard Agricultural Monthly—Price $1.50,)

BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that NOW is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year *(when ordered together)* for only $3.50.

Address either

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 24, 1867.

NEWS OF THE WEEK.

From Washington.

AT the close of the Surratt trial Judge Fisher ordered Mr. Bradley's name (one of Surratt's legal defenders) struck from the list of attorneys, and much excitement followed, some of the lawyers denying Fisher's right to do so, even if Bradley's conduct in Court—want of respect—made him amenable. A fight was feared, and friends of each gathered round. Bradley handed a paper to Judge Fisher in the street car which was supposed to be a challenge, but he says it was not, but a proposal for amicable settlement.

Gold in the U. S. Treasury the 15th, $88,777,000; gold certificates, $20,195,000; amount of currency, $67,281,000.

Secretary Stanton has left his office by written order of the President, to which he replied, denying the President's right of removal, and saying he yielded under protest to superior force. Gen. Grant is made Secretary for the time, until some one is chosen. He wrote a note to Mr. Stanton informing him of the fact, and saying that he believed Stanton had discharged his duties well and faithfully. Mr. Stanton and wife have gone to Boston to spend a few weeks with Hon. Mr. Hooper.

It is said the District Commanders South will not be removed, except possibly Sheridan.

Efforts are making for the removal of Judge Advocate-General Holt.

The World says the President has decided to remove Judge Holt from the Bureau of Military Justice; also, that General Thomas is soon to supersede General Sheridan.

Southern Items.

GEN. POPE has removed the civil officers of Macon county, Ga., from Judge down.

New Orleans registration returns for the State are—whites, 44,732; blacks, 82,907. Fourteen deaths from yellow fever in a week, in N. Orleans.

The cotton worm is destructive in Texas, and on the coast of Louisiana.

Hon. J. S. Pendleton of Culpepper county, Va., has been arrested, charged with perjury in having registered.

A brig which brought a load of Coolies to New Orleans has been libeled, and the captain and men in charge fined $1,000 each.

A meeting of ex-officers, soldiers and sailors of the the United States Army was held in Richmond, Va., the 13th, to call a State Convention in September. There are 1,100 in Richmond who were lately in the United States service.

The cotton crop is favorable in Alabama, Georgia, South Carolina and Florida. Damage by caterpillars less than was feared. Wheat and corn crop large, and starvation relieved.

At a pic-nick near Vicksburg last week eight persons died after eating of the refreshments furnished, and as many more are not expected to survive. The food was poisoned, but by whom is not known.

Gen. Pope has written a letter to Gen. Grant on reconstruction affairs in his Department, advising the expatriation of B. H. Hill and all the prominent men whose views coincide with those enunciated by him in his recent communications to the public.

Western Items.

THE next Kentucky Legislature will be: Senate—Democrats, 25; Radicals, 9; third party, 4. House—Democrats, 85; Radicals, 11; third party, 4.

Trains now run from St. Louis to St. Joseph, the guage of the North Missouri Railroad being changed from 5 feet 2 inches to 4 feet 8 inches. The change, over 170 miles of road was made in three days!

The political canvass in San Francisco and the State is very warm—Union, Independent and Democratic candidates in the field.

John J. Edwards, teller in a St. Louis bank, has been arrested on a charge of robbing the institution of $18,000, by allowing a gold broker to overdraw his account for speculative purposes in which Edwards is supposed to be interested.

Gen. Halleck has attached, by order, Alaska to the military district of California—Sitka to be the headquarters. Company F, Ninth Infantry, will be assigned to garrison duty there.

The Annual Fenian Pic-nic in the vicinity of Chicago, held on the 16th, is reported to have been a turbulent affair. Several bloody fights are reported and sundry arrests made.

Gen. McCall and a Mr. Edgar of the Commissioners' Department, Fort Harker, Kansas, had a collision resulting in a challenge to a duel. Col. Crane, commanding there, put them both in the guard house to cool off.

Storm in the South.

A HEAVY rain storm commenced in the Gulf States on the 15th inst., doing considerable damage to the railroads. Proceeding northward it culminated in a deluge in the region of Washington and Baltimore—suspending travel northward for some time. A train from New York fell through a culvert 14 miles from Baltimore, damaging several cars and injuring seriously the express and mail agents. No one killed. No rain storm of equal copiousness has occurred in that region for the last ten years.

The lower sections of Baltimore were flooded, and families extricated from their cellars with difficulty by means of boats. Three lives are reported lost.

The damage to mills and manufacturing establishments is quite severe. The rain was equally copious and destructive in the regions of Washington, Richmond, and, in fact, all that section of country. The bridges, over the smaller streams, have been generally swept away.

Indian Affairs.

TROUBLES are still serious beyond Fort Hays; all the men have recently been driven from the railroad.

Near Fort Kearney a hard fight occurred between some 30 whites and over 200 Indians, in which over 60 Indians were killed, but they stampeded the cattle of the whites.

The Indians lately run a freight train off the track beyond Omaha, and burned it, killing several of the men in charge.

White men, deserters, are with them in these fights. They say their annuities are not paid fairly. Traders also furnish them with arms and ammunition.

It is reported from Omaha that 200 Pawnee scouts encountered 500 Sioux in the neighborhood of Plum Creek, and whipped them after a battle of six hours. United States troops have been sent to re-inforce the Pawnees.

From New York.

DEPUTY UNITED STATES MARSHAL ABNER C. NEWCOMBE, New York, has been held to answer a charge of obstructing the ends of justice by receiving money from counterfeiters and conniving at their escape.

Generals Beauregard and Magruder visited the Stock Exchange, New York, on the 16th, on the invitation of a member. They were coldly received, and hissed on leaving.

The N. Y. Herald states that the investigation into the affairs of the Tradesmen's National Bank of that city discloses a defalcation of $95,000. The affair is likely to be settled.

Foreign Intelligence.

ANOTHER Japanese port—Tamarga—is open to foreign commerce.

A fire broke out the 14th, in the famous Dankirche, or ancient Frankfort Cathedral, built in 1425, and of great size and beauty. All the decorations were destroyed, and the building must be taken down. It was the pride of Germany.

The Sultan, on his return home, in an address to the Grand Vizier, said that, as the result of his observations in Western Europe, he proposed to submit measures of reform and progress for the benefit of the Turks.

The British Reform Bill, after the House of Lords had receded from their amendments, and agreed with the Commons, passed both Houses the 14th; it is assented to by the Queen, and is now the law of the land.

Garibaldi is at Scienna, renewing his preparations for the movement on Rome, which was to have taken place last month.

The Garibaldians are reported as about to move on Viterba.

There were 3,333 deaths by cholera in Sicily during the week ending July 24th.

A water spout burst in the village of Palazzo, Italy, destroying 30 buildings. Fourteen persons were killed.

The Empress Carlotta is in better spirits, and her mental condition is slightly improved. She knows that Maximilian is dead, but fancies he died from fever.

STRUCK BY LIGHTNING.—On Sunday, the 18th inst., a shower passed over the North-western section of Rochester and the adjoining town of Greece. At Deep Hollow, within the city limits, the barn of John Mason was struck by lightning but not seriously injured. It also struck the large barn on the premises of George J. Whitney, on the Charlotte road, about three miles from the city, which was entirely consumed, together with 550 bushels of white wheat, 40 tons of hay, and four valuable horses with a lot of farming implements. Loss about $7,000. The wife of Mr. Jones, superintendent of the farm, was prostrated and rendered insensible, but subsequently was restored to consciousness.

EFFECTS OF ALCOHOL.—Experiments made by Drs. Ringer and Rickards on men and animals go to show that the temperature of the body falls nearly as fast after the use of alcohol in doses sufficient to produce intoxication, as after death itself. The facility with which drunkards freeze to death is explained by this fact.

BUFFALO, Aug. 15.—Bonner of the Ledger, pays $50,000 for the horse Dexter, who is to fill his racing engagements until October, and then go into Bonner's stable in New York, never to race again for money.

ALBANY, Aug. 15.—The managers of twenty knitting factories met here to-day and resolved to run only a part of their machinery for ninety days from Sept. 1, the market for knit goods being overstocked.

NEWS PARAGRAPHS.

N. T. JACKSON, Spring Mills, Allegany Co., N. Y., recently shot an eagle which measured six feet and eleven inches across the wings from tip to tip.

WORK in the United States Armory at Springfield, Massachusets, is reduced. Some three hundred of the employes are now being discharged.

THE State Prison at Auburn contains at present nine hundred and eighty-eight convicts, among whom are forty who are senteneed to remain during life.

THE Mexican press is advocating a general amnesty, but all are sure that punishment would be meted out to Marquez, Lacunza, Lares and several other leaders.

THE Commencement Exercises of Madison University, at Hamilton, N. Y., were highly successful and satisfactory to the large audience, and showed good scholarship and thought.

IN the township of San Gabriel, California, 700,000 grape vines are growing this season, and it is also estimated that 25,000 acres of just as good land is lying waste in the same township.

THE corner stone of the Union School House at Fredonia, was laid the 8th inst., in presence of a great concourse of people, with addresses, Masonic ceremonies, &c. The building and grounds will cost $100,000.

HON. CHARLES I. WALKER of Detroit, formerly of Brattleboro, has been appointed by the Governor of Michigan, Judge for the First Judicial Circuit of that State, in place of Judge Witherell, deceased.

AT Victoria, Australia, lately, a new tariff, somewhat protective, has been adopted whereat the London commercial press are somewhat annoyed, fearing it will prejudice English trade, and that they may make less money from the colonists.

IN a report on the canals to the Constitutional Convention, Mr. Hatch says they carry about 8,000,000 tons yearly, as much as all the railroads, at half the cost. The revenue from the canals has been $22,000,000 in ten years, of which $20,000,000, was from the West.

SEVERAL "bricks" of Montana gold have recently been received in St. Louis. Among them there is one valued at $9,600; two "bricks," one weighing 452, and the other 453 ounces, valued respectively at $7,769.47, and the latter $7,775.43—each containing $83.100th of pure gold.

DURING one month the Society for the Prevention of Cruelty to Animals, in New York, have procured twenty-five convictions and fines against parties acting cruelly to animals. The fines range from 25 cents to $25 and imprisonment. The total amount of fines for the month amounted to $257.50.

A JAPANESE newspaper has been started at Yokohama, edited by the Rev. M. Buckworth Bailey, entitled the "*Bankok Shin Bun Shi*," (All Countries News Reading Paper.) This is the first paper ever published in Japan, and promises to be a great success; the Japanese community being very curious to obtain foreign information.

A. CANE, who has visited the Paris Exposition, writes the Democrat that Rochester only had Prof. Clum's Aelloscope or "Storm Viewer," Lambs's Knitting Machine, Webster's Plans for Parks, Booth's Steel-Capped Rail, and Judson's Graduating Governor for Steam Engines on exhibition, and thinks we might have done more, especially in horticultural matters.

A ST. LOUIS correspondent of the Chicago Republican confirms the report of the discovery of valuable tin mines in Missouri. Thus far fourteen kinds of ore have been found. The tin region extends over an area of from twenty to twenty-five miles. In this region the ore frequently crops out of the hillsides, and is never far from the surface, where it occurs at all.

"MALAKOFF" writes from Paris to the New York Times:—"Quite a stir has been made here lately about the Great Union Pacific Railroad, by the lectures on the subject delivered at the Geographical Society, at the the lecture-room of the Great Exhibition, and at the Society of Engineers, by Col. Heine, late of the United States Army, now at the Consular Office at Paris."

THE Society of Friends recently held their Yearly Meeting in London, England. Their membership numbers 6,474 males and 7,312 females; total, 13,786. Besides these, they reckon 3,582 persons who habitually attend their meetings, but are not members of the Society. It was stated that the standard of education among them now occupies a higher position than it did, since the number of "College-bred Friends" was larger than at any other period in their history.

NEW ARTICLE FOR FUEL.—Within thirty miles of New York, in New Jersey, recently discoveries have been made of a combustible material little known in our country, but long in use in Europe, under the name of lignite, or brown coal. Lignite is about half the weight of anthracite coal, burns with a strong quick flame, and is especially useful for generating steam and for smelting purposes. The deposits in question are very extensive. The fuel has been analyzed and tested with the best results, and is about being introduced into use. At about half the cost of anthracite, it can be mined and sold with profit.

ASSIGNMENT OF GENERALS.—We learn by telegraph as we go to press, that the President has sent an order to General Grant assigning General Sheridan to the command of the Department of Missouri, General Hancock to the Department of the Cumberland, and Gen. Thomas to that now held by Sheridam—the Department of the Gulf.

ONE GENERATION.—Thirty-two years ago, when Douglas left his Green Mountain home for Illinois, his great rival, Lincoln, was keeping post-office, fresh from the glories of the Black Hawk war; Andrew Johnson was Mayor of a little mountain town in Tennessee, Jeff. Davis, a lieutenant of dragoons, was chasing Indians. Seward was grieving over his defeat as Governor, Breckenridge was studying the orations of Cicero against Catalline, at a Kentucky college, Chase was endeavoring to gain a law practice in Cincinnati, Sumner was entering the Boston bar, Grant was a school-boy in his teens, and Farragut was watching the honor of his flag on the torrid coast of Brazil.

THE MODERN NEWSPAPER.—The only institution in a republic which verges upon the monarchial, is that of an editor. If there were but a single newspaper, this would become a tyranny, and society would be at the mercy of one man, clothed with an impalpable, irresponsible, imperious power, which came with every day of life, assuming to tear down and build up, to honor or dishonor, to reward and punish. The multiplication of newspapers avoids this. If one editor commits a wrong, there are twenty who will see that justice is done.—*Tribune.*

☞ AMONG the many awards of First Prize Gold Medals at the Paris Exposition, *two* only were given to manufacturers of Organs. The recipients were Messrs. *Mechlin & Schut*, of France and Belgium, for large organs, who also received the decoration of the Legion of Honor, and Messrs. *Alexandre & Son*, of Paris, for the best reed organs.

The harmoniums or "Alexandre organs" of the latter house, have had a world-wide notoriety for many years, but they have never obtained popularity in the United States on account of their loud and reedy quality of tone, yet the internal mechanism is very fine and durable, and has been greatly commended by all who have inspected these instruments.

Competent and disinterested judges who are well informed in relation to the merits of reed organs manufactured in Europe as well as in this country, and who have carefully examined the AMERICAN ORGANS, manufactured by Messrs. S. D. & H. W. Smith of Boston, have pronounced them unexcelled even by the "Alexandre Organ," in the beauty and perfection of the internal workmanship, while in the quality of tone, whether soft, smooth or powerful, in variety of combination or delicate expressive effects, they have been adjudged far superior, though they were not on exhibition at the Paris Exposition.

We learn that the new Masonic Temple is to be furnished with *two* of these unrivaled instruments, which are now in process of construction. —*Boston Journal.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, August 20, 1867.

THE money market is without material change. Money is a drug in New York, and is likely to be very abundant and rates of interest low, for some time to come. There is a moderate movement of currency to the West, but not sufficient to have any sensible effect on the market. Secretary McCulloch has given notice that the time for the conversion of the Aug. 7-30's is extended to Sept. 15.

SMALL COIN.—There is an unfortunate mixture of sizes and quality in the present bronze, copper and nickel coins. We never saw any person who approved the arrangement of these coins, and we trust Congress will revise the coinage business and introduce a better system. The metal cent last authorized is composed of 95 ℔ cent. of copper and 5 ℔ cent. of tin and zinc, with a standard weight of 48 grains. The two-cent piece has the same composition and weighs 96 grains. The three cent piece is made up of copper and nickel "not exceeding 25 per cent. of the latter as shall be determined by the Director of the Mint," with a standard weight of 30 grains. And the five-cent piece has the same composition as the last, with a weight of 77 16-100ths grains. The arrangement of sizes and value is altogether incongruous. The small coin should be of uniform composition; each higher denomination should be more valuable intrinsically, than the one below, allowing a uniform decreasing ratio in weight, so that the series could be easily distinguished and kept in mind. These pieces might have been creditable to the taste of the people at some remote period—just when, we don't know—but they are not in good taste now. We have not heard of any citizen of this country being proud to exhibit them as specimens of taste and convenience, at the Paris Exposition.

WOOL.—The price of wool still tends downward. There have been very few sales in this locality for the past week, sellers and buyers both being indisposed to operate. Prices at the east are low and drooping. The receipts continue large, and manufacturers are purchasing to considerable extent; they are rather anticipating their wants, and laying in stock ahead. The sales in Boston, last week, were 1,500,000 lbs., at a range of 29@62c for fleece. Among the sales reported were 60,000 lbs. fine Ohio and Michigan at 47@52c, and 32,000 lbs. unwashed Western at 30c. The demand for some descriptions of woolen goods is rather increasing.

WHEAT.—Prices remain about the same as last week.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		**Fruits, Vegetables, Etc.**

JOHN MURPHY, Ag't, Dansville, Liv. Co., N. Y.

HUNTERS AND TRAPPERS—I have been to great expense the present summer in purchasing and publishing a new list of Recipes and methods for Trapping and Hunting all kinds of fur animals. The most of them were obtained of an old Indian in the northern part of Minnesota, at an enormous expense. The balance were obtained of different trappers throughout the West, and are perfectly reliable. They are published in book form, and explain the whole thing so that any boy can understand it. The trapping season is nearly at hand and all should secure a copy at once. The Recipes are warranted genuine. Copies will be mailed, postage paid, to any person on receipt of 50 cts. All orders promptly filled. Address F. A. ELLS, Charlotte, Michigan.

— There are thirty savings banks in New Hampshire, with deposits amounting to $11,011,900.

Special Notices.

WILLIS' STUMP EXTRACTOR.

TESTIMONY OF JOHN GORDON OF DOVER, DELAWARE.

MR. WILLIS—*Dear Sir:*—Having seen numerous notices of your Stump Extractor, I wish to state to you what I have recently done with it in New Jersey and Delaware. I commenced about the 1st of April, at Moorestown, N. J., pulling stumps for Edward Harris, Esq. I worked in all 6½ days; clearing in that time a ten acre lot, which was thickly set with hickory and white oak stumps of the largest size. Mr. Harris was highly gratified with the operation of the machine. I came to Dover May 26, and have worked some seven days in all—pulling down trees for Mr. E. Lincoln. I have averaged upwards of an acre per day of heavy timbered land. Those who have witnessed our operations here can hardly find words to express their astonishment at the wonderful power of this Machine. JOHN GORDON.

YOUNG MEN WANTED!

THE UNION TELEGRAPH COLLEGE, OBERLIN, OHIO, has authority from Telegraph employers to receive students and *guarantee* them *good situations* upon graduation. This is the *only* school of the kind in the Union which has such support, and in point of numbers is the LARGEST. Offices are secured to graduates by WRITTEN CONTRACT. Our letters of authority for graduating can be seen by any who doubt our ability to promise employment. Operators receive from $45 to $125 per month. For full particulars address

C. H. POND, Oberlin, Ohio.

GOOD READING VERY CHEAP!

WE have a few extra copies of Volume XII of the RURAL NEW-YORKER, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. A few bound copies of same volume for sale at $3. We can also furnish bound copies of most of the volumes issued since 1855, at $3 each. Bound volumes of 1865 and 1866, $4 each.

Address D. D. T. MOORE, Rochester, N. Y.

New Advertisements.

AGENTS WANTED.—On receipt of 50 Cents I will send full instructions for manufacturing and retailing an article in daily use in every family. The greatest discovery of the age—staple as flour—$10 from $1. Male or female agents who are willing to work can make from $5 to $7 per day. *No Humbug.* Address Dr. L. H. HOLMES, Box 1,663, Detroit, Mich.

ONE CHANCE IN A MILLION.—AGENTS Wanted, male and female, to introduce a patented article that every farmer and housekeeper will buy at 500 per cent. profit. Sample sent on receipt of 25 cents. Address GEORGE M. DANFORTH & CO., Inventor's Exchange, 512 Broadway, New York.

WORTHY OF ATTENTION.

"Agriculture underlies every other pursuit of life, and "the subject of FERTILIZERS underlies Agriculture."

"The Plant Must Have Food!"

To give the growing plant food and PERMANENTLY improve the soil is just what

Fresh Bone Superphosphate of Lime,

Can and will continue uniformly to do. Try it and judge for yourself. LISTER BROTHERS, 159 Front St., New York, Manufacturers.

THE NEW STRAWBERRY!
CHARLES DOWNING.

This New Seedling was raised by L. S. Downer of Kentucky, and is justly entitled to bear the name of the first Pomologist in America. This new seedling is mammoth in size, wonderfully productive, and of exquisite flavor. The plant is more vigorous than any other variety, leaves very large and standing a foot high. This remarkable berry is far in advance of any other kind known, new or old, and every one should have it in their garden. It is entered for the great Greeley Prize, two years is required before award is made. The committee, consisting of Charles Downing, J. J. Thomas, Thos. Meehan, Prof. Thurber and John Ellis, examined this variety on the 24th of June, 1867, and all agreed that it was far ahead of any other berry offered for the prize. Chas. Downing, one of the Committee, says:

"Downer's new Seedling is certainly a very promising sort, and from what I have seen this season, think it will prove an acquisition, and for vigor, productiveness, size and quality, combined, think it superior to any new sort. The naming it Charles Downing prevents me from saying much about it."—*Chas. Downing.*

Mr. Downing has fruited this variety one or two years. We propose sending out plants after the 1st Sept., in rotation, as ordered, at the following rates:—3 plants, $2; 6 plants, $3; 12 plants, $5; 100, $25; 500, $85; 1,000, $150. Also, the following valuable

New Strawberries.

PRESIDENT.—A new Seedling of very large size, productive and firm.

HARRISON.—A chance Seedling, raised in Westchester Co., fruit very large, quite equal to the Hovey in size and quality, productive and firm.

MARKET.—A Seedling from Illinois, of large size, wonderfully productive, and very early. Several days before the New Jersey Scarlet.

ABRAHAM LINCOLN.—A Seedling raised by Mr. Plattmen of Erie, Pa., monstrous in size, productive, and of extra quality. These 4 splendid varieties, $2 dozen, each, or the collection, 1 dozen each, $5.

PERPETUAL PINE.—I have imported this remarkable berry, at a large expense. It is described by Mr. Gloede, the originator, as follows:—"The kind I have the good luck to offer is a real, perpetual, large-fruited strawberry, of the pine class, which, during three years culture, not only bore an abundant crop in spring, but continued flowering and fruiting till late in the Autumn." Plants $1 each; 6 for $3; 12 for $5

The following new Seedlings have been well tested in different parts of the country and strongly recommended.

PHILADELPHIA, very early, Starr, Stinger, Great Eastern, Hubbard Seedling, very fine, Fenner Seedling, Durand Seedling, and Ella, one of earliest to ripen, and very fine. Plants $1 per dozen for each variety, or the eight varieties, $5.

ROMEYN SEEDLING.—This new Seedling is better than the Wilson, quite as firm and productive, and continues fruiting until August. 5 for $1; 20 for $3; 50 for $5; 100 for $10; 1,000 for $75.

RIPPOWAM, has proved this season to be the king of strawberries, monstrous in size, firm, exquisite flavor, and very productive; 12 plants, $1; 100, $3; 1,000, $25.

The Philadelphia promises to be very valuable for its great productiveness, and ripening its fruit 10 days ahead of all others; the berries are large and fine. A large stock of Romeyn Seedling; this is a splendid market berry. Address W. S. CARPENTER, Rye, Westchester Co., N. Y.

FRUIT AND ORNAMENTAL TREES.—A large stock for sale at the Niagara Nurseries. For Wholesale, Retail and Descriptive Catalogues address 917-8t E. MOODY & SONS, Lockport, N. Y.

ELLWANGER & BARRY'S
SEEDLING STRAWBERRY
"NICANOR."

Having Fruited it for six years, we pronounce it a decided acquisition to the list of Market Strawberries. Plant very hardy and vigorous, surpassing in quantity of fruit, and hardiness of vine, any other variety we have ever tested. It commences to ripen a few days before the Early Scarlet, and continues on up to the latest, thus making it profitable at both ends of the season. Fruit from 1 to 1¼ inches in diameter, very regular and uniform in size, roundish conical, bright scarlet, and more firm and not so acid as the Wilson. Plants will be ready for delivery about the 15th of Sept., at $5 per dozen.

ELLWANGER & BARRY, 917-3t Mount Hope Nurseries, Rochester, N. Y.

THE
GREAT AMERICAN
TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₱ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,30 ₱ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER $1,25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound Hotels, Saloons, Boarding House Keepers and Families who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges,** by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations.* We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

Y.

ELMIRA FEMALE COLLEGE.
Next Session Opens Sept. 4th.

This College presents superior inducements to those who desire a thorough practical Christian education at a moderate cost. All students share in the lighter domestic labors of the family. For Circulars address

Rev. A. W. COWLES, D.D., President.

A NEW GRAPE.—SALEM.—The Subscriber now offers for sale for the first time the above grape, No. 53 of his hybrids, named SALEM, from the place of its origin.

This grape has been withheld from sale or exhibition for various reasons, until a stock of plants could be obtained. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape; being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and highly-flavored fruit.

This grape is a hybrid between the native and Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for sale. E. S. ROGERS, Salem, Mass.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

The undersigned now offers for sale this Autumn, the above valuable Vine, in quantity, one and two year old plants, suitable for vineyard purposes. The demand for it will be large, and those wishing to secure them would do well to send in their orders early. Price List and engraving will be sent in August, on application to

J. L. WARING, Sole Proprietor "SALEM" Vine, Amenia, Dutchess Co., N. Y.

DR. NICAISE
STRAWBERRY PLANTS.

We are now ready to deliver fine grown plants of this

Celebrated European Strawberry.

The fruit is of enormous size, berries having been picked this season (from plants set last Sept.,) that measured 6½ inches in circumference and weighing from 1¾ to 1⅞ ounces. It is early, of a bright red color, very glossy, flesh white and of the first quality. In Europe it is considered one of their finest varieties. On account of the limited number in the market and the great demand for them, it would be well for those who wish them to *order early.* Price by mail, postage free, $1 ₱ plant; $10 ₱ dozen; $75 ₱ 100. Address GOULD, BECKWITH & CO., Monroe Co. Nurseries, Rochester, N. Y. 917-4t

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.

W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

IT DON'T SCRATCH YOU! OR TEAR YOUR CLOTHES!

Davison's Thornless Black-Cap Raspberry is the best, as it is hardy, productive, early and sweet, and it is a pleasure to cultivate it. Circulars giving origin, description, prices, testimonials, &c., will be ready in September. JOSEPH SINTON, Angola, Erie Co., N. Y.

GENTLEMEN!—IF YOU WANT A LUXU- riant growth of beard in five weeks, use the Indian Compound. *Satisfaction guaranteed or money refunded.* Price, by mail, closely sealed, 50 cents.
906-13t RUSSELL & CO., Watertown, N. Y.

WANTED—AGENTS FOR BOSTON, Philadelphia, Cincinnati, Chicago, with $150 to locate. Also, 20 Traveling Agents can make $2,500 per annum, selling Prof. JOHNSON'S Wash Crystals, Prepared Starch, and Improved Indigo Blue, &c. Address, with postage stamp for Circulars, or send 50 cts. for samples. I. T. JOHNSON, 316 Greenwich St., N. Y. 907-13.

THE HARRIS HOP PRESS, (ILLUS- trated and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others, So rapidly has it come into favor, that four-fifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.

Messrs. RAMSBY & HANSEN of Kilbourn City, Wis., and I. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.

BUCKINGHAM, WALSH & CO., 911-9t Waterville, Oneida Co., N. Y.

Price only Twenty Dollars. Extraordinary Inducements to Agents. For full particulars, address 905-13t W. G. WILSON & CO., Cleveland, Ohio.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton goods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (⅔ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (⅓ bbl.,) $10; No. 5, (1-6 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

50 MAKE YOUR OWN SOAP PER CENT SAVED BY

USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the strength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 898-39t

PORTABLE STEAM ENGINES— Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address 904-26t J. C. HOADLEY & CO., Lawrence, Mass.

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address 886-tf DRS. BABCOCK & SON, 700 Broadway, N. Y.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

BROTHERHOOD.

BY M. H. COBB.

THERE is an untold weight of bliss
In hating little, loving much,
Until the heart that throbs amiss
Shall thrill at sorrow's every touch.
We love too little here below—
We know too little of each other;
But in the prime,
Of a coming time,
Each man shall be to each a brother.

Ambition, envy, greed and pride,
The soul of man too much consume;
Too few seek out life's darker side,
With love its darkness to illume.
Too few are great in doing good,
As guides and helps to one another,
Few gaze away,
To the coming day,
When each shall be to each a brother.

We do not hear the angel feet
That fall beside us in life's path,
Nor do we feel the hearts that beat
So near to ours. Existence hath
So much to share with greedy self,
We grow oblivious to each other;
And thus delay
The coming day
When each shall be to each a brother.

Kind words bear hearing, Christ-like deeds
Are prayers embodied forth to view;
O speak! and heal the heart that bleeds!
Act! and the earth may bloom anew!
If Earth hath *lost* one Eden-time,
Through love it yet may *win* another,
When man shall be
Unselfish, free,
And each shall be to each a brother.

The Story Teller.

[From the Cornhill Magazine.]

BEAUTY AND THE BEAST.

BY MISS THACKERAY,
AUTHOR OF "THE VILLAGE ON THE CLIFF," ETC.

PART II.

V.

[Continued from page 268, last number.]

Guy merely told the servants to pick it all up, and put down the things he was carrying, and walked straight across the room to the two frightened people at the far end of the table. Poor fellow! After shaking hands with old Barly and giving Belle an abrupt little nod, all he could find to say was,—

"I hope you came of your own free will, Miss Barly?" and as he spoke he gave a shy scowl and eyed her all over.

"Yes," Belle answered, blinking her soft eyes to see him more clearly.

"Then I am very much obliged to you," said Guy.

This was such an astonishingly civil answer that Belinda's courage rose.

Poor Belinda's heart failed her again when Griffiths, still in an agony of shyness, then turned to her father, and in his roughest voice, said,

"You leave early in the morning, but I hope we shall keep your daughter for a very long time."

Poor fellow! he meant no harm, and only intended this by way of conversation. Belle in her secret heart said to herself that he was a cruel brute; and poor Guy, having made this impression, broken a dozen wine-glasses, and gone through untold struggles of shyness, now wished them both good-night.

"Good-night, Mr. Barly; good-night, Miss Belle," said he. Something in his voice caused Belle to relent a little.

"Good-night, Mr. Griffiths," said the girl, standing up, a slight, graceful figure, simple and nymph-like, amidst all this pomp of circumstance. As Griffiths shuffled out of the room he saw her still; all night he saw her in his dreams. That bright, winsome young creature, dressed in white soft folds, with all the gorgeous gildings and draperies, and the lights burning, and the pictures and gold cups glimmering round about her. They were his, and as many more of them as he chose; the inanimate, costly, sickening pomps and possessions; but a pure spirit like that, to be a bright, living companion for him? Ah, no! that was not to be,—not for him, not for such as him. Guy, for the first time in his life, as he went down stairs next morning, stopped and looked at himself attentively in the great glass on the staircase. He saw a great, loutish, round-backed fellow, with a shaggy head and brown glittering eyes, and little strong white teeth, like a dog's; he gave an uncouth sudden caper of rage and regret at his own appearance. "To think that happiness, and life itself, and love eternal depend upon tailors and hair-oil," groaned poor Guy, as he went down to his room to write letters.

Mrs. Griffiths had not seen Belle the night before; she was always nervously averse to seeing strangers, but she had sent for me that evening, and as I was leaving she asked me to go down and speak to Miss Barly before I went. Belinda was already in her room, but I ventured to knock at the door. She came to meet me with a bright puzzled face, and all her pretty hair falling loose about her neck. She had no notion who I was, but begged me to come in. When I had explained things a little, she pulled out a chair for me to sit down.

"This house seems to me so mysterious, and unlike anything else I have ever known," said she, "that I'm very grateful to any one who will tell me what I'm to do here,—please sit down a little while."

I told her that she would have to write notes, add up bills, to read to Mrs. Griffiths, and to come to me whenever she wanted any help or comfort. "You were quite right to come," said I. "They are excellent people. Guy is the kindest, best fellow in the whole world, and I have long heard of you, Miss Barly, and I'm sure such a good daughter as you have been will be rewarded some day."

Belle looked puzzled, grateful, a little proud, and very charming. She told me afterwards that it had been a great comfort to her father to hear of my little visit to her, and that she had succeeded in getting him away without any very painful scene.

Poor Belle! I wonder how many tears she shed that day after her father was gone? While she was waiting to be let in to Mrs. Griffiths she amused herself by wandering about the house, dropping a little tear here and there as she went along, and trying to think that it amused her to see so many yards of damask and stair-carpeting, all exactly alike, so many acres of chintz of the same pattern.

"Mr. Griffiths desired me to say that this tower room was to be made ready for you to sit in, ma'am," said the respectful butler, meeting her and opening a door. "It has not been used before." And he gave her the key, to which a label was affixed, with "MISS BARLY'S ROOM," written upon it, in the housekeeper's scrawling handwriting.

Belle gave a little shriek of admiration. It was a square room, with four windows, overlooking the gardens, the distant park, and the broad cheerful road which ran past the house. An ivy screen had been trained over one of the windows, roses were clustering in garlands round the deep still casements. There was an Indian carpet, and pretty silk curtains, and comfortable chintz chairs and sofas, upon which beautiful birds were flying and lilies wreathing. There was an old-fashioned looking piano, too, and a great book-case, filled with books and music. "They certainly treat me in the most magnificent way," thought Belle, sinking down upon the sofa in the window which overlooked the rose garden, and inhaling a delicious breath of fragrant air. "They can't mean to be very unkind." Belle, who was a little curious, it must be confessed, looked at everything, made secret notes in her mind, read the titles of books, examined the china, discovered a balcony to her turret. There was a little writing-table, too, with paper and pens and ink of various colors, which especially pleased her. A glass cup of cut roses had been placed upon it, and two dear little green books, in one of which some one had left a paper-cutter.

The first was a book of fairy tales, from which I hope the good fairy editress will forgive me for stealing a sentence or two.

The other little green book was called the *Golden Treasury;* and when Belle took it up, it opened where the paper-cutter had been left, at the seventh page, and some one had scored the sonnet there. Belle read it, and somehow, as she read, the tears in her eyes started afresh.

"Being your slave, what should I do but tend
Upon the hours and times of your desire?"

it began. "To ——" had been scrawled underneath; and then the letter following the "To" erased. Belle blinked her eyes over it, but could make nothing out. A little further on she found another scoring,—

"O, my love's like a red, red rose,
That's newly sprung in June?
O, my love's like the melody,
That's sweetly played in tune!"

and this was signed with a G.

"Love! That is not for me; but I wish I had a slave," thought poor Belle, hanging her head over the book as it lay open in her lap, "and that he was clever enough to tell me what my father is doing at this minute." She could imagine it for herself, alas! without any magic interference. She could see the dreary little cottage, her poor old father wearily returning alone. She nearly broke down at the thought, but some one knocked at the door at that instant, and she forced herself to be calm as one of the servants came in with a telegram. Belinda tore open her telegram in some alarm and trembling terror of bad news from home; and then smiled a sweet loving smile of relief. The telegram came from Guy. It was dated from his office. "Your father desires me to send word that he is safe home. He sends his love. I have been to D. on business, and traveled down with him."

Belinda could not help saying to herself that Mr. Griffiths was very kind to have thought of her. His kindness gave her courage to meet his mother.

It was not very much that she had to do; but whatever it was she accomplished well and thoroughly, as was her way. Whatever the girl put her hand to she put her whole heart to at the same time. Her energy, sweetness, and good spirits cheered the sick woman and did her infinite good. Mrs. Griffiths took a great fancy to her, and liked to have Belle about her. Belle lunched with her the first day. She had better dine down below, Mrs. Griffiths said; and when dinner-time came the girl dressed herself, smoothed her yellow curls, and went shyly down the great staircase into the dining-room. It must be confessed that she glanced a little curiously at the table, wondering whether she was to dine alone or in company. This problem was soon solved; a side door burst open, and Guy made his appearance, looking shy and ashamed of it as he came up and shook hands with her.

"Miss Belinda," said he, "will you allow me to dine with you?"

"You must do as you like," said Belinda, quickly starting back.

"Not at all," said Mr. Griffiths. "It is entirely as you shall decide. If you don't like my company, you need only say so. I shall not be offended. Well, shall we dine together?"

"O, certainly," laughed Belinda, confused in her turn.

So the two sat down to dine together. For the first time in his life Guy thought the great room light enough and bright and comfortable. The gold and silver plate didn't seem to crush him, or the draperies to suffocate, nor the great columns ready to fall upon him. There was Belinda picking her grapes and playing with the sugar-plums. He could hardly believe it possible. His poor old heart gave great wistful thumps (if such a thing is possible) at the sound of her voice. She had lost much of her shyness, and they were talking of anything that came into their heads. She had been telling him about Myrtle Cottage, and the spiders there, and looking up, laughing, she was surprised to see him staring at her very sadly and kindly. He turned away abruptly, and began to help himself to all sorts of things out of the silver dishes.

"It's very good of you," Guy said, looking away, "to come and brighten this dismal house, and to stay with a poor suffering woman, and a great uncouth fellow like myself."

"But you are both very kind," said Belinda, simply. "I shall never forget—"

"Kind!" cried Guy, roughly. "I behaved like a brute to you and your father yesterday. I am not used to ladies' society. I am stupid, and shy, and awkward."

"If you were very stupid," said Belle, smiling, "you would not have said that, Mr. Griffiths. Stupid people always think themselves charming."

When Guy said good-night immediately after dinner, as usual, he sighed again, and looked at her with such kind and melancholy eyes that Belle felt an odd affection and compassion for him. "I never should have thought it possible to like him so much," thought the girl, as she slowly went along the passage to Mrs. Griffiths' door.

It was an odd life this young creature led in the great silent stifling house, with uncouth Guy for her playfellow, the sick woman's complaints and fancies for her duty in life. The silence of it all, its very comfort and splendidness, oppressed Belinda more at times than a simpler and more busy life. But the garden was an endless pleasure and refreshment, and she used to stroll about, skim over the terraces and walks, smell the roses, feed the birds and the goldfishes. Sometimes I have stood at my window watching the active figure flitting by, in and out under the trellis, fifteen times round the pond, thirty-two times along the terrace walk. Belle was obliged to set herself tasks, or she would have got tired sometimes of wandering about by herself. All this time she never thought of Guy except as a curious sort of companion; any thought of sentiment had never once occurred to her.

VI.

ONE day that Belle had been in the garden longer than usual, she remembered a note for Mrs. Griffiths that she had forgotten to write, and springing up the steps into the hall, on the way, with some roses in her apron, she suddenly ran up against Guy, who had come home earlier than usual. The girl stood blushing and looking more charming than ever. The young fellow stood quite still too, looking with such expressive and admiring glances that Belinda blushed deeper still, and made haste to escape to her room. Presently the gong sounded, and there was no help for it, and she had to go down again. Guy was in the dining-room, as polite and as shy as usual, and Belinda gradually forgot the passing impression. The butler put the dessert on the table and left them, and when she had finished her fruit Belinda got up to say good-by. As she was leaving the room she heard Guy's footsteps following. She stopped short. He came up to her. He looked very pale, and said suddenly in a quick, husky voice, "Belle, will you marry me?" Poor Belinda opened her gray eyes full in his face. She could hardly believe she had heard aright. She was startled, taken aback, but she followed her impulse of the moment, and answered gravely, "No, Guy."

He wasn't angry or surprised. He had known it all along, poor fellow, and expected nothing else. He only sighed, looked at her once again, and then went away out of the room.

Poor Belle, she stood there where he had left her,—the lights burnt, the great table glittered, the curtains waved. It was like a strange dream. She clasped her hands together, and then suddenly ran and fled away up to her own room,—frightened, utterly puzzled, bewildered, not knowing what to do or to whom to speak. It was a comfort to be summoned as usual to read to Mrs. Griffiths. She longed to pour out her story to the poor lady, but she dreaded agitating her. She read as she was bid. Once she stopped short, but her mistress impatiently motioned her to go on. She obeyed, stumbling and tumbling over the words before her, until there came a knock at the door, and, contrary to his custom, Guy entered the room. He looked very pale, poor fellow, and sad and subdued. "I wanted to see you, Miss Belinda," he said aloud, "and tell you that I hope this will make no difference, and that you will remain with us as if nothing had happened. You warned me, mama, but I could not help myself. It's my own fault. Good-night. That is all I had to say."

Belle turned wistfully to Mrs. Griffiths. The thin hand was impatiently twisting the coverlet. "Of course,—who would have anything to say to him? Foolish fellow," she muttered in her indistinct way. "Go on, Miss Barly."

"O, but tell me first, ought I remain here?" Belle asked, imploringly.

"Certainly, unless you are unhappy with us," the sick woman answered, peevishly. Mrs. Griffiths never made any other allusion to what had happened. I think the truth was that she did not care very much for anything outside the doors of her sick-room. Perhaps she thought her son had been over hasty, and that in time Belinda might change her mind. To people lying on their last sick-beds, the terrors, anxieties, longings of life, seem very curious and strange. They seem to forget that they were once anxious, hopeful, eager, themselves, as they lie gazing at the awful veil which will so soon be withdrawn from before their fading eyes.

A sort of constraint came between Guy and Belinda at first, but it wore away by degrees. He often alluded to his proposal, but in so hopeless and gentle a way that she could not be angry, still she was disquieted and unhappy. She felt that it was a false and awkward position. She could not bear to see him looking ill and sad, as he did at times, with great black rings under his dark eyes. It was worse still when she saw him brighten up with happiness at some chance word she let fall now and then,—speaking of home, as he did, or of the roses next year. He must not mistake her. She could not bear to pain him by hard words, and yet sometimes she felt it her duty to speak them. One day she met him in the street, on her way back to the house. The roll of the passing carriage wheels gave Guy confidence, and, walking by her side, he began to say, "Now I never know what delightful surprise may not be waiting for me at every street corner. Ah, Miss Belle, my whole life might be one long dream of wonder and happiness, if....." "Don't speak like this ever again; I shall go away," said Belle, interrupting, and crossing the road, in her agitation, under the very noses of two omnibus horses. "I wish I could like you enough to marry you. I shall always love you enough to be your friend; please don't talk anything else." Belle said this in a bright, brisk, imploring, decided way, and hoped to have put an end to the matter. That day she came to me and told her little story. There were almost as many reasons for her staying as for her leaving, the poor child thought. I could not advise her to go, for the assistance that she was able to send home was very valuable. (Guy laughed and utterly refused to accept a sixpence of her salary.) Mrs. Griffiths evidently wanted her; Guy, poor fellow, would have given all he had to keep her, as we all knew too well.

Circumstance orders events sometimes, when people themselves, with all their powers and knowledge of good and of evil, are but passive instruments in the hands of fate. News came that Mr. Barly was ill, and little Belinda, with an anxious face, and a note in her trembling hand, came into Mrs. Griffiths' room one day to say she must go to him directly. "Your father is ill," wrote Anna. "Circumstances demand your immediate return to him." Guy happened to be present, and when Belle left the room he followed her out into the passage.

"You are going?" he said.

"I don't know what Anna means by circumstances, but papa is ill, and wants me," said Belinda, almost crying.

"And I want you," said Guy; "but that don't matter, of course. Go,—go, since you wish it."

—[Concluded next week.

GALILEO'S INSTRUMENTS.

THE museum called *La Specola*, in Florence, possesses a most precious and interesting collection of scientific relics, namely, the instruments which served for the experiments of Galileo and for those of the *Academy del Cimento;* they are preserved in that portion the museum which is known as the Tribune of Galileo. The greater portion of these instruments are composed of extremely thin transparent glass, and they are said to be perfect marvels of the glass-blower's art. The whole of these have been carefully photographed, and it is said that these interesting reproductions of the instruments, which served for the famous experiments of Pisa, will be shown at the Exposition in Paris. It is hardly possible to imagine a more attractive series of pictures than these will present to the scientific world."

ANSWERS TO ENIGMAS, &c., IN No. 916.

Answer to Illustrated Enigma:—Honesty is the best policy.

Answer to Miscellaneous Enigma:—It is better to trust in the Lord than to put confidence in man.

Answer to Anagram:

Let those who love the spring-time
Rejoice in early flowers;
Let those who love the summer
Enjoy her curtained bowers,
Her roses and her woodbines,
Her songsters full of glee,
But the golden tints of autumn
Have a matchless charm for me.

Answer to Decapitations:—Hand, Swine, Bat, Ditch, Core.

Answer to Question:—29½ inches per second.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

GOOD AND CHEAP BOOKS FOR Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER**. We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Pomology (200 Illustrations)	3,00
American Sharp Shooter (Telescopic Rifle)	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	30
American Horticultural Annual	50
American Agricultural Annual	50
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	90
Architecture (Cummings & Miller,) 382 designs and 714 illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored illustrations	9,00
Bement's Poulterer's Companion (120) illustrations	2,00
Bommer's Method of Making Manure	25
Browne's Field Book of Manures	1,50
Breck's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	30
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50

PURE WATER.—Health and economy. Patent Lead Encased Tin Pipe, recommended by the Medical Faculty and approved by Water Commissioners. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply THIS Pipe at a LESS price per foot than common Lead Pipe. To furnish the cost per foot please state the head or pressure of water and bore of pipe. Pamphlets sent FREE on application. Address THE COLWELLS, SHAW & WILLARD MANUFACTURING COMPANY, foot of West 37th St., New York. 916-4t

BELLS! BELLS!!
MENEELY'S WEST TROY BELL FOUNDERY,
ESTABLISED IN 1826.
Bells for Churches, Academies, Factories, &c., made of genuine Bell-metal, (Copper and Tin) mounted with Improved Patented Mountings, and warranted. Orders and inquiries addressed to the undersigned, will have prompt attention, and an illustrated catalogue sent free, upon application. E. A. & G. R. MENEELY, West Troy, N.Y.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remidies the ill effects of *Bad Dyes*. Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor*. All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y. ☞ BEWARE OF A COUNTERFEIT. 882-26teo

CHOICE SPANISH MERINO EWES AND RAMS for sale at fair prices by JOHN SHELDON & SON, at Moscow, Livingston Co., N. Y., owners of the prize Ram "*Dew Drop*," the winner of the Sweepstakes prize at N. Y. State Sheep Fair at Auburn last May.

WANTED, SALESMEN—Permanent Employment in selling Crowell's Improved Scissor and KNIFE SHARPENER. Sample sent by mail on receipt of 50 cents. G. W. CROWELL & CO., Cleveland, O

MASSACHUSETTS INSTITUTE OF TECHNOLOGY—A Scientific School for the Professional Education of Mechanical, Civil and Mining Engineers, Practical Chemists, Builders and Architects, and for the general education of young men for business life. Instruction given in Mathematics and the Physical Sciences, Modern Languages and English Studies. Students received on special studies. Examinations for admission OCTOBER 5, at the New Institute Building, Boylston street, Boston. For Catalogues apply to Prof. W. P. ATKINSON, Secretary of the Faculty.
903-9teo WM. B. ROGERS, President.

AWAY WITH Spectacles.

AGRICULTURE · HORTICULTURE · RURAL LIFE · EXCELSIOR · LITERATURE · SCIENCE · ARTS · NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS

VOL. XVIII. NO. 35.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, AUGUST 31, 1867. [WHOLE NO. 919.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

TIME OF SOWING WHEAT.

IF the question is presented to the farmer whether he shall sow his wheat very early in the season on soil hastily and imperfectly prepared, or wait until a later period and expend more labor in the preparation of the seed bed, let him decide in favor of late sowing and thorough preparation. Under most circumstances early sowing is of no advantage, and often it is highly injurious. The supposed benefit to be derived from it is a large fall growth, and strong rooted plants which can endure the winter. But it is not always the largest growth of top in the wheat plant in the fall which makes the best root. Early sown wheat may have its growth, by means of warm, wet weather, thrown largely to the top and less to the root, than is desirable, and in this case will not come through the winter as well as that sown later, when the cool weather is favorable to root growth and healthy development of leaf. We do not advise late sowing on poorly prepared ground, and that which is too much impoverished. Sow early on such soil if you must sow it in poor condition. But it is preferable to defer the seeding a week or two, and, in the meantime, till and manure the land. A top dressing of manure or straw, after the sowing, is worth more for winter protection than a large development of the plant leaf; and Western farmers that are in the habit of burning large quantities of straw might find better use for it in shielding their wheat fields.

This year the Hessian fly has injured the wheat crop to a greater extent than usual. Early sowing induces their attack. Very early sowing followed by a warm autumn sometimes causes the seed stalk to start before winter stops the growth of the plant, and thus a portion of its strength is wasted. We do not advocate extremes either way in sowing wheat, but first, a thorough prepartion of the soil, then the choosing, if possible, of that medium period which comes after the heat and drouth of an early autumn, and gives time for a moderate and healthy growth before winter.

SOWING RYE AMONGST CORN.

THE practice of sowing rye amongst corn early in autumn is adopted to a considerable extent in some portions of the West. It is a good one, and might be extended with profit to every cornfield in the Union. If the cornfield is tolerably free from weeds and grass, and the cultivation has left the surface flat, the rye will do better than if these conditions were lacking, and in covering the grain with the cultivator the corn crop receives benefit by the stirring of the soil and the smothering and uprooting of weeds. Although the rye is sometimes left to mature its grain the next season, yet the main use of a crop sown amongst corn—and the most profitable use we think—is to furnish fall and spring feed for stock and manure to enrich the land. As a general rule we cannot plow too much vegetable matter into the soil, and every opportunity should be improved to turn under a green crop. Spring grain usually follows corn, and if the fall sown rye is not fed with stock it will furnish a fair coat of manure at the spring plowing.

RURAL FARMERS' CLUB.

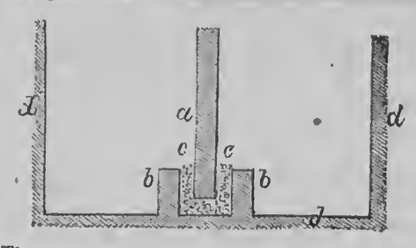
A Farmers' Club in Every Town.

E. E., Montezuma, N. Y., urges the organization of a Farmers' Club in every town, for the purpose of benefiting farmers by the discussion of topics touching their interests, and to advance these and protect themselves from the encroachments of other classes by co-operation in political action. He thinks one energetic young farmer in each town could easily perfect such an organization, and have it in motion by the first of 1868. We believe in Farmers' Clubs everywhere, but let them beware of purely political questions. They would be apples of discord.

Filtering Cisterns.

MRS. H. A. B., Harker's Corners, (what State?) asks how to construct a filtering cistern, and whether one is preferable to a well for furnishing water for family use.

If good, pure spring water can be obtained, we should prefer it to cistern water for family use. There are various ways of making filtering cisterns, but they differ mostly in detail and little in principle. A large cask, holding say a hundred gallons, may be placed above the cistern, and the water passed through it before it enters the reservoir. Fill the cask two-thirds full of clean gravel, mixed with some charcoal, and let the pipe leading from the bottom be covered with a strainer, and you have a very complete filter, which may be readily cleaned and refilled at any time without disturbing the contents of the cistern. We illustrate another method of filtering cisterns which perhaps will suit the majority of people better.



The partition A divides the cistern, d, d, d, into two portions; it is pierced at the bottom with several apertures and low walls, b, b, built up on both sides. The spaces c, c, between the low walls and the partition, are filled with fine charcoal and gravel. The water is let into one side, flows through this filter into the other and is drawn thence clean and clear. The packing must be renewed occasionally and the cistern cleaned.

Hens—A Post-Mortem Layer.

DAVID THOMAS, Ovid, Seneca Co., N. Y., writes: "I think I have the best breed of hens to lay there is in the United States. They are the English Top-knot Pheasant variety. They are everlasting layers, and do not want to sit from one year's end to the other. Last Monday one of my best layers dropped down dead. I examined her, but could not see any external cause why she should die, being in good condition. I caused the feathers to be picked off her, after which I laid her upon a woodpile out doors, until I could conveniently bury her. I neglected to do so until Wednesday, being the second day after she died, when to my astonishment I found she had laid an egg, if I may so call it. At any rate, it passed from her the second day after she died. I had to pass by her several times, back and forth to my barn, on Tuesay, and I noticed her Tuesday evening. No egg there then. Meant to bury her, but could not do so until next morning. I could not help laughing when I saw the egg right there, to think she would keep on laying after she died, but it is a fact, and I can prove it beyond a doubt by all the members of my family, however improbable it may appear. It was never put there, no tricksters about my house, and if I ever believed anything in my life I believe the egg passed from her the second day after she died. Now, if any one can beat that, I should like to hear from them."

Mr. T. further explains the phenomena by the supposition that the accumulated gas in the carcass forced out the egg. We may add that gas will explain most of the stories about everlasting-laying, non-setting breeds of hens, of which we hear so much now-a-days.

The Opium Poppy.

T. C. D. asks for information about the Opium Poppy. The opium of commerce is mostly derived from the White Poppy, (*Papaver Somniferum,*) so called because the seed is generally white. The Black Poppy of this species is distinguished by its dark colored seed, which furnishes a sweet oil, very wholesome and used largely as a salad oil either pure or mixed with olive oil. Opium is the thickened juice of the White Poppy. Incisions are made in the head, or ovary, when it is in a green state, from which milky juice exudes. This juice dries and hardens in the sun into opium; it is scraped off and collected by hand labor.

The White Poppy is supposed to be a native of Asia, though it is nowhere found in a wild state. Its cultivation was known to the Greeks, and Arab authors of ancient date have described it. The flowers are usually red of different tints. The Poppy might be profitably cultivated for its seed, of which it yields an abundance, but the opium business requires cheap labor.

Hop Growing in Wisconsin.

MESSRS. RAMSEY, MACKEY & YOUNG, Reedsburg, Sauk Co., Wisconsin, send us statistics of the hop crop of that county, which is the one in which that culture is principally carried on in the State. Hop growing is getting to be almost a mania in many sections, and it is interesting to note how it has taken hold of one in the Far West. The total number of acres picked in Sauk county in 1866 was 888; yield, 1,022,782 pounds. Number of acres to be picked in 1867, 2,548; in 1868, 5,586.

"The increase in acreage of 1867 over 1866 is nearly 300 per cent., and for 1868 over 1867 is nearly 250 per cent. The total number of pounds for 1866 was 1,022,782, showing an average yield per acre of 1,152 pounds. This does not show a fair average, because Hop Yards were badly winter-killed during the winter of '65-'66, and our returns many of them show as low as 300 pounds to 400 pounds per acre, while the average of some towns is as high as 1,600 pounds. We have never been troubled with louse, and our vine as yet has always been perfectly free from disease, so that the entire crop produced in the county heretofore has been a prime hop. This year (1867) we estimate the crop of Sauk county at over three million pounds, or 16,000 to 17,000 bales. The number of acres of roots sold in the spring of 1867 to go out of the county, was 2,000 acres, most of which were planted in other parts of the State. We estimate that Sauk county this year (1867) will grow two-thirds of the total amount grown in the State, which total we think will reach 25,000 bales, and that next year the growth of Sauk county will exceed 35,000 bales, and for the whole State about 65,000 bales. At this date our vine is thrifty, of vigorous growth, good strong lateral branches, hop formed in all the yards, and in most the hop half grown, free from vermin and disease of any kind."

Notes From Kansas.

MESSRS. INGRAHAM & HYLAND send us the following notes from Baxter Springs, Cherokee Co., Kansas:—"We are now favored with the regular visits of our old acquaintance, the indispensable RURAL NEW-YORKER, the best (we think) family paper. One year ago no newspaper had ever been taken in this section of country. To-day every class is represented here. One year ago this town contained three cabins only. To-day there are two hotels, four dry-goods stores, one drug store, one tin shop, a boot and shoe shop, a harness shop, and two good schools in operation. A large steam mill, for the manufacture of flour, lumber, and agricultural implemets, will soon be in operation, and three large stores are being erected. Three tri-weekly lines of mail stages leave this town for Fort Scott, Kansas, Humboldt, Kansas, via "Old Catholic Mission," and to Neosha City, Missouri. Also a weekly stage to Fort Gibson, Cherokee Nation. Application has been made for a tri-weekly mail route (stage) to Carthage, Mo.

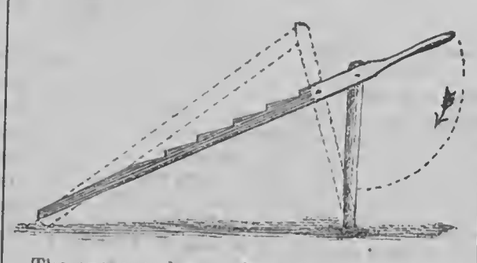
A little over a year ago this was the home of the red man; to-day the center of travel as well as of commerce for the south-western frontier. We would call it "the hub of the universe," had not that name already been monopolized by that "slow old coach," Boston, Mass. Twelve months ago there was not an improved farm in sight of town. Now, nearly every quarter-section for miles around is occupied—not by the mere squatter, but is being improved by an intelligent, enterprising, (enterprise in the West means "business,") hard-working population, generally from the Northwestern States.

This is supposed to be, naturally, a very fine fruit country, and every settler will plant, the coming fall and spring, *all* the fruit trees that he is prepared to take care of. The number of fruit and ornamental (don't get alarmed; that reads ornamental) trees and osage orange plants, already ordered by us, would shame many old settlements of twenty-five years' standing. Fruits of all kinds, and of fine varieties, are plenty here, raised in Southwestern Missouri and Northwestern Arkansas, only a few miles distant.

The climate is very fine; latitude, 37° north; weather during the day somewhat warm; nights *invariably* cool and pleasant, with heavy dews. Always have a fine breeze night and day. Range of thermometer for the month of July last—highest, 98°; lowest, 64°; average for the month, 81¾°. The thermometer stood at 98° only twice during the month—on the 6th and 26th. Depth of rain during the month, 4 71-100 inches. Prevailing winds, S.-W. Month of June, rain, 6 3-100 inches. No record of thermometer kept. Crops of all kinds very fine indeed. *No grasshoppers.*"

The Best Wagon Jack.

THIS is a little simple implement which every farmer wants. There are many costlier ones made and sold, but the one herewith illustrated a boy twelve years old can make at a cost of fifty cents, and it is the best tool for its work you ever saw. Inch and a quarter or inch and a half hard wood plank, two bolts and a thin iron plate six or eight inches long, (a hard strip of wood will answer instead of the iron plate,) are all the materials required. The engraving shows it in position to go under the axletree of a wagon; the dotted lines show its position when the axletree is raised. One can easily raise a heavily loaded wagon. There should be an iron spike in the bottom of the leg or standard to prevent its slipping on the floor.



The engraver has made such wretched work that the reader may require telling there is a joint where the left hand bolt is shown, between the handle and the piece that lifts the wagon.

Mixing Hay and Straw in the Mow.

F. H. GURWITS, Clinton, Mich., writes on this subject as follows:—"In the summer of '66, I wrote to the RURAL concerning the practice of some farmers in this vicinity of mixing straw with new hay when the latter is put in the mow. They are put in in alternate layers, and there is no doubt that the dry straw, acting as an absorbent, will permit the hay to be put in greener, less dry, than it otherwise could be, with a certain impunity from heating and mold. I have heard it said by some that the straw will be as good as the hay when taken out for feeding in winter, and it is this belief that induces many to use the straw in this manner, believing that it absorbs properties from the fresh hay that would otherwise be lost, thus being a gain. This latter belief is incorrect, as I know from observation. I have seen cattle pick out the hay from the mixture, avoiding the straw, when fed to them in winter, the same as if the mixing had been done at the time of feeding. I am satisfied that the practice has no good reason for it, unless, at the time of harvesting, there is an urgent necessity for putting in the hay before it is thoroughly cured. The absorption of some of the moisture by the dry straw will lessen the degree o moisture in the whole mow."

IMPLEMENTS—CLOD CRUSHER.

THE last quarter of a century has been very productive in new and improved implements of agriculture. The mower and reaper, horse fork and rake, &c., have almost arrived at perfection. The plow has undergone many modifications, and attempts have been made to supersede it with a rotary implement, which should more finely disintegrate and pulverize the soil, and also require less power to perform the same amount of labor. In this line, we have had GIBBS' Rotary Spader, the EVANS' machine, somewhat similar to SAMUELSON'S English Forking Machine, and lastly, COMSTOCK'S Spader. The last two are said to work well, where there is not too much stubble or rubbish on the surface to be buried. COMSTOCK'S spader was used and commended by Mr. SULLIVANT in Illinois; but still there seems to be some impediment in its general use.

A rotary implement, which shall do the work equally well with the hand spade, or work up the soil to the depth of a foot or less, is the desideratum of agriculture. The plow is an imperfect implement to do the work for which it is used. It moves the furrow slice, reverses and leaves it in bulk, and where the soil is stiff and dry, leaves it in large lumps, too hard to be reduced by the harrow or cultivator. We all know the effect of hand spading and garden culture on the productive power of the soil, and if we had an implement that would imitate this culture, it would not only be a great economy in working the land, as it could be done at one operation, but it would add much to the profit. Let us hope that all difficulties will be overcome, and that we shall soon be in possession of this great want of the farmer. But, in the meantime, while the plow must be used as the best tool for breaking up the soil, we can avail ourselves of a machine for crushing these stubborn lumps. In the preparation of heavy land for winter wheat, where it is not summer fallowed, it often becomes next to impossible with the cultivator to reduce it to the proper tilth for wheat.

But the clod crusher (an illustration of which was given not long since in the RURAL,) will crush these chunks and leave the soil in fine tilth to receive the seed. This implement needs an improvement. The points on the sections should be at least four inches long, instead of two, so as to penetrate deeper. This would more effectually crush the large lumps and disintegrate the surface. When this improvement is made, (which is easily done by making a pattern for only one section,) it will leave little more to be desired in a clod crusher. We have used the clod crusher for years, and often find it the only implement by which the stubborn soil can be pulverized. It is also an excellent thing to run over a sod, plowed in the spring, before it is cultivated. This will prevent any of the turf from being reversed, and much improve its condition for planting. It would, with the lengthened points, mellow the soil to the depth of four inches, and when followed with the cultivator leave it almost in garden tilth. Every farmer whose soil is heavy or breaks up in lumps, when dry, should use the clod crusher.

E. W. S.

TURNIPS AMONG CROPS—STORING.

IN the first place know that your seed is good; grow it yourself if possible, and use nothing but the *strap* leaf—either white or red topped—varieties. Immediately after the last cultivation sow broadcast from a half to one pound per acre. Have three boys—one at each end of the rows, with hoes cutting weeds, &c. The other on a horse, hitched to a small armful of brush; start him through on the trot, if you wish, and as he comes to the end the boy with the hoe takes up the brush and throws it into the next row, and so on to the end of ten acres in half a day. A half pound of good seed is sufficient for an acre; and in order to seed it evenly, I estimate what part of an acre five rows across the field are, and then take that part of the seed I wish to put on the acre, measuring with a spoon or small tin box, and mix it thoroughly with sufficient fine soil to scatter easily on the strip. The turnip

will not bottom much till the corn is cut up. If they do not then get but half size so much the better for feeding. Gather them the last days before winter sets in, throwing tops and all as free from dirt as possible, into the wagon box and deposite on a clean grass plot, near the barnyard or stable, about four inches in depth, and put over them a few inches of corn stalks or coarse straw, and if the winter is open put on a little more. Then, in warm days even till spring, you can roll up or throw back the covering and shovel up your turnips as fresh as they came from the field—and I believe after several years' experience, they are worth ten times the cost.

H. H. DOOLITTLE.

Oak Corners, N. Y., 1867.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE DOG PLAGUE.

GEORGE SNYDER, Rhinebeck, N. Y., writes us bitter complaints against what he appropriately terms the "dog plague." He says he has had his flocks four times destroyed by worthless curs; that he has received "little pay" for them; that the dog tax is not "collected in many cases" in his (Dutchess) county; that it ought to be raised to three or five dollars per head; that there are many thousand acres in the county that would be worth twice as much for sheep as for plowing, were it not for this intolerable nuisance; that if a dog is shot when "seen among the sheep," he must be paid for, "as he has three times tested;" that he tried to bring up this matter in the State Agricultural Society meeting last winter, "but the time was all occupied in appointing men to go to England to find cures for the cattle plague, which has not made its appearance among us, while the dog plague has raged fifty years."

We think the last point pretty well taken. The dog tax, notoriously, is not properly enforced, or not enforced at all, in many New York counties. The same laxity prevails, we understand, in some other States which pretend to have laws on the subject. Why should not this subject receive the attention, the earnest attention, of all our State Agricultural Societies and Wool Growers' Associations?

The most astounding statistics have been published, in various States, of the enormous annual destruction of sheep by dogs. The money value of the property thus sacrificed would have more than furnished adequate sanitary supplies for all our armies during the Rebellion. It would support the eleemosynary institutions for the blind, the deaf and dumb, and the insane, in the extensive wool growing States. It would form a magnificent pension fund for our disabled soldiers. In many counties it would not unfrequently nearly pay the poor rates.

Two years since the N. Y. State Sheep Breeders' and Wool Growers' Association passed resolutions urging the imposition of a higher tax than the present one on dogs, and provisions for a more effective enforcement of the law. The writer of this transmitted the resolution to a prominent Senator, who was also a prominent farmer, then at Albany, requesting him in the name of the Association to bring the subject before the Legislature. He replied that he thought it would be inexpedient—that if the subject should be agitated there would be greater likelihood of the present law being abolished, or the tax lessened, than that a more stringent one would be adopted!

"Dog laws," forsooth, are *laughed* down, and laughed out of our legislatures. They furnish excellent sport for the witty members—fast men, young lawyers, sleek merchants, city fops and demagogues who seek votes from the slums and dens where men, and dogs, and fleas, and other insects unmentionable, cuddle lovingly together. The Hon. Mr. Shinebeots of the city of New York remembers his fifty sporting constituents with five fancy dogs apiece, and the two or three hundred roughs with a couple of fighting dogs apiece. Should he vote to protect a great national industry by cur-tailing the curs, the sportsmen would taboo him as not a "good fell-ah," and the roughs "pitch into" him at the next ward meeting as a "moral reformer!" The Hon. Mr. Dirtyboots from the country, has, in like manner, his fast and dirty constituents to keep in with. And, unfortunately, some soldier and better men, who have an itching to hold still higher offices, are loath to damage their standing with Shinebeots and Dirtyboots, whose votes would count one each in a State nominating convention,—or, say, in the election of a United States Senator!

The farmers are a patient generation. They vote for their principles (or their party) irrespective of private griefs. If half a dozen of them, in almost any election district, would go personally to a candidate for a legislative nomination on their own side, and ask him, "Will you, if nominated and elected, vote for a reasonable law to abate the dog nuisance?—if not, we and our farming friends will combine to defeat you,"—they would find him *limber* in the knees and *stiff* in his pledges; and, having made the latter, there would be a considerable chance of his keeping them. Outside questions should rarely be permitted to affect important political issues; but where two candidates in the *nominating* convention are equally sound on these, may we not legitimately give preference to the one who is also sound on the outside question? We would at least like to have legislative trimmers understand that the water is as deep on one side of the bridge as the other—that in sacrificing or neglecting an important and honest branch of industry, they will lose quite as much as they will in giving offence to fancy men, and fast men and roughs.

We see no way to attain the object but in some such manner as that proposed. Resolutions passed at State Associations, or State Societies, amount to nothing, without resulting action. They are as harmless as the "proclamations" which the doughty old Dutch Governor, PETER STUYVESANT, we think it was, fired off at the English invaders of Manhattan, in the place of good lead and iron,—as recorded by the veracious historian, Knickerbocker! Let but half a dozen, or even two or three, active and intelligent members of the Legislature be elected, who will make an earnest effort for the abatement of the dog nuisance, and it would probably suffice. So important can it be shown, and such an overwhelming array of facts can be adduced in its favor, that anything like a thorough ventilation of the subject in a legislature of respectable character would leave Shinebeots and Dirtyboots in a contemptible minority.

A BUREAU OF WOOL STATISTICS.

SAMUEL ARCHER, Esq., of Holliday's Cove, West Va., one of the most enterprising and successful Merino breeders and improvers of that State, writes us as follows:

"I have been thinking for some time whether there is any way to gather facts and information relative to the wool and woolen business and disseminate them among the wool growers. *Wool growers need information.* Our National, State and County Wool Growers' Associations are a powerful means to this end. Can we not make them more efficient yet? Could not you or some other fit person, appointed by you or by the Executive Committee of the N. W. G. Association, learn and report everything possible respecting the production, manufacture and consumption of wool this past year,—all about the market, why it is lower, what has affected it, the amount of wool in store in the east or elsewhere, at what prices, condition of it, &c., &c.,—all operations and effects of the tariff,—all about cloths, consumption, importation, prices, supply and demand, &c., &c.,—all about woolen factories, where situated, &c., &c.; in a word, all the great facts and the minutiæ of the whole business? I know that there is much of this in different statistical reports,—but there is much which would be useful that is not in reports. All should be compiled in one, together with the whole proceedings of the N. W. G. Association, and perhaps those of all State Associations; and this report should be printed and transmitted through the State and County Associations to *each* of their members? Might it not be nearly self-sustaining? If not, could the funds be raised to carry it through one year after another? Now, what do you think of the scheme or something similar? Would it not be useful, or can it be done? Certainly the people need something of the kind."

A bureau of wool statistics, under the auspices of the National Wool Growers' Association, would doubtless be of high utility, if conducted with proper judgment, ability and industry. But it would, we apprehend, be difficult to find the right man for the place, whose services could be obtained by any salary the National or State Wool Growers' Associations could raise for him. We see no possible view of the case in which such a bureau could be "self-sustaining." The Secretary of the National Association of Wool Manufacturers, who performs a somewhat similar, though nothing like equal, range of duties, receives $3,000 per annum, traveling expenses, clerk hire, we think, and the printing is done at the expense of the Association. We venture to say that $5,000 per annum does not cover these items.

The National Association of Wool Manufacturers, two years ago, consisted of two hundred and ten individuals and firms. Each pay an initiation fee of $50 and an annual membership fee of $25, unless firms pay more than individuals, a fact concerning which we are not informed. The National Wool Growers' Association has no initiation or membership fees, and no means of raising money but by voluntary subscription. If our correspondent has ever indulged in that amusement—that of raising money by subscription—he can judge as well as we of the feasibility of thus supporting such a bureau as he proposes.

A period may come when such a thing will be attainable,—but in our opinion some time must first elapse. In the meantime, our agricultural journals should as far as possible supply the desired information.

Condensed Correspondence, Items, &c.

REPORTS OF GREAT FLEECES.—Under this head, July 13th, we alluded to a statement made to us by "JOHN BARKER & SON," North Granville, N. Y., that a three-year-old Merino ram of theirs had yielded three fleeces, weighing 21 lbs., 27 lbs., and 30 lbs.; and we expressed the opinion that such extraordinary statements should always be accompanied by proof. I. BARKER has since forwarded us the affirmation of SIMEON H. LOOMIS (if we read the name aright) that he sheared the ram about the middle of May, 1867, "saw the weight" [of the fleece] and "it was 30 lbs." He forwarded also a certificate of GEO. F. INGALLS, a clerk in a store, that BARKER "brought into the store a fleece of wool; said it was his buck's fleece;....its weight was 30 lbs." Mr. BARKER assures us that he "can furnish more" witnesses "if necessary, as soon as he gets through his haying," and "of the other two fleeces if we wish." He adds, "I do not mean to state anything I cannot prove." We regard it as particularly fortunate for him that he can furnish such proofs, for, to say the truth, his statements have been received with a good deal of incredulity, and, as we are informed, by many in his own county. To make his proof satisfactory to the public, it will have to embrace all three fleeces, for, though separately remarkable, it is a succession of such fleeces from a three-year-old ram which renders his account so marvelous; and which, if it can be clearly established, places his ram in wool production far in advance of any other one of the breed, or probably of any breed that ever lived. Mr. BARKER shall have a hearing, and perfectly fair play at our hands, but we would warn him that the proof he has so far offered amounts to little by itself. The public will not receive the mere *experte* and unsustained affirmation of an unknown shearer as sufficient testimony—and the certificate of INGALLS amounts to nothing. He was not present at the shearing, did not open the fleece to see whether it appeared to be one, or what was in it, knew nothing about it except what he was told by BARKER. But Mr. B. promises more testimony. Let it be forthcoming.

ILLUSTRATIONS.—We have a number of cuts of sheep in our possession, some of them received a long time ago, which have not been published for want of the pedigrees, which it is presumed the owners of the sheep wish to accompany them. The pedigrees may in some of these instances have been forwarded to the artist who executed the drawings, the engraver, or some other person—or they may have been sent to us. If we have received any of them, they have been mislaid, and the apology we have to offer is the illness and pressure of business which has often compelled us, during the past year to employ others to take care of our papers. We now call upon *all* persons having unpublished sheep cuts in the RURAL office to send us their pedigrees *at once*, or the cuts will be published without the pedigrees. And let all who hereafter send sheep illustrations for publication remember that the *cuts* are in all cases to be forwarded directly to D. D. T. MOORE, RURAL Office, Rochester, N. Y., and the *pedigrees* are to be forwarded directly to the editor of this Department, Cortland Village, N. Y., together with a statement of the time when the cuts were forwarded to Mr. MOORE.

ERRORS.—In an article on Mr. JOHN D. WING'S Maple Shade flock of Cotswolds in this paper, August 10th, it was stated that the sheep were imported in 1855, 1856, and 1857. It should have read 1865, 1866, and 1867. Accompanying the cut of Mr. HAMMOND'S ram "Green Mountain," published Aug. 3d, we said he stood at $100 per ewe in 1866, and would stand at the same price this year. He stood at $50 last year, and will stand at $100 this. During Mr. MOORE'S illness typographical errors have recently occurred in our editorials—affecting their meaning in some instances—but we have ventured to hope that our readers would set them right without any formal correction.

THE N. Y. WOOL SCOURING TEST.—There has been an unusual delay in the preparation of the Report of the Committee on scoured fleeces, entered for competition at the last Fair of the New York State Sheep Breeders' and Wool Growers' Association. A long delay occurred in the scouring, owing to the continued muddy condition of the water at the mill where that process was performed, and since that period some of the members of the Committee have been absent attending the Paris Exposition. Should they not soon return, the Committee will be filled up and the Report completed.

Rural Spirit of the Press.

A Nuisance Made Useful.

THE Northern Farmer mentions a man in the southern portion of Wisconsin who destroys bugs on potato vines by sprinkling them with a decoction of May weed. If this is true, it is turning a farm nuisance to a good account.

Plaster and Drouth.

THE Northern Farmer (Wis.) states that plaster sown upon land not only promotes the growth of vegetation, but tends to avert the injurious effects of drouth upon farm crops. Besides its fertilizing properties it is an excellent absorbent for use around outhouses, stables, yards, and manure heaps, destroying the effluvia arising from decaying matter.

Feed the Hogs.

THE Maine Farmer says it is a great mistake to feed hogs short at this season of the year, and adds:—"There is no time when a hog will grow so fast, on so little food, as in August and September. The weather of these months seems better adapted for them than any other. Make a little extra effort for the hogs now and you will see the benefit next November. We think a bushel of meal, fed to them now, worth more than a bushel and a-half in cold weather."

Staggers Among the Hogs.

THE Farmers' Advertiser, St. Louis, states that a fatal disease prevails in the southern portion of that State. At first the disease was supposed to be the hog cholera,—but close observation shows that the symptoms and actions are quite different from that disease. The animal has much the appearance of having what is known as the "blind staggers." As long as warmth and circulation is kept up, the animal shows no signs of disease, but as soon as quiet and inactive, the suffering appears intense. In many instances the eye-balls are turned completely around, and frequently burst. The hog attacked generally lives two or three days.

A Bug Machine.

THE ravages of the Colorado potato bug in Iowa seem to have acted as a spur to some mechanical genius who was desirous of heading off this new farm pest. The result is a bug machine, propelled by horse-power like a reaper, consisting of a reel, similar to those used on that implement, which knocks the beetles off the vines into a box having a moving canvas bottom. This carries the bugs forward to a couple of rollers, between which it and its involuntary freight pass, crushing the latter to a jelly. The slaughter in this way is very great—enough so as to nearly clear a potato field of this new enemy. Those which the machine misses may be readily dispatched by hand if time and patience are devoted to the work.

Bee Comb—How Made.

M. W. LELAND, Rochester, Minn., criticises the statement of Mr. BINGHAM, that "each female soldier is ordered to take eight pieces of prepared honey-combs" by saying that the bee has its honey-sack, but asks, "where is its haver-sack for this prepared comb?" "Nothing of the kind," he adds, "can be discovered" and thinks it will be difficult to show that the bee takes any thing but honey. He says, further, that "the bee has no more to do with the mechanical construction of its comb than has a fowl with its eggs. Bee comb is the oil extract of honey, and instead of its being mechanically made, it grows! In well-fed and well-conditioned swarms, where they remain in contact for any length of time, the temperature being sufficiently high, comb commences to grow, and the bees cannot help it!"

Rural Notes and Items.

A COOL AND ECONOMICAL BEE-HIVE MAN.—One ALLEN, of Onondaga County, recently sent us a copy of the Bee Journal, inclosing therein a letter (thereby defrauding the Government and subjecting himself to a heavy penalty,) requesting us to copy from said Journal a long puff (really an advertisement) of his patent hive. On our respectfully declining the free advertisement—in a letter upon which the legal rate of postage was paid—Mr. A. kindly writes us that he "supposed our columns *was* open for the promotion and advancement of agricultural interests in general"—in which he is right, but slightly mistaken in supposing we consider it in the line of duty to comply with all requests of patentees to aid in disposing of their wares. He furthermore says:—"Had you given that article an insertion in your paper as a voluntary contribution as it was intended, I would have been glad to have patronized you by advertising in your paper and subscribing for the same." This liberality is stunning and quite overcomes us—and moreover shows our exceeding folly in losing the glorious prospect of being *patronized*, to an alarming extent, by a man who subjects himself to a heavy penalty rather than pay three cents postage! We hope the RURAL will survive the lack of what it does not desire—the *patronage* of such a philanthropist.

—For the benefit of the aforesaid ALLEN, and all wiseacres of like brass and benevolence, we here repeat two or three sentences from an article entitled "About Blowing Other People's Horns," published in this journal of the 6th of April last:—"Patentees, and all others who are anxious for us to *benefit our readers, by commending their wares*, are respectfully advised that we have expended over Fifty Thousand Dollars in Advertising, Premiums, &c., &c., to secure the circulation and influence which the RURAL NEW-YORKER has attained, and hence submit that those who use it for their *personal benefit* should pay therefor. * * Almost daily we are bored by requests to publish this or that in reading columns, ostensibly for the benefit of the public, but really to promote the interests of individuals. * * By reading the RURAL carefully (including this article) our friends will be likely to ascertain our platform—one plank of which is that it is *not* our DUTY to enrich any man or company, though the public may be individually benefited. If Inventors will forego patent royalty the RURAL will freely do its full share toward introducing all useful improvements to the public."

THE DRY TERM.—The dry term, noticed by us for three or four weeks past, still continues. There has not been any rain in Rochester and the immediate vicinity worth mentioning for the past four weeks. The consequence is that fall crops are withering, wells and water-courses have gone and are going dry, to the great discomfort of man and beast. Gardens are literally burned up, cutting off the customary supply of potatoes, cabbages, beans, cucumbers and tomatoes. Four weeks of burning hot weather, with but about one-sixteenth of an inch of rain-fall, is not often witnessed in this section. The country round about has generally fared better, but even there the drouth is becoming very severe.

IMPLEMENT TRIAL—N. Y. STATE AG'L SOCIETY.—The second national trial of Plows, Harrows and Cultivators will take place at Utica, commencing on Wednesday, Sept. 11th, 1867. The Plow Trial will be first in order, and be succeeded by the Harrows and Cultivators. No implements except those entered at the May meeting will be tested at this trial. The President, Secretary, Treasurer, Consulting Engineer, and the Board of Judges, will assemble at BAGG'S Hotel on Monday, September 9th, when all the necessary arrangements for the trial and reception of implents will be made.

WHITE LABOR AND COTTON.—The Columbus, Miss., Sentinel details a visit of the editor to a cotton plantation, the work on which was entirely performed by white laborers. The number of acres cleared was about 900, of which 600 were planted with cotton. There were twenty-one men and seven or eight youngsters who worked on an average about twenty acres each. It was one of the best arranged and managed plantations in the cotton region. The crop promise was excellent, and estimated at 1,200 pounds to the acre.

AYRSHIRE HERD BOOK.—A circular from J. N. BAGG, Cor. Sec'y, (of Springfield, Mass., we reckon, though no address is given,) informs us that "the publication of the second volume of the Ayrshire Herd Book is postponed till October next to accommodate the pedigrees still coming in, and to give the Committee further time for their examination,"—that about 600 pedigrees have already been received, that others will be given at 50 cents each, and that orders for the book, price $1, are solicited.

ILLINOIS INDUSTRIAL UNIVERSITY.—The Financial Committee of the State Industrial University have had a meeting with reference to locating the 100,000 acres of the college scrip yet undisposed of. Authority was given to a committee to locate the land anywhere in the States of Iowa, Minnesota, Kansas or Nebraska. The 180,000 acres, already sold, produced an average of 56⅔ cents per acre. At the same rate the remaining 100,000 will bring to the fund $56,500.

FROM VIRGINIA.—Under date of Upperville, Fauquier Co., Va., Aug. 18, H. T. PETERS writes:—"The prospect of corn is very fair for a good average crop. There has been more than an average crop of grass in all this section. Wheat is not turning out remarkably well. Of Lancaster and Old Mediterranean the crop is a fair average, but the smooth kinds (particularly Blue Stem,) are a total failure. Fruit good size and a good crop."

AGRICULTURAL SOCIETIES—ADDRESSES.—The annual address before the Warren county Agricultural Society, French Mountain, will be delivered by Prof ALFRED A. POST of New York city. That before the Dundee, Yates county Society will be by GEORGE W. BUNGAY, Esq., Sept. 17th on the "Philosophy of Labor."

N. E. AG'L SOC'Y—FOURTH ANNUAL FAIR.—A programme and premium list of this Fair, to be held at Cranston, near Providence, R. I., September 3d and 6th, has been rec'd. Premiums offered about $10,000.

RAISING MINKS FOR PROFIT.—The Fredonia Censor says that Messrs. PHILIPS & WOODCOCK of Cassagoga, are raising minks for their fur. They have 40 on hand—22 of this year's raising.

TO ADVERTISERS.—The pressure upon our Advertising Department is such this week that we are obliged to defer several new advertisements—a repetition of what has occurred many times this year.

AGRICULTURAL EXHIBITIONS FOR 1867.

Two weeks since we gave a list of Fairs as far as then ascertained. We now republish the National and State Fairs, and the County and District ones of New York, together with those in other States which have come to hand since that publication:

NATIONAL, STATE, PROVINCIAL, &c.	
American Institute, New York	Sept 12 Oct 26

HORTICULTURAL.

PROTECTING FRUIT TREES WITH EARTH.

Many cultivators do not appreciate the importance of using the soil as a protector to their fruit trees. The rule should be to work the dirt from the trees in the spring, while the weather is cool and moist, and as the heat of midsummer approaches reverse this operation, turning the plowshare towards the trees, and heap the soil over their roots. This wards off the intense heat of the summer sun, and, left in this position, protects the roots, in a great measure, from the effects of winter frost. Dwarf pear trees are especially benefited by increasing the depth of soil over the roots from midsummer until spring. The roots of the quince stock lie near the surface, are fibrous, and easily and often seriously affected by climatic changes; and we doubt not that many a fine young orchard of this fruit has gone to destruction for want of sufficient dirt over the roots. The peach tree may also be well protected by heaping the soil over its roots and against its trunk in the autumn. It is less liable to injury from extreme cold winter weather, and maintains its vigor a longer period for such protection. Stir the soil by throwing it in midsummer towards your trees, thus giving them protection from both heat and cold and from stagnant water, and in the spring reverse this and admit light, warmth and moisture to begin a vigorous growth.

PEAR BLIGHT AND BORERS.

Eds. Rural New-Yorker:—My attention being called to an article in the Rural of July 20th, signed T., which, after enumerating the various kinds of blight, calls for facts to enable us to determine the cause of the pear blight, then goes on and suggests whether the borer does not attack our most vigorous and flourishing pear trees and make them die suddenly of blight. To this suggestion allow me to say that the borer is as unable to begin upon such a tree as a man to bore with an old-fashioned pod augur without first chipping out with a gouge a place to begin, for in all places where I have noticed the operations of the borer, whether in fruit trees or forest trees, they have always entered the tree where it had previously sustained an injury, and become rotten or softened, to enable him to begin. If we cut down a pine tree and saw it into mill-logs, and lay them upon skids, strip the bark from some and leave the bark on others, and go near them on a still warm evening, we will hear them bore in the logs with the bark on, as plainly as we can hear a man bore with an inch augur. So that the borer cannot be the pioneer in the mischiefs to the pear tree.

I suppose that the various kinds of insects and vermin have the same right to a living that we have, and they will have it. And I further believe that their mischiefs are generally very much overrated. I recollect that thirty years ago, or more, the people hereabout were very anxious to learn means of destroying bots in horses, when a Virginian, (not John Miner Botts, but some other Virginian on the subject of bots in horses,) laid down the principle that bots rarely injure a horse, and are never the pioneers in mischief to him; that they have no other means of propagating their species than laying their nits on him, he biting off the nits and swallowing them; they hatch in him; he casts them out; they take wing, and in turn put their nits on the horse. He said that thorough examinations proved that all horses had more or less of bots in them; that fat and well-conditioned had the most; that so long as he was well fed and well, they never troubled him, but if he was abused or starved — sick or dead — they would try to eat their way out. His theory had so much the appearance of common sense I remembered it. In relation to the pear blight, I have for a long time been satisfied that it is caused by the heat of the sun shining upon the trunk and branches of the tree, thickening or coagulating the albumen of the sap, thereby obstructing its circulation in its descent in the bark, leaving it to putrefy. To remedy this, keep a close watch of your trees and as soon as such injury can be seen in the bark, take a knife and slit the bark from a little above the injured spot, to a little below it. If the spot be wide, make two or three slits. Sometimes such an injury is remedied by an effort of Nature in the tree by which the sap will resume by little and little, its wonted circulation, in which case the bark will invariably be found cracked. This suggested the use of the knife.

As facts are called for, I will mention one which I have found to be such, and that is, that pear blight never prevails to much extent unless we have extremely hot sunshine, continued for a considerable length of time without intermission, except, of course, nightly intermissions.

Rochester, Aug. 8, 1867. E. M.

HORTICULTURAL GLEANINGS.

The Catawissa.—An advertisement of this raspberry, in another column, shows where information can be had of its general habits, and where a supply can be procured.

Scaring Birds from Grape Vines.—Owners of Delaware vines which are well set with grapes will be anxious, as the fruit begins to ripen, to protect it from the birds. It has been suggested that birds of prey—hawks, for example—be stuffed and set in the vines, or on a pole near by, to scare off the depredators. The suggestion is worthy of trial, and if live hawks could be secured and fastened near the fruit the robbers would keep their distance.

The Tilden Tomato.—In a paragraph published in the Rural, Aug. 17th, we stated that the Tilden Tomato was ten days behind the large red variety. Referring to this, S. T. T., Sedalia, Mo., writes:—"Your note in reference to the Tilden Tomato is fully corroborated here—our large red variety ripening several days before it, and fully equaling it in vigor and flavor. Not half the seed sent sprouted under the most favorable circumstances."

Sweet Corn.—F. R. Elliott, Cleveland, Ohio, sends us the following notes about sweet corn: "Of all the varieties of sweet corn, one under name of Brill's Extra Early comes to maturity fit for eating the first. Planted at the same time as the Early Jefferson, a small, white, early corn, its ears were gathered the same day, and its sale in market was twenty-five cents a dozen—when the Jefferson sold at eighteen. The Darling's Sweet Corn, at the same time of planting, was ready for picking one week after Brill's, and is the next best variety.

Heliotropes.—The Germantown Telegraph says: August is the month to propagate this fragrant and favorite flower. It can be done in pots or in the open ground. In both cases it should be protected from the sun, except a couple of hours in the morning, and watered thrice a day until it has firmly taken root. The heliotrope is one of the most tender flowers; the least touch of frost will wither it; but secured from this and placed in a genial warmth, either in the greenhouse or sitting-room where the temperature is pretty uniform, will flower beautifully all winter to the shame of many others with greater pretensions.

Osage Orange Hedges.—A writer in the Prairie Farmer says:—"Trim at least three times a year, and an efficient hedge will be made—such a one as will be an ornament to a farm. Encourage it to widen out until it is four to five feet wide at the base, keeping it nicely rounded from the center down to the ground. If the work is done with reasonable care, the hedge in two years is worth looking at, and the owner soon learns not to fear breeding stock. When the hedge becomes formed, be careful to trim very close to the former cutting; a good lively hand can trim one hundred to one hundred and fifty rods per day, of hedges four to five feet wide."

Grass for Lawns.—A correspondent in the Gardeners' Monthly recommends for lawns a mixture of about one-third rye grass (*Lolium perenne*) and two-thirds Kentucky blue grass (*Poa pratensis.*) For lawns that are machine-mowed, he also recommends red top (*agrostis rubra.*) In preparing land for a lawn subsoiling is of much value, for a loose subsoil never gets so hard as one of hard-pan will. If sown in the fall, a mixture of oats or rye is recommended, especially the former; when sown in spring the grass should be the only crop. In order that the roots may penetrate deeply, which they will do in proportion to the growth above ground, and to secure vigorous plants, the grass should not during the first year or two be mown very early or often.

THE SENECA BLACK-CAP RASPBERRY.

Since the Doolittle Black-cap Raspberry has come into extensive cultivation, growers of this fruit have greatly desired another which should ripen a week or two later, in order to supply the market or table fully up to the time of blackberries. This quality of late ripening is of much greater importance than that of earlier maturity. The Seneca Black-cap, which we herewith illustrate, is offered as a candidate for this position. It has been heretofore mentioned in the Rural and described by Mr. Doolittle as a seedling, grown nearly seven years ago by Mr. Dell of Seneca Co., N. Y., from the Doolittle Black-cap, possessing the same characteristics of hardiness, fruitfulness, firmness and flavor of fruit, the same habit of growth and propagation, and as being from seven to eight days later in its period of ripening. We received, in their season, several boxes of the fruit from Messrs. Doolittle & Wight, and these specimens justified its claims as to flavor, size and firmness. We also had the pleasure of examining their plantation at Waterloo, N. Y., where the Seneca and the Doolittle were growing in the same field, and were satisfied of the good qualities of the plant, and from the best information we could collect concluded that the period of ripening its fruit was later than that of the Doolittle, and that it must therefore prove a valuable addition to our list of berries.

Horticultural Notes and Queries.

Catalogues, &c., Received.—Vick's Catalogue of Hardy Bulbs for the autumn of 1867. This offers an unusually attractive list, from which the cultivators of these showy and beautiful flowers can make choice selections. Mr. V. will fill all orders received up to the 1st of December. Write James Vick, Rochester, N. Y., for the Catalogue.

Wholesale Catalogue of the Niagara Nurseries, from E. Moody & Sons, Lockport, Niagara Co., N. Y. This enumerates all kinds of nursery stock, which they have for sale in large quantities.

Ellwanger & Barry's Wholesale Catalogue of Fruit and Ornamental Trees, Shrubs, Roses, Dahlias, Bulbous Roots, Border Plants, &c. Address the above firm, Rochester, N. Y.

Hayward's Seed Farm.—Just outside the limits of Rochester, in the town of Brighton, Messrs. E. S. & N. Hayward cultivate a farm of about 100 acres, of which a large portion is devoted to growing garden products and seeds of vegetables. During a recent visit, we saw lettuce, onions, beets, cabbage, &c., growing in large quantities for seed alone. This branch is the main feature of the farm, and the fact that the Messrs. H. have followed seed growing for over twenty years, and continue to enlarge the area devoted to it is sufficient evidence of its being profitable. Every part of the farm is in a high state of cultivation, which is shown by the fact that though the cash value of it is $500 per acre, its products return good interest and profit on the invested capital. We had intended to give our readers more extended descriptions of this seed culture, and shall take a future opportunity to do so, but our recent visit and notes were very much shortened by a smart shower of rain in the beginning and the departure of a railroad train at the end.

Vineyard Culture Improved and Cheapened.—By A. DuBreuil, Prof. of Viticulture and Aboriculture, in the Royal School of Arts and Trades, Paris. Translated by E. and C. Parker of Longworth's Wine House, with notes and adaptations to American culture by John A. Warder. Illustrated: Robert Clarke & Co., publishers, Cincinnati, Ohio.

The author of this work prepared himself for his work by ten years' travel among the vineyards of France. He treat succinctly the methods of culture practiced with different varieties in the various departments of that country, and points out what he conceives to be improvements. Varieties are mentioned, and the details of culture, pruning, propagation, &c., illustrated and described. It is not a manual for beginners in American grape growing, but of great interest to those who wish to become acquainted with vine culture in Europe, and compare their systems with our own. Dr. Warder's extended notes add much to its interest and value for the American reader.

Wine Exhibition at St. Louis.—The Mississippi Valley Grape Growers' Association have determined to hold an exhibition of wines at St. Louis at the time of the meeting of the American Pomological Society. Contributions of wines from all quarters will be cordially received.

The Japanese plant cucumbers in drills three or or four feet apart, and bush them like peas with tall brushwood, arching the tops together. It saves space, avoids trampling on the vines in picking and secures a uniform development of the fruit on all sides.

Domestic Economy.

HINTS ON PICKLING.

Never use brass, copper or bell metal kettles for pickling, because the verdigris produced in them by the vinegar is very poisonous. Kettles lined with porcelain are the best, and if you cannot procure them, block tin may be substituted; iron is apt to discolor any acid that is boiled in it. Vinegar for pickles should always be of the best cider kind. In putting away pickles use stone or glass jars; the lead, which is an ingredient in the glazing of common earthenware, is rendered very pernicious by the action of the vinegar. Have a large wooden spoon and a fork for the express purpose of taking pickles out of the jar when you want them for the table; see that while in the jar they are always completely covered with vinegar. If you discern in them any symptoms of not keeping well, do them over again in fresh vinegar and spice.

The jars should be stopped with large flat corks, fitting closely, and having a leather, or a round piece of oil-cloth, tied over the cork. It is a good rule to have two-thirds of the jar filled with vinegar. Alum is very useful in extracting salt from pickles, and in making them firm and crisp; a very small quantity is sufficient—too much will spoil them. In greening pickles, keep them closely covered, so that none of the steam may escape, as its retention promotes their greenness, and prevents the flavor from evaporating. Vinegar and spice for pickles should be boiled but a few minutes—too much boiling takes away the strength.

To Stuff Poultry.—Take some bread crumbs and turn on just enough hot water to soften them; put in a piece of butter, not melted, the size of a hen's egg, a spoonful of pulverized sage, a teaspoon of ground pepper, and a teaspoon of salt; there may be some of the bread crumbs that need to be chopped; then mix thoroughly, and stuff your turkey.

A Bucks County Soup.—Take two quarts of soup stock, put it to boil with an onion, two carrots and one turnip cut fine, and season it with pepper and salt. If it is made of brown stock, add half a teaspoon of cloves and boil it half an hour, then add a glass of port wine; but if it is made of white stock, put in half a teaspoon of ground mace and a glass of sherry.

New Advertisements.

GRAPE VINES.—All the best varieties, including Salem and Martha. Price and quality of vines are worthy of the special attention of Dealers and Planters. Price List free to applicants. C. L. HOAG & CO., Lockport Grape Nurseries, Lockport, N. Y.

10,000 CATAWISSA RASPBERRIES and Houghton Gooseberries for sale. Send stamp for our Circular, showing the habits of this prolific Raspberry, which bears a crop in July, and another that is abundant in Sept. and Oct. Address CHAS. D. COPELAND, Agent, Genesee Nurseries, Lima, N. Y.

GRAPE VINES.—A VERY LARGE AND superior stock of Iona, Israella, Adirondac, Rogers' Hybrids, Concord, Creveling, Delaware, Diana, Hartford Prolific, Rebecca, Catawba, Clinton, Isabella, and other varieties, by the 100 or 1,000, at low figures. Send for Price List. ELLWANGER & BARRY,
919-3teo Mt. Hope Nurseries, Rochester, N. Y.

MONROE COUNTY NURSERIES,
ROCHESTER, N. Y.
We offer for the Fall Trade a general assortment of all kinds of Fruit Trees, both Standard and Dwarf; also, Ornamental Trees, Shrubs, Plants and Vines, and every desirable variety of Small Fruits. Would call special attention to our stock of Roses, on their own roots, consisting of over 200 different sorts. Also, a fine lot of standard Roses. Wholesale Catalogues sent on application. GOULD, BECKWITH & CO., Rochester, N. Y.

BULBOUS FLOWERING ROOTS,
FOR FALL OF 1867.
We offer a fine collection of Hyacinths, Tulips, Crocus, Narcissus, Iris, Gladiolus, Japan Lilies, and other Bulbs; also choice varieties of Chinese Peonies. Prices furnished on application. Small quantities forwarded by mail, prepaid at Catalogue Prices.
ELLWANGER & BARRY,

FRUIT AND ORNAMENTAL
TREES!
FOR THE FALL OF 1867.

ELLWANGER & BARRY
Invite the attention of Planters, Nurserymen and Dealers in Trees, to their extensive stock now offered for the Fall Trade. In the departments of

HARDY FRUIT TREES,
ORNAMENTAL TREES,
SHRUBS AND PLANTS,

The collections are the most extensive and complete in the United States.
Prompt and careful attention given to all
ORDERS, AND PACKING DONE
in the most skillful and thorough manner.
Full particulars will be found in the following Catalogues, which will be sent, prepaid, to applicants who enclose stamps:
Nos. 1 and 2—Ten Cents each; No. 3—Five Cents; No. 4—Three Cents.
No. 1—A Descriptive and Illustrated Catalogue of Fruits.
No. 2—A Descriptive and Illustrated Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c., &c.
No. 3—A Catalogue of Dahlias, Verbenas, Petunias, and select new Green-House and Bedding Plants, published every Spring.
No. 4—A Wholesale Catalogue or Trade List.
919-3teo **ELLWANGER & BARRY,**
Mount Hope Nurseries, Rochester, N. Y.

I **AM NOW PUBLISHING,**
WILL BE READY
For Mailing Sept. 5th, a Small Book of 24 Pages,
PRICE, 20 CENTS,
ENTITLED
TWELVE YEARS EXPERIENCE
IN
BLACK-CAP RASPBERRY
CULTURE.

Illustrated with Eight Engravings.

My theory of select propagation—the method of layering plants—the distinction between good and bad plants, and a chapter of plain directions for the management of a plat of berries, the result of recent experiments,

WORTH $25

Yearly to every one growing an acre of this fruit.

This book also contains a full history of that most promising market berry so generously illustrated in another column of this paper, the

SENECA BLACK-CAP!

A new Seedling, from the DOOLITTLE, seven or eight days later, a ranker grower, larger berry, decidedly sweeter in flavor, hardy, firmer fleshed, can be marketed 500 miles from home as well as the DOOLITTLE can 100 miles, &c. See the cut and its accompanying article.

RASPBERRY GROWERS!

Who know that as their crop begins to fall the demand begins to increase and the price runs up in proportion as their berries fall, will be able to appreciate the value of this berry for market purposes. For further particulars see book.

This book also contains a full account of the origin, &c., of my new Seedling, called the RED-FLAVORED BLACK RASPBERRY, this name being too long I now change it to

The Garden Raspberry.

I give it this name because, being rather soft and a less seedy berry than the DOOLITTLE, it can not be sent to a distant market, but is truly a HOME berry. For a near

MARKET AND FAMILY

use this berry will supply a long and widely felt want; a rich, juicy, exceedingly productive berry, of good size and hardy as the oak. It is two or three days earlier than the DOOLITTLE, and being less seedy, is very superior for table use, drying and all culinary uses. It is

Peculiarly Adapted to Gardens

because being propogated from the tips of the cane, it will stand in permanent hills and will not fill the grounds with superfluous shoots and suckers like all Red Raspberries and Blackberries.

Another feature adapting this berry to

GARDEN CULTURE,

is the permanency of its good habits. For example, the seven-year-old original plant, left this year, without manure, hoeing, or cultivation of any kind, yielded at least FOUR QUARTS of berries, as large as the average size of those in the cut of the

SENECA BLACK-CAP,

and throughout the whole plat of this variety, the older the bush the ranker the canes and the larger the berry. For further particulars see book.

For the reason of the absence of evidence of disinterested persons of the merits or demerits of these two new berries, see article in last Rural, headed, "The Committee on Native Fruits." Concerning the

Doolittle Raspberry,

whose praise is in everybody's mouth, nothing need be said. I make the propogation of these plants a specialty and attend personally to their

Assortment and Packing,

and intend to serve those who favor me with their orders, as I would wish to be dealt with by others.

Having associated with me, in partnership, Mr. WARREN WIGHT of Waterloo, N. Y., and six acres of young plants being located there, and six acres at Oaks' Corners, N. Y., we request those writing from the West to direct to

H. H. DOOLITTLE,
OAKS' CORNERS, N. Y.,
and those ordering from the East to address
DOOLITTLE & WIGHT,
WATERLOO, N. Y.

I give my personal attention to both places, but this will divide the labor of correspondence.

Price of Book, 20 Cents by Mail,
postage paid. Sent free to all ordering $2 worth of plants.

PLANTS AT THE FOLLOWING RATES:
20 PLANTS OF
THE DOOLITTLE,
securely packed and sent by mail, postage paid, for $1; 100, expressage unpaid, for $3; 1,000, or over, at $20 per thousand.

The Seneca Black-Cap
AND
GARDEN RASPBERRY PLANTS
are put at one-third the usual price of such new and rare plants, thus putting them in reach of all.

☞ Where a few of each kind are sent in the same package, the GARDEN RASPBERRY will be lashed together with COLORED twine, and the SENECA with WHITE twine; the DOOLITTLE without any. ☜

One plant of the GARDEN RASPBERRY and one of the SENECA BLACK-CAP, or two of either kind will be sent, postage paid, for $1; 12 will be sent thus by mail for $5; 100, expressage unpaid, for $25; 1,000, or over, at $200 per 1,000.

☞ A receipt for the money (and when $3 worth of plants are ordered, the book also,) will be forwarded by return mail, after receiving an order.

☞ **Be careful in giving your address—write plainly Name, Post-Office, State, &c.**

☞ Orders for Plants will commence being filled in the rotation in which they have been received, about October 15th. Address

H. H. DOOLITTLE,
Oaks' Corners, N. Y., Or
DOOLITTLE & WIGHT,
Waterloo, N. Y.

Ladies' Department.

Written for Moore's Rural New-Yorker.

ANNA LEE.

Come to her, sweetest voiced birds of the summer-time,
From your vine-covered haunts where the violets wave,
Bring your wings laden with kisses from lilies rare,
Lilies and kisses her bosom to lave.
Gather the crystalized dew drops of morning,
Purer in heart than the pearls of the sea,
Linger they long with the daisies and roses,
Yet die on the lips of my sweet Anna Lee.

Voice of the low winds, from highland and valley,
Whispered her name in their chidings of fate,
And mourned for my darling in tears of devotion,
Silent and sad, as they passed through the gate.
At eve, when the wicket was opened for darkness,
The zephyrs stole out in their frolicsome glee,
And back they flew to her, and sighed through her tresses,
Yet dare not breathe chill on my sweet Anna Lee.

Night in her mantle cloaked, darkness o'erspreading,
Came blessing all with her baptism of rest;
Looked she to him, in his home on the billow,
Then to the warblers asleep in their nest;
On as she came, she saw in her beauty,
And kneeled by my angel so artless and free;
Smiling, she pressed her soft lips till the morning,
Then whispered farewell to my sweet Anna Lee.

Far away on that shore, trod by feet of the holy,
Two, absent from earth, launched their bark on the bay;
The impress of Heaven gleamed bright on their foreheads,
To light them afar from winged legions away.
'Twas the Ruler who fastened their sail to the topmast,
To return with the tide, was His parting decree;
Then swift o'er the waters their proud shallop bore them,
To look once again on their own Anna Lee.

Winter will scatter the song-birds and flowers,
Earth and her millions will sigh for the Spring;
Fancies long cherished will droop by the wayside,
Hope breathing low, will her offerings bring:
Though cold on earth's frozen breast lies the verdure,
While angry winds drift from far o'er the sea,
A home in my heart there will be for one only!
'Twill shield the lone child of my soul—Anna Lee.

Conesus Center, N. Y. J. F. D.

CATHARINE M. SEDGWICK.

To live well-nigh eighty years, with fair health, with good culture, with many friends, tried and true, is a great privilege. To have grace and strength to fill that life with loving and kindly deeds, to write much for many to read, and give such ideal of life thereby as shall help to higher wisdom, more tender charity, more healthful and natural life in others, to find most heart-felt pleasure in helping others, is a privilege great indeed. Such was the life of this excellent and gifted woman, who, but a few days ago, ripe in years and experience, passed from this to a higher life, at Roxbury, Mass., and her body was interred at Stockbridge, her home.

Born in 1789, her first story "A New England Tale," was published in 1822, and gained great popularity. In 1824 "Redwood" came out and was soon read in England, and translated in France, Italy and Sweden. In 1827 "Hope Leslie, or Early Times in America," followed. Accurate, simple, yet beautiful descriptions of common life, ideals of purity and truth, and honor, and religion, in men and women, healthful tone, and graceful charm of style marked these, as all her works. "Clarence," "Le Bossu," and "The Linwoods," filled the time to 1835.

In the next three years came several books, so widely read, and conveying so many useful lessons as to be often called "the people's books:" "The Poor Rich Man and The Rich Poor Man," "Live and Let Live," "Means and Ends," "Home," "Love Token for Children." In 1841, coming home from Europe, "Letters from abroad to Kindred at Home," delighted and instructed many. "Milton Harvey and other Tales" followed in 1845, and in 1857 came "Married or Single," fresh and graceful as the productions of her youth, and rich with deeper thought and more varied experience.

Essays and stories for magazines gave frequent proof of her industry, and the charm of style was heightened by the excellent sense of her productions. Her books are found in district and Sunday School Libraries, as well as in homes all over the land. As a woman she richly won and well deserved the reverent affection of those who knew her. Full of signal value and interest is this fact of the *true womanhood* of authors who have won name and gained attention.

In the last fifty years the influence of woman in literature has been more felt than ever before. Some one has said "she has made our literature decent," and no doubt the upward tendency of womanly influence has done much in the great change for the better which has taken place. Elizabeth Barrett Browning spent her last years in Florence, seeking health beneath the genial sky of Italy. The poor peasant women in her vicinity knew nothing of her wealth of learning, her wondrous genius, or poetic fame, but the sweet poem of her daily life was written in deeds their hearts could read—kindly acts, not only to her own sweet boy as she walked in the fields with him, but to their children as she met them by the flowery wayside. They knew not her name, but in their musical Italian, called her, "the loving English mother of the fair-haired boy." Not selfish pride, not love of display or reputation, not habits of dissipation, but all sweet and tender charities, the sanctity of home affections, the earnest purpose to *be* and to *do* something that shall help humanity upward, mark the lives of noble women not a few, in our country and in England, whose names and writings are "familiar as household words" in many a home, and whose thoughts have moved many souls and wrought great and beneficent results.

THE TRUE STANDARD OF DRESS.

We are always excessive when we sacrifice the higher beauty to attain the lower one. A woman who will sacrifice domestic affection, conscience, self-respect, honor, to love of dress, we all agree, loves dress too much. She loses the true and higher beauty of womanhood for the lower beauty of gems, and flowers, and colors. A girl who sacrifices to dress all her time, all her strength, all her money to the neglect of the cultivation of her mind and heart, and to the neglect of the claims of others on helpfulness, is sacrificing the higher to the lower beauty. Her fault is not the love of beauty, but loving the wrong and inferior kind.

In fine, girls, you may try yourselves by this standard:—You love dress too much when you care more for your outward adornings than for your inward disposition, when it afflicts you more to have torn your dress than to have lost your temper—when you are more troubled by an ill-fitting gown than by a neglected duty, when you are less concerned at having made an unjust comment, or spread a scandalous report, than having worn a *passe* bonnet, when you are less troubled at the thought of being at the last great feast without the wedding garment, than at being found at the party to-night, in the fashion of last year. No Christian woman, as I view it, ought to give such attention to her dress as to allow it to take up *all* of three very important things, namely, *all* her time, *all* her strength, *all* her money. Whoever does this, lives not the life of a Christian, but that of a Pagan—worships not at the Christian's altar of our Lord Jesus, but at the shrine of the lower Venus of Corinth and Rome.

LOVE.—WHAT IS IT LIKE?

A lady being asked what love was like, replied in the following truthful and beautiful language:

"What is love like?" The love of the world's votaries is like a butterfly's wing. Richly painted with gorgeous colors, it entrances the eye, and its loveliness steals upon the heart, making all but the outer covering to be forgotten; but grasp it with a firm hand and try its beauty, and, alas! the many-colored tints all fade away.

"What is love like?" The love of a true-hearted friend is like a star beaming in the sky, when no other light is seen, and clouds thickly surround it. It is like music that calms the troubled mind. The darker the day the firmer the friendship. The more agitated and disturbed the more sweet and soothing are the accents of the loved one's voice.

"What is love like?" The love of a Christian is like the purest diamond, like the "unsullied dew-drop," like infancy smiles, like the fragrance of sweet flowers, and like a rainbow's form. It sparkles brightest in adversity; it comes forth pure from all trials; it is humble and gentle under temptations, and it is supremely beautiful. When the spirit bids adieu to earth, and wings its way to the fountain of all love, it then decks itself in holiday attire, tunes anew its golden harp, and with a form made new and perfect, soars far away to chant a *Te Deum* of unending praise and love.

NAMING CHILDREN.

The day of using nicknames never will die out, but the custom of christening children by nicknames and pet names should be strangled in the cradle. The rising generation will blush for the sentimental silliness of their parents, who bestowed these names upon them. A writer says:—"Girls, instead of being baptized with such sensible names as Matilda, Charlotte, Margaret, or Sarah, are christened 'Tillie,' 'Lottie,' 'Maggie,' and 'Sadie.' Ellen dwindles into 'Ella;' Susan shrinks into 'Susie;' Caroline is made ridiculous by being cut down to 'Linia.' Emma becomes insipid in 'Emmie;' and most wretched of all, the beautiful name Mary is frittered away in 'Mamie.' This nicknaming would be all very well if in its use it was confined to the family circle; but such names are given permanently to children, and the future wives and mothers of the land figure in every advertised list of letters, and in every school examination, as 'Lidies,' 'Susies,' and 'Sadies.' Think of the wife and mother of the father of his country christened by the name of 'Mamie' and 'Marthie,' and of the mother baptizing the future hero and statesman as 'Geordie!' The First Napoleon would have remained a bachelor forever had his first wife been named 'Josie,' and he would not have troubled an Archduchess of Austria to take the place of the discarded Empress had she been named 'Minnie Loui,' instead of plain and sensible 'Maria Louisa.'"

Choice Miscellany.

BOOKS FOR THE PEOPLE.

BY ANNA C. LYNCH.

Light to the darkened mind—
Bear, like the sun, the world's wide circle round—
Bright messengers, that speak without a sound!
Light on the spirit-blind
Shall fall where'er ye pass: your living ray
Shall change the night of ages into day.
God speed ye on your way!

In closet and in hall
Too long alone your message hath been spoken:
The spell of gold that bound ye there is broken;
Go forth, and shine on all!
The world's inheritance, the legacy
Bequeathed by Genius to the race are ye:
Be like the sunlight—free.

A mighty power ye wield!
Ye wake dim centuries from their deep repose,
The spoils of time to yield.
Ye hold the gift of immortality:
Bard, sage, and seer, whose fame shall never die,
Live through your ministry.

Noiseless upon your path,
Freighted with love, romance, and song ye speed,
Moving the world in custom and in creed,
Making its love or wrath
Tyrants that blanch not on the battle plain,
Quail at your silent coming and in vain
Would bind the riven chain.

Shrines that embalm great souls,
Where yet the illustrious dead high converse hold,
As gods spake through their oracles of old!
Upon your mystic scrolls,
There lives a spell to guide our destiny—
The fire by night, the pillar'd cloud by day,
Upon our upward way.

NOTES AND SENTIMENTS

FROM A SOJOURNER IN THE GREEN MOUNTAIN STATE.

Clarendon, Vt., Aug. 16, 1867.

VERMONT AND WESTERN NEW YORK.

Dear Rural:—We are among the mountains—the Switzerland of America. Old Vermont, grand old State, still rears high her beautiful hills and mountains, and with joy would summons visitors to her valleys through the summer months. Western New York has her fine, fertile fields,—Vermont her fields covered with flocks. Western New York has her fine trading posts—Vermont her marble interests, with a largely increasing trade in sheep, cattle and horses, as well as her manufacturing interests. When one rides over the hills and through the valleys of Vermont he feels an inspiration which is full of respect to nature and her works, and which thrills every fiber of the soul, and leads us to respect God in his works. Truly, among the glens and hills one can spend many a happy hour and chase "dull care" away with a book or paper, while the innocent lambs skip by or the happy squirrel sports unmolested. When the morning sun rises, and the merry rattle of the mower is heard in the valley below, if you stand on the mountain top you will experience much of the natural grandeur of the "Old Green Mountain State." Vermont does not lack of wealth, even in agricultural pursuits, nor does she in any pursuit where the busy brain of the Yankee is called upon to exert itself.

FREEDOM AND SELF-GOVERNMENT.

Many questions of interest are being discussed in the papers which ought to command the attention of every true American. It is not the brilliant diplomacy that is so much needed to settle these questions, as it is the steady, sober, earnest thinker for the right. But a short time ago a man attempted to seat himself upon a throne, and in the attempt lost his life. The people of the 19th century will not endure such usurpation. There is too much liberality of education among the masses to submit to the galling chains of a monarch. Let the kings sleep quiet in their graves, for the laws of equal rights to man are too powerful to be ignored by a panoply of kingly courts. Let the children of kings learn to be busied with agricultural and scientific pursuits, rather than building foundations for thrones. Let one glad voice of rejoicing ascend to heaven from the Mexican and American Republics in response to the tottering of thrones, as Free Democracy makes onward marches in self-government. Rejoice, oh! Mexico, for never again shall the triumph of a king sound o'er thy hills and valleys! Never again shall a usurper question your rights as a free and nationalized republic. The long line of kings are becoming extinct; the fires of royalty burn low; the government of people must be among themselves, or bloody wars, carnage, death at the altar of liberty are the results.

Men have been educated to fight for liberty, and the man who attempts to change this education will meet a strong combination of educated muscle, and, in time, have to succumb to its influence. Strong, heavy blows have been dealt for the perpetuity of the liberties our fathers died for, and still stronger blows will be dealt, if the right to enjoy those liberties is questioned by monarchs or kings. America stands proud of her success over and magnanimity to a fallen people. Mexico would have been recognized as more philanthropic had she spared the life of the fallen king, as Victor Hugo pleaded. But the *die* had been cast, and the king's life was below par. When will blood cease to flow for blood? When will the thirst for blood be satiated by more refined and nobler tastes? Alas! so long as the masses remain uneducated and monarchs are ambitious to conquer republics.

MODERN YOUNG MEN AND WOMEN.

Not long since we were reading in one of the Boston papers an elaborate discussion about modern young men and women. One of the writers seemed to condemn young ladies very severely, because they were not, as a general thing, as well prepared to be good and worthy wives as the young men were husbands. Now, we do not question any character on either side, but would rather suggest that there is a great lack of principle and straightforward living on the part of both. Young men are just as much to blame for ignoring any good quality of stability as are young ladies. Young men drink, chew, dance, prostitute nobility of intention and purpose far more recklessly and insanely than young ladies.

But this does not seem the right way to look at the question. We ought to make a classification,—Good men and women, bad men and women. Here we have two classes, the one good, the other bad. To belong to the one class is to be in good society, practice honesty of thought and purpose, do good to all with whom we are associated; to belong to the other is to live in bad society, practice deceit, live dishonestly, ruin our own reputation and that with which we have to do. There is no condemning where there is nothing to condemn, therefore, those of the first class, both young men and women, are worthy and capable to shoulder the responsibilities which will soon fall upon them in the busy, active world. Those of the second not worthy, not capable, not of the class which has the most influence. Little by little is the idea that money and nabobism rule social life, becoming extinct, and more and more is the idea that merit and steadiness gain popular credit and confidence. Therefore, it becomes every young man and woman to recognize the true path to general approbation, and to walk in that path.

But we are lengthy; so adieu. L.

AUGUST—IN EUROPE.

There is no month in the whole year in which Nature wears a more beautiful appearance than in the month of August. Spring has many beauties, and May is a fresh and blooming month, but the charms of this time of year are enhanced by their contrast of the winter season. August has no such advantage. It comes when we remember nothing but clear skies, green fields and sweet smelling flowers,—when the recollection of snow and ice and bleak winds has faded from our minds as completely as they have disappeared from the earth,—and yet what a pleasant time it is! Orchards and cornfields ring with the hum of labor; trees bend beneath the thick clusters of rich fruit which bow their branches to the ground; and the corn piled in graceful sheaves, or waving in every light breath that sweeps above it, as if it wooed the sickle, tinges the landscape with a golden hue. A mellow softness appears to hang over the whole earth. The influence of the season seems to extend itself to the very wagon, whose slow motion across the well-reaped field is perceptible only to the eye, but strikes with no harsh sound upon the ear.

As the coach rolls swiftly past the fields and orchards which skirt the road, groups of women and children, piling the fruit in sieves, or gathering the scattered ears of corn, pause for an instant from their labor, and shading the sunburnt face with the still browner hand, gaze upon the passengers with curious eyes, while some stout urchin, too small to work, but too mischievous to be left at home, scrambles over the side of the basket in which he has been deposited for security, and kicks and screams with delight. The reaper stops in his work, and stands with folded arms looking at the vehicle as it whirls past; and the rough cart-horses bestow a sleepy glance upon the smart coach team, which says as plainly as a horse's glance can, "It's all very fine to look at; but slow-going over a heavy field is better than warm work like that upon a dusty road, after all." You cast a look behind you as you turn a corner of the road. The women and children have resumed their labor; the reaper once more stoops to his work: the cart-horses have moved on, and all are again in motion.—*Dickens.*

EVERY DAY MAXIMS.

Remember that every person, however low, has right and feelings. In all contentions let peace be rather your object than triumph; value triumph only as the means of peace.

When you meet with neglect let it arouse you to exertion; instead of mortifying your pride, set about lessening those defects which expose you to neglect, and improve those excellences which command attention and respect.

If you desire the people to treat you as a gentleman, you must conduct yourself as a gentleman should to them.

Do not attempt to frighten children and inferiors by passion. It does more harm to your own character than it does good to them. The same thing is better done by firmness and persuasion.

Find fault, when you must find fault, in private, if possible, and some time after the offense, rather than at the time. The blamed are less inclined to resist when they are blamed without witnesses.

Keep up the habit of being respected, and do not attempt to be more amusing and agreeable than is consistent with the preservation of respect.

Don't be too severe upon yourself and your own feelings; keep on, don't faint, be energetic to the last.

If you wish to keep your mind clear and body healthy, abstain from all fermented liquors.—*Sidney Smith.*

To despise theory is to have the excessively vain pretension to do without knowing what one does, and to speak without knowing what one says.—*Fontenelle.*

Pleasant recollections promote cheerfulness, and painful ones gloom. Thus the happiness that flows from the right regulation of the feelings tends to perpetuate itself.—*Ballou.*

Sabbath Reading.

THE HAPPY LIFE.

OLD ENGLISH POEM, BY SIR HENRY WOTTON.

How happy is he born or taught,
That serveth not another's will;
Whose armor is his honest thought,
And simple truth his highest skill:

Whose passions not his masters are;
Whose soul is still prepared for death;
Not tied unto the world with care
Of princes ear, or vulgar breath.

Who hath his life from rumors freed;
Whose conscience is his strong retreat:
Whose state can neither flatterers feed,
Nor ruin make oppressors great.

Who envies none whom chance doth raise,
Or vice: who never understood
How deepest wounds are given by praise;
Nor rules of state, but rules of good.

Who God doth late and early pray
More of His grace than gifts to lend;
And entertains the harmless day
With a well chosen book or friend.

This man is freed from servile bands,
Of hope to rise, or fear to fall;
Lord of himself though not of lands;
And having nothing, yet hath all.

EFFECTIVE PREACHING.

It is well for ministers to know how they and their efforts are regarded by intelligent and sensible men who occupy the position of outside observers. Even if they sometimes lack moral sympathy with the gospel message and listen with the critical mind instead of the prayerful heart, they may indicate what is needful in order to command that respectful attention without which the pulpit is sure to fall. The Nation has some remarks on this subject that are entitled to consideration. It says:

Odd or otherwise startling themes are chosen, and announced beforehand in flaming advertisements. Eccentricities of style are deliberately assumed. Wit, such as it is, is to relieve the weariness of the hearer. A convulsive, boisterous elocution is palmed off in the room of earnestness. An excessive and unnatural vehemence, which is a fault of Mr. Beecher in certain passages of his discourses, is copied by his feeble imitators. A shrewd observer remarked, the other day, that in order to make the fortune of a sermon now-a-days, it is necessary for the preacher to "holler" at least once in the course of it; once is enough, but once at least he must bawl. Cases are not infrequent where a vociferous delivery is accepted in lieu of intellectual qualifications for the preacher's office; in lieu of method and of good sense.

What is wanted, it is plain, is a living earnestness to take the place of the spurious and counterfeited earnestness which can deceive only the ignorant. Eloquence is born of deep and stirring convictions; genuine itself, all its products are of necessity genuine. It can afford to disdain every species of clap-trap. It is a flame that communicates itself and kindles all within its reach. It goes forth with the speech of a living man, so that books are no substitute for it. When preachers are truly earnest, preaching is truly eloquent. It is then a fresh and warm and enlivening utterance.

To say something, a man must have something to say. He must not deal in vague generalities. He must not speak out of fluctuating and inconsistent moods of opinion. He must not contradict himself from week to week. The preacher must have not only faith, but *a* faith. He must have beliefs in religion which are capable of being stated, which are coherent, and which are held as something sacred and vital to the welfare of men. In this case he will speak with authority; not the authority of an arbitrary or overbearing mind, but with the authority that depends on insight and assured conviction.

IT IS WELL WITH THE CHILD.

Bishop Leighton thus wrote to his sister's husband on the death of a beloved child:—"I am glad of your health, and of the recovery of your little ones; but, indeed, it was a sharp stroke of a pen that told me your little Johnny was dead, and I felt it truly more than to my remembrance I did the death of any child in my lifetime. Sweet thing! and is he so quickly laid asleep? Happy he! Though he shall no more have the pleasure of lisping and laughing, he shall have no more the pain of crying, nor of being sick, nor of dying; and hath wholly escaped the trouble of schooling and all the sufferings of boys, and the riper and deeper griefs of upper years—this poor life being all along nothing but a linked chain of many sorrows and of many deaths. Tell my dear sister she is now so much more akin to the other world, and this will be quickly passed to us all. John is but gone an hour or two sooner to bed, as children used to do, and we are undressing to follow. And the more we put off the love of the present world, and all things superfluous beforehand, we shall have the less to do when we lie down."

The three tongues that were written upon the cross—Greek, Latin and Hebrew—to witness Christ to be the king of the Jews, do each of them, in their several idioms, avouch this singular axiom, that Christ is an all-sufficient Saviour; and a threefold cord is not easily broken.—*Spurgeon.*

We find the following remark credited to a Unitarian minister:—"It is doubtful whether, with our modern tendency, God can send upon society a greater combination of curses than a very eloquent preacher, a ten thousand dollar organ, and a superb opera choir."

THE BEAST AND BEAUTY.

[Concluded from page 284.]

Those few days were endless, slow, dull, unbearable,—every second brought its pang of regret and discomfort and remorse. It seemed to Belinda that her ears listened, her mouth talked, her eyes looked at the four walls of the cottage, at the furze on the common, at the faces of her sisters, with a sort of mechanical effort. As if she were acting her daily life, not living it naturally and without effort. Only when she was with her father did she feel unconstrained; but even then there was an unexpressed reproach in her heart like a dull pain that she could not quiet. And so the long days lagged. Although Dr. Robinson enlivened them with his presence, and the Ogdens drove up to carry Fanny off to the happy regions of Capulet Square (E. for Elysium, Anna I think would have docketed the district,) to Belinda those days seemed slow, and dark and dim, and almost hopeless at times.

On the day on which Belinda was to have returned there came a letter to me telling her story plainly enough:—"I must not come back, my dearest Miss Williamson," she wrote. "I am going to write to Mrs. Griffiths and dear kind Guy to-morrow to tell them so. Anna does not think it is right. Papa clings to me and wants me, now that both my sisters are going to leave him. How often I shall think of you all,—of all your goodness to me, of the beautiful roses, and my dear little room! Do you think Mr. Guy would let me take one or two books as a remembrance,—Hume's History of England, Portens' Sermons, and Essays on Reform? I should like to have something to remind me of you all, and to look at sometimes, since they say I am not to see you all again. Good-by, and thank you and Mrs. H. a thousand thousand times.—Your ever, ever affectionate BELINDA. P. S.—Might I also ask for that little green volume of the *Golden Treasury*, which is up in the tower-room?"

This was what Guy had feared all along. Once she was gone, he knew by instinct she would never come back. I hardly know how it fared with the poor fellow all this time. He kept out of our way, and would try to escape me, but once by chance I met him, and I was shocked by the change which had come over him. I had my opinion, as we all have at times. H. and I had talked it over,—for old women are good for something after all, and can sometimes play a sentimental part in life as well as young ones. It seemed to us impossible that Belinda should not relent to so much goodness and unselfishness, and come back again some day never to go any more. We knew enough of Anna Barly to guess the part *she* had played, nor did we despair of seeing Belinda among us once more. But some one must help her; she could not reach us unassisted; and so I told Mrs. Griffiths, who had remarked upon her son's distress and altered looks.

"If you will lend us the carriage," I said, "either H. or I will go over to Dumbleton to-morrow, and I doubt not that we shall bring her." H. went. She told me about it afterwards. Anna was fortunately absent. Mr. Barly was down stairs, and H. was able to talk to him a little bit before Belinda came down. The poor old man always thought as he was told to think, and since his illness he was more uncertain and broken than ever. He was dismayed when H. told him in her decided way that he was probably sacrificing two people's happiness for life by his ill-timed interference. When at last Belinda came down, she looked almost as ill as Griffiths himself. She rushed into H.'s arms with a scream of delight, and eagerly asked a hundred questions. "How were they all,—what were they all doing?"

H. was very decided. Everybody was very ill and wanted Belinda back. "Your father says he can spare you very well," said she. "Why not come back with me this afternoon, if only for a time? It is your duty," H. continued, in her dry way. "You should not leave them in this uncertainty." "Go, my child,—pray go," urged Mr. Barly. And at last Belinda consented shyly, nothing loth.

H. began to question her when she had got her safe in the carriage. Belinda said she had not been well. She could not sleep, she said. She had had bad dreams. She blushed and confessed that she had dreampt of Guy lying dead in the kitchen-garden. She had gone about the house trying, indeed she had tried to be cheerful and busy as usual, but she felt unhappy, ungrateful. "O, what a foolish girl I am," she said. All the lights were burning in the little town, the west was glowing and reflected in the river, the boats trembled and shot through the shiny waters, and the people were out upon the banks, as they crossed the bridge again on their way from Dumbleton. Belle was happier certainly, but crying from agitation.

"Have I made him miserable, poor fellow? O. I think I shall blame myself all my life," said she, covering her face with her hands. "O, H.! H.! what shall I do?"

H. dryly replied that she must be guided by circumstances, and when they reached Castle Gardens, kissed her and set her down at the great gate, while she herself went home in the carriage.

It was all twilight by this time among the roses. Belinda met the gate-keeper, who touched his hat and told her his master was in the garden; and so instead of going into the house she flitted away towards the garden, crossed the lawns, and went in and out among the bowers and trellises looking for him,—frightened by her own temerity at first, gaining courage by degrees. It was so still, so sweet, so dark; the stars were coming out in the evening sky, a meteor went flashing from east to west, a bat flew across her path; all the scent hung heavy in the air. Twice Belinda called out timidly, "Mr. Griffiths, Mr. Griffiths!" but no one answered. Then she remembered her dream in sudden terror, and hurried into the kitchen garden to the fountain where they had parted.

What had happened? Some one was lying on the grass. Was this her dream? Was it Guy? Was he dead? Had she killed him? Belinda ran up to him, seized his hand, and called him Guy,—dear Guy; and Guy, who had fallen asleep from very weariness and sadness of heart, opened his eyes to hear himself called by the voice he loved best in the world; while the sweetest eyes, full of tender tears, were gazing anxiously into his ugly face. Ugly? Fairy tales have told us this, at least, that ugliness and dullness do not exist for those who truly love. Had she ever thought him rough, uncouth, unlovable?. Ah! she had been blind in those days; she knew better now. As they walked back through the twilight garden that night, Guy said humbly,—

"I sha'n't do you any credit, Belinda: I can only love you."

"*Only!*" said Belinda.

She didn't finish her sentence; but he understood very well what she meant.

HUMBUGS.—A man advertised lately to forward, on receipt of postage stamps, "sound practical advice, that would be applicable at any time, and to all persons and conditions of life." On receipt of the stamps he sent his victim the following:—"Never give a boy a penny to watch your shadow while you climb a tree to look into the middle of next week."

Various Topics.

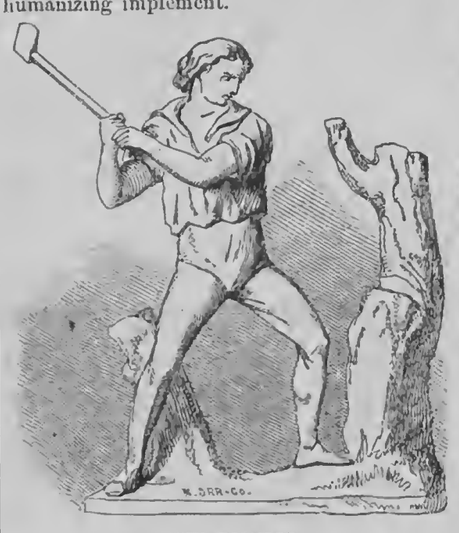
THE NATIONAL CAPITOL:

SYMBOLICAL ILLUSTRATIONS OF THE INTERIOR.

THE columns of the RURAL NEW-YORKER have already presented several features pertaining to the National Capitol at Washington—the central point or heart of numerous States composing the nation. In the present issue we continue these illustrations embracing a portion of our symbolical history, as portrayed in the interior of our National edifice. The first figure would seem to indicate the war period, when the people of the Colonies resolved to separate from England and set up a government for themselves. This course, determined upon, the first step was to draw the sword in vindication of its justice and propriety.

THE SOLDIER.

In the second figure is symbolized the close of the conflict, and the return of the people to the pursuits of peace. As the sword had won the country, it was important that it should be made available for the production of human sustenance. The forests were in the way, hence the necessity for the ax,—we are sorry the artist did not make a better delineation of it,—and here we have a pioneer, or backwoodsman, who has exchanged the sword for this important and humanizing implement.



THE PIONEER.

In the next group we have represented the results following from the use of the sword and the ax—a season of peace and affluence; the youth, rehearsing the early toils and struggles by which their exemption from oppression and poverty were secured.

YOUTH.

THE fourth figure indicates that home tuition which lies at the base of all well regulated paternal government, and contributes so essentially to the future attainments and usefulness of adult age.

EDUCATION.

Next we have symbolized the results of the war of Independence; the clearing up of the forests and family education. These have induced industry, and this has produced a surplus of local commodities. The circle of human wants and aspirations has been enlarged, producing the merchant, or man of commerce. He is making up a venture for foreign climes and is comparing, probably, the packages with the shipping bill while rehearsing, mentally, the chances of loss or gain.

COMMERCE.

The steps taken to arrive at his point have displaced a former occupant of the soil—the red man. He has fought the pale faces, long and vigorously, but in vain. He is weary and broken hearted, and sits despondently down, for a time, before turning his face towards the setting-sun.

THE INDIAN CHIEF.

HOME MARKET.—SHOPS AND FARMS.

WHEN farms and workshops, or mills, are near each other, transportation is saved, the exchange of commodities is rapid, the home market saves much waste, prices are better, lands grow in value and productiveness, and all find labor. As an illustration, up among the Alleghanies, some seventy miles east of Pittsburg at Johnstown, are the Cambria Iron Works, employing some 3,000 men, and making last year 45,000 tons of railroad iron, beside some of other kinds. The soil around is mostly rough and unproductive, well nigh valueless before the mills were built. Every cultivable spot is now improved at a good profit for a day's journey around, and the price has increased ten-fold. It is estimated by the officers of the Company that the workmen spent of their wages some $2,925,000 in the past year, of which was—

Paid to western farmers	$1,028,250
" southern "	319,050
" local "	217,800
" foreign "	175,500
" western manufactures	103,500
" southern do.	79,200
" local and eastern do.	616,950
" foreign do.	103,500
" for other articles	281,250
	$2,925,000

It will be seen how large are the sums paid out at home. They have just built a large woolen mill to employ hundreds of the wives and sons and daughters of the iron workers, who want occupation.

The great factories at Youngstown, Ohio, on the Mahoning, have used up the products of the farms for a wide extent, and the value of lands has been more than doubled. They have bought, from the West, over $1,000,000 worth of grain and meat, in the past year.

Beside all this is the fact, little thought of but important, that every bushel of grain sent far away decreases the grain-growing capacity of the soil by taking away a portion of the constituent properties that must be had to produce that grain, and thus of any product sent away. This drain is constant and immense. Stop it, and thus keep up and increase the average products of the farm, by seeking the benefits of a home market.

DRUNKENNESS IN PARLIAMENT.

IT appears the English have a way of keeping from the public eye the antics of the "red-eye" members of the House of Commons. A London correspondent of the Chicago Tribune says:

"Last week I saw two distinct cases of intoxication in the House of Commons. In one, a clever young member talked such nonsense that the House roared with laughter, occasionally putting an unseemly construction upon his rambling words and chuckling at the coarseness. In another, the member, a learned lawyer, too, was so incoherent and absurd that Mr. Gladstone, in charity, suggested that he should reserve his remarks to a later period of the discussion, adding that no good could come of his debating the question at that particular moment. The House perfectly understood this advice, and gave a significant cry of "Hear! hear!" But directly afterwards, it tittered loudly as it saw the offender walk up the floor with difficulty and seat himself at Mr. Gladstone's side, endeavoring to enter into a private explanation with the peculiarly refined and particular leader of the Liberal party. Were the press to name these wretched men, actions at law would at once be brought, and it would be impossible to prove the statement however notorious the circumstance.

SOUND economy is a sound understanding brought into action; it is calculation realized; it is the doctrine of proportion reduced to practice; it is foreseeing contingencies and providing against them; it is expecting contingencies and being prepared for them.—*Hannah Moore.*

PARIS EXPOSITION—SEWING MACHINE AWARDS.

WE recently published a brief telegram from Paris, announcing the award, over eighty-two competitors, to Messrs. WHEELER & WILSON of the Highest Premium, a Gold Medal, for the perfection of Sewing Machines, and Button-Hole Machines. The following are copies of the official documents confirming the announcement:

EXPOSITION UNIVERSELLE,
PARIS, 1867.

COMMISSION IMPERIALE, CHAMP-DE-MARS, 16th July, 1867.

MR. R. HUNTING, No. 139 Regent St., London:

DEAR SIR: Replying to your inquiry, I beg to state that the ONLY GOLD MEDAL for the manufacture and PERFECTION OF SEWING-MACHINES and BUTTON-HOLE MACHINES, was awarded to Messrs. WHEELER & WILSON of New York.

Yours, respectfully,
HENRY E. Q. D'ALIGNY,
Member of International Jury and Reporter of same.

Another letter, of the same date, says:

DEAR SIR: Replying to your inquiry, I herewith give you the list of gold medals awarded to my class:

DUFUIS ET DUMERY, for Screw Shoe Machines.

WHEELER & WILSON, New York, for the manufacture and perfection of their Sewing Machines and Button-Hole Machines.

There is, also, in the list of "CO-OPERATORS," a Gold Medal granted to Mr. Elias Howe, Jr., personally, as PROMOTER of the Sewing-Machine.

Respectfully yours,
HENRY F. Q. D'ALIGNY,
Reporter of Class No. 57, (Group No. 6,) Member of the International Jury at the Exposition Universelle.

Extract from LE MONITEUR UNIVERSEL, official journal of the French Empire:

"The Wheeler & Wilson Company of New York, manufacturers of American Sewing Machines, have just received the GOLD MEDAL at the Exposition Universelle, for the good construction of their machines; the new improvement for making button-holes, applicable to their sewing machines; also, for their machine especially for making button holes. This award is accorded for the great development that Messrs. Wheeler & Wilson have given to the sewing machine industry, in bringing their machines to the doors of all, by their cheapness and solid construction, which allows their employment with satisfaction in families, and with great advantage in work-rooms."

PROGRESS OF THE PACIFIC RAILWAY.

DISPATCHES from San Francisco give encouraging accounts of the progress and prospects of the western end of the Great Pacific Railroad. It will be remembered that Congress granted to the two principal companies—the Union Pacific and the Central Pacific—the right to build their respective lines from opposite ends until they meet and connect. The former having nearly crossed the level plains of Nebraska is rapidly approaching the outlying hills of the Rocky Mountain range; while the latter, it appears, is making equally gratifying headway. During this month it is expected the last and greatest of the tunnels on the western link will be opened, and the crossing of the dreaded Sierra Nevada Mountains be regularly made by the locomotive, into the Great Salt Lake Basin. This achievement of hewing and blasting a pathway through primeval granite barriers, although all included within 150 miles, is equivalent to more than 600 miles of ordinary railroad, in cost and resistance overcome. Upwards of $20,000,000 have been expended in the enterprise, which includes, however, the equipment and materials for 150 miles additional. Eastward of the graded portion the line has been surveyed and located for 600 miles, developing an easy and favorable route, and it is believed that fully half of the distance between the Pacific Coast and the Missouri River will be built by the Central Pacific Company, as they are favored by having their hardest work done, and by the presence of large numbers of cheap and serviceable Chinese laborers. It is assuring to be informed, also, that the business of the road is very large, the earnings for July being $175,000 in gold; while the operating expenses were less than $25,000.

The Company receives a large subsidy from the Government, and in order to push on the work with even greater energy, are offering their First Mortgage Bonds for sale, through Fisk & Hatch, their Financial Agents in New York, and our leading Bankers, at rates very tempting to capitalists. The merits and advantages of the Central Pacific Railroad Bonds are fully set forth in our advertising columns.

THE SECRET OF LONGEVITY.—An entertaining book of sporting gossip, recently published in London, under the odd title of "Sportascrapiana," gives, in the words of Capt. Horatio Ross, the secret of the remarkable preservation of his fine vigorous physique to a late period in life. "I attribute it," he says, "in a great measure to having always kept myself in a state of moderate training. I have always lived well, and for many years have drank nothing but light claret, one bottle per diem; but I have never omitted, wherever I was, whether in town or country, whether the weather was fair or the reverse, to walk regularly eight miles, and generally twelve miles, every day of my life, unless I had an opportunity of going out shooting. I have also, for a great many years, been very particular in taking a sponging bath of cold water, every morning." And now, at sixty-five, he can walk his fifty miles, at three and a half miles an hour, without fatigue, and he is still the best rifle shot in England.

The Reviewer.

DOMBEY AND SON. "Globe Edition" of Hurd & Houghton; and MARTIN CHUZZLEWIT, "Diamond Edition" of Ticknor & Fields.

IN Chuzzlewit, written soon after DICKENS' visit to America, he introduced some American characters, types of rude phases of our life, perhaps exaggerated. But it is of no use to be "thin skinned," especially as he holds up British absurdities with an unsparing hand. Possibly he might have been a little disturbed by his want of success in an international copyright. TICKNOR & FIELDS claim that they alone pay the author a per centage on sales in this country, and surely they offer the works in attractive dress. The large pages and type so legibly clear of the "Globe" style are surely welcome to eyes tried by diamond print, and thus all tastes and wants are met by different editions. The genius of DICKENS still holds its sway, and the charm of his descriptions of common life still fascinates. With no effort to portray great personages, he bodies forth the hopes, affections, struggles, trials and triumphs of the every-day people, giving cheerful and healthful views of life, with rare touches of tender and natural pathos. He has thereby helped to expose old abuses, and roused up a more heartfelt interest in the world's suffering poor. Both editions sold at DEWEY'S.

CHEMISTRY OF THE FARM AND THE SEA. With other Familiar Chemical Essays. By JAS. R. NICHOLS, M. D. Boston: A. Williams & Co.—1867.

A SMALL volume containing the substance of sundry lectures "and communications published in the Boston Journal of Chemistry during the past and present years." The subjects are: Chemistry of the Farm; of the Sea; of a Bowl of Milk; of the Dwelling, and of a Kernel of Corn. Also obscure sources of disease; local decomposition in lead aqueduct pipes; bread and bread-making, and chemistry of the sun. Each of these subjects is familiarly and lucidly discussed, affording information valuable to all classes, but especially so to those engaged in agriculture.

THE SAYINGS OF DR BUSHWHACKER, and Other Learned Men. By FRED. S. COZZENS, Author of "Sparrowgrass Papers, etc." New York: A. Sampson & Co.—1867.

AN assemblage of terse, dashing, interesting and amusing disquisitions on various subjects. Among them are—"A Talk about Tea," "A Journey around a Tapioca Pudding," "Old Phrases," &c., &c. It contains a fund of information in an attractive dress, and must challenge public favor. DEWEY has it.

GOOD STORIES.—Messrs. TICKNOR & FIELDS have issued the initial number of "Good Stories," under which title they propose to publish, in cheap and attractive form, a valuable collection of Short Stories, Tales and Sketches. It is not intended to limit this collection to English literature. It will embrace, by competent translations, the best and most characteristic short stories of all languages. The number before us is first of the series, and if it be followed by others of equal value and interest, the fifty cents for each number will be *little for much*, especially as illustrations are added to the attractive text. Sold by DEWEY.

CASSEL'S MAGAZINE.—Eighty broad pages of London type, with English illustrations, a monthly for which WALTER LOW, 596 Broadway, New York, is agent. It aims "to present for family reading the largest and best amount of literary matter that can be afforded," and is surely attractive. Price 30 cents, or $3.50 per year.

BELL MAHONE. Song and Chorus. By J. H. MCNAUGHTON. Published by PENN & REMINGTON, Buffalo, who offer at wholesale and retail the songs and music of MCNAUGHTON, VIRGINIA, GABRIEL, and others, at their large musical establishment.

APPLETON'S HAND BOOK OF NORTHERN TRAVEL.—A volume of 400 pages of Descriptions, Maps and Plates,—a guide over the broad land from Maine to Oregon, and over the British Possessions. Valuable for all. Sold by ADAMS & ELLIS.

MISCELLANEOUS ENIGMA.

I AM composed of 21 letters.
My 3, 10, 11, 21 waits for no man.
My 15, 19, 20, 21 is often cultivated.
My 8, 10, 5, 12 is not homely.
My 11, 1, 7, 18, 16 is one of the New England States.
My 11, 4, 2, 2 is an unmarried female.
My 6, 14, 9 is an article of dress.
My 6, 7, 13, 17 is what a goose often does.
My whole is an old and good proverb.

Collinsville, Ill. JOHN W. LOW.

ARITHMETICAL PROBLEM.

Two men, A and B, ran a foot-race of a quarter of a mile. A wins, making the quarter of a mile in 5 minutes, while B was just 5 behind at the end of the race. If A's speed is doubled, while B's speed remains as before, how far will A be in front of B?

E. J. SHRIVER.

ANSWERS TO ENIGMAS, &c., IN No. 917.

Answer to Miscellaneous Enigma:—He that is slow to anger is better than the mighty.

Answer to Anagram:

Now fades the glimmering landscape on the sight,
And all the air a solemn stillness holds;
Save where the beetle wheels his droning flight,
And drowsy tinklings lull the distant folds.

Answer to Riddle:—Brook.

Two First-Class Journals for $3.50.

MOORE'S RURAL NEW-YORKER,

(The Leading Weekly of its Class—Price $3.00 a Year,)

AND

THE MARYLAND FARMER,

(A Standard Agricultural Monthly—Price $1.50,)

BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that NOW is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals,—both of which will be sent one year *(when ordered together)* for only $3.50.

NEWS DEPARTMENT.

ROCHESTER, N. Y., AUGUST 31, 1867.

NEWS OF THE WEEK.

New York State Items.

A FREIGHT TRAIN was thrown from the track in Rochester, at 3 A. M., the 22d inst., by the misplacement of a switch. Several cars were smashed and part of a brick house knocked down. No lives lost.

A man named Murphy, a resident of Jordan, was killed in Rochester on the 21st inst. He was acting as brakeman in place of his son, and fell from the top of a car when several of them passed over his chest crushing him to death.

A hail storm passed over a section of Ontario county on the 13th inst. Damage to crops light.

The Annual Session of the Grand Lodge of the I. O. of O. F., of New York, commenced in Syracuse on the 21st inst. Attendance large.

Two men, Jacob Frink and Martin Weaver, carpenters, working upon a cornice of a mill in Baldwinsville, fell a distance of forty-one feet—one striking on a stone and the other upon his feet. Both were severely injured and may die in consequence. The scaffolding went down with them.

A young man employed in a drug store, Rochester, charged a soda fount so heavily as to cause its explosion with a report like a cannon. He was considerably injured.

A destructive hail storm passed near the village of Memphis, Onondaga county, on the 18th inst. Its track was strewn with the debris of corn, tobacco and oat fields.

Auditor Benton denies the charges made against him by Eli T. Bangs, and offers, through his attorney, if a hearing can be had, to show that Bangs is utterly unworthy of credit.

A destructive fire occurred at Plattsburg on the night of the 20th. One church, a bank, two printing offices, and twenty-five residences and stores were burned. Loss $750,000.

The large bonded warehouse of John C. Thompson, Brooklyn, has been seized and closed on account of alledged frauds.

From Washington.

SECRETARY MCCULLOCH writes to the Assistant Treasurer, New York, that the reports of frauds in the Printing Bureau of the Treasury Department are entirely without foundation. No over-issues of Government obligations or securities have been made.

The records of the Smithsonian Institute show that the fall of rain, Aug. 18th, was nearly six inches, exceeding the entire amount for August in a long series of years.

The Germans of Washington have sent their congratulations to Juarez, through the Mexican Minister, for his course in relation to the late Emperor Maximillan.

Gen. Grant has ordered the mustering out the extra paymasters in the army. It is supposed none will be retained but those belonging to the regular service.

The internal receipts from July 1st to August 24th, amount to $38,907,364.

It is thought, from present indications, that a negro will be elected Mayor of Washington.

Gen. Thomas is too ill to assume charge of Sheridan's Department. In consequence of this the order in reference to Gen. Sheridan has been suspended.

The office of Commissary-General of Prisoners is to be merged in that of the Adjutant-General, and dispensing with the services of a large num- of subordinates.

The correspondence between the President and Gen. Grant, on the removal and change of Departmental Commanders, is published. Gen. Grant strongly dissuades the President from making the changes, though issuing an order to carry them into effect. The President's response is quite elaborate in defense of the changes ordered by him.

From the South.

THE Press in Georgia, with few exceptions, urge a State Convention in opposition to the reconstruction policy of Congress.

The cotton and corn crops continue to indicate an abundant yield.

Hon. William B. Campbell, late member of Congress from the Nashville (Tenn.) District, died in Lebanon on the 19th, of disease of the heart.

A U. S. District Attorney in Georgia is to prosecute eight prominent citizens of that State for taking the test oath contrary to law.

A project is in agitation in the Sumter District, S. C., to get all the landholders incorported into a "Land Agricultural and Manufacturing Company." This gained, it is thought foreign capital will be liberally invested in the stock, and the improvement of the country rapidly and permanently secured.

The Mobile Herald estimates the cotton crop of the South the present year at 3,750,000 bales.

Twelve deaths from yellow fever in New Orleans the 18th, and two from cholera.

The Roanoke River rose twenty feet above low water in consequence of the recent heavy rains. Crops considerably damaged.

It is reported that prominent Union men of New Orleans are preparing charges against Generals Rosseau and Steedman for interposing hindrances to re-construction.

The registration in Louisiana is completed; whole number registered a little over 100,000—a large proportion colored.

Yellow fever of a very virulent type prevails at Corpus Christi.

The freshets in North Carolina are seriously injuring the lowland crops. The rivers overflowed their banks in numberless places.

From the West.

GEN. HANCOCK, of the Peace Commission, has made a long report on the subject of the mission, taking the ground that the only way to secure peace with the Indians is to give them "a good thrashing." He considered the "Peace Commission" a waste of time and money. The Indians will meet the Commissioners as agreed upon, receive their presents, and then go to lifting scalps again by the time spring opens. Gen's Grant and Sherman coincide in this opinion. Gen. Harney, on the other hand, thinks the Indians will prove true this time. "Spotted Tail," with 900 Sioux, says he will meet the Commissioners shortly and make all right.

The citizens in the vicinity of Fort Sedgwick are arming for the protection of that post.

It is reported from Denver that Forts Reno and Phil. Kearney were besieged by Indians at the latest dates from these points.

The cholera is raging very severely at Shawnee, Illinois.

Work on the pacific railroad has been suspended west of Fort Hays in consequence of Indian depredations.

The Blackfeet Indians killed a squad of thirty white laborers near Versillion recently.

The Michigan Constitutional Convention has engrafted a liquor prohibition into the Constitution, to be submitted to the people.

The reported fight of Major Powell with the Sioux Indians is confirmed. The Indians, 3,000 in number, fought three hours with a loss of some 200 killed. There were but 29 whites in the corral during the conflict. Maj. Powell was not killed as reported.

Gen. Auger is of the opinion that in the event of a general Indian war 25,000 troops will be necessary to suppress it in the Department of the Platte, and 20,000 in the Department under Gen. Hancock.

Advices from Fort Hayes to Aug. 23, report a desperate battle with the Indians under Satani on the Republican River. Three soldiers were killed and twenty-five wounded. The Indians suffered severely, but finally repulsed the troops. Capt. Ames had 125 men, and fought the Indians three days. Reinforcements have gone forward.

A conference with the various tribes of Indians is to be held at Fort Laramie on the 13th of September for the purpose of arranging all matters in dispute.

The National Labor Congress.

THE National Labor Congress met in Chicago on the 19th inst. About three hundred delegates were in attendance. The eight-hour movement was urged, as also the co-operative system through the trades unions. It was resolved to establish a newspaper organ of co-operation in the United States. Also, to send a delegate to Europe to study co-operation there. A resolution in favor of giving (not selling) public lands to actual settlers, was adopted. Also, a report recommending legislative regulation of apprentice labor. The President was authorized to employ lecturers in the cause. A presidential labor ticket is to be decided upon at the next meeting in the fall.

An election of officers resulted in favor of J. C. Whaley, Washington, President. Vice-Presidents—Messrs. Gibson of Connecticut, and Tucker of Ohio; Mr. Smeglass of Pennsylvania, Secretary; Mr. Hinchcliff, Treasurer, and Wm. Trovelich, Delegate to Europe.

Latest European News.

IT is reported in London that the Sultan has received a strong note from the United States on the subject of the Cretans.

It is said that Victoria, Francis Joseph and Napoleon will hold a conference in Paris next Octobor.

The Australia cotton crop is reported very fine.

M. Gustave Lambert, and some fifty others, Frenchmen, propose to reach the open Polar sea, and the Pole itself, by a route never before tried.

The Emperor of Russia is reported to be quite ill in the Crimea.

Admiral Farragut and the officers of his fleet had a grand ovation at Cronstadt from the Russians—the Grand Duke presiding.

The Vienna journals say the recent meeting of the Emperors of France and Germany secures the peace of the latter.

The English Parliament was prorogued on the 21st. The Queen declares there is no longer any ground for apprehending war. The Fenians are done for in Ireland.

Advices from Spain report the revolt in Catalonia a failure. The authority of the Queen is being rapidly restored there.

The movement on Rome, contemplated by Garibaldi, has been abandoned.

NEWS PARAGRAPHS.

THE HON. ERASTUS BEACH, a prominent member of the Massachusetts Bar, died at his residence in Springfield on the 22d instant, aged fifty-eight years.

ADONIJAH SKINNER, seventy-six years of age, committed suicide on the 25th inst., in Rochester, by cutting his throat with a razor. He had been a resident of the city for many years.

DANIEL GROSVENOR of Troy, Ohio, recently went to a druggist to get calomel—was given corrosive sublimate by mistake—took it, and was soon a corpse.

THE new Cincinnati train ran from Buffalo to Rochester on the 20th inst., in ninety-one minutes, including a stop for wood and water at Batavia. The distance is 69 miles.

DURING a hail storm on the 18th, between 6,000 and 7,000 lights of glass were broken in the railroad shops at Susquehanna. The damage to the Company amounted to $3,000.

A THREE-YEAR old boy, picking blackberries near Saugerties, wandered away, and was not found for two days. He was on a high ledge of rocks feebly calling "Pa! Pa!" when found.

CAROLINE NEWMAN, nine years old, was swinging on a clothes line attached to two chimneys on the roof of a house in Buffalo, one day last week, one of which toppled over and fell upon her, killing her instantly.

THE Episcopal Convention of Western New York, in session for several days at Elmira, has adjourned after making a division of the Diocese. The dividing line follows the eastern boundaries of Wayne, Ontario, Yates, Schuyler and Steuben counties.

FROM CUBA.—The lost Cuban cable has been found, and messages passed between the Mayor of Key West and the Captain General of Cuba. Gen. Lergundi has been appointed Captain General of Cuba, and is expected there in December. There had been 1,229 cases of yellow fever in Cuba, and 226 deaths from it. A political emeute took place at Villa Caura, and resulted in the execution of some of the leaders. The financial affairs of Havana are represented to be in a bad condition.

Practical Knowledge.

A CELEBRATED Greek Philosopher, on being asked what young men most needed to be instructed in, replied, "*Teach them those things which they will have to practice when they become men.* There is sound wisdom in this advice, and it is well worthy the thoughtful consideration of every person. The question may be asked, "Where can such instruction be acquired?" Business Colleges have hitherto sought to afford this desideratum, but they have thus far generally failed in imparting the necessary *fundamental* knowledge to those who have not already acquired a passable English education; and also in making their curriculum of study sufficiently *comprehensive* to include *all* the branches requisite to qualify young men to occupy any station in life which they may be called upon to fill. Messrs. H. C. & L. L. WILLIAMS, proprietors of the *Rochester Business University*, have taken a step in the right direction in advance of other Business Colleges, and have remedied this defect by introducing, in addition to a thorough course in Book-keeping, Penmanship, Telegraphing, Commercial Law, Commercial Arithmetic, &c., an elementary and progressive course in English, Classical and Scientific Studies. This, we believe, is the only institution in this country that has made this important improvement, and the only one as yet which affords *complete* facilities for a *thorough* and *practical education*. We therefore recommend it to every young man who desires to fit himself for a sphere of usefulness, honor and emolument.

☞ BELLS.—At least one of the manufacturing interests of our locality is prospering, not withstanding the general dullness of trade. Messrs. E. A. & G. R. Meneely, of the West Troy (N. Y.) Bell Foundry, report a positive increase of orders over last year, the larger portion of which comes from the Churches, Academies and the Factories of the growing West. Beside, the supply of our own country, they have a very considerable demand from the British provinces, the East and West Indies, the Sandwich Islands, South America and other foreign countries, which, together with the fact of having been established over forty years, explains why one house should do so large a business in a branch of manufacture so comparatively limited. Messrs. Meneely's illustrated catalogue is a book of over fifty pages, and contains much information respecting bells and their history which is of general interest.—*Troy Daily Times.*

ON the 10th of October, 1866, I applied Bangh's Raw Bone Phosphate with my seed wheat, at the rate of 200 pounds per acre, leaving an unmanured strip contiguous, which subsequently did not require any mark or stake to define its limits. The apparent difference before harvest was at least ten bushels per acre, and the actual difference by weight of the crop was eighty-six per cent., including straw. The grain gave more than fifty-six per cent. increase over the unmanured. DAVID STEWART, M. D.,

16th July, 1867. Port Penn, Del.

☞ Dr. S. was well known fifteen or twenty years since by his contributions to agricultural literature, and subsequently as Chemist of "Md. State Agricultural Society," acting Principal of St. John's College, at Annapolis, Prof. of Nat. Phil., etc.

MONEY TO LOAN ON GOVERNMENT SECURITIES.—The Mechanics' Savings Bank of Rochester is prepared to make temporary loans on pledge of United States or Monroe County Bonds, as collateral security.

JNO. H. ROCHESTER, *Sec'y.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, August 27, 1867.

MONEY is still abundant in New York, but the calls were reported rather larger last week than heretofore. Considerable sums are sent West to move the crops, though thus far the amount is not as large as was anticipated. In the interior the discount line of the banks is full. Wool dealers are unable to sell at satisfactory rates, and their paper is seeking renewal.

The Dry Goods trade is very dull in Boston, and the same may be said of New York, though for a few days a little more activity is reported. As a whole, the August business has been unusually light,—the large dealers from the South and West, that usually purchase this month, have few of them been in market, and those who have appeared, have purchased sparingly. The spring trade was late, and the fall trade will be correspondingly late.

An intelligent New Yorker, now in Europe, writes as follows in reference to American stocks:—"American Government stocks are in large and increasing demand in Germany, and they are purchased not on speculation, but for investment. They are the favorite security at this time. The general estimate of the Frankfort bankers of the amount of these stocks now held on the Continent, is not less than five hundred millions."

WHEAT CROP.—The Cincinnati Price Current of Aug 21, in summing up the crop reports received at that office says:—"The wheat has been harvested in good order and the quality is fair, but in quantity is not over two-thirds an average crop; that less than the usual quantity of fall wheat was sown, but a full crop of spring."

Other writers put the yield of winter wheat considerably higher. Late accounts from the localities where spring wheat is grown, particularly in Minnesota, are very encouraging. The crop of wheat raised in 1860 was 173,104,924 bushels. An Eastern writer estimates the crop this year at 232,520,000 bushels.

WOOL.—There is no change in the market, and few purchases are made from first hands in this region, or at the West. Receipts at the East are falling off. Sales in Boston continue large, footing up last week 1,200,000 lbs., at a range of 28@60c for fleece, and 30@40c for the various grades of pulled. Wool is now cheap—very cheap. It has not been as low since 1813, that is, if we reduce the currency value to the gold standard. There is no wonder that manufacturers are buying largely, for goods manufactured at the present prices for wool, must afford a large profit. It will be singular if rates do not advance in the next 30 or 60 days.

WHEAT.—Red wheat is selling at $2,05@2,15. Farmers are still actively engaged in thrashing, but are not selling very freely. The Eastern market for wheat and flour tends downward.

Rochester Wholesale Prices Current.

Good houses and barns. Any one wishing such situation can apply in person, from Sept. 1st to Nov. 1st, 1867, to A. H. SMITH, 919-4t Enon, Clarke Co., Ohio.

THE

Central Pacific Railroad,

THE WESTERN HALF OF THE

Great National Trunk Line Across the Continent,

Being constructed with the AID AND SUPERVISION OF THE UNITED STATES GOVERNMENT, is destined to be one of the MOST IMPORTANT AND VALUABLE RAILROADS IN THE WORLD, as it is the sole link of communication between the Pacific Coast and the Great Interior Basin, and the

Principal Portion of the Main Stem Line between the Two Oceans.

The present western terminus is at Sacramento, on the navigable waters of the Pacific; but it will ultimately extend from San Francisco across the richest and most populous parts of California, Nevada, and Utah, contiguous to all the great Mining Regions of the Far West. The Company are authorized to continue their line eastward until it shall meet and connect with the roads now building east of the Rocky Mountain ranges.

Assuming that they will build and control half the entire distance between San Francisco and the Missouri River, as now seems probable, the United States will have invested in the completion of **865** miles **$28,592,000**, or at the average rate of **$35,000** per mile—not including an absolute grant of **10,000,000 acres** of the Public Lands. By becoming a joint Investor in the magnificent enterprise, and by waiving its first lien in favor of the First Mortgage Bond holders, THE GENERAL GOVERNMENT, IN EFFECT, INVITES THE CO-OPERATION OF PRIVATE CAPITALISTS, and has carefully guarded their interests against all ordinary contingencies.

The Central Pacific Railroad enjoys all the privileges, grants, and subsidies conferred by the Acts of Congress upon the other parts of the through line, and has, in addition, SEVERAL SPECIAL, EXCLUSIVE ADVANTAGES applicable only to the Western Half.

I. The Company has received from the State and chief cities of California, *assistance in money, credit, and valuable property, worth over* $3,000,000 in gold, in addition to the full benefit of the Government subsidy.

II. *The hardest and costliest part of its construction has been successfully overcome* within the first 150 miles. In a few weeks the track will be completed entirely across the Sierra Nevadas, after which progress to Salt Lake will be easy and rapid.

III. The local business alone of this road establishes its complete financial success, independently of the vast through traffic which must pass over it. The gross earnings for the months of June and July, upon the 94 miles then open for business, were *upward of* $297,000 *in gold;* of which *four-fifths* were net earnings.

IV. It can have no competition, but will carry, beside its own lucrative local traffic, the *whole volume of through business* which is shared among its Eastern connections and their branches.

V. The road lies wholly in territory yielding the precious metals, *and its revenues are collected in coin.* Its rates for transportation are very advantageous, being more than three times those of roads lying east of it; and the ratio of operating expenses is less than 25 per cent. of the gross earnings.

VI. In consequence of the aid it receives from the General Government, from the State of California, and from municipal corporations, the annual interest obligations which the Company are called upon to assume are very light. The net earnings upon an average of about 75 miles, in 1866, were nearly three times the amount of annual interest liabilities to be assumed in building it, and were $235,000 more than the annual interest on the entire amount of First Mortgage Bonds which the Company can issue upon the first 150 miles.

The Company offer for sale, through us, their

First Mortgage Thirty Year, Six per Cent. Coupon Bonds,

PRINCIPAL AND INTEREST PAYABLE IN GOLD COIN, in New York city. They are in sums of $1,000 each, with semi-annual gold coupons attached, and are selling for the present at **95** per cent. and accrued interest from July 1st, added, in currency, at which rate they yield nearly

Nine per Cent. upon the Investment.

These Bonds, authorized by Act of Congress, are issued only as the work progresses, and to the same amount only as the Bonds granted by the Government; and represent, in all cases, the first lien upon a completed, equipped, and productive railroad, in which have been invested Government subsidies, stock subscriptions, donations, surplus earnings, etc., and which is worth more than three times the amount of First Mortgage Bonds which can be issued upon it.

The agreement of this Company to pay principal and interest of their Bonds in coin, being made under the Specie Contract Law of California, authorizing and enforcing contracts to pay gold, is legally binding, unlike similar agreements made by companies in States where no such legislative sanction exists.

In these important particulars the Securities of the Central Pacific Company offer an unusual degree of safety, stability and profit combined.

The First Mortgage Bonds of this Company are destined to occupy a prominent place among FIRST-CLASS SECURITIES in the money markets of this country and Europe, and will, without doubt, be eagerly sought for, and anxiously dealt in hereafter, at rates materially in advance of the price at which they are now offered.

Having carefully investigated the resources, progress, and prospects of the road, and the management of the Company's affairs, we cordially recommend these Bonds to Trustees, Executors, Institutions, and others as an eminently sound, reliable and remunerative form of permanent investment.

Conversions of Government Securities

INTO

CENTRAL PACIFIC FIRST MORTGAGE BONDS

now realize for the holders about TWELVE PER CENT. ADVANTAGE, with the same rate of interest.

For sale by Banks and Bankers generally, of whom descriptive Pamphlets and Maps can be obtained, and by

BAUGH'S RAW BONE SUPER-PHOSPHATE OF LIME.
To OUR CUSTOMERS.—We take pleasure in announcing to Dealers in Fertilizers, and the Agricultural public, that we have within the past year increased our facilities for the manufacture of our RAW BONE PHOSPHATE, to an extent unequalled by any other House in the United States or Europe. These facilities not only include the enlargement of our old established works in Philadelphia, known as the DELAWARE RIVER AGRICULTURAL CHEMICAL WORKS, but also the purchase of extensive and well stocked works at Chicago, Ill., with all the necessary machinery, cars, &c., to conduct the business. This establishment alone has produced annually over 5,000 tons of dried Bones and Meal, and is capable of being largely increased. We desire, by the closest supervision, to conduct these two concerns so that our customers will derive a practical benefit from their consolidation, in obtaining a MANURE which shall maintain a standard and uniform quality, and at the lowest possible price. ELLWANGER & BARRY'S
SEEDLING STRAWBERRY
"NICANOR."
Having Fruited it for six years, we pronounce it a decided acquisition to the list of Market Strawberries. Plant very hardy and vigorous, surpassing in quantity of fruit, and hardiness of vine, any other variety we have ever tested. It commences to ripen a few days before the Early Scarlet, and continues on up to the latest, thus making it profitable at both ends of the season. Fruit from 1 to 1¼ inches in diameter, very regular and uniform in size, roundish conical, bright scarlet, and more firm and not so acid as the Wilson. Plants will be ready for delivery about the 15th of Sept., at $5 per dozen.
ELLWANGER & BARRY,
917-3t Mount Hope Nurseries, Rochester, N. Y.

DR. NICAISE
STRAWBERRY PLANTS.
We are now ready to deliver fine grown plants of this
Celebrated European Strawberry.
The fruit is of enormous size, berries having been picked this season (from plants set last Sept.,) that measured 6½ inches in circumference and weighing from 1¾ to 1¾ ounces. It is early, of a bright red color, very glossy, flesh white and of the first quality. In Europe it is considered one of their finest varieties. On account of the limited number in the market and the great demand for them, it would be well for those who wish them to *order early*. Price by mail, postage free, $1 ₱ plant; $10 ₱ dozen; $75 ₱ 100. Address GOULD, BECKWITH & CO., Monroe Co. Nurseries, Rochester, N. Y. 917-4t

WHISKERS.—Dr. Lamontes Corrollia will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges,** by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to
GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.
PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.
The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of
Pulverized Slate and Viscous Matter,
(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.
AS A ROOFING MATERIAL IT STANDS UNRIVALLED.
A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and unde cayluy.
FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.
The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and
PERFECTLY FIRE-PROOF.
It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

WANTED—AGENTS FOR BOSTON, Philadelphia, Cincinnati, Chicago, with $150 to locate. Also, 20 Traveling Agents can make $2,500 per annum, selling Prof. JOHNSON'S Wash Crystals, Prepared Starch, and Improved Indigo Blue, &c. Address, with postage stamp for Circulars, or send 50 cts. for samples. I. T. JOHNSON, 346 Greenwich St., N. Y. 907-tf.

THE HARRIS HOP PRESS, (ILLUSTRATED and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that fourfifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.
MESSRS. RAMSEY & HANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send on your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.
BUCKINGHAM, WALSH & CO.,
911-9t Waterville, Oneida Co., N. Y.

MACHINERY OILS—BEST and CHEAPEST in use. Send for Circulars. Samples free. Inquire of your merchants for OUR OILS. WARFIELD & CO., Wholesale Dealers in Machinery Oils, No. 109 State St., Rochester, N. Y. 915-tf

$18.00 A DAY.—Agents Wanted, Male and female, to introduce a new article of household utility. Only Five Dollars Capital required. Particulars free. Address W. A. HENDERSON & CO., Cleveland, Ohio. 905-13t

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.
MANUFACTURERS of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising
"Star" Cotton Gins and Condensers,
"Star" Railway Powers, (Emery Patent,)
"Star" Lever Powers, "Star" Threshers & Cleaners,
Threshers and Separators, Circular and Dragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c.
OUR "STAR" THRESHER AND CLEANER
as now made by us, unites more valuable features and possesses qualities far more superior than were ever before combined in such a machine. Comparatively small, compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw*, so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be threshed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.
We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power. With regard to
OUR RAILWAY POWER,
we may say that every where the "EMERY POWER" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as
THE "STAR" RAILWAY POWER,
it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c.
OUR "STAR" LEVER POWER,
though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.
Our extensive works are under the immediate Superintendence of Mr. WM. R. EMERY, (Survivor of EMERY BROTHERS,) which fact, from his long personal experience in the Manufacture of Agricultural Machines, gives additional guarantees of the superior character of the machines made by this Company, and confident, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Dealers and others, assuring such that all orders with which we may be favored shall be executed with the utmost promptness and fidelity.
☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge*, on application, and all information cheerfully furnished.
Agents, both Traveling and Local,
are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 913

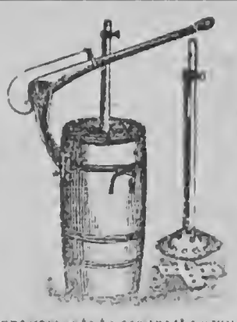
THE CHAMPION.
HICKOK'S PATENT PORTABLE.
KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.
This admirable machine is now ready for the fruit harvest of 1867, is made in the most perfect manner with either one or two tubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.
FOR SALE BY ALL RESPECTABLE DEALERS.
I also make two sizes of superior
PRESSES FOR BERRIES, &c., &c.
If your merchant does not keep them, tell him to send for one for you, or write for one yourself. Address the manufacturer, W. O. HICKOK, Harrisburg, Pa.

YOUNG LADIES' INSTITUTE, AT MAPLEWOOD, PITTSFIELD, MASS. One of the oldest and most successful schools in the country, widely known for its superior facilities and splendid location. Commences its Fall Session Sept. 19th, 1867.
916-4t C. V. SPEAR, Principal.

A SPLENDID FARM FOR SALE.—AS I am now four-score years of age, I offer my Homestead for sale, containing about 106 acres. It lays on the east bank of the Seneca Lake, 3 miles from Geneva, and one of the best roads in the country. The farm is so well known I give no description. Those wishing such a farm will come and view it. JOHN JOHNSTON,
July 9, 1867. near Geneva, N. Y.

FOR SALE—The best Farm in Monroe county, situated in the town of Wheatland, four miles west of Scottsville, belonging to the estate of the late Hon. ELISHA HARMON, consisting of about 400 acres. A splendid residence with tenant house, barns, &c., in first rate condition on the premises. A portion of the premises will be sold separately if desired. Terms to suit the purchaser. For particulars, inquire of MILFORD HARMON at Medina, OSCAR FOLSOM at Buffalo, or
895-tf F. A. MACOMBER, Rochester, N. Y.

Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., W. corner St. Paul St. and Fayette St., Baltimore, Md.



H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.
This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.
"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and countenance."—*Boston Cultivator.*
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

A new and enlarged edition is now ready. One Agent sold 220 the first week. These two works form a complete library of the War from the other side. E. B. TREAT & CO.,
915-7teo Publishers, 651 Broadway, N. Y.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.
For Families and Manufacturers.
THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.
THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are
WORLD RENOWNED.
They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world
These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.
They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.
The Stitch invented by Mr. HOWE, and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.

SOMEBODY.

Somebody's eyes have grown dimmer,
Off in some quaint old home,
At morn, when the evening stars glimmer,
Watching for somebody to come;
Watching while heart grows sicker,
As day after day glides along,
Watching while tears fall the thicker,
Choking a lullaby song.

Somebody, wandering over
Lands far away from his own,
Sees, as of old, the sweet clover
That grew by the old door-stone,
Longs to go back and to mingle,
As in the dim days of yore,
With those round the old cottage ingle—
Those who, alas! are no more.

Somebody's prayers are ascending,
Ever for dear ones away,
Prayers that His blessing attending
May keep them from going astray;
Prayers that float near and nearer
The throne of the father above,
And reaching the ear of the Hearer,
Are answered in Infinite Love.

Somebody's life-work is ended—
Patient they wait now to go;
Long have they faithfully wended
Toilsome paths here below;
Soon the reward they'll be reaping
That to the faithful is given—
"Well done,"—"Come up," and be keeping
Watch for somebody in Heaven!

The Story Teller.

[From the Cornhill Magazine.]

BEAUTY AND THE BEAST.

BY MISS THACKERAY,
AUTHOR OF "THE VILLAGE ON THE CLIFF," ETC.

PART II.

V.

[Continued from page 276, last number.]

After all, perhaps it was well she was going, thought Belle, as she went to pack up her boxes. Poor Guy's sad face haunted her. She seemed to carry it away in her box with her other possessions.

It would be difficult to describe what he felt, poor fellow, when he came upon the luggage standing ready-corded in the hall, and he found that Belle had taken him at his word. He was so silent a man, so self-contained, so diffident of his own strength to win her love in time, so unused to the ways of the world and of women, that he could be judged by no ordinary rule. His utter despair and bewilderment would have been laughable, almost, if they had not been so genuine. He paced about the garden with hasty, uncertain footsteps, muttering to himself as he went along, and angrily cutting at the rose-hedges. "Of course she must go, since she wished it;—of course she must,—of course, of course. What would the house be like when she was gone?" For an instant a vision of a great dull vault, without warmth, or light, or color, for possible comfort anywhere, rose before him. He tried to imagine what his life would be if she never came back into it; but as he stood still, trying to seize the picture, it seemed to him that it was a thing not to be imagined or thought of. Wherever he looked he saw her, everywhere and in everything. He had imagined himself unhappy; now he discovered that for the last few weeks since little Belinda had come, he had basked in the summer she had brought, and found new life in the sunshine of her presence. Of an evening he had come home eagerly from his daily toil looking to find her. When he left early in the morning he would look up with kind eyes at her windows as he drove away. Once, early one morning, he had passed her near the lodge gate, standing in the shadow of the great aspen-tree, and making way for the horses to go by. Belle was holding back the clean stiff folds of her pink muslin dress; she looked up with that peculiar blink of her gray eyes, smiled, and nodded her bright head, and shrunk away from the horses. Every morning Guy used to look under the tree after that to see if she were there by chance, even if he had parted from her but a minute before. Good, stupid old fellow! He used to smile to himself at his own foolishness. One of his fancies about her was, that Belinda was a bird, who would fly away some day, and perch up in the branches of one of the great trees, far, far, beyond his reach. And now was this fancy coming true? was she going,—leaving him,—flying away where he could not follow her? He gave an inarticulate sound of mingled anger and sorrow, and tenderness, which relieved his heart, but which puzzled Belle herself, who was coming down the garden walk to meet him.

"I was looking for you, Mr. Griffiths," said Belle. "Your mother wants to speak to you. I, too, wanted to ask you something," the girl went on, blushing. "She is kind enough to wish me to come back.....but—"

Belle stopped short, blushed up, and began pulling at the leaves sprouting on either side of the narrow alley. When she looked up after a minute, with one of her quick, short-sighted glances, she found that Guy's two little brown eyes were fixed upon her steadily.

"Don't be afraid that I shall trouble you," he said, reddening. "If you knew,—if you had the smallest conception what your presence is to me, you would come back. I think you would."

Miss Barly didn't answer, but blushed up again, and walked on in silence, hanging her head to conceal the two bright tears which had come into her eyes. She was so sorry, so very sorry. But what could she do? Guy had walked on to the end of the rose-garden, and Belle had followed. Now, instead of turning towards the house, he had come out into the bright-looking kitchen garden, with its red brick walls hung with their various draperies of lichen and mosses, and garlands of clambering fruit. Four little paths led up to the turf carpet which had been laid down in the center of the garden; here a fountain plashed with a tranquil fall of waters upon water; all sorts of sweet kitchen herbs, mint and thyme, and parsley, were growing along the straight-cut beds. Birds were pecking at the nets along the walls; one little sparrow, that had been drinking at the fountain, flew away as they approached. The few bright-colored straggling flowers caught the sunlight and reflected it in sparks like the water.

The master of this pleasant place put out his great clumsy hand, and took hold of Belle's soft reluctant fingers. "Ah, Belle," he said, "is there no hope for me? Will there never be any chance?"

"I wish with all my heart there was a chance," said poor Belle, pulling away her hand impatiently. "Why do you wound and pain me by speaking again and again of what is far best forgotten? Dear Mr. Griffiths, I will marry you to-morrow, if you desire it," said the girl, with a sudden impulse, turning pale and remembering all that she owed to his forbearance and gentleness; "but please, please don't ask it." She looked so frightened and desperate that poor Guy felt that this was worse than anything, and sadly shook his head.

"Don't be afraid," he said. "I don't want to marry you against your will, or keep you here. Yes, you shall go home, and I will stop here alone, and cut my throat if I cannot bear the place without you. I am only joking. I dare say I shall do very well," said Griffiths, with a sigh; and he turned away and began stamping off in his clumsy way. Then he suddenly stopped and looked back. Belle was standing in the sunshine with her face hidden in her hands. She was so puzzled, and sorry, and hopeless, and mournful. The only thing she could do was to cry, poor child,—and, by some instinct, Griffiths guessed that she was crying; he knew it,—his heart melted with pity. The poor fellow came back trembling. "My dearest," he said, "don't cry. What a brute I am to make you cry. Tell me anything in the whole world I can do to make you happy."

"If I could only do anything for you," said Belle, "that would make me happier."

"Then come back, my dear," said Guy, "and don't fly away yet forever, as you threatened just now. Come back and cheer up my mother, and make tea and a little sunshine for me, until—until some confounded fellow comes and carries you off," said poor Griffiths.

"O, that will never be. Yes; I'll come," said Belle, earnestly. "I'll go home for a week, and come back; indeed I will."

"Only let me know," said Mr. Griffiths, "and my mother will send the carriage for you. Shall we say a week?" he added, anxious to drive a hard bargain.

"Yes," said Belinda, smiling; "I'll write and tell you the day."

Nothing would induce Griffiths to order the carriage until after dinner, and it was quite late at night when Belle got home.

VII.

Poor little Myrtle Cottage looked very small and shabby as she drove up in the darkness to the door. A brilliant illumination streamed from all the windows. Martha rubbed her elbows at the sight of the gorgeous equipage. Fanny came to the door, surprised, laughing, giggling, mysterious. Everything looked much as usual, except that a large, pompous looking gentleman was sitting on the drawing-room sofa, and beside him Anna, with a huge ring on her fourth finger, attempting to blush as Belle came into the room. Belle saw that she was not wanted, and ran up stairs to her father, who was better, and sitting in his arm-chair by his bedside. The poor old man nearly cried with delight and surprise, held out both his shaking hands to her, and clung tenderly to the bright young daughter. Belle sat beside him, holding his hand, asking him a hundred questions, kissing his wrinkled face and cheeks, and telling all that had happened. Mr. Barly, too, had news to give. The fat gentleman down stairs, he told Belle, was no other than Anna's old admirer, the doctor, of whom mention has been made. He had re-proposed the day before, and was now sitting on the sofa on promotion. Fanny's prospects, too, seemed satisfactory. "She assures me," said Mr. Barly, "that young Ogden is on the point of coming forward. An old man like me, my dear, is naturally anxious to see his children settled in life and comfortably provided for. I don't know who would be good enough for my Belinda. Not that awkward lout of a Griffiths. No, no; we must look out better than that."

"O, papa, if you knew how good and how kind he is!" said Belle, with a sudden revulsion of feeling; but she broke off abruptly and spoke of something else.

The other maid who had already gone to bed the night before when Belle arrived at the cottage, gave a loud shriek when she went into the room next morning and found some one asleep in the bed. Belle awoke, laughed and explained, and asked her to bring up her things.

"Bring 'em hup?" said the girl. "What, all them 'ampers that's come by the cart? No, miss, that's more than me and Martha have the strength for. I should crick my back if I were to attempt for to do such a thing."

"Hampers,—what hampers?" Belle asked; but when she went down she found the little passage piled with cases, flowers and game, and preserves, and some fine old port for Mr. Barly, and some roses for Belle. As Belinda came down stairs, in her fresh morning dress, Anna, who had been poking about and examining the various packages, looked up with offended dignity.

"I think, considering that I am mistress here," said she, "these hampers should have been directed to me instead of to you, Belinda. Mr. Griffiths strangely forgets. Indeed, I fear that you are too wanting in any great sense of ladylike propriety."

"Prunes, prism, propriety," said Belle, gayly. "Never mind, dear Anna; he's sent the things for all of us. Mr. Griffiths certainly never meant me to drink two dozen bottles of port wine in a week."

"You are evading the question," said Anna. "I have been wishing to talk to you for some time past,—come into the dining-room, if you please."

It seems almost impossible to believe, and yet I cannot help fearing that, out of sheer spite and envy, Anna Barly had even then determined that, if she could prevent it, Belinda should never go back to Castle Gardens again, but remain in the cottage. The sight of the pretty things which had been given her there, all the evidences which told of the esteem and love in which she was held, maddened the foolish woman. I can give no other reason for the way in which she opposed Belinda's return to Mr. Griffiths. "Her duty is at home," said Anna. "I myself shall be greatly engaged with Thomas," so she had already learned to call Dr. Robinson. "Fanny also is pre-occupied; Belinda must remain."

When Belle demurred, and said that for the next few weeks she would like to return as she had promised, and stay until Mrs. Griffiths was united with another companion, Anna's indignation rose and overpowered her dignity. Was it *her* sister who was so oblivious of the laws of society, propriety, modesty? Anna feared that Belinda had not reflected upon the strange appearance her conduct must have to others, to the Ogdens, to them all. What was the secret attraction which took her back? Anna said she had rather not inquire, and went on with her oration. "Unmaidenly,—not to be thought of,—the advice of those whose experience might be trusted,"—does one not know the rigmarole by heart? When even the father, who had been previously talked to, sided with his eldest daughter; when Thomas, who was also called into the family conclave, nodded his head in an ominous manner, poor little Belinda, frightened, shaken, undecided, almost promised that she would do as they desired; and, as she promised, the thought of poor Guy's grief and wistful haggard face before her, and her poor little heart ached and sank at the thought. But not even Belinda, with all he courage, could resist the decision of so much experience, or Anna's hints or innuendos, or, more insurmountable than all the rest, a sudden shyness and consciousness which had come over the poor little maiden, who turned crimson with shame and annoyance.

Belinda had decided as she was told,—had done as her conscience bid her,—and yet there was but little satisfaction in this duty accomplished. For about half an hour she went about feeling like a heroine, and then, without any reason or occasion, it seemed to her that the mask had come off her face, that she had discovered herself to be a traitoress, that she had betrayed and abandoned her kindest friends; she called herself a selfish, ungrateful wretch; she wondered what Guy would think of her; she was out of temper, out of spirits, out of patience with herself, and the click of the blind swinging in the draft was unendurable. The complacent expression of Anna's handsome face put her teeth on edge. When Fanny tumbled over the footstool with a playful shriek, to everybody's surprise Belinda burst out crying.

All Bells warranted in quality and tone. Catalogue and Price List sent on application. [917-6teo

MONITOR CLOTHES WRINGER—WITH all White Rubber Rollers, with and without Cog-Wheels. See long advertisement in Rural New-Yorker of May 11th, page 154. Manufactured by JOHN YOUNG & SON, Original Wringer Inventors. 917-cowtf.

The Young and Middle Aged Men of the Country.

THEIR START IN LIFE AND THE WORK BEFORE THEM.

TO PARENTS AND GUARDIANS!

START IN LIFE.—To get a start in life, has perplexed the young men of every age. How can I obtain a foothold? What shall I do? Where shall I go? Have been problems not easily solved. These obstacles no longer exist. The query is answered.

THE OPPORTUNITY.—To the many young men of the country starting in life or seeking successful, honorable employment, and to the middle aged men living by small wages and desiring to better their situations by engaging in active, successful business, I offer (at my Institution at Poughkeepsie, N. Y., on the Hudson,) better advantages, at a more reasonable expense than was ever before presented to the people of this country, and guarantee situations in first-class business houses, to graduates of merit, who desire assistance.

I refer not only to the two hundred distinguished citizens who have just presented me with a complimentary testimonial, expressing their appreciation of my services in founding this Institution, and introducing practical instruction, and patrons in every State, but to more than TWO THOUSAND GRADUATES IN THE EAST ALONE, who owe their success as Merchants, Bankers, Clerks and Business Men, to the situations obtained for them on the completion of their course here.

FARMERS AND PLANTERS.—This course, for FARMERS as well as MERCHANTS, and for those from the plantations and manufactories, is the best in the world, it being *the shortest, the most practical, comprehensive, and the most reasonable.*

WORK AHEAD! MEN WANTED!—The nation, in its new start in wonderful, unprecedented prosperity, calls for new men of practical skill, and great business gifts. They are wanted everywhere. The country is full of money waiting for practical talent to use it. The avenues of commerce, agriculture, trade, and finance are open wider and more inviting than ever before. Vast crops are being gathered, and their great money value, amounting to more than four hundred millions of dollars more than last year, will give an activity to trade seldom witnessed in our history. This Institution then, with its *common sense* course of business training, is a national necessity. Where one of our boys is wanted as a graduate of Yale, West Point or Newport, *a thousand* are wanted, thoroughly furnished, educated athletes, for trade and commerce. Parents and the guardians of our youth, think of this!

THE ONLY PRACTICAL SCHOOL.—This is the only Institution where the Eastman System is taught—is presided over by the author of Practical Instruction and the founder of Commercial Colleges. The fact that the small Commercial Schools and "Chain Colleges" that spring up in almost every city, have become extinct or nearly so, and the difference between them and this Institution being understood, has given it a more extended patronage than it has previously enjoyed.

THE WEST.—The closing of the Western College, at Chicago, and its removal here is increasing largely our number of Western and South-Western students. The difference in the expense here is in many cases more than pays railroad fare and expenses of the Western students in coming here.

The regular Fall exercises, celebrating the fourteenth year of this, the oldest Commercial Institution in this country, will take place Tuesday and Wednesday, Sept. 17th and 18th. Hon. Horace Greeley, Hon. Mark D. Wilber, Rev. Samuel D. Burchard and others will address the College on that occasion. Gov. Fenton and staff, Gen. Woodford, Hon. Lewis L. Parsons of Alabama, and other distinguished gentlemen have been invited to be present.

This occasion will afford to those who desire to enter the College at that time or thereafter, an opportunity of witnessing the practical workings of the Institution. This invitation is extended to any Young and Middle Aged Men who desire to educate themselves at a small cost for better positions in life, that they may inform themselves by a personal examination of the superior facilities this College presents over other Commercial Institutions.

Full information and valuable reading matter in College paper, sent free of charge.

Address the President,
H. G. EASTMAN, LL. D., Prest. Eastman Business College,
Poughkeepsie, N. Y., On-the-Hudson.

THE Bryant, Stratton AND Williams

Business University and Telegraphic Institute,
ROCHESTER, N. Y.

A "Link" in the Great International Association of FORTY-FOUR COLLEGES, located in the large business centers throughout the United States and Canadas. A life Scholarship issued from the Rochester Business University, secures to the student education, acquaintance and influence in Forty-Four of our largest cities. The success of this College has been *unprecedented*, the natural result of the untiring efforts of its proprietors to make it, beyond comparison, the *best institution of the kind in this country.* The sudden collapse of the "Eastman National Business College" concern of Chicago, its complete absorption by the Bryant & Stratton College of that city, and the hasty retreat of the adventurous proprietor from that field and the rapid decline of the Poughkeepsie end of the parody on the "International Chain," have proved conclusively to the world, that *whenever* and *wherever* these *individual* schools come in direct competition with the thorough and well established "Chain," they must necessarily sink into insignificance, or suffer total annihilation. This College, since its first inception, has been second to none in point of numbers. Its universal popularity is strikingly evinced by the very large patronage it is receiving from all parts of the Continent. Young men who enter our school, receive the *personal attention* of the proprietors, at all times an honorable and gentlemanly treatment, a thoroughly practical education and all the assistance *any* school can render in procuring lucrative situations, as our facilities in this direction are *unsurpassed.* Our country is just entering upon a decade of unparalleled financial prosperity, which will create a demand for competent Book-Keepers and Telegraph Operators hitherto unknown. Young men should bear this in mind, and thoroughly equip themselves at once for active business life. There are no "extra" charges in the Rochester Business University. The student pays for his tuition and the necessary books when he enters, which are cheaper than in any other educational institution, considering the thorough and extensive course of study. Book-Keeping, in all its details, is here taught by *practical business men;* Commercial Law, by one of the most eminent Law Lecturers in the United States; Commercial Arithmetic, in daily recitations, by one of the most accomplished mathematicians; Penmanship, by Masters of the Art, and Telegraphing by a Practical, "Sound" Operator. Young men, do not be deceived by promises to "guaranty situations." They are *impositions*, invented to entrap the unwary. We give instruction to both ladies and gentlemen and afford the former equal facilities with the latter. For further particulars send for our beautifully illustrated College Advocate, containing a full description of Rochester and vicinity, also for Specimens of Penmanship, &c., inclosing two stamps, to

The Bryant, Stratton & Williams Business University, Rochester, N. Y.

☞ An eminent corps of Lecturers have been engaged for the coming fall and winter, for the especial benefit of our Students. A well organized Lyceum is also ably conducted by the Young Men of our College.

AGRICULTURE · HORTICULTURE · RURAL LIFE · EXCELSIOR · LITERATURE · SCIENCE · ARTS · NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO. 36.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, SEPT. 7, 1867. [WHOLE NO. 920.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

SEPTEMBER is an important month to the farmer—especially to the wheat grower. It is the favorite one for seeding, and is usually a busy one. The plow, the harrow and the seeding drill should be in order and timely used. The preparation of the soil for the reception of the seed should be carefully attended to, and the work well done. Neglect, or parsimony at seeding time, will be punished at the succeeding harvest, in a diminished yield and an inferior product.

The potato fields have probably become considerably choked with weeds, with matured or maturing seeds upon them. It will pay well to pull these up and pile them away so that the digger may have a clean run when the potato harvest arrives. Some use these weeds in a compost heap. The practice is of doubtful utility, as it tends to seed the ground to weeds when the manure of such compost is applied to the soil. A better disposition would probably be made of them, were they to undergo a purification by fire.

As the oat and pea harvest is over such implements as have been used in connection with them should be gathered up and placed under cover. It is miserably poor farm policy to leave farm implements lying around loose, exposed to the corroding influence of autumnal rains. Have a place for every implement under shelter, and when not in use, see that it occupies it. If repairs are needed make note of the fact in order that they may be attended to before the season for using them comes round again.

If the harvesting season has disclosed impediments to the scythe, mower or reaper, in the shape of stones, stumps, and the like, remove them while the surface is clear and the ground compact, as less injury will be done to a meadow at this season than in the spring when the turf is spongy and yielding to the tread of a team.

See that your corn cribs are in order and your cellars in a suitable condition to receive their winter stores. It is money saved to have things ready when wanted.

If you have hay or grain out in stacks examine them carefully. If found defective towards the apex as they sometimes are from the hurried manner of topping off, supply the defect by a thatch of straw. The labor is easily and quickly done, and will pay ten fold the cost of it.

This month is one of the best of the twelve for ditching and underdraining. There is no labor about most farms that pays so liberally as this. If farmers will keep up the productive power of their lands they must plow deeper and underdrain more, and the latter, on most lands, is essential to the success of the former.

The barn yards should not be neglected at this season. Gather the refuse matter scattered over them into compost heaps. They will make a rich fall application to waning meadows, causing them to double their products the ensuing summer.

Now is the time to remedy any defects in the roofs of the farm buildings which may have been detected during the prevalence of the heat and showers of summer. A leaky roof to a house is a great nuisance, and that of an out-building is scarcely less so. A shingle or a board timely applied, will prevent much annoyance and damage.

Get your pig pens and hen houses in order—especially the former, as now is the time to commence preparing the hogs for their winter destiny. The poultry house, too, should be put in condition for comfortable occupancy during the impending storms of autumn and winter. Turn swine into the orchard and let them eat the fallen fruit, and thus destroy its enemies that harbor in it.

AGRICULTURAL NOTES FROM FRANCE AND SWITZERLAND.—No. I.

BY H. D. L. SWEET.

PARIS, August, 1867.

EDS. RURAL NEW YORKER:—I propose to give you a few observations on the Agriculture of parts of France and Switzerland, as seen from the window of the railway carriage and diligence. The route taken was from Paris to Strasburgh, Basle, Luzerne, Intertaken, Berne, Geneva, Chaumony, Macon, Dijon, and back to Paris, and occupied about twelve days.

After leaving Paris the first of agricultural interest was in the vicinity of Nancy. The morning's sun began to illumine the hills, and dark-green vineyards on their slopes, variegated with an occasional strip of grain that had just begun to assume the yellow tinge, looked rich and magnificent. The grain on the flats, nearer us, was thin and short, giving evidence of a wet season. The great variety of weeds and their rankness where the grain had fallen, proclaimed, in a most unmistakable manner, that the trials of the farmer were great, even in these famous fruitful valleys, and that the fertility of the soil was not the only recommendation that a country needed to make it wealthy. As we neared Strasburgh we left the narrow valley we had been threading and emerged in the broad valley of the Rhine. The surface was not that dead level that we are accustomed to see on the Genesee, but considerably rolling between the hills that are perhaps some twenty miles apart.

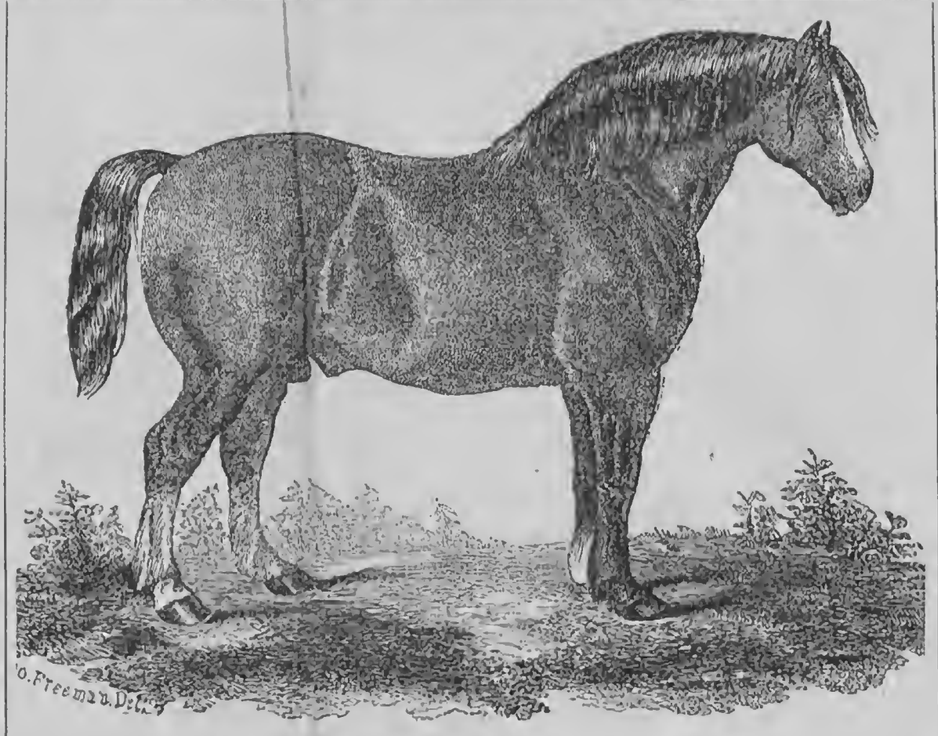
Beyond Strasburgh it was delightful. The grain of all kinds was excellent, and the harvesters were busy in securing it. I saw no reapers, but few cradles, and these used by striking towards the standing grain instead of from it, and women employed to take the grain out of the way for the next swath. Hundreds of people were at work in the fields—men, women and children—and as many women as men. Most of the women were reaping with short sickles—some where the grain was standing beautifully, and at other times where it was badly lodged. Most of the wheat was suffering to be cut. The harvest looked abundant, and the laborers few. Everything that you would see growing in New York, in crossing the State, you would see here in fifteen minutes, except broom corn and sorghum. Everything in the grain and vegetable line, is grown in strips of from one to four rods in width, and it matters not whether there be a large farm or a small one, every man thinks he must raise a little of everything, including Indian corn and tobacco. Flax and hemp are as often seen as wheat and barley, but pastures with flocks and herds did not come within the scope of my observation. Occasionally a vineyard with its dark-green foliage, would give a sudden change to the bright yellow of the wheat or the whiter barley, and in a few instances the fallow strip, black and smooth, would afford an agreeable contrast.

The dwellings were good, substantial brick, built with considerable taste and architectural skill, and the out-buildings were in the main excellent, but altogether too near the dwelling to suit my fancy. They were large and plenty of them, and in the whole trip I did not see a stack until within fifty miles of Paris, and those did not seem to be put up for the winter. Fences of course there were none to speak of—occasionally a hedge or a wire, and that was all, except beside the railway.

After leaving Basle the country soon became mountainous, and although the natural productions were still the same, they did not exhibit that luxuriance; the hill-sides were in most instances in pastures, except upon the southern slopes, which were almost invariably covered with vines. The crops of wheat nearly all appeared to be of the spring variety; the barley was shorter, the oats later, potatoes more plenty, and meadows full one-half of the entire surface. Round Lake Luzerne the haying had not been finished, and acres and acres of grass were in the swath or cock, but as it was not a hay-day we did not witness the operation of gathering it. High upon the mountain sides, higher than any mountain in New York, are hundreds of barns in which to store the product of these mountains, which are naturally very fruitful in grass, and above the barns are the pastures where thousands of cows gain a good subsistance, and furnish the butter and cheese for consumption and exportation.

By diligence from Luzerne, over the Alps to Thun, with three little steamboat rides, gave a good opportunity to observe the details of farming operations, as well as the climatic effect produced by altitude. The soil is in most places very fertile naturally, being affected by the disintegration of the limestone and clay slate rocks, and every source of obtaining manure is faithfully drawn from, and it is applied judiciously. The crops are kept free from weeds, and if a mountain brook can be conveniently turned to aid some little intervale with its enriching sediment, it is carefully trained to do its good, and not subject the crop to the chance of injury in case of a freshet. The misdirected energies, applied upon these mountains to obtain a scanty subsistance, would in Western New York feed, clothe and educate ten times the inhabitants. Gradually rising from the Lake the grain continually grew shorter, and later, till at the summit wheat was not headed out, potatoes only in blossom, and Indian corn about a foot high. In a single instance there was what appeared to be a patch of winter wheat about four rods square, as handsome as is usually seen, nearly fit to cut, and at an elevation of about 3,000 feet above tide.

At the extreme height of the Brunig pass, 3,362 feet, nothing but meadows showed, that the land contributed to the wants of man. Little patches of flax and hemp appeared to be a part of each proprietor's possessions,—never enough, it would seem, to bother with; and in a country where woolen clothing, if any where, is needed, the entire absence of sheep; seemed strange and unaccountable. Wolves ought not to be very numerous in a land that boasts of the most daring hunters on the globe,—a country that has been inhabited for a thousand years. I could see no reason why sheep should not flourish on those rocky peaks, as well as goats, and from the position I occupy among my fellow men at home, I must say a word or two for sheep. Except in the market place at Berne I did not see a sheep in Switzerland, a very few horses, not any pigs to speak of, and those an *awful* breed that could root up two rows of potatoes through the fence All the implements are of the rudest character, and nothing seemingly fit to use, except the spade.



A CLYDESDALE DRAFT-HORSE.

OUR engraving portrays the English Clydesdale Stallion, "Sir Walter Scott," eight years old, owned by the Duke of Hamilton. This is one of the leading breeds of British draft-horses—less bulky than the old black cart breed; quicker of motion, and hence generally preferred for agricultural purposes. These horses take their name from the vale of the Clyde, but are extensively bred in the western counties of Scotland. Their color is chiefly bay and black, the former rather predominating. Their general height is 16 hands, and, in weight, they range from 1,700 to 2,000 pounds. They are generally symmetrical and walk easily and quite rapidly. They have good constitutions, are cheaply kept, and, for heavy farm work, are favorites.

MANURES AND THEIR APPLICATION.

THE Utica Herald publishes a long report of a discussion, on manures and their application, before the Herkimer Co. Farmers' Club, at a recent meeting.

Mr. WHITMAN said it was important to first determine what legitimately constituted manure. If the term represented matter, used by plants, it was questionable whether fresh excrement from cattle could or ought to be so denominated. It could not supply plant food, in a crude state, but required fermentation to give it value. This would explain why the results expected, from manurial applications, so-called, were often not obtained. Fermentation and decomposition were essential to the production of legitimate plant food. The materials, for the supply of this food, were abundant and varied, but the trouble was many of the most valuable were thrown away as valueless. Among these were the flocks or waste of refuse wool,—a valuable manure; coal ashes, an excellent solvent on clay lands; lime from paper mills and gas works. These are excellent for renovating meadows, if judiciously spread upon them in the spring. The application should not be a heavy one, as this kills the plants, while a light one imparts vigor and greatly increases production. A judicious application of wool flocks, plowed under, promotes the growth of plants and fruit trees. A thin distribution is much better than a heavy one. Refuse hair from tanneries is also a good fertilizer, as are also the washings from bleaching and kindred establishments. Hair, for turnips, cabbages, cucumbers and the like, is deemed an excellent application.

Judge EARL spoke about top-dressing meadows. It was a disputed point whether this should be done in the fall or the spring. The prevalent opinion seemed to be in favor of fall application. Some favored top-dressing immediately after haying—bushing in well-rotted manure, followed by an application of plaster to fix the ammonia in the manure and prevent its escape. Thus applied, the manure seemed to shield the grass roots from the effects of the sun, while promoting an autumnal growth of grass. It was all-important to have the top-dressing well rotted, as its effect was more immediate while waste was prevented. The poudrette of commerce was denounced as a humbug, but that properly prepared—that is, night soil, with an infusion of copperas, charcoal and muck—made a valuable fertilizer.

The subject of wire-worms was discussed. Judge OWEN said he had tried many things to kill them off ineffectually. Finally he let a field go fallow one year, plowing it three or four times. The worms got starved and left the premises and have not got back yet.

WEEDING POTATOES.

No post-harvest labor on a farm will pay better than that devoted to weeding the potato field. This is important, whether the potatoes are to be dug with the hoe, fork or machine digger, but especially if the latter implement is to be used. Besides facilitating the digging process, pulling and removing the weeds aids in giving a more perfect development to the tubers and checks the tendency to rot, noticeable where the weeds are allowed to overtop and choke the vines. But the principal advantage gained by weeding is the celerity imparted thereby to the digging process, especially if a machine is used. This of itself is sufficient to justify the expense incurred, though this is by no means all the advantage derived from the operation. It serves to destroy a large portion of the weeds before they have time to ripen their seeds for a succeeding crop—no small consideration to the farmer who understands his business and appreciates, at its full value, the advantage of clean culture.

"A PAIR OF OLD PLUGS."

REALLY, WEBSTER is at fault here, for I have not been able to find anything that would cast a gleam of light upon what kind of a team this is: "A pair of old plugs, such as many drive," spoken of in the RURAL, Aug. 10, in the article on "Cows for Draft."

The subject of economical teams for small farms is one which ought to receive more attention. True, to a great extent many will be governed by their own peculiar taste in the choice of their farm team, as much as by that of convenience or economy; yet, with many others, profit is necessarily the great object. For years I have thought favorably of working cows and heifers, and can see no valid objection. Have seen two and three-year-old heifers worked with steers of the same age, to make up the plow-team in spring's work, and they stood their work and were equal to their mates, of the same age, and grew as well afterwards, other things being equal, but are not thought to be quite as strong at heavy startings much after two years old.

On our small farms, (and some of the largest ones are doing likewise,) whose owners work their brains as well as their muscles, a custom is quite common and yearly increasing, to buy the best two and three-year-old steers, well and equally mated, as they may need to do their work, in the fall, or any time after haying, and by good feeding get 18 inches growth upon each steer, beside doing their work with them, and then in the fall selling for $25 to $100 more than paid for them, to those whose fancy demands such steers and oxen; or, for beef, when high.

Farmington, Maine. O. W. TRUE.

DOGS—AGAIN.

NOTICING an article in the RURAL of 27th ult. on the taxation of dogs, I would add that if the law of the State in relation to the collection of the tax now ordered to be levied on dogs was so revised as to amount to something, a pretty large sum might be realized. There has been, for many years, a law taxing dogs fifty cents and a dollar each (male and female,) and making it the duty of the assessors to enumerate them, but without providing any pay for such labor. Two years ago the law was so revised as to allow the assessors ten per cent. on all sums collected. Then the Solons at Albany thought they had the thing all right, but they forgot to provide any means for the collection of the tax. Assisting the assessors, last fall, in making the assessment in seven of the wards, I found about twelve hundred dogs or dog kind—indicating about 2,400 in the city, the tax on which, if collected, would amount to over $1,200,—a fact for the Supervisors to consider,—but as there is no way provided for the collection of the tax, I am out about two months' labor, and hence feel interested in having this dog business stirred up a bit.

YORICK.

COTTON SEED MEAL FOR COWS.—The Massachusetts Plowman says the meal of cotton seed is proving of great advantage to those engaged in the dairy business. Feeding it to cows adds largely to their flow of milk, while the quality is correspondingly improved. Several farmers in Hampshire county have used the meal with most gratifying results. It is sold in the Eastern States at about $45 per ton.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

WRINKLES—YOLK.

"A CONSTANT READER," Marshall, Michigan, asks:—"Have you changed your opinions in regard to the amount of wrinkles and yolk desirable in Merino sheep, as expressed in the Practical Shepherd? Are not wrinklier and gummier sheep than those there approved of, more saleable?"

We have *not* changed our opinions. "Wrinklier and gummier sheep" than those we approve of *are* more salable to a great many, perhaps to a majority, of purchasers. The majority of purchasers who have so eagerly sought rams of this description, for the last three or four years, were not the owners of standard American Merino flocks, already about right in those characteristics. Their flocks consisted of grades or common sheep, with smooth skins and dry wool. They were desirous to bring the produce of these to the *proper* standard of wrinkliness and yolkiness as soon as possible, and believed this would sooner be accomplished by using rams possessing such characteristics to an *excess*.

It is also true that the owners of full-bloods have, in many instances, bred much more for wrinkles and yolk than formerly. Breeders, technically so-called, do not grow sheep for either mutton or wool, as primary considerations. Their business is *ram-selling*; and to sell rams, they must suit the wants or tastes of their customers.

But we have yet to meet the first judicious or eminent breeder who really approves of an excess of wrinkles and yolk, unless for crossing with smooth, dry sheep—who believes that it would be expedient to bring whole flocks to that standard. It is noticeable that the portraits of the most celebrated stock rams, published in our columns, do not exhibit more wrinkles than are pronounced admissible in the Practical Shepherd; and we know that, as a general thing, their fleeces do not contain more yolk. The rams and ewes which have sold for the highest prices ever paid in the United States have been, so far as we know, uniformly of this description; and so have been nearly all the rams and ewes which have received the highest prizes of our State Wool Growers' Associations and State Agricultural Societies. We do not, to-day, know of a breeding flock ranking, or popularly considered as ranking, in the first class, which generally, or on the average, goes beyond the same standard in the particulars under consideration.

A loose skin has always been regarded as a high point of excellence in Merino sheep; and such skins are likely to be accompanied by a degree of corrugation or wrinkling. This should not be objected to when it does not produce inconvenience in shearing. Perhaps, in deference to public taste, or to the prevailing ideas of what constitutes the distinguishing characteristics of a breed, it is advisable to go a step further, and tolerate such wrinkles as do not injure the quality of the fleece, and produce about enough additional wool to pay for the additional trouble of shearing. This would admit of neck folds, and those moderate corrugations about the elbow, hind quarters, tail, and flanks, which *fashion* is now so very particular about. So much for breeding flocks.

But even in breeding flocks, anything which materially depreciates the value of the fleece, or costs a great deal more than it comes to, must be pronounced objectionable by sensible men. And such things we still pronounce those great, prominent, firm ridges of skin which are sometimes seen running, more or less closely together, over the whole body of the sheep. They injure the quality and evenness of the best part of the fleece. In not one case in ten is the wool on the upper edge of the ridges of the same quality with that between them. It is generally coarse, harsh, and often contains hairs. And we have seen sheep of this sort which it required from two to three hours each to shear properly. This would be a delightful and profitable state of things in a wool growing flock, i. e., a flock kept primarily for the production of wool, consisting of several thousands! To say nothing of the deterioration of the wool, the extra cost of shearing, and the inconvenience of getting shearing done within the proper time, would ten or twenty times counterbalance the gain in amount of wool.

An excess of yolk in the ram *may* be desirable in crossing with dry fleeced ewes. Another object has been the attainment of "brag fleeces,"—that is, fleeces which in the dirt and "grease" reach very astonishing weights,—and which are expected, therefore, to give great reputation to the sheep and their breeders among ram buyers. But it has already been learned by the latter, who are not absolute green-horns, 1st, that rams which have a good deal more wool and a good deal less yolk, shear nearly or quite as heavy as unwashed fleeces; 2d, that at last buyers have learned to discriminate to a sufficient degree to give more for the fleeces last mentioned; 3d, that rams of the latter description are likely to get the heaviest fleeced progeny, washed or unwashed, because, as a general thing, an extra amount of wool is much more likely to be transmitted to progeny than an extra amount of yolk. This last proposition, though not without exceptions, is borne out by the observation of breeders who have made numerous and careful experiments. We know several eminent breeders who *own* and *let* very excessively yolky rams,—but we have not chanced to know of any such breeder habitually *using* such a ram *in his own flock*, with a single exception. And in that exceptional case the ram had been found to get lambs unlike himself in this particular. The rams which now stand highest in reputation in Vermont and New York

MESSRS. SHERWOOD & PERCEY'S RAM "NORTH AMERICA."

"NORTH AMERICA" was bred by J. C. TAFT, West Bloomfield, N. Y., and is the property of LIONEL SHERWOOD & A. G. PERCEY of Newark, Wayne Co., N. Y. He was got by the "Gardner ram," by Young Matchless, by Wooster. His dam was by the "Peck & Leach ram," (bred by Mr. CUTTING of Vt.,) by Wooster. Mr. PERCEY writes:—"North America's fleece of just one year's growth, at 4 years old, was 29 lbs. 3 oz.; at 5 years old, 26 lbs. 8 oz.; at 6 years old, (1 year 7 days growth,) 25 lbs. 2 oz. Average weight of carcass, after being shorn, 115 lbs."

—which will sell for the most money to breeders—which command the best prices for serving ewes—are not excessively yolky fleeced.

4th. There are other considerations. There is a prevailing, and we believe correct, impression, that excessively yolky fleeced sheep are harder keepers, are less capable of withstanding severe cold, and are generally less vigorous in constitution.

We have said that buyers at length discriminate between very yolky and moderately yolky wool. This has been so for a couple of years, at least within the sphere of our personal observation. It is probably due to the fact that the wool has gone off slowly, without an active demand, and has been bought much more generally directly by manufacturers themselves, experienced wool merchants, or the well qualified agents of such parties. When there comes another keen scramble for wool, and speculation is accordingly rife, we shall perhaps again see the old swarm of raw buyers on commission running their horses round the country and giving the same prices for wool, irrespective of condition.

But even if this happens, it is not as profitable to grow an excessive amount of yolk, if our third and fourth propositions are sound ones.

IMPORTS OF WOOL AND WOOLENS FOR 1866 AND 1867.

WE have obtained from an official and reliable source the following hitherto unpublished table of values of quarterly imports into the port of New York of Wool, Flocks, and Manufactures of Wool, for 1866 and the first quarter of 1867. It will be remembered that the new tariff on Wool and Woolens did not go into effect until two months of the first quarter of 1867 had expired:

Raw Wool.	Flocks.	Manufactures of Wool.
	First Quarter, 1866.	
$1,997,826	$103,427	$16,406,832
	Second Quarter.	
$2,145,347	$184,442	$7,793,344
	Third Quarter.	
$702,036	$118,820	$14,861,083
	Fourth Quarter.	
$443,841	$167,867	$8,431,144
$5,289,050	$574,556	$47,492,403
	First Quarter, 1867.	
$835,374	$129,768	$10,019,044

No wool of any amount is now entering the port of New York.

Condensed Correspondence, Items, &c.

WOOL SAMPLES.—BAKER & HARRIGAN, Comstock's Landing, N. Y. Ram "Cashier," got by HAMMOND'S Green Mountain, by Gold Drop, by California, by Sweepstakes, &c. Dam by Paymaster, by Sweepstakes, &c.; grand-dam by Sweepstakes. Fleece shorn at Washington county Show, May 2d; weight of it heretofore given; shorn carcass 75 pounds; staple 2¾ to 3 in.; quality and style good. A correspondent writes:—"His fleece is much like his sire's, is very dense and well set on, covering him well on belly, head and legs.—the latter being wooled clear round inside and out. He has a low, wrinkly, heavy neck, cross on thigh, fan tail, &c. He is not oily, and has less of the 'golden tinge' than most fashionable rams." He will stand for ewes, through the fall, on terms advertised elsewhere in our columns.

SAMUEL C. SANFORD, Carlton, Orleans County, N. Y. Sample from two-year-old Silesian ram, bought when a lamb with imported dam of WILLIAM CHAMBERLAIN of Red Hook, N. Y., fleece 11 lbs. 12 ozs., staple 1½ in., in quality and style broadcloth wool. Several samples from tegs got by above ram out of "the common ewes of the country." We have long known that the high-bred Silesian ram improved the quality of the wool when crossed with coarser ewes with great rapidity and uniformity, but if Mr. SANFORD means that his cross was taken with common *coarse* ewes, the change in quality is truly wonderful. The staple is from 1½ to 2 in. Mr. S. also sends sample of American Merino ewe, bought of A. J. BLOOD, got by his ram Don Pedro, Jr., (see RURAL, Aug. 4, 1866) out of a ewe he bought of EDGAR SANFORD, Cornwall, Vt. Fleece 12 lbs., staple about 2½ in., quality good.

H. C. BURWELL, Bridport, Vt. Samples from his ram "Silver Ring," bred by JAMES M. HILL of same place, out of a thorough-bred Atwood ewe, by the Fitch and Myrick ram, he by Old America, by Hammond's Sweepstakes; also from ram teg, 13 mos. old, out of an Atwood ewe, by the John Sprague ram, of Waltham, Vt. "Silver Ring's" fleece last year, 17¾ lbs., cleansed at Middlebury factory, 6 lbs. 7 ozs.; this year 20 lbs. 2 ozs.; cleansed at Vergennes factory, 6 lbs. 12 ozs.; staple 2⅝ in. Teg's fleece, 15 lbs. 14 ozs., cleansed at Vergennes factory, 6 lbs. 4 ozs.; staple a little over 2¾ in.; quality of both good.

J. PLUCHE, Cape Vincent, N. Y., incloses samples from ram and two ewes—weights of fleeces unwashed, 14 lbs., 10 lbs. 10 lbs.—and asks "to what class of Merino sheep do they belong?" The ram's wool is fine and good, and resembles that of the Merinos of fifteen or twenty years ago, whose fleeces were finer, lighter and less yolky than those of the present day. The ewe samples are not so fine, and they lack style. If full blood, they have been defectively bred in this particular. They have the appearance of grade wool.

SALE OF COTSWOLDS IN ENGLAND.—JOHN D. WING, Esq., Washington, N. Y., informs us that Mr. WILLIAM LANE of Broadfield, Eng., has "again proved himself champion of the Cotswolds, his average sales this season being the highest yet known for fifty rams, viz.: £31 17s 1d. each, being £7 3s. 3d. per head over highest competitor." Mr. WILLIAM HEWER of North Leach, obtained £20 1s 11d. per head; Mr. GEO. FLETCHER of Hundoversford, £14 9s.; C. BARTON, £14 7s. 6d. We recently published a letter from Mr. LOOMIS of Conn., now in England, in which he stated that Mr. ROBERT GARNE of North Leach, sold fifty rams at "an average of about £25." These we believe comprise the most noted English breeders of Cotswolds.

SHEEP IN EUROPE.—We cut from the July Report of the Department of Agriculture, the following statistics, furnished by Dr. F. B. W. VON HERMANN of the Bavarian Bureau of Statistics;

	Domestic animals for 1,000 inhabitants.			
COUNTRIES.	Horses.	Cows.	Sheep.	Hogs.
Austria	642	1,152	3,006	1,500
Prussia	576	1,098	6,114	968
Saxony	276	1,176	1,368	696
Wurtemberg	336	1,626	2,382	756
France	480	772	5,580	882
Belgium	366	876	774	606
Holland	444	1,704	1,566	492
Ireland	630	1,782	3,600	1,200
Bavaria	486	1,956	2,634	1,188

Dairy Department.

SEE TO THE COWS.

THIS is a season of the year when pasturage usually runs short, doubling the labor of cattle in searching for food and then getting but a scant supply. These facts should admonish the owners of dairy stock to supply the deficiencies of the pastures by a liberal feeding of mashes and such green or root food as may be available, till the fall pasture shall become equal to the demands made upon it. If cows are neglected now, the *present* flow of milk will be diminished, rendering it next to an impossibility to recover the loss, no matter how abundant the aftermath of meadows may be. The great aim should therefore be to prevent, as far as possible, any considerable diminution of milk during the season of short pasturage, so that, when the autumnal pastures are ready for the cows, nothing need be expended in recovering what short feeding during the dry season may have caused to be lost.

THE BUTTER SEASON.

THE business of cheese making will soon be over and that of butter in order. The cool weather of autumn is the most favorable season of the year for making butter, and it should be the aim of every farmer or dairyman to produce the best possible article for market purposes. There is no disguising the fact that, with good cows, ample feed and much experience in butter making, many persons succeed in making a villainous compound of grease, milk and hair, designated by the name of butter, but having no legitimate relationship to it. Much of the butter of commerce is of this character—a fact for which there is no excuse.

Clean milking, clean pails, pans, crocks and churns are the first requisites to the production of a good article of butter. This everybody knows, without being informed of it, but the trouble is the practice is not up with the information possessed. Here is where reform, in many cases, should commence—followed by a kindred amendment in the manner of converting the cream into butter. If the buttermilk is not thoroughly worked out, a good article cannot be produced; if the salt used is foul, of poor quality and injudiciously applied—too much or too little—the butter will not be of good quality nor command a top price in the market.

Sometimes all the prerequisites to success are observed, and still a failure ensues from neglect in putting the butter down. This is important, if any considerable time is likely to intervene between the manufacture and use. It is safest and best to put butter down as though months were to pass before consumption, as the trouble and expense are little, if any, increased by the precaution. Press closely in the tubs, which should be well cleaned and brined before being used, and, as far as possible, exclude the air from the mass. When a crock or tub is full, sprinkle it well with pure rock salt and cover till wanted, and the chances are ninety-nine in a hundred that the butter will do credit to the maker months after being put down. Nothing new is claimed for this, but it is sometimes profitable to be reminded of things with which we have long been conversant, but, for the moment, forgotten.

CHEESE MARKET.—The market at Little Falls, on the 26th ult., showed little change from that of the previous week. About 2,000 boxes of family dairies were delivered and sold from 11c to 12¼c, the greater portion at the former price. Factory sales were comparatively light, and prices ranged from 13½c to 14c. The bulk of the cheese from that dairy region has gone forward to market and is considerably short of the amount shipped last year,—but as new districts have been formed during the time, there will probably be an increase of production on the whole. With reference to the foreign demand and market the reports are that the receipts are heavy and prices continue to drop. Extra American fine is quoted at 58s to 60s.

Rural Spirit of the Press.

Poultry Manure.

THE celebrated VANGUELIN says that when the value of manures is considered in relation to the amount of azote they contain, the poultry manure is one of the most active; and when, as a means of comparison, the following manures are taken, in parts of 1000, it will be found that:

Horse manure contains	4.0	parts of azote
Guano as Imported	49.7	"
Guano when sifted of vegetables and stones	53.9	"
Poultry manure	83.0	"

Two Queens in One Hive.

"ON examining a nucleus hive," says ELLEN S. TUPPER in the Am. Bee Journal, "in which I was rearing queens, just at night, I found a fine young Italian just hatched. As there was little if any brood in the hive I went hastily to a good strong colony and took out a frame of brood to give to the small one, to prevent the bees leaving when the queen made her flight. Two days after, on examining the hive to see if the queen was depositing eggs, I found on the first frame that I lifted out an old queen with one wing clipped and the cells all filled with eggs. I knew the queen as the mother of the colony from which I had taken the brood comb so hurriedly. On the frame I found my young queen unharmed, quite contrary to my expectation. To observe the ending of the matter I left both in it. Several days of bad weather followed. I looked in the hive each afternoon and found both queens doing well. Then came a bright warm day, and about noon, as I passed the hive, I saw the bees dragging out what proved to be my young queen, and on opening it the old one was found in full possession. My inference is that the young one left the hive, and had been fertilized, and on her return was killed by either queen or workers, who before had not distinguished her from a common bee."

Bee Mysteries.

THE Ayer Advertiser, (Scotland,) says the ways and workings of bees are mysterious enough to baffle the most scientific observers. There is no doubt much nonsense written about them. For instance, the queen is popularly known as a very "swell" individual, very much larger than the common bee, and of brighter colors; this is very poetical, but quite incorrect. The queen-bee is of precisely the same color as her subjects, is scarcely any larger, and can be distinguished from them only by being a little longer in the body.

But there is sufficient of the marvellous about the bee-kingdom without necessitating any romance. Take the act of swarming, for instance; the highest flight of science—the electric telegraph—is simplicity itself compared with this extraordinary process. The first swarm usually alights on a bush or branch of a tree. Before swarming, however, some of them collect on the front board of the hive, to the edge of which twenty or thirty of them cling; the others pass over them and hang on by each other in clusters till the ball is often as large as a man's two fists. When all is ready and the royal command is given, they all come pouring out in a stream as thick as a man's wrist, and take a turn through the air. Suppose them to settle on a thorn three inches in circumference, their weight, for the cluster is as big as a boy's head, will bend the thorn stick nearly to the ground. Comparatively few of them have hold of the branch; the rest all hold on by each other. How can those who have hold bear the weight of the mass? How long would a man hold by the branch of a tree if the weight of 300 men were attached to him? And yet we suspect every bee with a hold sustains a much higher proportion of weight in the cluster below. This is one of many mysteries of creation that mocks at human science.

BREEDS OF SWINE.—In an article on swine, in the Farm and Fireside, Mr. John Dimon of Pomfret, Conn., recognizes seven, and only seven, distinct breeds, in this country, viz.:—Yorkshire, Chester County or Chester White, Essex, Suffolk, Berkshire, Lincolnshire and Chinese.

Rural Notes and Items.

IMPROVED AUTOMATIC RAKE FOR DODGE'S HARVESTER.—During a recent visit to Auburn, we accepted an invitation from Col. DODGE, Pres't of the DODGE & STEVENSON Manuf'g Co., to witness a trial of their Automatic Rake for DODGE'S Harvester—they having added some very important improvements to the style of the rake hitherto used. These consist of four independent rakes, so constructed as to allow all of them to be in use for reeling on the grain, or by a slight movement of the hand or foot, causing either rake to rake off the cut grain, in any sized gavels required. These additions overcome the defects heretofore existing in it and make it perfect for its work, and will, in addition to its other good qualities, leave few if any improvements to be desired in this machine.

The trial took place on the farm of JOHN W. AIKEN, in the town of Scipio, Cayuga Co., and was witnessed by many farmers and other spectators. The grain cut was heavy oats, very ripe, lodged in spots, and the straw badly crinkled down and twisted together. There was also a heavy sprinkling of Canada thistles in the grain, and some spots on which, evidently, water had stood after sowing in the spring, where the straw was short and thin. On the east side of the field the grain leaned very much towards the machine, and the wind blew freshly from the southwest. The ground was in good condition for the machine to travel on, the surface being slightly rolling. Three to four acres were cut while we were in the field—the work being done in a very satisfactory manner. The rake, which also reels, worked easily and without apparent clumsiness, and delivered the gavels in fine condition for binding, clear of the track, whenever the driver slightly pulled a cord. No adjustments were made or needed in the field, and no difficulty or impediment was met with in the lodged, thin, or leaning grain. Several farmers present drove round the field by turns, and all concurred in the opinion expressed by an agent of a rival machine, who, after driving round, remarked:—"It does the best work of any self-rake I ever saw."

—We congratulate the Company upon this important improvement, which must render their excellent and popular Harvester still more acceptable to the grain growing community.

JUDGES AT FAIRS.—It is generally conceded by the officers of agricultural societies that one of the greatest hindrances to success is found in making a proper selection of judges to pass upon the claims of competing parties. If a good selection is made, it rarely happens that all attend, and the vacancies have to be supplied on the spur of the moment from those who will serve, rather than from such as are competent to do so with justice to all concerned. This is a difficulty which can hardly be obviated on all occasions, hence people should exercise charity towards those who have to meet it with the best means available at the time. If the names of exhibitors were entirely suppressed till after the awards are made, there would be less ground for inferring partiality on the part of judges, and possibly a readier acquiescence in their decisions.

AGRICULTURE—BANNER STATE.—A subscriber, Sedalia, Mo., closes a business note thus:—"Missouri is bound to be the banner State for agriculture yet." This will probably prove no empty boast. Missouri is first class in point of territory, is centrally and admirably situated, both as to climate and commercial facilities, and with a soil peculiarly adapted to the vigorous growth of most of the products of the Gulf States as well as those of the Northern and Eastern ones. With the "Father of Waters" washing its eastern face, and the Missouri and its tributaries irrigating its central and lateral sections, it is safe to assume that Missouri will soon attain a leading position among the agricultural States of the Union, while its commercial importance will be second to but few. We therefore say to its farmers, go up, but do not get proud.

QUESTIONS FOR DISCUSSION AT THE NEW YORK STATE FAIR.—The questions selected for discussion at the State Fair, Buffalo, on Tuesday, Wednesday and Thursday evenings, October 1st, 2d and 3d, are as follows:

1st. Whether the culture of the apple has not occupied as much of our State as is profitable to the State—Hon. HUGH T. BROOKS of Wyoming county, to open the discussion.

2d. Cooking and cutting food for stock; its importance—E. W. STEWART, Esq., of North Evans, Erie county, to open the discussion.

3d. Soiling cattle; is it profitable?—DONALD G. MITCHELL, Esq., to open the discussion.

SHAWL FLEECE GOATS.—ISRAEL S. DIEHL writes the Turf, Field and Farm, from Angora, Turkey, Asia Minor, in reference to the shawl fleece goat. He says there are 1,200,000 of these goats, in that section of Asia. He had purchased one hundred of the best wool-bearing goats and intended to purchase seven hundred more from the more northern districts, so as to have every variety. They are in great demand—the wool being some 400 per cent higher than that from the best sheep.

THE HOP CROP.—It is reported that the hop crop has been greatly damaged this season in this State, and in the West in many districts, and also in Canada. Wisconsin makes the best show, but with a favorable picking season now at hand, the yield will be much below an average. Many yards in Onelda, Madison and Otsego counties have been quite destroyed by the hop-louse, while some have suffered severely from hail storms. The picking commenced in Ontario county last week with a crop of tolerably fair promise.

CAST IRON CHIMNEYS.—E. W. answers an inquiry recently published in this column as follows:—"I see in your paper of August 10th that inquiry is made about the operation of the cast iron chimney. I have had one of them in use six or seven years and like it. Think it perfectly safe from fire if properly put up, and they are so considered by my neighbors who have had them in use several years. I have never heard of one being struck by lightning."

CROPS IN MISSOURI.—W. C. R. writes from Caldwell county, Mo.:—"Apples, pears, peaches, quinces, plums and grapes, are all looking fine. Winter wheat was a fine crop, some pieces yielding as high as forty bushels per acre. We are having a fine rain that will insure a heavy crop of corn. The country is filling up fast with northern and eastern immigrants."

CROPS IN MISSISSIPPI.—L. O. P., Pleasant Hill, Miss., Aug. 5th, writes:—"The crops in Mississippi are very fine. Corn is twice as good as at this time last year. Cotton is very fine; wheat and oats tolerably good. We are blessed with fine weather now."

HORTICULTURAL.

THE COMMITTEE ON NATIVE FRUITS.

I OBSERVE, in the last RURAL NEW-YORKER, some censure on the Committee on Native Fruits, appointed by the Horticultural Society of Western New York, for supposed neglect of duty. It is of course a matter of no interest to your readers and the public what private reasons prevented the attendance of any of the Committee; but it may assist future exhibitors of new fruits, and prevent disappointment, for me to state some of them, as Chairman of that Committee.

I saw no printed notice to the Committee, and had this season but two special notices by mail. The first was from a strawberry cultivator at Waterloo, whose notice came as I was preparing to leave home on a previous appointment for a distant city, and it was impossible to be at both places at once. The other was from H. H. DOOLITTLE, mentioned in last RURAL NEW-YORKER. It was received on the appointed day, after all trains had passed except the one reaching the designated place at 9 P. M.—quite too late for a satisfactory out-door examination. Had I received it in season, it would, however, have been of little use to me, as it stated that the Committee was to meet, not at Oak's Corners, the exhibitor's residence, but at Waterloo; but how far from the station, in what direction, and on whose premises, no mention was made; nor by which of the several trains that pass daily through the place.

This suggestion to exhibitors therefore presents itself:—Give at least some days' notice, after allowing for tardy mails—designate the place, train, and local conveyance—and allow for a change of day where previous engagements require. These examinations are for the benefit of the exhibitors and not of the Committee, and all reasonable facilities should therefore be rendered—especially to those whose time is much filled by various appointments. With a little care of this kind, these examinations might prove mutually interesting and satisfactory.

J. J. THOMAS.

Union Springs, N. Y., 8th mo., 26th, 1867.

THE CLEVELAND COMMITTEE AND WALTER GRAPE.

EDS. RURAL NEW-YORKER:—I have just had my attention called to an article in your journal over the cognomen of "Penn Yan." Your correspondent seems to have been seized with quite an uncomfortable billious attack from inability to digest the grist ground out by the Cleveland Committee. He wonders "by what road the mill is reached that grinds out such monstrous opinions." Mr. Editor, if your "Master in the Vineyard" will keep a close lookout for a few years, he will find that some of us have a way of getting to mill without going round by *Iona* or Penn Yan; and that there is no accounting for taste, on which we base our opinions. The Committee went to their work strongly prejudiced in favor of the Iona grape, and we feared at first that we had before us inferior specimens of that excellent variety. But as this is not claimed by any or either of the champions of the Iona, who furnished the samples from her native isle or elsewhere, the Committee are the better satisfied with their decision; and as the must from the best specimens of Iona, picked from the vines as late as the 12th of October, could only register 79 deg., or 18 1-10 sugar, 9 8-10 acid, it will be conceded the committee may possibly have had some grounds for presuming to notice a competitor. The veteran vineyardists on the committee were two in number; both decided and voted to give the Walter Grape the first premium. After the vote was taken, the premium awarded to the Walter *four to one*, and the committee dispersed, one who voted with the majority called on the members singly and asked the privilege of changing his vote, which I presume was cheerfully granted by all; I know it was by one. Now, by what route this "veteran" went to mill, or what grist was put in the hopper to grind out this second opinion, this deponent saith not.

Why is it, Mr. Editor, that the Walter Grape and the award of a thick-headed "furry-skinned Cleveland Committee," as "Penn Yan" has it, should make such a fluttering among the grape leaves along the banks of the Hudson? Is it because the Almighty is grinding out a better grist for the "Friends" at Po'keepsie than He has for Iona?—or has the little cloud, so promising for a shower, arisen in the wrong direction and under the wrong sky? Now, the Cleveland Committee have long felt thankful for the Delaware, the Iona, and the grand old broad-leafed people's Concord; and if a better than these shall be raised up in the Walter, or any other grape, we are free to be thankful for that also. It is a little noticeable that "Penn Yan" states, in the beginning of his attack, that the Walter is an entire stranger to him; and then, before he closes, he essays to give a full description of its bad qualities, as having "a thick, furry skin, with a tough, acid, unripe center," &c. Perhaps he was unfortunate in falling in with the specimens in the Newburg vineyards,—for I am told it is claimed that the Walter is growing in these grounds; or perhaps he was present at the repast with Mr. MEAD at "a well-grown and well-ripened plate of Dianas;"—or, more likely, he has read the report of our excellent Secretary of the Lake Shore Grape Growers' Association, who seems to make Mr. CAYWOOD, the exhibitor of the Walter, say it was tough at the center, with a thick skin, which all who were present know is not so; but he did say its skin was thin as Delaware and center no tougher than Catawba.

I hope, Mr. Editor, that your correspondent and many others interested in the culture and propagation of good fruits, will do themselves and the Walter Grape the justice to visit the vines at Po'keepsie (the only place it can be seen,) the last of August, and handle, taste and see for themselves,—and, without fawning fear or favor, judge for themselves; for, depend upon it, Mr. Editor, the people will give the final verdict as to the excellence and value of this grape, just as they are now doing for the Concord in the very face of protestation and opposition of the whole Pomological faculty and amateur wisdom of the Rhine of America.

In conclusion, Mr. Editor, I wish just here to jot down two or three statements which I hope may turn out to be predictions, notwithstanding I have so great and so honorable an array of unbelieving veterans against me. First, then, I predict that Mr. CHARLES DOWNING has not, and never had, the Walter Grape growing in his grounds. Second, the vine, leaf and fruit of the Walter resemble Delaware so closely that the difference can be distinguished only in the greater size of fruit, larger and more fleshy leaf, and rampant growth of wood,—in the last particular nearly equaling Concord. Third, the Walter has neither "a thick, furry skin," nor "a tough, acid center,"—but, on the contrary, it resembles in taste and flavor its parent, the Delaware; is equal in both to the Iona or Delaware, and, unlike either of these varieties, is entirely free from the least unpleasant odor, taste or flavor in skin or flesh, when thoroughly chewed and held on the tongue, and is no more pulpy than our favorite Catawba.

And now, Mr. Editor, I have only to say the Cleveland committee are all growing the vine, and we all give the excellent Iona its deserved prominence in our collections; and when it shall please a kind Providence to reward the patience and skill of some industrious fellow laborer by raising up a variety as good or better, we will be found ready to award it a premium or a place.

CLEVELAND.

THE HUCKLEBERRY.

THE huckleberry is one of those fruits which have always been neglected; none of our horticultural writers have deemed it worthy of any particular description, and but very few have thought it worthy of mention. Why this neglect I am at loss to understand, for the huckleberry possesses naturally better qualities than even the currant and gooseberry. All our northern species are perfectly hardy, producing no thorns, (which is such a disagreeable feature with many of our small fruits,) and the plants are generally quite productive. The berries are more firm than the raspberry, blackberry, or strawberry; consequently will bear carriage well, and are suitable for market. Thousands of bushels are annually gathered from the woods and fields, but these sources of supply will not always be available; besides, we should not be content with depending wholly upon Nature for either the necessaries or the luxuries of life, while a helping hand would not only increase the quantity, but improve the quality.

Those species which naturally grow upon high, dry soils, will probably be the best for garden culture; still, because a plant is found in its wild state in any particular soil or situation, it does not follow that similar circumstances are always necessary for its best development when under cultivation. If Nature invariably located plants under the most favorable conditions for growth, then improvements would be less certain and far more difficult than now. The history of horticulture affords abundant testimony to the fact that many plants succeed far better in soils and locations differing very materially from the one in which Nature has placed them, than otherwise.

The swamp huckleberry, (*V. corymbosum*,) is sometimes found upon high, dry soils, although it grows chiefly in locations where the roots are immersed in water for the greater portion of the year. That it will grow and produce fruit upon high and dry soils, I have proved by experiment. There is no great difficulty in removing the plants from their native locality to the garden, but our main dependence for improvement should be upon seedlings, because they will always vary more or less from the parent, and by carefully selecting the best improvements, are certain. The seeds are quite small, and require considerable care in sowing.

THE SWAMP HUCKLEBERRY.

A good plan is to crush the berries, and mix them with fine sand; then put them in a box or flower-pot, and bury in the open ground until spring. Prepare a seed-bed, the soil of which should be, at least, half leaf-mould, or peat, from a swamp; the remainder may be any good garden soil. Surround the bed with boards, a foot or more in width, mix the soil thoroughly and rake level, then sow on the sand containing the seeds; then sift over this soil sufficient to cover the seeds about a quarter of an inch deep, give a good soaking of water and place a screen over the frame. It may be made of lath, coarse cloth, or anything that will partially shade the plants when they come up, but not wholly exclude the light. Keep the soil well watered, applying the water with a watering-pot, or in such a manner that the seeds or plants will not be disturbed. The seedlings may be transplanted when one year old, if they have made a good growth, or remain in the seed-bed for two years. They will usually come into bearing in three to six years, at which time the best should be marked, so that they may be propagated. The inferior kinds may be thrown away, or be reserved for stocks, on which to work the others. Budding and grafting may be employed in propagation, as well as layers, the operation being performed in the usual manner.—*Fuller's Small Fruit Culturist.*

HORTICULTURAL GLEANINGS.

Salt Does It.—H. M. C., in the Mass. Ploughman, gives it as his opinion that much of the failure, in raising fruit, is owing to a lack of saline materials in the fertilizers used. If we would have good crops of apples, plums, and the like, a liberal supply of salt must be mixed with the manure used on orchard or fruit lands.

Grapes for Missouri.—GEO. HUSMANN writes to the St. Louis Farmers' Advertiser thus: "Among the varieties I have tried for a number of years I consider as very promising, so much so that I would not hesitate to plant largely of them, the following:—Cynthiana, Cunningham, Martha, Creveling, North Carolina Seedling, Maxatawney, Rogers' Hybrids, Nos. 1, 3, 9, 12, 19, and the unknown number which you mentioned in your article. These will, I think, all make good wine, and are uniformly healthy and productive. They will give us a list of wines which will comprise all shades of color, and with the old established varieties, Norton, Concord and Herbemont, joined to them, we can soon challenge the world to produce better.

Facts in Fruit Culture.—Dr. TRIMBLE of Newark, New Jersey, who has paid great attention to fruit culture, gives the following as his views—the results of many years experience:

"1. That the most successful way to conquer the curculio is to gather the fruit as it falls, and feed it to the stock or destroy it, as it is by this fallen fruit that the curculio propagates its species.

"2. That the fruit of the apple tree can be protected from the apple tree moth by wrapping around each tree two or three times a rope made of straw. The moths will harbor in this rope, and can then be destroyed.

"3. That the only way to kill the peach tree borer is to cut him out with a knife, not once only in a season, but to follow him up every two weeks until exterminated. After the first 'going over' of an orchard, this will be little or no trouble, as each tree can be attended to in two minutes."

The Power of a Growing Tree.—Walton Hall, says an English paper, had at one time its own corn mill, and when that inconvenient necessity no longer existed, the millstone was laid in an orchard and forgotten. The diameter of this circular stone measured five feet and a half, while its depth averaged seven inches; its central hole had a diameter of eleven inches. By mere accident, some bird or squirrel had dropped the fruit of the filbert tree through this hole on to the earth, and in 1812 the seedling was seen rising up through that unwonted channel. As its trunk gradually grew through this aperture and increased, its power to raise the ponderous mass of stone was speculated on by many. Would the filbert tree die in the attempt? Would it burst the millstone, or would it lift it? In the end the little filbert tree lifted the millstone, and in 1863 wore it like crinoline about its trunk, and Mr. WATERTON used to sit upon it under the branching shade.

Horticultural Notes and Queries.

FOX RIVER VALLEY HORT. ASSOCIATION.—By a note from the Secretary, N. E. BALLOU, dated Sandwich, Ill., Aug. 24th, we learn that a Society has just been formed there with the above title. That section of the State is said to be eminently adapted to fruit growing, hence the Society commences operations under flattering auspices. The Society organized and elected the following officers: *Pres't*—AUGUSTUS ADAMS. *Vice Pres'ts*—Israel Rogers, Jesse Brady. *Sec'y*—N. E. Ballou. *Treas.*—H. C. Groves. *Executive Board*—William Henning, Smith G. Minkler, John A. Cook, M. D., D. R. Breese and Israel Skinner.

A FRUIT FARM.—E. A. THOMPSON of Cincinnati, about three years since commenced operations on a hill, two miles from Covington, for the purpose of making a fruit farm. Since that time he has prepared the ground and planted out 37,000 grape vines, comprising nine varieties, and 1,000 peach and 1,500 pear trees. The vines and trees give promise of abundant fruitfulness in the immediate future.

CATALOGUES, PAMPHLETS, &c., RECEIVED.—FROST & Co's. Illustrated and Descriptive Catalogue of Fruits. Also their Wholesale Catalogue of Fruit and Ornamental Trees, Shrubs, Roses, Bulbs, &c., for the autumn of 1867. Address FROST & Co., Genesee Valley Nurseries, Rochester, N. Y.

LAKE SHORE GRAPE GROWERS' ASSOCIATION.—Our Report of the meeting of this Association, and some notes of the excursion to the Islands, are necessarily deferred until next week.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

EDS. RURAL:—As I have learned many excellent things from your paper, I will venture to give you some of my receipes:

DYSPEPSIA BREAD.—3 qts. of unbolted wheat meal; 1 qt. of soft water; 1 gill of yeast; 1 gill of molasses and 1 teaspoon of saleratus.

MUFFINS.—1 qt. of milk; 2 eggs; 2 spoonsful of yeast; 2 lbs. of flour; a lump of butter the size of an egg—which is to be melted in the milk—and a little salt. The milk is to be warmed and the ingredients added. Let it rise, and then turn the mixture into buttered pans. Bake to a light brown.

PLUM PUDDING.—Pound 6 crackers and soak them over night in milk enough to cover them; then add 3 pints of milk; 4 or 5 eggs; ½ lb. of raisins, and spice with nutmeg. Sweeten with sugar and molasses. Bake about two hours.

POUND CAKE—1 lb. of flour; 1 do. of sugar; 1 do. of butter; 10 eggs; rose water and nutmeg.

WARTS.—Apply caustic or wash the wart with milkweed.

FOR A CUT.—Do it up in fresh blood; keep it wet with hot drops, and it will soon get well.—MARIA, *Maple Grove, N. Y.*

SPINACH.—"A.," Grattan, Mich., writes: "We have some lusty niee spinach, but know not how to use it—whether to boil, stew, fry, bake or roast. Will some one please tell us, and oblige a hungry soul."

This plant is sometimes used in soups, but more generally boiled for greens. Prepared in this way we know of one hungry soul that would be at no loss as to the disposition to be made of it. Try it as greens.—ED.

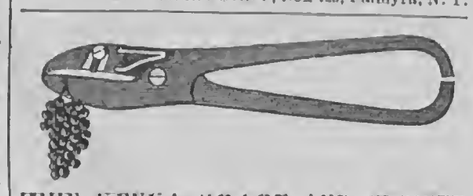
HOME MANUFACTURING.

No branch of industry is more neglected by the farming community than that of manufacturing their common wearing apparel and household goods, such as sheeting, toweling, blankets, carpets, grain sacks, &c.; and yet there is no branch of industry that will pay the farmers' wives and daughters so well. Most of farmers raise, all could raise, the material of which such goods are made; and, if manufactured at home, they would not cost more than half what they are now paying for goods that will not wear so well. At first view many will say that manufacturing has been brought to such perfection, and goods are sold at such small profits, that there is no advantage in manufacturing goods at home; but before deciding the question, let us see what is saved by so doing. First, you save the profit of the wool buyer; you save the manufacturer's profit, the six per cent. Government tax, the commission merchant's profit, the wholesale merchant's profit, and lastly the retail merchant's profit, besides freights, boxing, warehouse charges, &c., &c.

Within a reasonable distance of most neighborhoods there are factories at which wool can be carded and spun. Every family can get a loom. The old-fashioned hand loom, on which our grandmothers used to make all the clothing of the family, *will pay*, if you can not do better, but is very far behind the times. We know of no loom for general family purposes that will compare with the Mendenhall Improved Self-Acting Hand Loom, sold by A. B. GATES & Co., Philadelphia, Pa. It is simple, easily understood, and easy to operate; all the operations of weaving are performed by simply turning a crank. It operates on the same principle as a power loom, and weaves nearly as fast. Farmers that are paying out from one to five hundred dollars each year for "store goods" should look to their interest and start manufacturing *at home.*

New Advertisements.

MIAMI BLACK CAP RASPBERRY. Superior to the Doolittle in every respect, but ripens one week later and keeps in bearing two weeks LONGER. I will guarantee it to be equal if not superior to the Seneca County Black Cap in every respect, and the price is only *one-eighth as high.* Price, $1 per dozen; $4 per 100; $25 per 1,000. Also Doolittle Black Cap, Purple Cane, Philadelphia, Ohio Everbearing, Golden Cap, Catawissa and Davison's Thornless Raspberry. Also, Dorchester, New Rochelle, Kittatinny, Early Wilson and Crystal White Blackberry. Also, Strawberry Plants, Currants, Grapes, &c., &c., in enormous quantities, and at the very lowest rates. Wholesale List sent on application. Also, PURDY'S SMALL FRUIT CATALOGUE for 10 cents. Address A. M. PURDY, South Bend, Ind., Or M. R. PURDY, Box 125, Palmyra, N. Y.



THE KEUKA GRAPE AND FLOWER PICKER—Picks and holds the fruit until deposited. Adapted for all kinds of fruit, especially grapes, and for Ladies gathering roses and flowers. No vineyardist or amateur grape grower can afford to do without it. The fruit gathered is worth more, and the time saved will soon pay for it. Retail price $3. Sent by mail, safely packed, on receipt of the price. ☞ Liberal discount to Vineyardists and Nurserymen by the dozen. ☞ Agents wanted to canvass the grape growing regions and villa residences about large cities. Liberal terms given. Address D. M. DEWEY, Agent, Rochester, N. Y.,
Or F. M. McDONNELL, Wayne, Steuben Co., N. Y.

N. B. The money will be refunded in every instance, where the article does not prove satisfactory. D. M. D.

JUST PUBLISHED—AND SENT BY return mail for 20 cents,

TWELVE YEARS EXPERIENCE IN CULTURE OF THE

DOOLITTLE

Or Improved Black Raspberry,

By H. H. DOOLITTLE, Oaks' Corners, N. Y.

21 Pages, Illustrated with Eight Engravings.

My theory of propagation, method of cultivation, trimming, describing good from bad plants, and giving practical directions for managing a plat of berries—the result of recent experiments, and never before published,

WORTH $25 PER ACRE

to any one growing these berries. Describes also the

The Seneca Black-Cap,

A new Seedling from the Doolittle—7 or 8 days later—larger and every way a better market berry. Also

CARDEN RASPBERRY,

Another Seedling from the Doolittle, more juicy, less seedy and decidedly a home berry. Price of book, by mail, 20 cents; to dealers, by express, $10 ₰ 100.

N. B.—Editors of Agricultural and Horticultural papers sending copy, with rates of advertising marked, will receive a copy by return mail, and probably an advertisement.

WANTED!

Some one living near where Agricultural and Horticultural Societies hold their Fairs, or meetings, this Fall, in every State, to sell or distribute, as directed, the above described little book. Liberal compensation allowed. Write by return mail, stating number of such Fairs, and whether State or County, &c., you can visit, and giving the terms or price per day, (with good reference,) for which you can serve me. Address H. H. DOOLITTLE, Oaks' Corners, N. Y.

GRAPE VINES.—All the best varieties, including SALEM and MARTHA. Price and quality of vines are worthy of the special attention of Dealers and Planters. Price List free to applicants. C. L. HOAG & CO., Lockport Grape Nurseries, Lockport, N. Y.

10,000 CATAWISSA RASPBERRIES and HOUGHTON GOOSEBERRIES for sale. Send stamp for our Circular, showing the habits of this prolific Raspberry, which bears a crop in July, and another that is abundant in Sept. and Oct. Address CHAS. D. CUPELAND, Agent, Genesee Nurseries, Lima, N. Y.

MONROE COUNTY NURSERIES, ROCHESTER, N. Y.

We offer for the Fall Trade a general assortment of all kinds of Fruit Trees, both Standard and Dwarf; also, Ornamental Trees, Shrubs, Plants and Vines, and every desirable variety of Small Fruits. Would call special attention to our stock of Roses, on their own roots, consisting of over 200 different sorts. Also, a fine lot of standard Roses. Wholesale Catalogues sent on application. GOULD, BECKWITH & CO., Rochester, N. Y.

STRAWBERRIES BY MAIL! FREE OF POSTAGE.

Dr. Nicaise, $1 each; $10 per Dozen!

Wilson's Albany, Hooker, Triomphe de Gand, Russell's Prolific, Agriculturist, $2 ₰ 100; Golden Queen, Holden Seeded, Jucunda, $3 ₰ 100. Now ready for delivery. Send your orders, large or small, cheaper by the thousand. MARK D. WILLSON,
918-3t No. 195 North St., Rochester, N. Y.

SEEDLINGS! SEEDLINGS! SEEDLINGS!

500,000 Plum Seedlings, 1 year old, very fine.
150,000 Pear " 1 year old, very fine.
200,000 Cherry " 1 year old, extra size.
50,000 Apple " 1 year old, extra size.
30,000 Quince Stocks. Grape Vines, Raspberry and Strawberries, of leading sorts; Asparagus, 1 and 2 years old. I offer the above stock at very low rates, quality considered. Nurserymen are respectfully invited to call and examine my Stock of Seedlings, which I believe cannot be excelled, if equaled, in this country. Correspondence solicited; Price List free. Address
JOHN MURPHY, Ag't, Dansville, Liv. Co., N. Y.

FRUIT AND ORNAMENTAL TREES.—A large stock for sale at the Niagara Nurseries. For Wholesale, Retail and Descriptive Catalogues address
917-8t E. MOODY & SONS, Lockport, N. Y.

HYACYNTHS, TULIPS, &c., &c.—I shall receive from Holland about the 1st of Sept., a splendid lot of HYACINTHS, TULIPS, CROCUSES, LILIES, and all other Hardy Bulbs suitable for Autumn planting. Catalogues supplied free.
Address JAMES VICK, Rochester, N. Y.

A NEW GRAPE.—SALEM.—The Subscriber now offers for sale for the first time the above grape, No. 53 of his hybrids, named SALEM, from the place of its origin.

This grape has been withheld from sale or exhibition for various reasons, until a stock of plants could be obtained. It is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape; being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and highly-flavored fruit.

This grape is a hybrid between the native and Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early as Delaware or Hartford, having never failed to ripen in the most unfavorable season for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by a few of the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of my collection, and now offer it for sale. E. S. ROGERS, Salem, Mass.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must hereafter be addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

The undersigned now offers for sale this Autumn, the above valuable Vine, in quantity, one and two year old plants, suitable for vineyard purposes. The demand for it will be large, and those wishing to secure them would do well to send in their orders early. Price List and engraving will be sent in August, on application to
J. L. WARING, Sole Proprietor "SALEM" Vine,
Amenia, Dutchess Co., N. Y.

DR. NICAISE STRAWBERRY PLANTS.

We are now ready to deliver fine grown plants of this

Celebrated European Strawberry.

The fruit is of enormous size, berries having been picked this season (from plants set last Sept.,) that measured 6¾ inches in circumference and weighing from 1¾ to 1¾ ounces. It is early, of a bright red color, very glossy, flesh white and of the first quality. In Europe it is considered one of their finest varieties. On account of the limited number in the market and the great demand for them, it would be well for those who wish them to *order early.* Price by mail, postage free, $1 ₰ plant; $10 ₰ dozen; $75 ₰ 100. Address GOULD, BECKWITH & CO., Monroe Co. Nurseries, Rochester, N. Y. 917-11

PARKER'S PATENT FRUIT GATHERER. Send for Circulars. HOLDEN & HOWARD, Scio, Allegany Co., N. Y. 905-tf

Ladies' Department.

Written for Moore's Rural New-Yorker.

DO YOU REMEMBER?

Do you remember darling, a summer long ago?
When the fair white water lily lay rocking on the stream,
With its buds of fragrant beauty, like a heap of drifted snow,
Peeping out so fair and timid 'mid the leaves of glossy green.

I remember, how you bore them from their silvery hiding place,
That I might see their beauty, and breathe their perfume rare;
And your kind words at the moment lent their loveliness new grace,
As you shook the snowy petals down upon my braided hair.

The lily buds are withered, this many, many a day,
And many a fair summer has faded in the west,
But our star of love beams brighter, with a purer, steadier ray,
As I rock our little ones to sleep upon my loving breast.

Their golden heads are fairer than the dancing lily bells,
And their voices make sweet music where'er their footsteps roam,
'Till our grateful heart with rapture to our Heavenly Father swells,
As we gaze upon the treasures of our happy, happy home.

Porter, N. Y., 1867. A. E. H.

Written for Moore's Rural New-Yorker.

WOMANLY INFLUENCE.

In the dreamy langnor of this summer heat, the thoughts go floating back toward youth and childhood, catching gleams of light and life from the memory of what was best in those days; and the *influence of womanhood* comes up, as the helper of the soul.

In a simple and peaceful home, on the banks of the Connecticut, where one could see the blue river, the green valley, the grand hills and clear sky bending over all, we remember not alone the family circle, but the gentle presence of a sister's teacher, a gifted woman who said little to me, but ever seemed as one "pure as the perfect chrysolite."

A few years later, in an old farming village up the river, we remember lying on the grass, in days like this, and looking up with wonder at the great branches and interlacing boughs, and myriad leaves of the mighty elms that overshadowed the old house, and listening to the bird songs, and watching a score of nests. Not far away was an old country tavern; quaint, rambling, full of odd nooks and corners, its many rooms grouped in most cheery and social array around the great central chimney. There was the post-office, and there, in a far-off corner of the house was the sitting-room with a score of great easy chairs ever hospitably waiting.

Not alone were the host and his good wife there, but an adopted daughter, flitting about like some bird of bright plumage, yet with a voice soft as a nightingale's, and tinged with pathos like the note of the whippowill, and eyes wondrous in their tenderness and depth of spiritual beauty. A privilege, full of benefit and blessing it was to be her friend, frankly and freely, as she *ripened to a rare* womanhood.

Across the wide, grassy street another old homestead, a house of old-time grandeur, with its traditions going back more than a hundred years, its rich furniture antique in style and imposing to the young imagination. There was a woman, the best friend of a beloved sister, and in later years our valued friend. Such grace, dignity and playfulness, such wealth of intuition, such varied information, but most of all such height of spiritual purity,—such wondrous womanhood. Her presence a benediction, lifting heart and soul to higher realms, to come back full-freighted with grace and strength. Yet another comes to mind in a western city, sitting in her simple home like a Queen, rich in the affluent wealth of her noble womanhood, to which the best and truest, from varied stations in life do glad homage.

These are but a few glimpses. Men, too, noble and true, we remember, and would not depreciate their excellence; but the memory of these womanly influences is what most enriches and elevates, and that influence every woman, wisely true to what is best and richest in her spiritual nature, can and must exert to a greater or less degree. S.

A PARIS DRESSMAKER.

Let us now leave the galleries of the Great Exposition to visit the saloons of Madame Pieffort, No. 1 Rue de la Grange Batelliere; there we shall see a number of new and tasteful dresses.

A dress of mauve gross grain silk, with a long skirt and sweeping train, ornamented with rouleaux of the same material, which come down on either side, and are rounded off towards the back, where they simulate a sort of bow with loops and ends. This pattern is repeated upon the top and bottom of the sleeves, and the rouleaux are continued round the neck and on the waistband. The short paletot to correspond is cut out in poplum style.

A dinner dress of maize colored gross grain silk has a sweeping train, trimmed with a ruche round the bottom; a tunic of white lace comes down as far as the ruche; it is slightly looped up on either side with branches of Parmese violets. The low bodice is ornamented with a fancy drapery of white tulle, fastened with violets upon the shoulders. A bouquet of the same flowers is placed in front.

A charming white costume is composed of an underskirt, trimmed with vandykes of black braid, and of an upper one looped at each seam. There is no body to the skirt, but it is replaced by a bodice of white muslin, striped with narrow black ribbon velvet. A short, loose paletot is ornamented to correspond with the skirt.

A ball dress of Brussels net is arranged in bouillons placed lengthwise, and divided by strips of open-work straw braid. The skirt is edged round the bottom with a narrow quilting of maize-colored ribbon; a wide sash of white tulle, embroidered with straw, is fastened at the waist with a bunch of wheat ears.

The low bodice is rounded off at the sides and ornamented with a pastral of small bouillons; the small leaves are also formed of bouillons.

Madame Pieffort also prepares bodices of tartaline, foulard and muslin.

A bodice of white tartaline is ornamented with braces of blue silk, embroidered with a pattern of wheat ears in maize-colored silk; the neck, wrist and waistbands are also of blue silk, embroidered in the same style.

A very pretty white muslin bodice is embroidered round the neck, the top and bottom of the sleeves and the waistband, and in front there is a plain strip of linen, stitched on either side.

White foulard bodices, made very simple, are embroidered in point Russe, with black or with bright colored silk.

Other bodices are made entirely of white guipure lace; they are worn with a colored silk skirt, and a necklace and bracelets of ribbon of the same color of the skirt, studded with pearl or crystal beads. This forms a pretty toilet for a concert, dinner party, or evening promenade.

The bonnets of the month are exceedingly pretty and graceful.

Tulle bonnets are generally of the fanchon shape. Straw or crinoline bonnets of different round or oval patterns.

Rice straw is more fashionable this summer than crinoline. There are also some very pretty kinds of fancy straw.

A Leghorn bonnet of the Dubarry shape is trimmed with black ribbon and chains of straw passe-menterie. A bouquet of red silk poppies is placed on one side. The strings, of black ribbon, are fastened with one poppy.

The Bismarck color is still more fashionable both for bonnets and dresses.—*English Women's Domestic Magazine.*

DUTIES OF PARENTS.

Parents should understand the little joys and griefs of their children. They should sympathize with them in their sorrows, and hopefully encourage their hearts when they see them despondent. They should not allow their young and tender minds to be harassed with fears, or other excitable subjects, as this is very injurious to their mental and physical health, and often leads unexpectedly to an early death.

They should not censure them when they make mistakes, or fail to accomplish their object at the first trial; but teach them to be patient and persevering, and to try again, and again, if need be, till success crowns their efforts.

When very young, they should be taught to do things thoroughly and orderly, but should not be compelled by the whip to labor too hard for their years. Children need rest, active and healthful play, sometimes, to make them healthy and cheerful. But they should not throw stones or snowballs, or do anything mischievous or injurious to others.

Such things as children need to know when they grow to be men and women, need to be taught in a pleasant, patient manner than otherwise.

Tender-hearted children require a great deal of sympathy, and they will not grow to be healthful men and women without it. When it is the parent's duty to deny children's requests, (as it frequently is their duty,) do it without making the denial unpleasant. Give them reasons, or tell them when they grow older they will thank you for not granting their requests.

When quite young, teach your children to reason, and act from principles of justice to all, however lowly. Take good care of the health of body and mind, and teach them to shun all bad habits, and in future years they will arise up to call you blessed, and protect and aid you in age or helplessness.

WOMEN AT THE GREAT EXHIBITION.

A writer from the Paris Exhibition has a few words on the women who are seen at the great Fair. He says:

England sends us several misses, whose specialty consists in letting themselves be courted by all the world, then finishing by marrying some rich and idiotic nobleman. Russia sends princesses, created and sent into the world for the express purpose of marrying artists. Spain sends guitar women, reported morose, and unworthy of their reputation. Here the eye rests upon an Italian, with black eyes and purple black hair, and coiffed with this graceful *mezzao*, which is one of the most ravishing head-dresses ever invented by a coquette.

There is a Swede, with golden hair and complexion white as ivory, with indolent step and dreamy eyes. A little further, the blonde German, melancholy, to be consistent to national character. But among all, it is the Parisian who is the most feminine of all women. She is always invested with a charm peculiarly her own. She has eyes made to see everything. She has ears made to hear everything; a mouth made to say everything; and, in the meantime, the man the most rude would never dare to address her otherwise than respectfully. The Parisian is the woman the most dangerous and the most devoted, the most ardent and the most fickle, the most *spirituelle* and the least instructed, in the entire world.

A friend says, in allusion to the practice of buying and selling wives in Egypt, that though his wife didn't cost him a cent, he was cheated in the bargain.

O! WONDERFUL SEA.

BY A. A. HOPKINS.

O! wonderful Sea! there's a mystery
Deep hid for your every swell;
Nor mariner's ken, nor poet's pen
Can all of your mysteries tell.

The mountains you have no traveler brave
Has ever yet wandered o'er,—
The valleys that sleep in your twilight deep
No venturesome feet explore.

A myriad ships in your dark eclipse
That suddenly sunk from sight,
Are resting for aye where never a ray
Of sunshine is gleaming bright.

You have closed above many wrecks of love
Whose fate is for aye untold,
Full freighted that sailed, but were never hailed
By mariner young or old!

And brows that we kissed, and forms that we missed,
Are shrouded in your embrace,
While weary we wait,—so desolate,—
To give them a welcome place!

And tresses of hair that were strangely fair
To amber are bleached at last,
By waters that gave to the lost a grave,
In the sad and terrible past.

And beautiful lips, that went out in the ships
A-sailing far over your breast,
Forever are dumb, though we pray them come
And again to our own be prest!

O terrible Sea! In your maddening glee
Ye prisoned our loves and hopes
In prisons that hold better treasure than gold,
Whose portals it never opes;—

The blue of your breast, as they silently rest
With never a care or doubt
To trouble their dream, a Heaven may seem
With all of its stars gone out!

Forever, O Sea! will your mysteries be
Unfathomed by mortal ken,
'Till the watchers pale, in their shrouds of sail,
Come back from your waves again!

Written for Moore's Rural New-Yorker.

READING FOR CHILDREN.

Children are more easily led to be good by examples of loving kindness, and tales of well-doing in others, than threatened into obedience by records of sin, crime and punishment. Then on the infant mind impress sincerity, truth, honesty, benevolence and their kindred virtues, and the welfare of your child will be insured not only during this life, but the life to come.

A neat and sweet little volume, sparkling in gold and blue, fell into my hands some time since, bearing the attractive title of "Buds, Blossoms and Berries." I almost clapped my hands for joy as I ran my eye over its pages and thought I could feel the heart throbs of delight that would stir many a youthful mind. Such tales for children do our best work by beginning in early childhood to make the heart better. Even old eyes may water over "Kindness set to Music," and "Little Vine," Oh, what a responsibility to form a creature, the frailest and feeblest that heaven has made, into the intelligent and fearless sovereign of the whole animated creation, the interpreter and adorer and almost the representative of Divinity—to train the ignorance and weakness of infancy into all the virtue and power and wisdom of mature years! It is refreshing to find a book for children so full of Buds of Innocence, Blossoms of Cheerfulness and Berries of Love.

May "Buds, Blossoms and Berries" scatter their gold and blue in thousands of homes.

Benton Ridge, Ohio, 1867. Perry.

THE PRINTER.

The following beautiful tribute to the followers of the "stick and rule," is from the pen of B. F. Taylor of the Chicago Evening Journal:

The printer is the adjutant of thought, and this explains the mystery of the wonderful word that can kindle a hope as no song can, that can warm a heart as no hope can; that word "we" with hand-in-hand warmth in it—for the author and the printers are engineers together. Engineers indeed! When the Corsican bombarded Cadiz, at the distance of five miles, it was deemed the very triumph of engineering. But what is that range to this, whereby they bombard the ages yet to be?

There at the "case" he stands and marshals into line the forces armed with truth, clothed in immortality and English. And what can be nobler than the equipment of a thought in sterling Saxon—Saxon with a spear or shield therein, and that commissioning it when we are dead, to move grandly on to "the latest syllable of recorded time." This is to win a victory from death, for this has no dying in it.

The printer is called a laborer, and the office he performs is toil. Oh, it is not work, but a sublime life he is performing, when he thus cites the engine that is to fling a worded truth in grander curve than missile ever before described; fling it into the bosom of an age. He throws off his coat indeed, but we wonder the rather that he does not put his shoes from off his feet, for the place where he stands is holy ground.

A little song was uttered somewhere long ago; it wandered through the twilight feebler than a star; it died upon the ear. But the printer takes it up where it was lying there in the silence like a wounded bird, and he sends it forth from the ark that had preserved it, and it flies on into the future with the olive branch of peace, and around the world with melody, like the dawning of a spring morning.

Creditors have better memories than debtors and creditors are a superstitious sect, great observers of set days and times.—*Franklin.*

MEN IN ADVANCE OF THEIR AGE.

A majority of the noblest geniuses who have conferred the greatest benefits on mankind, have been spit upon or gnashed at and branded by the dominant class of their contemporaries. Prophets, discoverers, inventors, martyrs, an illustrious company gathered from many climes and countries, and associated in one fellowship of sublime genius, heroic devotion, and tragic state—history has nothing left of equal pathos to reveal when it has shown us these men, dreaded, despised, persecuted, outcast, dying, appealing to other generations to do them the justice so cruelly denied in their own. Nor has posterity proved recreant to the holy trust. They are revered and celebrated now with an enthusiasm in strong contrast with the obloquy they suffered when alive. And to enter into sympathy with them is an inexpressible comfort to those who in later times are called to a similar experience. As Heine says, "an equally great man sees his predecessors far more significantly than others can. From a single spark of the traces of their earthly glory he recognizes the most secret act; from a single word left behind he penetrates every fold of their hearts; and thus the great men of all times live in a mystical brotherhood. Across the long centuries they bow to each other, and gaze on each other, with significant glances; and their eyes meet over the grave of many buried races whom they have thrust aside between, and they understand and love each other." It is delightful to notice the geniality with which, in his Cosmos, the grand old Humboldt recognizes his great predecessors in the enterprise of surveying the universe as a whole—Strabo, Eratosthenes, Ptolemy, Hipparchus, Galen, Aristotle, Lucretius, the elder Pliny, Albertus, Roger Bacon, Galileo, Copernicus, Newton, and the rest—with what joy and piety he signalized from a height like their own intellectual peaks looming in clouds and stars athwart the historic table-land of science. The picture in the New Testament, of Jesus on the mount of transfiguration, in converse with Moses and Elias, is a beautiful symbol of the fellowship of the highest kindred spirits in all ages.—*Alger's Solitudes of Nature and Man.*

A SUMMER NIGHT.

The sun shines in St. Petersburg, in June and July, for twenty hours a day, and even scarcely disappears beneath the horizon. I never experienced such sweltering weather in any part of the world except Aspinwall. One is fairly boiled with the heat, and might be wrung out like a wet rag. Properly speaking, the day commences for respectable people, and men of enterprising spirit—tourists, pleasure-seekers, gamblers, vagabonds and the like—about nine or ten o'clock at night, and continues till about four or five o'clock the next morning. It is then St. Petersburg fairly turns out—then the beauty and fashion of the city unfold their wings and flit through the streets, or float in Russian gondolas upon the glistening waters of the Neva; then it is the little steamers skim about from island to island, freighted with a population just waked up to a realizing sense of the pleasures of existence; then is the atmosphere balmy, and the light wonderfully soft and richly tinted; then come the sweet witching hours, when

"Shady nooks
Patiently give up their quiet being."

None but the weary, labor-worn serf, who has toiled through the long day in the fierce rays of the sun can sleep such nights as these. I call them nights, yet what a strange mistake. The sunshine still lingers in the heavens with a golden glow; the evening vanishes dreamily in the arms of the morning; there is nothing to mark the changes—all is soft, gradual and illusory. A peculiar and almost supernatural light glistens upon the gilded domes of the churches, the glaring waters of the Neva are alive with gondolas; miniature steamers are flying through the winding channels of the islands; strains of music float upon the air; gay and festive throngs move along the promenades of the Neveskoi; gilded and glittering equipages pass over the bridges and disappear in the shadowy recesses of the islands. Whatever may be unseemly in life is covered by a rich and mystic drapery of twilight.—*J. Ross Browne.*

POETRY AND LANGUAGE.

Good poetry is in every way the choicest arrangement of words; it demands, therefore, and rewards the nicest elocution. Poetry preserves, upholds and improves language. It chooses the most clear, vivid and exact forms of speech, and supports the purest methods of pronunciation. Poetry is the chief storehouse of authority on these matters. Changes must gradually come in every language; but poetry opposes itself to carelessness, conventionality, vulgarism, corruption of whatever kind—all those deteriorations to which ordinary speaking and writing are so subject. And remember that when language decays, not merely good taste, but thought and reason also decay.

One cannot rate highly the *just et norma loquendi* of our own day, but doubtless it would be many degrees worse but for the poets. The diction of social life is at present for the most part vague, unpoetic and corrupt; so also in the general run of our public writing and public oratory—both of which indeed being addressed to the hour use—naturally the phraseology of the hour; but it is proper for men of literature, and it is their duty to uphold our noble tongue out of these debasements. This, though a subordinate, is an important function of literature, and especially of the flower of literature, Poetry—namely, to preserve, and, if possible, enhance language (which is Thought's body) in health and beauty.

Prosperity is no just scale; adversity is the only balance to weigh friends.—*Plutarch.*

Sabbath Reading.

ONE BY ONE.

One by one the sands are flowing
One by one the moments fall;
Some are coming, some are going—
Do not strive to grasp them all.

One by one thy duties wait thee;
Let thy whole strength go to each:
Let no future dreams elate thee;
Learn thee first what these can teach.

One by one bright gifts from heaven,
Joys are sent thee here below;
Take them readily when given—
Ready, too, to let them go.

One by one thy griefs shall meet thee;
Do not fear an armed band;
One will fade as others reach thee—
Shadows passing through the land.

Do not look at life's long sorrow,
See how small each moment's pain;
God will help thee for to-morrow,
Every day begin again.

Every hour that fleets so slowly
Has its task to do or bear;
Luminous the crown and holy,
If thou set each gem with care.

Do not linger with regretting,
Or for passing hours despond;
Nor, the daily toil forgetting,
Look you eagerly beyond.

Hours are golden links, God's token,
Reaching heaven; but, one by one,
Take them lest the chain be broken,
Ere the pilgrimage be done.

Written for Moore's Rural New-Yorker.

GLIMPSES.

Often when carelessly turning the pages of a book we catch a glimpse of some choice passage which attracts our attention, and pausing to read we become oblivious to all save the page before us. Thus when affliction casts its mantle of gloom around us, and we cannot penetrate the clouds which shadow the future, some unseen hand sweeps backward the pages in the book of life, and we catch glimpses of bright and beautiful passages around which Memory loves to linger. The cares of the present are forgotten, the shadows are lifted from the brow, and as leaf after leaf in the book of the past is unfolded to our view we find that on each page has been traced more of joy than sorrow—that no night so dark but morning brought the dawn, and that all along our path has been strewed blessings which, with unthankful hearts we have been gathering, appropriating to ourselves the honor and praise due only to Him from whom all blessings come. As these glimpses come to us, our souls are strengthened with new purposes and resolves, and we again take up the burden of life with hope in our hearts and a determination to find in every cloud a silver lining.

All through life we are catching glimpses,—sometimes they come to us through the merry laugh of childhood, and awaken olden memories,—sometimes through clover fields and meadow bloom, through rare and beautiful landscapes,—choice pictures hung in Nature's gallery,—or glorious sunsets when, through gold and purple clouds drifting across the sky, we seem almost to catch glimpses of the land that lies beyond. Of the glimpses that are given to the departing soul we cannot question; but to the dying Christian no doubt come bright gleams of the Throne to which he is hastening, prepared for the faithful, where not only glimpses but visions clear and lasting shall be found.

Maple Hill, Cazenovia, N. Y., 1867. S. E. W.

A BEAUTIFUL LEGEND.

They tell a story that one day Rabbi Judah and his brethren sat in the church on a fast day disputing about rest. One said it was to have sufficient wealth, yet without sin. The second said it was fame and praise of all men. The third said it was possession of power to rule the State. The fourth said it must be only in the old age of one who is rich, powerful, famous and surrounded by children and children's children. The fifth said it were all in vain unless a man kept all the ritual of Moses. And Rabbi Judah, the venerable, the tallest of the brethren, said:—"Ye have spoken wisely, but one thing more is necessary. He only can find rest who to all things addeth this—that he keep the traditions of the elders." There sat a fair-haired boy, playing with lilies in his lap, and hearing the talk, dropped them in astonishment from his hands, and looked up—that boy of twelve—and said:—"Nay, father, he only can find rest who loves his brother as himself, with his whole heart and soul. He is greater than fame, wealth and power; happier than a happy home without it; better than honored age: he is a law to himself above all traditions."

God Seen in Everything.—There is no creature in the world wherein we may not see enough to wonder at, for there is no worm of the earth, no spire of grass, no leaf, no twig, wherein we see not the footsteps of a Deity; the best visible creature is man. Now what man is he that can make but an hair, or a straw, much less any sensitive creature, so as no less than an infinite power is seen in every object that presents itself to our eyes; if, therefore, we look on the outside of these bodily substances, and we do not see God in everything, we are no better than brutish—make use merely of our sense without the least improvement of our faith or our reason. Contrary, then, to the opinion of those men who hold that a wise man should admire nothing, I say that a truly wise and good man should admire everything, or rather that infiniteness of wisdom and omnipotence which shows itself in every visible object.—*Bishop Hall.*

The Traveler.

UP THE SAGUENAY—No. II.

BY GULIELMUM.

TADOUSAC BAY.

UNTIL sunset, and afterward through the long twilight, we rambled about Tadousac. The tide was down, and we amused ourselves at first upon the beach. At this point the rise and fall of the tide is no small matter. The highest spring tides have a variance of twenty-two feet. They rise and fall the same distance, as far up the Saguenay, even, as we ascended. From the beach at the landing, we went around through the small collection of cottages which forms the village, to the hotel, which is really the largest part of the place. It is a large, and apparently very comfortable house, situated a little back from the smooth beach, and fronting the beautiful Bay. Bathing advantages must be splendid there; capital fishing abounds, with now and then an opportunity to see a black whale or grampus; and if invalids or nervous individuals are seeking quietude, I'll guarantee that there isn't a more retired resort to be found. I never was in but one place where silence seemed more perfectly regnant than there, and that was four miles under ground.

Quiet, quaint, unpretentious as Tadousac is, it has its history. It was long time the chief station of the Hudson Bay Fur Company, and the long, one-story old building which was the Company's headquarters, still remains intact. Near it can be distinctly traced the foundation of the first house built in Canada. The ancientness of these ruins is clearly shown. Since the foundation wall crumbled away, a pine tree, about two feet in diameter, has grown over one corner, and gone to decay, and the stump remains to mark the fact. It is claimed, also, that the curious church, standing near the hotel—a little box of a thing not more than twenty feet square—is the first one ever erected in Canada. It has had a rejuvenation, and looks much less venerable than many others I have seen in the Provinces. One thing is certain—if as old as represented it is very small of its age.

After a delightful stroll on shore, and a vote to repeat it on our return, our party wended its way back to the boat by a path leading through a narrow defile, over a miniature mountain; and before the steamer swung loose from the dock we were in dreamland.

Next morning, on awaking, we found the "Magnet" made fast to the landing

AT HA! HA! BAY.

We had ascended the Saguenay over sixty miles,—as far, in fact, as navigation properly extends. Vessels can pass upwards about ten miles further, to Chicoutimi, but only go there for lumbering purposes. A large lumber business is done there, and the place is also a station of the Hudson Bay Company. It preserves the aboriginal name of the Saguenay. The Indians had a happy talent at naming rivers and lakes. They never gave appellation without it possessed peculiar significance. Chicoutimi signified "deep water," and was therefore highly appropriate to the stream to which it was applied. But the early Jesuit missionaries foolishly substituted for this very euphonious and significant cognomen, the one which it now bears. As the Saguenay, then, thanks to the Jesuits, it will always be known.

Ha! Ha! Bay is an oval shaped expanse of water, extending inland a half dozen miles from the river, and hemmed in on all sides by bold, barren bluffs two or three hundred feet in height. Its water is a dull, dirty red, as seen in the shallows by the shore, but in its depth is black as ink. The surrounding country has as wild and bleak an appearance as can well be imagined. Much of the surface is rock—a sort of limestone granite—and the visitor is not a little puzzled to conjecture how the inhabitants can possibly raise food enough to give them subsistence. There seems to be (unlike some localities) very little land to the acre. And yet a settlement, numbering, all told, six thousand inhabitants, is sustained, and a surplus over the amount of produce needed for home consumption is sent away. The settlement consists of the small village of Ha! Ha! or Grand Bay, and many little hamlets scattered along up the Ha! Ha! valley, and over the adjacent country.

It is said that the Bay derived its name from the surprise of its discoverers, the French, when they first beheld it. It may be a name of surprise; it is quite as much in keeping to consider it one of laughter. Minnehaha is "laughing water," as everybody knows; and Ha! Ha! Bay is a laughing water, as well. Entirely surrounded, or nearly so, by such a high wall of rock, it sleeps in beautiful tranquility, with only little riplets of smiles running over its sparkling countenance.

After an excellent breakfast, we went ashore for a morning ride or drive,—which should it be? Finding the boat would tarry three hours, we decided on the former. We would ride over to Ha! Ha! village, around the Bay, three miles distant. Quite a number of *calèches*—those vehicles so peculiar to the regions bordering upon the lower St. Lawrence—were standing upon the wharf, and mounting to the high seat of one of these we went tearing away over the rough road at a lively pace. Our JEHU was a French-Canadian, like all the *habitans*, and spoke not a word of English. His French *patois* was not strictly in accordance with our FASQUELLE teachings, and consequently our interchange of language would have made a Frenchman smile. But he gave us a most exhilerating ride! The clear and bracing morning air seemed to affect the sleek pony he drove much as it did us. We felt a keen tension of the muscular system—a lithe, springing sensation, as though no efforts could weary us.

Reaching the village, we spent two hours very happily at the BLAIR mansion. The existence of a complete and admirably arranged farming establishment in this apparently sterile and unproductive region, much surprised us. Mr. BLAIR is a Scotch gentleman who has dwelt here a score of years, and has succeeded in bringing a large estate into thrifty condition. His farm comprises between three and four thousand acres of the most arable land in the vicinity, and he has twenty-five hundred acres under cultivation. The family are Scotch Protestants—very intelligent and refined. There is but one other Protestant family in the settlement. We found it very agreeable to be able to converse in English again, and received much interesting information from Miss MARY BLAIR, the accomplished young lady who showed us about the place. I know of no better kept or more conveniently arranged dairy in the States than theirs. It accommodates two hundred cows. Though their season is nearly two months shorter than ours, being cut off at each end, wheat and corn crops do very well. Mr. B. has sown over seven hundred bushels of seed grain this season.

SAGUENAY SCENERY.

At 10 A. M. we had returned to the boat. A moment later and the "Magnet" was gliding over the beautiful Bay, while the singular spot we had visited receded behind us. Half an hour afterward we had passed through the mouth of the Bay, and were floating upon the intensely black waters of the river.

The Saguenay is nowhere less than a half mile wide and varies from that to a mile in width. Its depth is very great, being, throughout the sixty miles we passed over, from six hundred to twelve hundred feet, and in some places still more. The shores are principally granite, and range from two hundred to one thousand feet in height. Their appearance is varied—now jutting out in bold headlands, with only the bare, gray rock visible; and now sloping inland, intersected by broad ravines, and clothed with rich evergreen verdure. The groupings of naked bluffs and wooded slopes are very picturesque. The forest growth is rather stunted, and would not promise large returns in lumbering. The lumber districts are in the neighborhood of Lake St. John. The fir is the prevailing species of wood, but its dark green is prettily relieved, here and there, with the lighter tint of the white birch.

About twenty miles on our downward way we find a marked contrast between the two shores. On the left the bluffs are yet more high and rugged, while those opposite become much less so. The further down we proceed the wilder the scenery becomes; and the shores increase rapidly in hight and abruptness. Another twenty miles and they attain to a round thousand feet of altitude, though they do not at first impress one as being so high. They are covered still, to quite an extent, with the light and dark green verdure, which is singularly beautiful. Here the right hand shore is the highest and most abrupt, and continues so for several miles.

A little further on, this shore is marked by Point Trinity and Cape Eternity, situate on either side of the entrance to Trinity Bay, which recedes a mile inland. These are the grandest points of interest along the river. What we have seen before has been but a preparation for this. Words cannot describe the sensations of awful sublimity which impress us as the steamer rounds Trinity Point and glides into the Bay close at the base of the stupendous pile of granite. Above, the mass of ragged rock looms up perpendicularly fifteen hundred feet, fairly overhanging us in its tremendous might; and below, the midnight waters are said to go down—down—fully two thousand feet. Cape Eternity, the other "eternal pile," is eighteen hundred feet in height, but is not quite so abrupt, and its dark sides are considerably covered with fir trees and the glistening birches. Between these two massive mountains of rock a beautiful echo is obtained, which we tested as we lay-to at the base of Trinity.

Out from this silent mightiness surrounding the Bay, the steamer passed, at length, and after an hour or more of sailing amid scenery wilder even than that which had preceded it, we reached Tadousac. The width of the river does not increase much—its average still being about a mile. Occasionally little cascades are seen, fluttering hundreds of feet down the precipices like ribbons of silver; and here and there a vein of snow-white marble lights up the cold gray of the granite. A noticeable feature of the Saguenay scenery is its silence. No birds wing their flights over the water, and I believe the only winged specie ever seen here is the bald-headed eagle, which sometimes frequents the cliffs. At intervals a salmon may leap up from the water, or a seal be seen bobbing its droll head up and down, but other than these no signs of life are visible. There is only a strange, weird, sublime silence. He who has experienced it can never forget it; he whose life is ever among the busy din and turmoil should go up the Saguenay, and realize and appreciate the magnificence of silence!

STATUE OF SIR JOHN FRANKLIN, IN WATERLOO PLACE, LONDON.

OUR illustration represents the monument recently erected to the memory of Sir JOHN FRANKLIN, the lamented hero of Arctic navigation and discovery, in Waterloo Place, London. The statue is cast in brouze, and is eight feet four inches high. The pedestal is of polished granite.

The moment selected for representation in the statue is when FRANKLIN was addressing his officers and crew, and telling them that the Northwest Passage had at last been discovered. He grasps in his hand the telescope, chart, and compasses; and wears the uniform of a naval commander, with a loose overcoat of fur as a protection against the extreme coldness of the Polar climate. The sculptor's great object was to give the character of FRANKLIN in the statue, and as far as possible by outward form to indicate those qualities of the mind which enabled Sir JOHN, by his deeds in life and by an example of heroic endurance in death, to add to the fame and glory of his country. The likeness has been pronounced by Lady FRANKLIN, and others who knew her husband best, to be characteristic and excellent.

Various Topics.

WALTER SCOTT'S MANUSCRIPTS.

THE original manuscripts of Sir Walter Scott's poems and several of his novels and prose works are to be sold at auction, by order of the executors of the late Mr. Robert Cadell of Edinburg. They comprise "The Lady of the Lake," "Marmion," "Rokeby," "The Lord of the Isles," "Don Roderick," "The Field of Waterloo, and other poems," "Hallidon Hill," "Doom of Devorgoil," &c., with an introductory "Essay on Ballad Poetry," "Auchindrane," "Anna of Geierstein, "Count Robert of Paris," "Castle Dangerous," and two volumes containing portions of "Waverley," "Ivanhoe," "The Bridal of Triermain" and "Tales of a Grandfather." This portion of "Ivanhoe," says the London Publishers' Circular, is believed to be the only portion of that romance which Sir Walter Scott wrote with his own hand, as the late Mr. John Ballantyne acted as his amanuensis for a considerable part of it, owing to the author having recently recovered from a severe illness. The manuscript of the "Lay of the Last Minstrel" was not preserved. All these manuscripts are remarkable for the extraordinary fluency with which they were written, and the very few corrections or alterations occurring in them; thus affording a proof of Sir Walter Scott's wonderful facility of composition. The manuscripts are stated to be all in a perfect state of preservation, and uniformly bound in Russia, with neat edges.—*Rochester Democrat.*

PRACTICAL AND STUDIOUS MEN.

THOSE who call themselves practical men are too apt to undervalue the thoughtful and studious men, and to sneer at them as mere bookmen. The practical navigator, with a little skill in the use of instruments and a knowledge of common arithmetic, by the help of certain printed formulas and tables, can guide his ship safely through the perils of the pathless deep. But he should not sneer at book-learning, for those charts and tables and instruments by which he makes his observations and solves his problems were the result of deep and profound study and thought. It is wrong to class among the non-producers all who do not labor with their hands. But for studious men, what would be the present condition of agriculture? It would indeed be blind and toilsome. To produce great results the brain and arm must move together—the ideal to be wedded to the practical. The world has as much reason to bless the memory of the inventor as that of him who reduced the invention to practice. Those only who live upon the profits of labor without an equivalent are to be regarded as stale and unprofitable.

SOLUBLE GLASS FOR SURGICAL SPLINTS.

M. VELPEAU has called the attention of scientific men to "anamo-inamovible" bandages made of soluble glass, to replace the starch, plaster-of-Paris and glue applications now used for bandaging fractures in England. The great advantage possessed by this glass is that it affords a firmer support, becoming quite hard in two or three hours, at the same time being readily removed by moisture. All these recommendations do not apply to the substances now in use, nor is their application as easy and neat as that of the soluble glass. It can be procured at a very moderate price from Mr. Rumney's Chemical Works, Manchester, and we hope that as fair a trial will be given to it in England as has already been done on the Continent. The discovery of this glass was made by Fuch, in Munich. It is of extensive use in the arts for stereo-chromic painting, and protecting substances of all kinds that might be damaged by moisture, etc., from atmospheric action.—*Chemical News.*

THE EDITORIAL TREADMILL.—It is one of the hardships of our profession that its working wheels—brains and heart—are not allowed to lag for sickness, or to stop for calamity or sorrow. The judge may adjourn his court, the school and the workshop may close shutters, the mourner may veil his features and turn friend and stranger from the door; but the journalist must forget before to-morrow the sorrows of to-day, must write gaily and freshly, as a newsmonger, on the trifle of the hour, whatever burden has been laid upon that same hour, by Providence or his brains as a man. It sometimes tries and mocks as the world that reads what is thus written would never dream of. The public looks upon an editor's labors as the Indian did upon the man that was cutting hay. He finally gave in his opinion that it was "easy to see the white man mow."

THE happy people of this world think that the unhappy ought to perish before them with the same grace as that which the Roman population exacted of the gladiators.—*Goethe.*

Reading for the Young.

ORIGIN AND SEALS OF THE STATES.

NUMBER ELEVEN.

SEAL OF MINNESOTA.

MINNESOTA was at an early day a part of Missouri territory, and almost an unknown land. It was made a State in 1858, with an area of 81,250 square miles. Its rich soil, climate cold but healthy, and ready access by the Mississippi, have led many Eastern settlers there, and the hardy and industrious Swedes and Norwegians like its clear air. In 1860 the population was 172,023, and has grown much since. Rolling prairies, wide plains, heavy forests on the rivers in the western part, and the broken rocks and sand hills of the northeastern portion make up its surface. The soil is rich, and wheat, oats and even corn yield well. Little streams flow into the head-waters of the Mississippi, the St. Lawrence and Lake Winnepeg, which is far northward—from these elevated plains and prairies. The French motto on the seal means "The Star of the North."

SEAL OF KANSAS.

Kansas was formerly a part of the great Missouri territory, it is but a few years since it began to be settled. The rapid emigration of Eastern people in the last fifteen years, who went to cultivate the land by free labor, and the "border ruffian" raids and fights, growing out of efforts to make it a slave State are fresh in all minds. It was admitted as a free State in 1860, with a population of 117,206, and has double that number to-day, probably. Its area is 114,798 square miles. The soil is fertile, productive of grains and fruits, and the western part excellent for pasturage. The eastern part is rolling prairies and forests, the central level plains, and the western somewhat broken toward Pikes' Peak and the Rocky Mountains, where are many "buttes," or hills almost perpendicular, a hundred feet high or more, and with flat tops, standing up like great pillars on the plains. The motto of the seal means "Upward through difficulties."

SEAL OF WEST VIRGINIA.

We give the seal of the new State of West Virginia, its population we cannot give as it was admitted to the Union since the Census of 1860. It embraces that part of Virginia from the western side of the Alleghanies to the Ohio river and Kentucky, a region of mountainous country, yet with rich land in the valleys and near the Ohio and a healthful climate. Iron ore is abundant, and manufacturing of iron, &c., increasing. The people chose not to go with Virginia, and cast their lot with the "Confederate States," but preferred to stay in the Union, and were made a State. The seal has an oil derrick, a railroad, and the farmer and mechanic in the center, with the Latin motto meaning, "The mountain always free," beneath.

HOLD ON, BOYS!

HOLD on to your tongues when you are just ready to swear, lie, or speak harshly, or use any improper word.

Hold on to your hand when you are about to strike, steal, or do any improper act.

Hold on to your foot when you are on the point of kicking, running away from study, or pursuing the path of error, shame or crime.

Hold on to your temper when you are angry, excited or imposed upon, and others are angry about you.

Hold on to your heart when evil persons seek your company, and invite you to join their games, mirth or revelry.

Hold on to your name at all times, for it is more valuable to you than gold, high places or fashionable attire.

Hold on to truth, for it will serve you well, and do you good throughout all eternity.

Hold on to virtue—it is above all price to you in all times and places.

Hold on to your good character, for it is, and always will be, your best wealth.

WHAT WE CAN NEVER CATCH.—Children, what is that you can never catch, even if you were to chase after it as quick as possible, with the swiftest horse in the world? You can never catch the word that has gone out of your lips. Once spoken, it is out of your power; do your best, you can never recall it. Therefore take care what you say, for "In the multitude of words there wanteth not sin; but he that refraineth his lips is wise." Proverbs x. 16.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., SEPTEMBER 7, 1867.

NEWS OF THE WEEK.

New York State Items.

Owing to the dry weather considerable fires have occurred along the line of railroad between Rochester and Buffalo. The woods and fields in many places have been badly scorched.

The Republican State Central Committee have called a State Convention at Syracuse on the 25th of September.

Mrs. Isaac Lyman of Fredonia, aged 50 years, poisoned herself to death with arsenic last week.

Daniel Hazeltine, one of the pioneers of Chautauqua county, died in Jamestown on the 24th ult., aged 73 years.

The corn and potato crops, in many parts of Western New York, are suffering very severely from drouth.

An elderly woman in Westfield, Chautauqua county, influenced by jealousy, donned male attire, and proceeded to smash in the windows of a neighboring spinster.

Gov. Fenton has appointed William Fullerton of New York, Justice of the Supreme Court in the Second Judicial District, made vacant by the death of Wm. M. Scragham. John Austin Stevens, Jr., is to represent the State at the Paris Statistical Congress the present month.

Bridget Durgan, murderess of Mrs. Corriel, New Market, N. J., was hung at New Brunswick on the 30th ult. She owned to the commission of the murder, and had no accomplice.

Silas Bruce & Co., dry good's dealers, Boston, have failed. Liabilities, $250,000.

A fire in New York, No. 27, Maiden Lane; loss $50,000. Another, 73, William street, Lattmore & Co.; loss $30,000.

The bark R. M. Goff and schooner Camanche, with grain, went ashore at Morgan's Point, Lake Erie, Aug. 31st.

Five Spaniards, charged with having stolen $200,000 in gold in Mexico, have been arrested in New York. About $10,000 in gold bars were found upon them.

A fire in Buffalo on Saturday night, the 31st ult., destroyed the engine works of Geo. W. Tifft & Son and the brass and iron works of Farror & Co. The loss is estimated at $150,000.

The Home Journal has passed into the hands of John S. Harper.

The Spiritulastic pic-nic at Portage Bridge on the 31st ult., was largely attended.

At a scrub race in Syracuse on the 30th ult., the contesting horses collided and fell to the ground. Both were up in a jiffy, but the riders failed to come to time, and were left behind.

A family in Brighton, N. Y., went to a pic-nic. On returning they found themselves richer by a male infant four or five days old in a basket, which had been shoved through a window.

The people of Avon, N. Y., are agitating the question as to whether that village rests on a gold mine or not. A small globule of the metal was found in a drain, which gave rise to the speculation.

A. G. Whitcomb, Rochester, has sold his half interest in the trotting horse George Palmer, for $3,000.

Business on the canals is decidedly improving. A brisk business and good freights are anticipated this fall.

The Canal Investigating Committee are to commence a session in Rochester soon.

From Washington.

Gen. Grant has issued an order directing Gen. Sickles to proceed to New York and report to the Adjutant-General. No other duty is yet assigned him.

It is asserted in dispatches from Washington that there is no truth in the report of a rupture between the President and Gen. Grant. Perfect agreement as respects re-construction, is said to exist between them, that the military forces will not be used for partizan purposes. Gen. Grant has withdrawn his protest. It is reported that he is still to occupy his position as Secretary of War *ad interim*.

The Commissary-General of Prisoners, Gen. E. A. Hitchcock, has been relieved from service.

The rumored Cabinet changes have not yet come off. One day they are to take place, and the next day they are not.

On the 26th ult. the President issued an order for the transfer of Gen. Sheridan to the Department of Missouri — taking the place of General Hancock, the latter to assume command of that vacated by the former. Another order assigned Gen. Canby to the Department commanded by General Sickles.

The friends of Mr. Seward assert he is not going out of the Cabinet, but will stay in to conclude important negotiations with reference to the Alabama claims which are in process of arrangment on the basis of a cession of British Columbia to the United States.

The Italian Minister, M. Corrati, was presented to the Secretary of State, and presented by him to the President on the 30th ult.

Gen. Grant has issued an order to the several District Commanders in the South not to make any appointments to civil offices where the old incumbents have been displaced by themselves or their predecessors. This order is the theme of much speculation.

Acting Attorney-General Binehly has given an opinion on the claims set up by Gen. Sickles and others, with respect to suspending the action of the United States Courts in the South. It is strongly adverse to such claim.

A large number of employes in the Departments at Washington were notified of their dismission on Saturday.

One-half of the clerical force in the Paymaster-General's office has been ordered to be discharged by Gen. Grant.

The Treasury Department employs over twenty thousand officials.

From the South.

The deaths from yellow fever in New Orleans for the last week averaged from 12 to 15 per day.

Counsel for parties in Richmond, charged with evading the revenue laws before the U. S. Commissiou, put in a plea of want of jurisdiction, as the revenue laws of Congress provided for the same number of inspectors in a State as it had members of Congress. As Virginia had no members of Congress there could be no legal inspectors within her limits.

Col. Wm. S. Obert, Adjutant-General of the U. S. forces at Galveston, died recently of yellow fever in that city.

Gen. Sheridan has made several late removals of civilians in Texas for alleged disloyalty.

Gen. Pope took umbrage at something said by a student of the University at Augusta during the commencement exercises, and proceeded to close the establishment by turning the buildings to barrack uses. The execution of this purpose was suspended on condition that the Press should not refer to the difficulty. The $8,000, appropriated the College by the Legislature, is to be withheld by Pope's order.

Some of the negroes, in the first and fourth Congressional Districts, Georgia, have published an address urging the election of colored men to Congress. They denominate themselves Conservatives, and favor universal amnesty.

Gen. Pope has modified his order about jurymen—leaving the selection to the whites exclusively, provided they have been registered. This has reference to a single term of the courts only.

Long-continued and heavy rains in Georgia have done considerable damage to the cotton crop, though a fair yield is hoped for.

A Commission was recently ordered by Gen. Schofield in Richmond, to ascertain whether secret military organizations of the blacks were in existence. The report disclosed the fact that such organizations of formidable character, existed there, and also, as believed, throughout the State.

J. L. Helm, Governor elect of Kentucky, is quite ill, and his inauguration was to take place at his residence in consequence.

There were 26 deaths from yellow fever at New Orleans on the 29th ult. Several of the crew of the iron-clad Mohawk, were sick with the same disease. Four of the crew had died of it.

Gen. Pope has responded to a question about an intention to suspend the collection of debts in certain cases, imputed to him, that he has no jurisdiction in the matter, and shall assume none.

A large meeting of whites and negroes was held in Columbus, Ga., on the 31st ult. Resolutions denouncing the enfranchisement of all the whites were passed and declaring the rights of the negroes to hold office. Some soldiers from the garrison interfered, and were afterwards arrested. An attempt to mob William & Holmes was made by the radical blacks.

A collision between the blacks and whites took place in Washington, Rhea county, Tenn., last week. The negroes were driven from the town, but being reinforced by the Loyal League, the fight was renewed with varying success. Several were wounded, and a general collision in that quarter was imminent.

The deaths in New Orleans last week from yellow fever were 126.

A letter received at St. Louis, from a former resident states that the negroes in Northern Texas have generally quit work and gone into camp well armed. They are to be a law unto themselves if they can.

The deaths from yellow fever in Galveston, Texas, for one week were 241, and in Corpus Christi, 100. About half the population in those places are sick or dead.

The "Countryman," published at Hempstead, Texas, Aug. 17th, says the cotton worm there had ceased its ravages and a full crop was expected.

Western Items.

Accounts from St. Louis mention the arrival there of many families from the South who apprehend an uprising of the blacks who are well armed and menacing in speech and deportment.

The net earnings of the Union Pacific Railroad, Kansas branch, for July, were $85,000.

A few days since a man calling himself "A. Burns," assuming to be a Baptist clergyman, got four drafts on the Tenth National Bank, N. Y., cashed at the First National Bank, Madison, Wis., for $10,000 and decamped for parts unknown. The drafts proved to be forgeries. A reward of $2,500 is offered for the forger and the money.

A large portion of Reynolds City, Montana, was lately destroyed by fire.

On the 30th ult. the liquor store of David Henry & Co., Chicago, was destroyed by fire. Loss $60,000. Insured $45,000.

Last week John McGreen and Charles Kinney of Kelley's Island, near Sandusky, Ohio, swam a race in Lake Erie from the Island towards the main land at Marblehead—a distance of 4½ miles. Kinney gave out at the end of three miles, and was taken into a boat. McGreen accomplished the whole distance in two and a half hours without resting.

More Indian murders and thefts are reported in Colorado and Utah. Gen. Terry has authorized Gov. Smith to proceed against the Indians at once, and preparations for the purpose are actively making. The Indians were recently repulsed in a fight near Fort Phil. Kearney. They are under the leadership of Red Cloud, who is bent on war.

J. S. Kirby, railroad agent, committed suicide at Americus, Kansas, last week. He was a reputed defaulter to the amount of $5,000.

Jones and McCool had a prize fight in Butler county, Ohio, on the 31st ult. Thirty-four rounds were fought and Jones badly whipped.

The receipts of gold at San Francisco for the last week were $1,100,000.

The Indians in Arizona are on the war path.

Foreign Intelligence.

The Prussian journals are very bitter in tone with reference to the recent conference of Napoleon and Francis Joseph at Salsburg.

Reports from rebel sources in Spain claim continued success for the Revolutionists, especially in the Province of Aragon. They are reported to have captured the city of Sarragossa.

The American Minister to the Court of Turkey, E. J. Morris, is said to have presented to the Sultan the resolutions of Congress with respect to the war in Candia.

Mr. Bancroft, the American Minister to the Court of Prussia, on special invitation, dined with the King on the 28th ult. A highly satisfactory interview of three hours' duration, preceded the dinner. At the conclusion of the latter the Minister was conveyed home in the royal coach.

Notwithstanding the assurance of the Moniteur that the late meeting of the two Emperors assures the peace of Europe, much uneasiness is manifested on the Bourse in consequence of apprehensions of war, and the tendency of the money market was downward.

The English Government is sending an imposing force to Abyssinia. Fourteen transports were chartered to carry out troops.

The reported collision between General Grant and the President had a marked effect on the price of American securities in London, inducing much speculation in 5-20 bonds. The prices of bread stuffs have suffered a considerable decline.

Lisbon dates of the 30th ult. announced the arrival of a steamer from Rio Janeiro, bringing news that the allied army had crossed the upper Parana into Paraguay. A great battle was expected to be the result.

The resolutions of the United States Congress with reference to the Cretans are said to have created a profound sensation at Constantinople.

It is said France has given assurance of peace to Prussia.

Active preparations are making by the English in India to rescue their countrymen in prison in Abyssinia. Sir William Napier commands the expedition.

The Emperor Napoleon recently made a speech in Paris counseling the French to have faith in the future.

Minister Bancroft had an audience with the King of Prussia on the 27th ult., when his credentials were delivered. Von Bismark sent him an invitation to a dinner be given in honor of the American Ambassador.

A new cable, from Brest to New York, is to be laid next May. The steamship Great Eastern has been chartered for the work.

Denmark has renewed its demand on Prussia in regard to the Northern Provinces of Schleswig.

It is asserted, by a prominent journal in Bavaria, that neither Bavaria nor any of the States of Southern Germany will unite either with Prussia or Austria, but, remaining independent of each, will hold the balance of power between the Northern Confederation and Austria.

The harvest accounts from the continent are satisfactory.

Napoleon and Louis of Bavaria, have had a friendly meeting at Munich. The Emperor and Empress of Austria joined them afterwards and participated in the general good feeling. Napoleon talks peace but prepares for war.

The cholera is raging at Palermo with great violence.

The Cretans are about to issue "letters of marque."

The situation of affairs in Spain is considered to be very critical. Martial law has been proclaimed in Barcelonia.

The Forty-Second Anniversary of the American Sunday School Union, in the Academy of Music.—The festivities were presided over by Chief Justice Chase, who made an admirable speech. The Academy was crowded with a most appreciative audience, and a chorus of six hundred children sang with inspiring effect; with their clear, fresh voices, supported by a superb reed Organ, which was so unusually fine that it deserves especial notice. We have never heard such a beautiful musical effect from so comparatively a small instrument. We learn from the programme that it was one of the celebrated American Organs, manufactured by S. D. & H. W. Smith of Boston, and can appreciate the high praise which every one accords them, as they are among the finest in America. Smith's Organs have a purity and volume of tone really astonishing for their size. One of our first musicians said to us, "the American Organs of Messrs. Smith are the most perfect and beautiful I have ever seen," We agree with him, and having examined the instruments carefully, must give them unreserved praise.—*Philadelphia Item.*

Commercial, Markets, Etc.

Rural New-Yorker Office,
Rochester, September 3, 1867.

The money market continues easy, and the accumulation of capital at the sea board is large. More currency than heretofore was sent West last week to move the crops, yet without producing any material effect on the market. Some alarmists apprehended financial trouble in consequence of the political excitement at Washington, but their fears thus far have proved groundless.

The immense accumulation of capital at the money centers in Europe continues to attract attention. Capitalists are hoarding their funds in consequence of distrust in the political future of Europe. In London and Paris there is no demand for money with interest at 1½ ₱ cent. This state of things indicates closed factories, and idle and hungry workmen. An exchange, speaking of the European market says:—"Money never was so plenty, although thousands of families starve for want of it. Enterprise is at a stand still, and the nations uncertain, fearful of the future, suspend ordinary industry, and wait for new developments. Commerce is afraid of war, and remains supine, inert, until the Kings shall have fought out their miserable quarrels."

Trade at the East continues dull. The jobbing business in August was unusually light.

Wool.—There is a little firmer feeling in the wool market, though we cannot report much advance in prices. The average price is 40c, though fine lots are sold at something above this figure. The last Boston Bulletin notices the market thus:—"The wool market exhibits no marked change except that the transactions are smaller in volume, and that both buyers and sellers have relapsed into seemingly mutual indifference to further dealings." The sales in Boston last week were to the amount of 650,000 lbs. at a range of 20@65c for fleece. The market for woolen goods has somewhat improved.

Wheat.—Red wheat is now selling in this city at $2@2,05. White wheat is very scarce and such lots as are offered readily bring $2,50. Farmers are not selling freely. Most of the mills in this city are now grinding Western wheat.

Rochester Wholesale Prices Current.

GERRY E. DANFORD & CO.,
No. 127 South Clark Street, Chicago, Illinois.

CHURCH CHOIRS ARE SATISFIED that the best book for their use is "The Jubilate," by L. O. Emerson. Letters from all directions confirm the opinion that no collection of Church Music recently published has given such general satisfaction. Choirs the most fastidious in their tastes, and having the reputation of being "very hard to please," have acknowledged it to be just the book they want. Price, $1,38 per copy; $12 a dozen. OLIVER DITSON & CO., Publishers, Boston; C. H. DITSON & CO., New York.

THE CELEBRATED
CRAIG MICROSCOPE
Combines instruction with amusement.—Best, simplest, cheapest and most powerful microscope in the world. Magnifies 10,000 times. Made on an entirely new plan, hence its low price and high magnifying power. Requires no focal adjustment, therefore it can be readily used by every one—even by children. A beautiful gift to old or young. Adapted to the family circle as well as to scientific use. Shows the adulterations in food, thousands of animals in a single drop of water, eels in vinegar, globules in milk, blood and other fluids, tubular structure of hair, claws on a fly's foot, also the celebrated "trichina spiralis" or pork worm, which is causing so many deaths among pork-eaters, and in fact the objects which may be examined in this wonderful microscope are without number. All are invited to call and see its great magnifying power. It took the first premium at the Ohio State Fair. Liberal discount to Agents, Booksellers and Stationers, Fancy Goods Dealers, Toy Dealers, Jewelers, Opticians, Druggists, &c. Price, $2,50. Packed in a neat box and sent pre-paid to any address on receipt of $2,75. Money can be sent by mail at our risk. Address GEO. MEADE, Racine, Wis.

AN INVALUABLE MEDICINE FOR THE PURIFYING OF THE BLOOD.

DR. J. W. POLAND'S
HUMOR DOCTOR,
A Positive Remedy for all kinds of Humors,
[PARTICULARLY]
Erysipelas, Nettle Rash, Salt Rheum, Scrofula, Carbuncles, Boils, and Piles.

This excellent medicinal compound was first prepared by Dr. J. W. POLAND, in 1847, and was then employed with great success in expelling Humors from the blood; but in 1858 a medical friend, who was quite celebrated as a physician, especially in the treatment of humors, suggested some important improvements, which were adopted, and which has made it (so the people say) the very best remedy for all kinds of humors known to "the faculty."

The Humor Doctor cures Scrofula, Salt Rheum, Erysipelas, Canker, Piles, Nettle Rash, &c. Numerous individuals, who have used this remedy for Erysipelas, give it the most flattering recommendations.

This preparation is composed entirely of vegetables, among which are Sarsaparilla, Yellow Dock, Noble Pine, Mandrake and Bloodroot.

When the originator lived in New Hampshire, at Goffstown Center, for the space of thirty or forty miles around, and in Manchester particularly, the Humor Doctor was well known and highly valued for the numerous and wonderful cures which it effected. Though manufactured in large quantities the supply was frequently exhausted, and purchasers had to wait for more to be made. In that region some very severe cases of Erysipelas were treated with,—and they were cured! Erysipelas sores, or carbuncles,—those ugly, painful ulcers,—were entirely removed wherever this medicine was faithfully used. So it was with Scrofula and Salt Rheum. The Humor Doctor cured them.

Within the last ten years this valuable remedy has so increased in popularity that now it is more largely used all over New England than any other one preparation for cleansing the blood, and restoring the system to its healthy condition. Throughout the Western States it is now meeting with great success wherever it has been introduced. It is *free* from any dangerous drugs, is pleasant to the taste, safe, yet sure and effective in its action.

PREPARED AT THE
New England Botanic Depot, - - Boston, Mass.
And for sale by all Dealers in Medicine.

THE GREAT PRIZE!
THE ONLY
Grand Cross of the Legion of Honor
AND GOLD MEDAL
Awarded to American Sewing Machines at the Paris Exposition of 1867, was given to us as per Imperial Decree, published in the "Moniteur Universel" (Official Journal of the French Empire,) Tuesday, July 2, 1867.

The Howe Sewing Machines
MANUFACTURED BY
THE HOWE MACHINE CO.,
ELIAS HOWE, Jr., President,
699 BROADWAY, NEW YORK.
FOR FAMILIES AND MANUFACTURERS.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine.

The New Improved Family Machine is without a rival, and cannot be surpassed,—a Hemmer, Feller, Braider, Quilter and Guide go with each Family Machine free of charge.

Every Machine is as near perfection as the best machinery in the world can make it.

They are adapted to all kinds of Family sewing, and Manufacturing of every description, making a beautiful and perfect Stitch, alike on both sides of the articles sewed, and will neither rip nor ravel.

The parts being exactly alike, if any part needs to be replaced, the operator can replace it.

Loss of time and expense of sending to a machine shop rarely occurs.

WILLIS' STUMP MACHINE.

Correspondence between F. F. Merceron of Philadelphia, and G. K. Trask of Massachusetts.

PHILADELPHIA, March 4.

Dear Sir: Understanding that you have one of Mr. WILLIS' Stump Machines in practical operation, I wish you to give me a correct account of the work it will do in a day—whether it is expensive to keep in repair—how long you have been using it—and whatever information you can give me concerning its merits or demerits. Respectfully, F. F. MERCERON.

MARCH 6th.

Dear Sir: I received a letter from you this morning concerning the Stump Machine of Mr. WILLIS. I have used the machine more or less since it came into notice, and have probably tested its powers more than any other person in the business. I have learned the crooks and kinks in the way of using it to the best advantage. The quantity depends on the kind of stumps you have to pull. I can take a machine of his largest kind and pull 35 or 40 of the largest stumps you can find; or pull from 60 to 80 of the size of a barrel, or 100 or more stumps 10 to 20 inches through, in a day.

I take my machine, (weight about a ton,) two horses, two men and a boy. One of my men I pay $1.50 per day, one $1.00, and the boy 62½ cts., horses $1.25, myself and machine, $5. My price for all hands and machine is $10 per day. I pull good stumps at 20 and 50 cents apiece. As to the merits of the machine, I can say it has no equal as to power, simplicity or ease of work. As to its demerits, no fault can be found, unless a man is troubled with laziness. It will make an awful pile of stumps, if you only keep it working. If you get a machine, I hope you will be as well pleased as I have been. G. K. TRASK.

☞ The great advantage of this Machine over all others is that it will clear or pull an acre of stumps without moving; lifts them from the pit and draws them until every root is detached. Address, for pamphlet of this machine, (inclose 3 cent stamp,)

W. W. WILLIS, ROCHESTER, N. Y.

THE UNION TELEGRAPH COLLEGE, OBERLIN, OHIO, has authority from Telegraph employers to receive students and *guarantee* them *good situations* upon graduation. This is the *only* school of the kind in the Union which has such support, and in point of numbers is the LARGEST. Offices are secured to graduates by WRITTEN CONTRACT. Our letters of authority for graduating can be seen by any who doubt our ability to promise employment. Operators receive from $35 to $125 per month. For full particulars address

The American Agriculturist,

FOR THE

FARM, GARDEN and HOUSEHOLD,

Including a Special Interesting and Instructive Department for

CHILDREN AND YOUTH.

ESTABLISHED IN 1842.

A GOOD, CHEAP, AND VERY VALUABLE PAPER FOR EVERY MAN, WOMAN, AND CHILD, IN CITY, VILLAGE, AND COUNTRY.

The AGRICULTURIST is a large periodical of 32 to 40 pages, well printed, and filled with plain, practical, reliable, original matter, including hundreds of beautiful and instructive ENGRAVINGS in every annual volume.

It contains each month a Calendar of Operations to be performed on the FARM, in the ORCHARD and GARDEN, in and around the DWELLING, etc.

The thousands of hints and suggestions given in every volume are prepared by practical, intelligent WORKINGMEN, who know what they write about.

The HOUSEHOLD DEPARTMENT is valuable to every Housekeeper, affording very many useful hints and directions calculated to lighten and facilitate in-door work.

The DEPARTMENT FOR CHILDREN AND YOUTH is prepared with special care, to furnish not only amusement, but also to inculcate knowledge and sound moral principles.

Circulation—TERMS—The circulation of the American Agriculturist (125,000 to 150,000) is so large that it can be furnished at the low price of $1.50 A YEAR; four copies, for $5; ten copies, for $12; twenty or more, $1 each; single numbers, 15 cents each.

NOW NOTICE:—The offer of THREE MONTHS FOR NOTHING, applies to ALL NEW SUBSCRIBERS RECEIVED IN SEPTEMBER, 1867, for the year 1868, whether single names or members of clubs. Thus:—$1.50 pays for one copy of the American Agriculturist for the whole of 1868, and the subscriber receives the paper for the last three months of this year FREE. $5, will pay for FOUR subscribers for the whole of 1868, and each of them receives the paper for the last three months of this year FREE, that is, they receive the Agriculturist from October 1867 to December 1868 inclusive, and in the same way with the larger clubs, as above; and these names count on the Premium Lists.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5613 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges**, by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5613 New York city.

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $10; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

IT DON'T SCRATCH YOU! OR TEAR YOUR CLOTHES!

Davison's Thornless Black-Cap Raspberry is the best, as it is hardy, productive, early and sweet, and it is a pleasure to cultivate it. Circulars giving origin, description, prices, testimonials, &c., will be ready in September. JOSEPH SINTON, Angola, Erie Co., N. Y.

AGENTS WANTED For J. T. HEADLEY'S Great Work on our Navy, entitled "FARRAGUT AND OUR NAVAL COMMANDERS," comprising the early Life and Naval Career of Admirals Farragut, Porter, Foote, Dupont and a host of others. Large 12mo.—534 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

MALTBY HOUSE,

A. B. MILLER, PROPRIETOR,

BALTIMORE, MD.

THE TWO ARMIES.

[This is one of the most perfect, most impressive of all Dr. HOLMES' charming little poems:]

As Life's unending column pours,
Two marshall'd hosts are seen,—
Two armies on the trampled shores
That Death flows black between.

One marches to the drum-beat roll,
The wide-mouthed clarion's bray,
And bears upon a crimson scroll,
"Our glory is to slay."

One moves in silence by the stream,
With sad yet watchful eyes,
Calm as the patient planet's gleam
That walks the clouded skies.

Along its front no sabers shine,
No blood-red pennons wave;
Its banner bears the single line,
"Our duty is to save."

For those no death-bed's lingering shade;
At honor's trumpet-call,
With knitted brow and lifted blade
In glory's arms they fall.

For these no clashing falchions bright,
No stirring battle-cry;
The bloodless stabber calls by night,—
Each answers, "Here am I!"

For those the sculptor's laurell'd bust,
The builder's marble piles,
The anthems pealing o'er their dust
Through long cathedral aisles.

For these the blossom-sprinkled turf,
That floods the lonely graves,
When Spring rolls in her sea-green surf
In flowery-foaming waves.

Two paths lead upward from below,
And angels wait above,
Who count each burning life-drop's flow,
Each falling tear of Love.

Though from the Heroes bleeding breast
Her pulses Freedom drew,
Though the white lilies in her crest
Sprang from that scarlet dew,—

While Valor's haughty champions wait
Till all their scars are shown,
Love walks unchallenged through the gate,
To sit beside the Throne.

The Story Teller.

Written for Moore's Rural New-Yorker.

MY HEART'S HISTORY.

BY LINA HILTON.

"NELL RAY, where are you?"

These words came quick and rather impatiently to my ears, as I was seated in my room, poring over a new book, in which I had become so deeply interested that I had entirely forgotten the stern realities of life; but was suddenly aroused to a sense of them by the words of my little fairy friend, ROSE WILD, and in a moment more the door flew open and she stood before me, her eyes sparkling with unusual brightness.

"Dear me! if this isn't provoking, NELL RAY. Here I have been looking for you in the garden, in the sitting-room and parlor, and in fact everywhere, calling you meanwhile as lustily as these lungs of mine would possibly admit, and here you are reading as interestedly and coolly as if I had not had a most severe test of my patience in ransacking all over for your precious self. Who would have dreamed of your being cooped up here this beautiful day?"

"Well, my little impulsive friend, I am very sorry to have been such a trial to your usually mild temper; but, as you see, I was feasting so heartily upon the glorious contents of this volume, I had neither eyes nor ears for anything else; and therefore was deaf to your calls. But never mind, now that I am found, proceed to relate to your eager fried why you were so particularly anxious to be in her delightful society."

"Well, the fact is my cousin, LEWIS STANLEY, has just arrived at our house, and I tell you, NELL, he is perfectly splendid, just as handsome as a picture, and he talks beautifully about books, and places where he has been—just as you do. O, I know you will like each other, and I want you to go right home with me now, and see him. That is why I am here, and why I was so impatient to see you."

I was for a moment dumb with astonishment, and then said, "Why, my little enthusiastic wild ROSE, is it possible that you are no better acquainted with me than to suppose I would accompany you home to see a gentleman?"

"Indeed, I can see no reason why my best friend should not go home with me to see my handsome cousin. I am sure if you will not I shall tell him just how naughty you are. But please do go. He need not know that you knew he was there."

"Nevertheless, little ROSE, I cannot do as you wish this time. But you must not feel too badly about it," I added, as I saw the great tear-drops standing in her eyes, and I drew her into my lap and kissed the tears away from her beautiful face, and talked cheerfully upon indifferent subjects until the traces of tears had entirely disappeared and her face was wreathed in smiles.

"Well, NELL, I must go," she said at last, "or mother will be wondering where I am, and perhaps cousin LEWIS will be lonesome. Remember, I shall tell him just how naughty you are."

"Very well,—then I presume he will not care for an introduction to your humble servant."

"Well, he shall have one in spite of fate, and that at no very distant day, either. So you may be in readiness, my fair, dignified friend; and now, adieu, until we meet again," and, giving me a hasty kiss, she left me alone with my book and meditations. But somehow my book had lost all its interest, and after vainly trying to find the charm that had held me spell-bound, previous to the call of ROSE, I threw it down and commenced thinking.

Ah! my little ROSE, you little thought your cousin was no stranger to me. Well do I remember his fine and dignified bearing—his handsome face—and last, but not least, his intellectual mind, that in brilliancy outshines the most precious gem. No danger of my ever forgetting him, any more than I shall those happy days spent in his society three months ago; or those cruel words I heard uttered by his proud, haughty mother. It was at the party at Mrs. C's. I had wandered out into the garden to obtain a breath of fresh air, for the crowded rooms made me feel sick and faint. I stood beneath the shadows of a majestic pine, enjoying immensely the glorious beauties of that calm, starlit evening, and thinking how beautiful our all-wise Creator had made everything for us. Suddenly my thoughts were interrupted by two ladies passing near me, and one of them saying very earnestly, "I am really afraid that proud icicle, Miss HELEN RAY, will succeed in her designs upon my son. He seems quite interested in her. But I would rather see him in his grave than have him wed that poor, haughty girl."

I plainly distinguished the voice. It belonged to LEWIS STANLEY'S mother. They passed me, and I sank down upon a seat that was near me, heart-sick and weary. But it was soon gone. HELEN RAY was not the person to give up so easily. If my life-path was to be a sorrowful one, I had strength to bear its burdens; so, breathing a vow that I would never enter a family where I would not be welcome to all its members, I re-entered those rooms crowded with beauty and fashion.

As soon as I returned, LEWIS STANLEY came to me. "Miss RAY," he said, "I have been looking for you vainly for some time; I am glad the long-looked-for has come at last. But you are pale; are you ill?"—and he looked very anxiously into my face. I told him my head ached slightly.

"A walk in the garden will do you good. Will you permit me to escort you thither? I have something to say to you, too, which is for your ear alone."

I replied by simply taking his arm, and we wended our way where such a little time before I had my happy dream blasted so quickly, yet so surely.

We walked up and down the smooth gravel walk several times, without either speaking; then he paused suddenly, and in a sweet, tender voice told me of his deep abiding love for me, and offered me his heart and hand in language fitting to his noble self. I felt that if I could accept this wealth of love my future life would be one of perfect peace and happiness, for I loved him almost to adoration. But it could not be. Stern fate had otherwise decreed, and I gave him a cold refusal. He seemed almost astounded for a moment; then said in a voice so sorrowful that tears almost forced themselves from my eyes—"Miss RAY, I cannot, will not, believe you are a vain coquette; I could not have been so cruelly deceived. It must be you have good reasons for blasting all my hopes of happiness in the long future of my life." I told him I had no more to say, and I thought we had better enter the house.

The party had lost all its interest for me, so I soon hastened home, and in the quiet of my room for the first time gave vent to my grief in a flood of tears. Through all the solitude of that night, I sat by the window, thinking. After the first burst of weakness I wiped the tears from my face with a firm hand. I had no time for such idle demonstrations, and when daylight returned, I had marked out a path in which my feet must walk. I would leave home; I could not stay near him. An aunt of mine had long been wishing me to make her a visit, and I would accept her invitation immediately.

The only sign I carried to the breakfast table, of my severe heart-struggle, was a face a few shades paler than usual. My mother said she wished I would not attend any more parties; she was sure they were injuring my health. I told her I would not, as I had concluded to accept Aunt LUCY'S invitation, and make her a long visit. The family looked surprised; but made no objections. In fact, they never did to any of my whims. My wishes were ever their law.

With me to think was to act, and in less than a week I was quietly settled with Aunt LUCY. It was a small, unpretending village, just the place for a world-weary, broken heart. Here I would forget the past, and spend my time in storing more bountifully my brain with knowledge. And in the three months which I remained there I was almost happy in pursuing my self-imposed task, in spite of the dense shadows which obscured the sunlight of my existence. Now, my peace of mind and quiet had been scattered to the four winds by the startling announcement that the idol of my heart was once more near me. Should I flee from him again? No, I would not. I had done so once; mysterious fate had brought him here, and I had grown strong enough now, I thought, to bear his presence, even when I knew he could be nothing to me.

I was here interrupted in my reverie by the entrance of Aunt LUCY, anxiously inquiring if I was sick. It was so unusual, she said, for me to stay in my room so long, instead of being out enjoying the beautiful weather. I told her I had a severe headache, and perhaps a ramble in the woods would do me good, and accordingly I wandered out into the fresh air, hardly knowing, caring less, where my footsteps led me. Scarcely conscious how I reached it, I found myself seated upon a favorite seat of mine, in a delightful grove about a mile from Aunt LUCY'S. I had only been there a few moments when I heard voices, and looking up saw my dear little friend ROSE, accompanied by LEWIS STANLEY. Would they see me? I hoped not; I would keep very quiet. But ah, vain effort. They had seen me, and were coming directly toward me. ROSE came bounding along in her usual impulsive way, and throwing her arms around my neck, kissed me heartily, then jumped up and apologized for not introducing her cousin before.

"Your friend is no stranger to me, ROSE," said STANLEY, adding, "Miss RAY, I am very glad to see you,"—and the hearty grasp of the hand, and glad welcome in his eyes, told me of his sincerity. I could not speak, so gave him my hand in silence, while he continued—"I should have supposed the companionship of my warm-hearted cousin would have melted some of the iciness of your nature."

I told him human nature was not so easily changed. Meanwhile, ROSE had been looking in the most profound astonishment. "Why is it," she said, "that I have never heard you speak of him, NELL RAY? I do not think I will ever tell you anything again as long as I live," and she pouted her pretty lips very crossly.

"Why, my little wild ROSE, you must not expect I could ever find time to relate to you all these brains of mine contain," I answered gaily; "beside, I had not the remotest idea that Mr. STANLEY was your cousin until to-day."

"Well, I suppose I shall have to excuse you this time; I love you too well to be offended with you long; and now, '*mon chere*,' I will go and cull you a bouquet, while you and cousin LEWIS talk over old times;" and she bounded away with the fleetness of a fawn.

He took my hand in his, and looked into my face with a loving, inquiring gaze; then said—"Shall we talk over old times, Miss RAY? It is a strange providence that has brought us together; you are the last one I thought of seeing in this little village. The past three months have been very long ones to me. I cannot express in words how much I have longed for the presence of my heart's chosen one. O, Miss Ray, I will not repeat the offer which met with such a decided refusal from you, but cannot you give me some little hope that my weary waiting may sometime be rewarded by the precious boon of your love?"

"It is impossible, Mr. STANLEY, and I hope the subject will not be renewed between us."

"But may I not call upon you? Surely you will let me be your friend, if nothing more."

"I shall be very happy to class you among my friends, but I think under existing circumstances the less we see of each other the better."

"Just as you think best, Miss RAY. I will not intrude my hateful presence upon you again. May GOD bless you ever; adieu;" and he hastened away, with a face from which the color had all flown. O, what would I not have given if I could have called him back and told him how madly I loved him;—but no, it would not do; I must still bear my cross alone. He had not disappeared from sight when ROSE came back with her hat filled with flowers.

"Why, NELL—what have you done with cousin LEWIS?" I pointed to his receding figure in the distance. "Gallant gentleman, I should think," she said, indignantly. "Presume I will accept of an invitation to walk with him again sometime. If I don't read the young gentleman a lecture upon good manners, my name is not ROSE WILD. But I cannot spend my precious time upon such an ungallant youth; therefore I will proceed to weave my flowers into a wreath to adorn your queenly head. I wonder if you know how beautiful you are. You always seem perfectly unconscious that you are the fortunate possessor of a single charm. O, NELL, I cannot help envying you your perfect beauty sometimes."

"Cease, little flatterer, or you may make me vain. But seriously, my darling, I often envy you your pretty childish ways, your golden curls, and eyes of heavenly blue. Now, as you have finished a beautiful wreath for me (for which I thank you most heartily,) I think we had better return home."

As we wended our way homeward, ROSE chatted gaily, little thinking what a heavy weight of sorrow rested upon the heart of her companion.

The following week my studies were very much neglected. I could not fix my mind upon anything long enough to commit it to memory. ROSE did not call as often as usual. She felt in duty bound to stay at home and entertain her cousin, during his sojourn among them. But one morning while I was helping aunt LUCY with her baking, ROSE came rushing in, nearly out of breath with the exertion of fast walking, and every feature showing intense excitement. "Please come up into your room with me," she said; "I have something to say to you." I followed her up stairs, wondering meanwhile what had happened to excite her so much. I did not have to wait long for an explanation, for she commenced hurriedly, "O, NELLIE, cousin LEWIS is very sick; we fear dangerous. He is quite delirious; and NELLIE dear, he keeps calling for you. The doctor requested me to tell you he thought that something weighed heavily upon his mind and caused his sickness, and he was sure it was something concerning you; also he says you only can save his life. I know all, NELLIE. I have guessed what he has not revealed in his ravings. You did not dare trust me with your secret, but you need not have been afraid. I would sooner die than betray the confidence of a friend. But I do not wonder. I know I appear very childish and simple, but you will surely come to cousin LEWIS, will you not? We have telegraphed for his mother. GOD grant that she may arrive before it is too late to see him alive.

What could I do? Should I be the means of restoring my darling to health and his friends. Of course I must go—but just then the words, "I would rather see him in his grave than to have him wed that poor, haughty girl," came to my memory with startling distinctness, and my determination was instantly made.

"I cannot go, ROSE; circumstances will not admit. Entreaty will be useless," I added, as I saw she was going to try her pretty persuasive powers.

"I am sorry NELL, yet I believe you have good reasons for your decision. But I must go—I am needed at home."

How the next three days passed I hardly know. I only remember walking my room a great deal, bending the suppliant knee often, and lifting my voice in earnest prayer that *his* life might be spared.

The next morning his mother came to me, and begged me to go to her son. She said, "Why cannot you love him? I am sure he is both noble and good."

"Granted, Mrs. STANLEY," I replied coldly; "but what think you now about the proud icicle succeeding in her designs upon your son? and would you not rather 'see him in his grave than have him wed that poor, haughty girl?'"

"O! forgive me for those cruel, hasty words," she said earnestly. "I repented of them, long ago. I did not know you then, but have learned to love you since, from hearing LEWIS tell of your excellence of mind and heart. Besides this lesson I have learned another, that only the good and pure are truly noble."

"I will go with you, Mrs. STANLEY," I said, softly.

"May GOD bless you, Miss RAY;" and she clasped me to her heart and pressed many warm kisses upon my cheeks and brow.

When I entered the sick room LEWIS was calling wildly, "O! HELEN, HELEN! come to me, my darling! I want you so much." I went up to him and placed my hand upon his burning forehead, and said, "HELEN has come, LEWIS." "I knew you would," he murmured softly, and soon after fell into a quiet sleep. The fever in his veins raged wildly for a week, but my voice always soothed him. At last the deep sleep which was to determine whether he would recover fell upon him. The Doctor had ordered the most perfect quiet, and so I was left alone with him. Hour after hour I watched by his bedside with almost breathless anxiety.

Finally his eyelids unclosed slowly and he looked at me with a pleased, surprised look, and was going to speak, but I put my hand over his lips and said, "You have been very sick, and must keep quiet so that you may be spared to us. Remember HELEN is with you, and loves you devotedly." He looked very happy and contented, and soon after fell into a refreshing sleep, such as he had not had before for a long time.

"Saved!" said the Doctor, joyfully, as he came in to look at him.

The following week I spent most of the time by his bedside, reading, singing or conversing, whichever pleased him best. He said those were the happiest days he ever experienced. He recovered rapidly, and in two weeks was able to walk out of doors. One day while we were out walking, enjoying the beauties of nature, and the sweet communion of two loving hearts, I told him all—how I had loved him all the while, and what had been the reason of my coldness toward him. A cloud passed over his face when I told him what I had accidentally overheard his mother say, but it soon passed away; it was no time to be sorrowful for the forever past.

"Nothing shall separate us now, HELEN."

"Nothing," I answered.

"Our life shall be one of perfect happiness and love, my HELEN,—all my own at last."

"May our life be one of usefulness, too, LEWIS, as well as happiness."

"Amen to that, my darling."

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 28 letters.
My 5, 20, 2, 23 is a pronoun.
My 6, 32, 3, 27 is to stop.
My 11, 26, 9, 14 is a wild beast.
My 24, 2, 8, 13 is a bird of prey.
My 28, 7, 32, 10, 19 is the seat of life.
My 31, 25, 2, 37, 29, 17 is what all should strive to gain.
My 22, 1, 38, 32, 27 is a kind of grain.
My 4, 35, 26, 30, 2, 33 relates to flowers.
My 34, 11, 21, 15, 12 is to deluge.
My 16, 18 is distress.
My whole is an old proverb.

Alexandria, O. BESS.

ANSWERS TO ENIGMAS, &c., IN No. 918.

Answer to Miscellaneous Enigma:—Help yourself and heaven shall help you.

Answer to Anagram:

Speak not harshly—much of care
Every human heart must bear;
Enough of shadows rudely play
Around the very summit way.
By thy childhood's gushing tears,
By thy grief in after years,
By the anguish thou dost know,
Add not to another's woe.

Answer to Problem:—5 cows, 1 sheep, 91 hogs.

Answer to Puzzle:

Read up and down
As you may see,
I am in love,
And 'tis with thee.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

BELLS! BELLS!!
MENEELY'S WEST TROY BELL FOUNDERY,
ESTABLISED IN 1826.

Bells for Churches, Academies, Factories, &c., made of genuine Bell-metal, (Copper and Tin) mounted with Improved Patented Mountings, and warranted. To the Readers of the Rural New-Yorker.

TWENTY-SIX years ago this month (September,) "The Eastman's Commercial College" commenced its operations in this city, and has continued up to this time in giving instruction to young men in business practices and Book-Keeping. From these long years of arduous labor, it may be asked what has this Institution accomplished towards business instruction?—What in the way of disseminating correct theories and notions?—How much real good during its long lease of patronage, in return for the generous support it has meantime received?

FIRST.—The absolute and UNDENIABLE INVENTION of the entire Commercial College System, as it exists anywhere in this country, or in the world.

SECOND.—The original plan of ACTUAL BUSINESS exercises strictly in accordance with law, usage and common sense.

THIRD.—A long, pains-taking and judicious elaboration of the details and general working of said plan in daily practice—until it became the most perfect working plan of business instruction ever witnessed, as we verily believe.

FOURTH.—The most admirable sets of blanks, and the best adapted to perspecuity of accounts, unity of design, comprehensibility, utility, simplicity and scope, comprising all sets necessary to record in full and detail, the complete transactions and accounts of any branch of business carried on in the United States during the year 1867; and

FIFTH.—The fact of having fully qualified for active business employment thousands of young men of average capacity, and no previous knowledge of the duties of the same. There is OUR record.

OUR SUCCESS

Is attributable in a great measure, undoubtedly, to the fact that the Principal is a *thoroughly educated* business man, and a practical Book-Keeper—who fully understands the duties of the Counting-Room, and gives his undivided attention to the practical duties of teaching. Under such auspices, a young man need hardly fail of becoming a proficient in the shortest possible time and at the least expense, as he is only taught what he should know.

Our College Paper, giving full information, will be sent free of charge by addressing

A. R. EASTMAN, Principal,

AGRICULTURAL NOTES
FROM FRANCE AND SWITZERLAND.—No. II.

BY H. D. L. SWEET.

PARIS, August, 1867.

THE valley of the Aar, that was now reached, was most thoroughly cultivated wherever a man could gain a foothold to plant a vine or cut a handful of grass. On the slopes of the mountains with a southern aspect, every available spot up to the region of eternal snow is called upon to contribute its mite to the support of the population. For the first five hundred feet, or such a matter, the vine seems to take precedence, after which potatoes, turnips and cabbages flourish; then comes the meadows, and last the pastures up to six, seven, or eight thousand feet above tide. After a height of 4,000 feet is reached, the grass is scanty and only lasts a few weeks, and above that only in peculiarly sheltered places, and of peculiar geological formation, grass growing the highest on clay slates, and next to that limestone. The alluvial and diluvial flats are especially reserved for grain, fruit and early vegetables, to supply the vast number of travelers that make Interlachen their head quarters for various excursions around. The almost entire absence of stone in the fields, where the mountains on every hand are vast masses of it, struck me as very singular. If there were miles and miles of stone wall, in an old country, the absence of stone in the field could be easily accounted for, but such is not the case, and the original owners of the soil were lucky in not having that nuisance to contend with.

The exceedingly careful manner with which every crop is cultivated here, can only be done in a country like this, where labor is cheap, and the women have nothing to do but labor in the field, like the beasts of burden. In passing over the Wengern Alp on foot, from Lauterbrunnen to Grindelwald, the manner of gathering hay in high altitudes was witnessed in all of its worst features. The mower, with a scythe about thirty inches in length and four in breadth at the heel, fastened to a straight stick, with one thole set at right angles, stood upon one knee and one foot, on a very steep side hill, and kind o' scraped from the face of Nature a little fuzz, about six to ten inches high, thin and wiry at that. He might cut possibly five hundred pounds in a day on the side of a mountain on which the sun did not rise till eight o'clock a thousand feet above him, and on which it probably set by four o'clock. This grass so cut, has got to be cured with this little sunshine and the aid of women and girls, who stir it and turn it and rake it, tie it up in blankets, and carry it in many instances half a mile to a barn, on their heads, remember, on this steep mountain side. And in winter time some poor fellow has got to climb this mountain side in snow and storm, to feed the cows; so it has been for many hundred years, and always will be, probably.

Above the meadows came the pastures, where hundreds of cows were grazing. The grass short, and very green, forming a tough sward, is watered by the condensation of the clouds ten times as often as in the valley below, and from this cause and the naturally fertile soil, clay from decomposed shale, gives no doubt an abundant growth, for the short time that the season allows. The first herds and cows that gave milk, and temporary house or houses that were only used in summer, were near where the milk was converted into butter and cheese. These families were moved up as the pastures afforded grass, till September, and then gradually recede with the parting grass. Above the herds that gave milk were those apparently fattening, and this pasture attained the summit, certain, and how much above on the mountain, to the north, I cannot say. At the summit I would call it pretty good for young cattle, excellent for sheep, and at an elevation of 6,703 feet above the sea.

On the opposite side of the valley to the south, and within a mile, was the everlasting snow, and glaciers that reached hundreds of feet below these pastures. The Jungfrau rises about 8,000 feet above, and several times during the walk the immense avalanches came down with a voice of thunder that, echoing among the neighboring mountains, gave the only sign of life in the prevailing solitude except the distant tinkling of a bell. The valley of Griudelwald looked lovely after this scene of snowy desolation, but the charm, the poetry of agriculture, is all dispelled when you can see so much hard labor accomplishes so little, where life is prolonged by such sacrifices, and barely the necessaries of life are obtained; and none of its luxuries, or even education, comes in compensation for so much toil.

Nothing worthy of note passed in review till the city of Berne was reached, when, it being market day, a fine opportunity was given to view the productions of the country, its inhabitants in their holiday attire, as well as the city at the same time. There were from 50 to 75 small, dun-colored cows on sale, of pretty good form, resembling Ayrshires, but with rather shorter horns, and invariably black. They had not the silky hair of the Devons or Durhams, and so far as quantity is concerned should not consider them very great milkers. They were rather handsome, looked intelligent, with a keen, bright eye, thin neck, and heads rather large for my fancy. The horses, as a usual thing, were not very large, and in no instance did I see two hitched to the same vehicle; neither was there one that would have carried twenty bushels of wheat.

Everybody seemed to come to market and to bring what they had, from a dozen eggs to a cow. Many of the little stocks in trade in early morning would not amount to one dollar's worth with us: two or three rolls of butter, a small cheese, a few heads of lettuce, a peck of new potatoes, two or three skeins of linen thread, a fleece of coarse black wool, a few beans, a few peas, two or three bushels of old wheat or barley, usually comprehended the whole lot. There were probably 30 sheep and lambs, nearly all black, long-legged fellows, with coarse, harsh wool, and about the same number of pigs that I have before spoken of. Aside from the cattle no man had ten dollars' worth of anything,—yes, I will except his wife and children, who were also there.

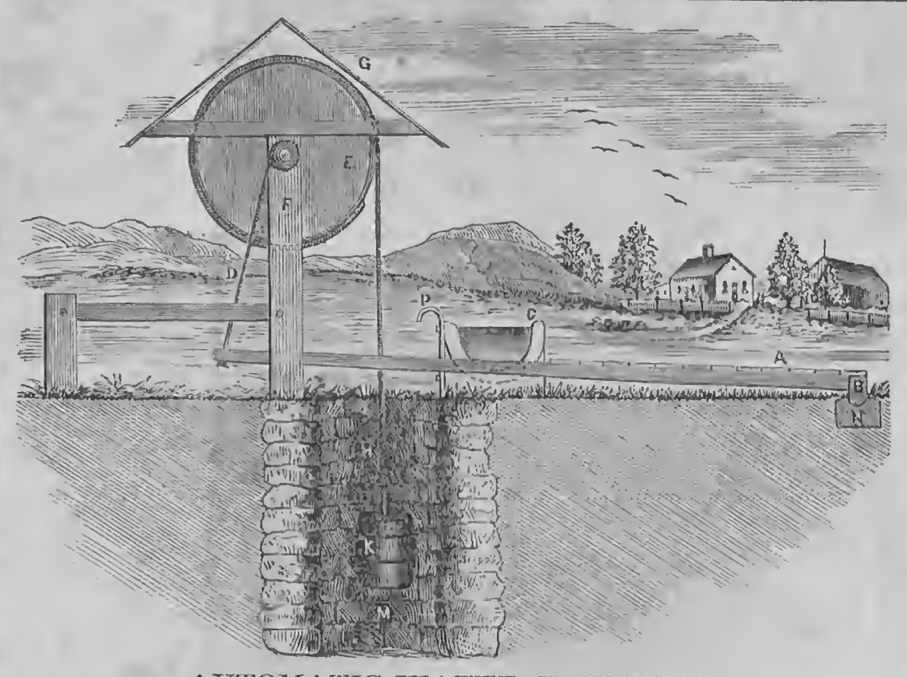
Of the grain itself I will not speak contemptuously; it was fine berry and clean, with hardly an exception. The grain appeared in all instances to be old, probably the surplus after getting in the new. There were some things for sale in the implement line that we should have in our museum as relics of a barbarous age—nowhere to be found in use with us except in Schoharie, and I hope not even there. Of course, our mowing machines, reapers, thrashers, winnowers, and all such things, are absolutely unknown to the great mass, but some few who will visit Paris this season must see something beside their own that will open their eyes to the improvements of the age they live in.

ABOUT WEEDS.—No. III.

THE extermination of weeds is the most interesting and practical part of our subject. But the cultivator may not hope to subdue useless plants so thoroughly as to lay aside his weapons of offense, and let the rust gather on them with impunity. Total eradication of weeds may not be hoped for, and the farm is yet to be shown on which this condition has been attained. Useless plants—weeds—will ever infest the soil, and increase the sweat of the brow whereby man eats his bread. "Thorns also and thistles shall it bring forth," was the early and ominous warning uttered to man when the gates of the Garden closed behind him forever. But no one will question but that weeds may be subdued to such an extent as to be of no perceptible detriment to the crops, and to cause but a trifling expense to the cultivator. The one thing most needful in this warfare on weeds is united and systemized effort among farmers. The warfare should be offensive,—some progress should be made every year towards ultimate subjugation of the enemy. Annuals may be eradicated simply by taking care that they do not ripen any seed; perennials must be smothered—subjected to repeated cutting, until their stores of nutriment in the underground stems are exhausted by repeated attempts to renew their tops.

Many weeds that infest our cultivated crops do not make their appearance in the grass lands. In fields that are covered with a thick turf but few annuals flourish so as to be of much detriment. The facility with which these may be cut so as to prevent their seeding, insures their speedy destruction. The perennial weeds, as Canada thistles and couch grass, are far more difficult to manage. There is but one course to be adopted with any promise of success, and that is such injury to the top of the plant as will cause the destruction of its roots. This may be accomplished by repeated cutting, or smothering by the liberal application of coarse manure, straw, or any substance which will answer the purpose. The liberal application of salt after cutting the weeds has sometimes been found successful in destroying their vitality.

When the farmer plows his fields and sows his grain, innumerable seeds of weeds which have lain dormant under the sod, spring to life and grow along with the crop. In most cases it is impossible to weed out these by hand labor. Generally, too, they are annuals, and they mature seed enough to stock the land densely with their species. With our present system of cultivating grain crops, we have no efficient protection against these intruders. Fighting them by hand is out of the question. We must devise some means of cultivation which can be applied to the growing crop. The system of drilling grain crops in rows having wide intermediate spaces, so as to admit of cultivation between, is one worthy of adoption, if for no other consideration at least for the facilities it affords for destroying weeds. Let us drill our grain in rows one foot apart and cultivate between, and we shall secure as great a yield if not greater, than under the present system, and be enabled to fight the weeds with success. Full plowing will sometimes start into growth the seeds of annuals, and is then a good practice; spring cultivation will destroy them. Gardens, especially those infested with chickweed, should be treated in this way. Summer fallowing, which allows of such frequent plowing as to keep down perennial plants, as the Canada thistle, is an effective means of destroying them if the work is thoroughly done; sometimes good cultivation early in the season, followed by a crop of buckwheat, will clean the soil of weeds. But the main reliance in the struggle to master the weeds should be placed on the thorough cultivation of every crop, and work so planned and executed as will surely lessen their strength and number each year on the farm.



AUTOMATIC WATER ELEVATOR.

ALL over this broad, fertile country of ours there are lands destitute of those surface springs and living streams of water, so necessary to the life and comfort of every living thing. In these places wells must be sunk, oftentimes to great depths, and all the water for the use of a large stock must be raised to the surface by laborious manual labor.

Various plans have been proposed for attaining this object, by dispensing with manual labor, in the use of windmills, &c., all of them however possessing such inherent defects as to render them of little practical use. The plan which I here present is one in which the animal is made its own servant, it being so arranged that in approaching the well it elevates the water and deposites it in the trough for its use. The method by which this result is attained will be easily understood by the aid of the accompanying drawing. A is a suspended platform, formed of two side timbers, mortised into a cross timber B, across which side timbers are spiked a series of planks, extending nearly to the trough C. To the further ends of each of these side timbers is attached a strong rope or chain D, which takes a couple of turns about the axle of the large wheel or pulley E, which is hung so as to revolve freely between two upright timbers F, having bearings therein. Upon these upright timbers is also constructed the roof G, to protect the working parts from snow and rain. About the pulley E, is wound another rope H, to the free end of which is attached the bucket K, shown suspended in a section of the well M. The bearing part of the platform is formed by rounding to a half circle the lower side of the cross piece B, which fits in a corresponding depression in the sleeper N. The whole apparatus is inclosed by a strong fence, except at the lower end of the platform.

The operation is doubtless already understood. The bucket K, by its own gravity, will descend to the bottom of the well, (where it remains filled with water,) thus unwinding the rope H from the pulley E, and winding up the rope D upon the axle, thus elevating the platform A into the position of a slightly inclined plane. Now, when an animal, approaching the well, steps upon the platform, in walking forward its weight will gradually depress the same, which unwinding the rope D from the axle, will at the same time wind up the rope H upon the pulley E, thus elevating the bucket until it reaches the hook P, which engaging therewith, will cause its contents to be deposited in the trough. When the animal retires, the apparatus will resume its natural position by the gravitation of the bucket, and all the parts will be in readiness for a repetition of the operation. The bucket should be provided with a valve in the bottom opening upwards to facilitate its filling.

The sizes of the wheel and axle and full of the platform must be proportioned to the depth of the well. With the axle six inches in diameter, and the pulley I six feet, by a fall of the end of the platform of eighteen inches—producing one revolution of the pulley, the bucket would be elevated eighteen feet. Thirty-two inches fall—producing two revolutions—thirty-two feet, &c.

In perfecting this invention simplicity has been my chief study. I have therefore reduced it to the smallest possible number of parts, so that it may be constructed by any farmer of ordinary mechanical ability. To the free use of all such the inventor hereby presents it.

Dream Lake, Aug. 20th, '67 WM. R. BROOKS.

AGRICULTURAL EDUCATION.—No. III.

FARMERS' CLUBS.

ALTHOUGH the farmer has hitherto paid but little attention to education, yet the present indications are very encouraging. A spirit of inquiry and rivalry has sprung up all over the country. Fairs are more generally attended, clubs for discussion and experiment are formed, and agricultural papers much better sustained. One of the most important means of exciting the interest of farmers in improvements in agriculture is in the formation of farmers' clubs. They have uniformly had a good effect. Wherever clubs have been formed by a few persevering individuals, who would see that the meetings were always held at the appointed time, a general interest has soon been awakened in them. And these club discussions are admirably calculated to correct erroneous ideas of those taking part in them. One comes with some pet theory, which he supposes himself abundantly able to maintain, but soon discovers, when subjected to sharp criticism, that he has built upon the "baseless fabric of a vision."

Another comes with some innovation upon immemorial custom, and he finds himself beset by conservative ideas on every side, but having experimented and become familiar with the question, he is able to parry all their thrusts, explain all their objections, and, although not perhaps able to convert them at once to its practice, yet he has made an impression which will have its effect in the end.

The principal reason that farmers make such slow progress in their business—are so slow to adopt improvements—is to be found in their isolated situation, their want of social intercourse. Not many men adopt new things alone. They fear the unfavorable opinion of neighbors. Men prefer to be in magnetic equilibrium with the "rest of mankind." They go with the crowd—move in masses and are carried along by social contagion. They seem to be excited only by social contact, and to progress only with the current. This law of our natures shows the great importance of these clubs to the farmer. A man who would be very timid to adopt an improvement urged upon him alone, would enter into it with zeal when adopted by the club—when he had the countenance and encouragement of his neighbors. Mechanics are congregated in cities—have frequent intercourse with each other—and are swift to adopt a labor-saving invention in their business.

But farmers are scattered over the country, and occupy themselves too constantly with physical labor on the farm. Too much muscular exercise wearies the body and indisposes the mind to exertion. The farmer has too long regarded his calling as a physical mission, requiring little or no effort of the mind, but a constant tension of muscle. Anything which should induce them to congregate together socially would be a great blessing, but still more so when this meeting is for the purpose of comparing notes upon their occupation.

It would surprise a body of farmers, who had never tried it, to find how much knowledge could be gained upon almost any subject connected with agriculture, from twenty-five average farmers, who should each contribute the facts he knew relating to it. Perhaps no one of the twenty-five would be able to give more than a few facts concerning the topic, yet when each had contributed what he knew, the subject might be thoroughly elucidated and easily understood. When they come together no one fully understands the subject, but when the discussion is over every one might carry away a full knowledge of it.

And this leads us to speak of the proper *method* of conducting these *Farmers' Clubs*. First, there should be as little formality and as few rules as possible, consistent with good order. Select a man of prompt decision and few words as chairman, and the most ready-writer for secretary. Avoid set speeches and prepared dissertations. You come together to communicate facts and not to display rhetoric. Any one who has a fact to give should be welcome. It should be a meeting for a free and informal interchange of ideas in the conversational way. This will be found much better and more profitable than debate. You cannot well debate a question without the disputants becoming interested for triumph in argument—for the success of a side—and this is not the object of discussion. The object should be to gain knowledge, to accumulate facts on which to base a right decision, and not to display ability in argument, to triumph in disputation. Suppose the question were the

"best time to cut wheat?" It is obvious that well-attested experiments bearing upon this subject would be necessary to determine it. Every one who could give any fact showing the effect of cutting wheat at a particular stage of growth would assist in elucidating it. One could perhaps give the effect upon rust, of cutting wheat while green, showing the quality of the grain to be little injured by it; another cut it when ripe, and the rust had ruined the grain; another states that he cut before ripe, when no rust appeared, and found the berry plump and got a larger proportion of flour per bushel than when he had cut on full ripening. And thus one after another gives his experience upon all sides of this question, until the facts render its solution clear. Now a learned dissertation upon the wheat plant, with an ingenious theory, unaccompanied by facts, might lead to a different conclusion, and gain applause to the speaker, but not being based upon a true foundation would only lead those astray who acted upon it. There can be no objection to an occasional essay upon some subject by one who understands it practically. This should be a feature by itself, and would be an important source of improvement; but the discussions should be conducted in the freest and most informal manner. Besides, this method of conducting the discussion would have the advantage of making every one a participator in the proceedings, and thus interest him.

Every farmer can find language to state a fact in reference to a subject, who, most likely, would not feel competent to make a speech maintaining a theory, and in fact, all theoretical discussions should be avoided, except as they grow out of well established facts. Theories sometimes cause experiments which lead to important discoveries, and in this way tend to increase knowledge, but too often theory is advanced as known truth, and when acted upon as such may lead to disappointment and disastrous failure. Theories are already too abundant, but for well ascertained facts, very great need. These club meetings excite the minds of farmers to greater activity, stimulate them to read upon the subjects to be discussed, learn them to sift evidence, to give facts and experiments their true weight, to value order and methodical arrangement. In short, for farmers now on the stage, who have passed all opportunity for an elementary education in agriculture, the farmers' club offers the greatest practical advantages. And the effect would soon be seen in the improvement of their implements—the bringing into use their waste fields—the saving and use of all their manures—improving the breed and condition of their animals, and in the whole order and arrangement of their farming operations. E. W. S.

MR. PATTERSON'S INFANTADO RAM AND RAM TEG.

MR. PATTERSON'S INFANTADO RAM.

THE property of J. D. PATTERSON of California, bred by J. & E. D. HINDS, Brandon, Vt., got by Mr. HAMMOND'S ram Gold Drop. Dam No. 2, by Green Mountain, out of an old Hammond ewe. Green Mountain, (dropped in 1858,) bred by WM. R. SANFORD of Orwell, was got by the Cross Ram, by Old Greasy, &c.,—his dam was got by Young Matchless out of one of Mr. SANFORD'S pure Infantado ewes. His pedigree was published by us April 29, 1865, under the same name, and Mr. E. D. HINDS informs us that he bore it before "HAMMOND'S Green Mountain" was dropped. This explanation is made on account of our remarks on "Duplicating names of Sheep," published in the RURAL, April 13, 1867.

MR. PATTERSON'S Infantado Ram Teg was bred by E. D. HINDS, and sold by him last spring with the older ram above mentioned to J. D. PATTERSON. He was got by HENRY W. HAMMOND'S Kearsarge, dam No. 11, out of a Hammond ewe by Green Mountain, by the Cross Ram, by Old Greasy, &c.

MR. PATTERSON'S INFANTADO RAM TEG.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

ROLLING STONES GATHER NO MOSS.

A. M. GARLAND, Esq., President of the Illinois State Wool Growers' Association, and an extensive wool grower, in a private letter, which we trust he will excuse us for copying a few sentences from, writes:

"Thousands of our sheep are being driven to Missouri and Kansas. This hegira is not *all* properly chargeable to the low price of wool, as less than half a crop of corn in the wool growing portion of our State has made that staple (the principal feed with us) too high to be put into wool. I think it a good time to *hold on*; but to carry through my stock I will have to drive them to some locality where feed is plentier. I expect now to start within a week for Missouri, where I learn feed is plenty and stock scarce. If I find it so, I will drive 2,000 or 3,000 head there and keep them until prices are better. 'There is a good time coming' for wool men, just as sure as 2x2=4. All that is needed is 'pluck' enough to enable us to 'labor and to wait.'"

The Prairie Farmer (Ill.) of August 31st, contains a reply to a previous communication, written by its sledge-hammer correspondent "Wool Grower," who, we will take the liberty to say, is SAMUEL P. BOARDMAN, Esq., of Lincoln, Logan Co., Ill., Secretary of the Illinois State Wool Growers' Association, and a large wool grower. We quote a few racy paragraphs:

"A. R. H. says the tariff has not helped the wool-grower the first continental; rather he puts the language into the mouths of free trade Congressmen. I beg to differ with him. I feel that had it not been for the moral force exerted by the mere fact of having such a tariff, we should have seen a panic in wool matters equal to that of 1861, when the first Bull Run battle scared manufacturers so badly that they bought much Western wool at 28 cents per pound. He need not borrow any trouble about that tariff being knocked in the head next winter—not if wool growers can exert any influence—I know that is the usual course of things in the tariff legislation of our country. Congress acts like a parcel of school boys, who put in all the noonings and recesses of two or three days, working very industriously to fashion from snow a large statue, and then, when complete, take the very next recess to knock it to pieces with snow-balls. However in this case I think the wool-growers of the country have worked too hard, for two or three years past to get this tariff, not to, if necessary, work still harder to keep it."

After quoting the table of imports of wool at New York for the first six months of 1866 and 1867, recently published by us, and calling on us for corresponding statistics in regard to the imports of woolens, (which we furnished last week) Wool Grower continues:

"Before I leave this matter of the tariff, I would like to ask A. R. H. (inasmuch as he has put some very pointed questions to me) whether he ever gave a dollar or a day's time to help secure the tariff? I discover, that in a general way, the men who exhibit the most querulousness with regard to the tariff—the men who think it won't do any good—that the manufacturers have got the big end—that they even framed our end of the tariff, etc., etc., are the men who don't come down with 'the stamps.'

"A. R. H. says, 'I have got sheep to sell, and so have nine-tenths of the sheep owners of Illinois.' So have I got sheep to sell; I sell my culls every fall and usually a lot of wethers every year. If he means that nine-tenths of sheep owners in the State wish to sell out of sheep, I beg leave to say that I think him very badly mistaken. No man could buy for twice or thrice what they would bring, the crop of lambs, or the ewe-flock of any of our long-time flock masters, the class he distinguishes by the epithets 'enthusiastic' and 'fascinated.' I can tell you what the enthusiasm and fascination consist in; they consist in good, large and well-improved farms, growing richer every day, having been 'sheeped' until the soil is better than the day the prairie plow rolled the sod over. They consist in good, well-bred flocks of sheep; in good teams, and plenty of farming tools and machinery; in barns, sheds and other out-buildings; in large, comfortably, and, in some cases, luxuriously furnished houses; in books, newspapers and educated children; and last, but not often, in good big credit account in bank. Who would not be enthusiastic and fascinated on those terms?

"Having reviewed A. R. H.'s chapter of disappointments, I would like to address myself for a short time to the whole class of sick, supremely disgusted, four-year-old sheep men—a sort of 'application,' as the preachers would call it, of the preceding discourse.

"MY VERY DEAR FRIENDS:—You all claim to be very sick of sheep. I have no doubt you are—and most probably with reason,—but the trouble is in yourselves and not in the business of wool growing. Some of you claim to be converts of mine. I have sown much sheep-seed in the last seven or eight years, and I see that in *your* cases it has fallen in stony ground; the stalk, after four years weakly growth, has withered away, *because* it had not much root. I have always said that not *all* men were called, or fit, to handle sheep; that the business of sheep raising required plenty of watchfulness, every day care and hard work. Some of you who took up the shepherd's crook are Reubens—unstable as water, ye shall not excel. You are the class which make frequent changes of business—every change involving a loss. It always so happens that when it rains *your* dishes are not right side up. You could not see any money in sheep until old culls—mere dead sheep—and hard-driven Michigan sheep, sold at from four to six dollars each. I have said to you that you might come out right, even in this case, if you would hang on long enough—*and well enough*—to grow a young flock out of them. But the *hang-on* isn't in you, and as you went into sheep just when they were highest, so you must needs supplement your foolishness by going out of them, when, perhaps, they are lowest. The sicker you grow of the stock, the less care you take of your flock,—thus hastening your descent down the broad road that leads to cholera hogs and ten-cent corn. As a heathen poet has expressed it,

"*Facilis descensus Averni.*"

"I know the present situation looks rough—that wool should be only 35 to 40 cents per pound with gold at 140, and with taxes and expenses at fever-heat,—but, my dear friends, are you going to gain anything by giving away your sheep? I grant you, this is the hardest season wool growers ever saw,—but I say to you that in sixteen years, I never saw two hard years for wool growers come together.

"Again, my friends, sick as you now are of sheep, you are very much inclined to view other specialties and pursuits of farming as if surrounded and enveloped with a golden atmosphere. Look at wool growing; won't the profits of it average, or more than average, with those of other kinds of farming for the past ten, or fifteen, or thirty years? Have you come to feel, in your supreme disgust, that there are no drawbacks to other kinds of agriculture? Have you forgotten that here in Central Illinois men sowed whole counties, almost in quarter-section fields of winter wheat from '57 to '62 inclusive, and did not harvest their seed through all those years? Have you forgotten those three years of ten to fifteen cent corn? Have you not known a number of years in the past sixteen, when men purchased stock hogs in the fall, fed their crop of corn to them and sold the pork for less than they gave for the hogs? Have you not known men to feed cattle with the same results?

"Have you not known men's entire herds of hogs to die with the cholera not for one year only, but for two or three in succession? Men and brethren! if you have not seen all these things take place, I have, in the sixteen years I have sojourned in this glorious prairie State.

"In conclusion, dear friends, allow me to hope that you will gird on the armor anew, stiffen up the upper lip, pull off the coat and roll up the sleeves, feed well, breed well, take good care of your sheep, so that next year—if our tariff holds its anchor—we all may find ourselves Western Argonauts, safe in the port of Colchis and taking off the golden fleece!"

Did space permit, we could extend this "application" to the farmers of New York. We will now simply ask those of them in our grazing districts, who rushed a few years since so eagerly from wool growing into *butter* and *cheese* making, whether they have found the latter to be out of the reach of the contingencies which unfavorably affect prices? How much greater has been the falling off in the prices of wool the last year than in the prices of dairy products? Here in Central New York, good wool fetched, in 1866, at the farmer's barn, from 50 to 55 cents per pound. This year it has sold from 40 to 45 cts. From April to October, 1866, butter fetched from 30 to 40 cts. It thence continued gradually declining until new butter came into market, reaching as low figures as 20 to 25 cts. Thus far, during the butter making season of 1867, it has averaged 10 cts. per pound lower than during the corresponding period of last year. Cheese sold in 1866 at 16 to 20 cts. per pound. It has sold this season at 11 to 16 cts. So in both, the per centage of falling off has actually been greater than in wool! In both interests the depression is as great as in wool growing, as the dairy farmers, whose cows stand them in from $70 to $100 per head, will feelingly testify. In neither is the *certainty* of a favorable change within a few months, in our judgment, near as strong or probable, reasoning on the basis of well established facts. And, be it remembered, that in instituting this comparison, we have selected what has been claimed to be decidedly the most profitable and safe husbandry of the grazing regions of New York and other dairying States, and fully as profitable, on the average, and safe as grain growing on the best grain lands.

Since the publication of our article headed "Wool Growing in the Southwest," (Aug. 10,) in which we attempted to give the reasons which show that the present depression in the wool market can only be temporary,—that the future prospects of the wool grower are brighter than they ever before were, provided the present wool and woolen tariff is undisturbed,—we have received private letters strongly endorsing our views from quite a number of as eminent wool growers as there are in our country, also from a few distinguished business men in other, though related, occupations; and from not one has come a word of dissent. If there is a single intelligent, experienced and extensive sheep breeder or wool grower in the country who has become sick of his business, "disgusted," and anxious to sell out, we have yet to learn who he is.

There are, doubtless, a considerable body of "four-year-old sheep men," well described by Mr. BOARDMAN, who are "supremely disgusted." A large share of them engaged in the business with little or no previous knowledge of it. They went into it as a *speculation*, not as the steady pursuit of a life, which required judgment, industry and perseverance to ensure success. Many bought at extravagant prices, expecting to become eminent breeders at once and to sell thousand dollar rams. As among the gold hunters of California, and the petroleum seekers of the "oil regions," not more than one in twenty would have achieved what they considered success under any circumstances; and the first sharp reverse, though obviously a temporary one, is sufficient to drive them out of the business.

When any person will point out to us a branch of industry which is *always* handsomely remunerative—or which is more out of the reach of casualties and drawbacks than sheep husbandry—we will advise those engaged in it to abandon the latter pursuit. But where is such an industry to be found? We should like to have some capable man attempt to prove, by specific and established facts, that any such one exists. We have repeatedly adduced specific *facts* and *figures* to prove the contrary. The accuracy of our figures has never been challenged. And our conclusions derived from them, have not, so far as we know, been assailed by the presentation of any opposing facts and figures. Until this is done, and successfully done, we shall take the liberty to regard our conclusions as established and undeniable.

The present stampede among the "four-year-old sheep men," like that of the same class among the temporarily disappointed dairymen, the hop growers, whose crops this year have been destroyed by lice, &c., indicate, like the flight of grasshoppers, which way the wind happens to blow for the moment. The next wind will blow them in another direction. These men will abandon their favorite agricultural hobbies and mount new ones as often as once in four years all their lives; and in nine cases out of ten will die poorer than they would have done had they adopted a business fitted to their knowledge and circumstances and then clung to it steadily and industriously, without regard to temporary reverses. Rolling stones gather no moss.

Condensed Correspondence, Items, &c.

BLEACHING WOOL.—We cut the following from the Chemical News, for August:—"In 1860 M. Jean-Henri Chandet of Rouen, France, was the first to propose the use of bisulphate of soda, or leucogene, for wool bleaching, which is now universally employed in France, Belgium, Italy, Prussia, and Russia. In a tub filled with cold water, the first operation is to pour 18 litres of leucogene at 25 degrees for every 100 kilogrammes of wool to be bleached. The wool, washed and scoured as well as possible, is steeped for at least three hours in this bath, and left to drain over the tub, so as to save all the liquid. It is then dried in the open air. The same bath serves for any length of time, provided at each operation there are added nine fresh litres of leucogene per 100 kilogrammes of wool, with a sufficient quantity of water necessary to replace that used up by the preceding operation. The wools thus bleached have a whiteness which is permanent and more lasting than the bleaching obtained by sulphurous acid. They can enter into the manufacture of tissues and other goods without the slightest danger of injuring the most delicate colors. Leucogene is an excellent decolorizing matter, if used in the bleaching of vegetable textile matters, such as cotton, linen, hemp, jute, or phormium. It gives a silky white color to threads and tissues, that cannot be obtained with the hypochlorites. M. Chandet manufactures annually 140 tons of leucogene, representing 2,000 tons of white wool.

ROT.—CHARLES C. BRANDS, New Ulm, Brown Co., Minnesota. We have nothing to offer in regard to (liver) rot, not already published in the Practical Shepherd. Considerable doubt exists as to how far it has made its appearance in the United States. Foreigners, who have seen the disease in Europe, think they recognize it here, in certain wasting maladies which put on very similar external appearances, but in all such cases which have fallen under our personal inspection the real characteristic symptoms of rot were wanting, viz., a pale, livid or spotted color and rotten condition of the liver, with its ducts filled with parasites (flukes) from three-quarters of an inch to an inch and a quarter in length, and from one-third to half an inch in their greatest breadth. While we have never chanced to witness such symptoms, it by no means proves that others have not—but it is remarkable that in all the cases described to us as rot, or which we have received inquiries about, no person has ever stated that he detected flukes—though they are so certain a concomitant of the disease that they are popularly supposed in Europe to be its cause, and we do not remember to have seen it stated by any veterinary writer, that it ever exists without developing these parasites.

SULPHUR FOR SHEEP.—C. SMITH, St. Louis, Mo., asks:—"Is sulphur *naturally* necessary to sheep as is salt—is it true that they will resort to sulphur springs to drink the water, passing by pure water, as a Texan informed me he had constantly seen them do?" To both of these questions we answer no. A sheep in perfect health, in our opinion, no more requires sulphur than it does nitre or rhubarb, and has no natural taste for it. We have often heard of sheep resorting to sulphur and other medicinal springs, but it is only where those springs also contain salt—this being the article they are in quest of.

KILPATRICK.—This famous ram of W. R. SANFORD, which has sheared 30 lbs. of wool, is, we hear, to stand for ewes this fall at Alexander, Genesee Co., N. Y., BOWKER & BUSH of Shoreham, Vt., having engaged him for that purpose.

Rural Notes and Items.

CROP PROSPECTS.—It is now the second week in September, and still the immediate section of country about Rochester is without rain, suffering much in consequence. With a single exception there has been no rain here of any consequence for nearly ten weeks, and the result is dry wells, dry pastures and dry everything. Potatoes, even early planted ones, are generally small and few in the hill, while the late planted have yet to grow, if they can, which is doubtful. Corn is being cut up because it has ceased to fill or mature and with occasional exceptions will turn out light. The apple crop though a short one, will probably prove better than the promise of two months ago.

CROP PROSPECTS SOUTH.—Southern exchanges generally concur in the opinion that adverse or wet weather, coupled with the workings of the cotton worm, will considerably diminish the anticipated yield of the Southern staple—cotton. Some sections will do fairly, while others will make but a slim return. As some recompense for the failure of cotton our Southern exchanges report the corn crop good, and the yield of wheat better than was anticipated before the harvest.

THE NEW ENGLAND FAIR.—The combined or New England Fair was held in Narragansett Park, near Providence, R. I., last week, and was well attended. At one time there were over 30,000 people on the grounds, and 3,000 carriages. The show of cattle and other stock was good, but the horse seemed to be in the ascendant. The show of fat cattle attracted much notice, however, as there were some noteworthy specimens on the ground. A Mr. CLARK of Bloomfield exhibited a pair of steers weighing 5,300 pounds, and DAVID GOODELL of Brattleboro, Vt., took them all down with a pair which, in January last, weighed 8,000 pounds. Among the noticeable cows was a lot of the Dutch variety—one of which, Texallah, has given seventy-six pounds of milk in one day! There was a good deal of movement, on the course, among the horses, showing that New England society has changed considerably within the last forty years with respect to horses and other matters. Financially we believe the N. E. Fair has fully met public expectation.

THE AMERICAN POULTRY SOCIETY.—This is the title of a Society recently formed in New York, a notice of which has been inadvertently delayed till now. Its fourth regular meeting was held on the 21st ult. A. M. HALSTED in the Chair. It was decided to hold the first exhibition of the Society in the city of New York on Tuesday, Wednesday and Thursday of Thanksgiving week, and that a suitable premium list should be prepared by a committee appointed for that purpose. The membership fee is fixed at $3 per year. The regular meetings of the Society take place every third Wednesday in each month. The officers of the Society are: *President*—J. G. FINNIE. *Vice Pres't*—James Mallory. *Auditor*—A. M. Halsted. *Treasurer*—John C. Thompson. *Cor. Sec'y*—S. M. Saunders, Box 285, New York. The Society has made a pretty fair start, and hope to make it a successful organization.

GENESEE VALLEY CHEESE FACTORY.—The Mt. Morris Union gives an interesting account of a visit made by its editor to the "Genesee Valley Cheese Factory" at Sonyea, six miles south of Mt. Morris. It is owned by Messrs. ANGEL & WADSWORTH, and located on the farm of the former. This factory receives about 5,000 pounds of milk daily from 275 cows, which has produced about 50,000 pounds of cheese. The principal owners of these are—Mr. WADSWORTH, 70; ANGEL, 50; CRAWFORD, 40; McNAIR, 35; FITZHUGH, 40; WELCH, BOGERT, VAN DORN and others, 20. The stock of cows will be nearly or quite doubled the next season. The buildings and manufacturing arrangements are of the most approved description.

CURE FOR THE DOG PLAGUE.—C. R., Rockford (Ill.) referring to dogs writes:—When dogs or wolves have made havoc among the sheep, remove the dead and wounded from the field with the exception of one. Hang that one up on a tree or fork out of reach of the dogs. Cut from the bum a number of pieces and flavor each well with strychnine, and drop them on the ground near the carcass. You will probably have an opportunity to collect the dog tax the next morning, but the result need not be published.

PRICES APPRECIATING.—It will be seen by our market quotations that prices of some farm products are appreciating somewhat—especially butter and hay. The latter has advanced four dollars per ton, within the last six weeks, especially for the best quality. Barley has also advanced slightly, though but little has yet been offered. Wool holds its own, and though there is no advance in price over last week's quotations, a more assured feeling is manifested.

PREMIUM ON BUTTER.—The managers of the Union Fair to be held at Fredonia, Chautauqua county, commencing on the 25th instant, are pretty liberal in the butter line. The best firkin, of not less than 50 lbs., is to be awarded $20. This will pay for being careful in the manufacture, while the reputation gained will be worth much more to an extensive manufacturer of butter.

SUNFLOWER SEED.—Those who have sunflower seed going to waste will find it to their advantage to feed it to their fowls. Where poultry raising is made a speciality it will pay well to raise sunflower seed for feeding the fowls. They will eat it in preference to corn.

EXPERIENCE IN THE SOUTH.—The Maryland Farmer states that the Hon. T. C. PETERS is preparing a volume for publication embodying his experience and observation in the Southern States. His tour of observation was quite extended, and his record of it will no doubt prove an interesting one.

DUNDEE UNION AG'L SOCIETY.—*Correction.*—In a notice of the Agricultural Fair to be held at Dundee, in the RURAL of last week, there was a mistake as to the month of holding the Fair. It should have been October 15—17, instead of September. GEO. W. BUNGAY, Esq., will deliver the address.

WAKING UP.—An Agricultural Society has been formed in Danville, Va. The constitution provides for holding two fairs in Danville each year; a general one in October, and a tobacco exhibition each June.

DRILLING SLAKED LIME WITH WHEAT.—A subscriber asks if it will do to drill slaked lime with wheat at the rate of three or four bushels to the acre. We think it will, unless the ground is very dry.

ORLEANS COUNTY FAIR.—Ex-Governor Horatio Seymour is announced to deliver the address at the Orleans Co. Fair on the 14th inst.

HORTICULTURAL.

LAKE SHORE GRAPE GROWERS' MEETING.

We joined the meeting of the Lake Shore Grape Growers' Association, at North East, Pa., on Tuesday, the 27th of August. The main object of the meeting, at this time of year, was to afford opportunity to those interested in grape culture to examine the vineyards, compare statements of the various conditions of the vine in different parts of the country, and by observation and criticism of the culture, pruning, soil, &c., endeavor to make some progress towards a riper knowledge of the work. Many distinguished horticulturists from other States were there. William Saunders, Esq., of the Department of Agriculture was present, and Mr. Knox, "the Strawberry King," from Pittsburg. New York was represented by Dr. Grant from the Hudson, Messrs. Champlin and McDowell from Crooked Lake, F. C. Brehm from Waterloo, Bronson from Geneva, T. G. Yeomans from Wayne Co., and Messrs. Hoag, Moody, Craine, Babcock and Ringueberg from Lockport.

THE VINEYARDS AT NORTH EAST.

The vineyards and premises of the South Shore Wine Company, and those of Messrs. Griffith & Bro. were the chief objects of interest. They are situated within a mile of the lake shore, on land sufficiently rolling to afford natural drainage. The soil is a gravelly loam, (drift,) with a porous subsoil. Twenty-two years ago Mr. William Griffith began grape culture here by planting six vines. From that commencement his vineyard grew until it covered one hundred acres and one hundred thousand vines, largely Catawbas and Isabellas. Mr. G. built the cellars, reared the vineyards, and organized the business before the present wine company, of which the venerable John E. Mottier is Superintendent, was called into existence and given possession.

Since the organization of the wine company twenty-five acres of grapes have been planted, which are devoted equally to the Iona, Concord, and Ives' Seedling. When in full bearing the yield of the vineyards it is estimated will amount to three hundred tons, and the wine cellars afford facilities to handle this quantity. They have now twenty-five or thirty thousand gallons of wine on hand. Besides the vineyards belonging to the company Messrs. Griffith & Bro. have fifty acres, twenty of which are planted with Iona, three with Israella, and the balance with Isabella, Diana, Delaware, Concord and Ives' Seedling.

The cultivation of all these vineyards was excellent; the ground was not only entirely free from weeds, but the soil was well stirred up and mellow. But little drainage is required, and there is nothing to hinder perfect cultivation. The crop on the vines was very light, probably not over one-third of a good one, which result was attributed by many to previous overcropping, and to the method of pruning and training adopted. The vines are mostly trained to stakes, which method crowds our free growing sorts too much, and the foliage becomes diseased. The laterals had been so closely pruned or pulled off as in many cases to start the buds at their base into premature growth, thus destroying the next years' crop. Subjected to such treatment last year, many vine growers present thought it easy to see why the crop of this present year is so light. On some trellised vineyards, belonging to the Messrs. Griffith, where the training was more open and the pruning not so close, the crop was better, though not as full as many expected to see. The rot had attacked the fruit to some extent, but it was hoped the disease had done its worst.

A two-year-old Iona vineyard of ten acres was remarkable for its vigorous and healthy growth and generally promising condition. No summer pruning had been done in this, and the laterals had made abundance of wood, while the main canes averaged six feet probably in length. Of course, the cultivation of the ground was perfect, the vines had been protected during the winter by laying down, throwing a furrow to them from each side, and then slightly covering with coarse barn-yard manure. The necessity of protecting vines during the first winter in this locality has been taught the growers by the bitter experience of losing acres of them when unprotected in some severe seasons.

THE PROPAGATION BEDS.

Another most interesting feature of these grounds were the propagation beds, more than ten acres in extent, where uncounted numbers of young grape vines were growing from single eyes in the open air. The propagation consists in laying off the ground in beds three or four feet wide and inserting the single eye cuttings at distances of three or four inches, then covering the whole with spent tan-bark to the depth of one or two inches. The wood on the cutting is cut close to the bud on the upper side, and left as long as possible on the other end. They are inserted in the ground in a nearly perpendicular position. The theory is that the mulching holds back the bud from breaking until the roots have started, so as to supply the plant with nutriment when that in the wood shall have been exhausted. It is because the bud starts first and uses up the food in the wood before any is supplied by the tardy developing roots, that single eye cuttings fail when tried in the open ground without mulch. Any weeds that appear are pulled out by hand. All of the hardier vines looked very well in these beds, the more tender ones were thin and of uneven growth, but these defects were attributed to the using of unripe and very small wood in making the cuttings. Mr. Griffith is, doubtless, the first who has applied this principle to the propagation of vines from single eyes on a large scale in the open air. He submitted a report of the process to the United States Commission at the Paris Exposition, and is in the receipt of a letter from the Secretary, dated August 12th, which says "the report was submitted to the Committee on Horticulture, Pomology, and the culture and products of the Vine, consisting of Messrs. Wilder of Mass., Flagg of Ohio, and Barry of New York. They made their Report to our Commission and included with it the entire article furnished by yourself, and which Report will be forwarded with others to the State Department at Washington."

IMPLEMENTS EXHIBITED.

There were some implements exhibited which possessed considerable interest. Dr. Grant had a set of plows which he has adapted to the preparation and culture of the vineyard. They were not subjected to trial, but the larger ones are designed to do the work of trenching, completely inverting the top soil and bringing the subsoil to the surface from a depth of twenty or more inches. Some skillful cultivators are inclined to think deep planting is best for the health of the vine, and for such work these plows will be of great value. A metal pail was also shown, designed for picking grapes, the novelty of which consisted in its being hinged so as to open in the middle and let the fruit fall downwards, when it was desirable to empty it. This it was thought would save handling. The Keuka Grape Picker was exhibited by F. M. McDowell, Steuben Co., N. Y. It can be used with one hand, and cuts the stem and holds it until deposited in the basket, and seems a very desirable implement for picking grapes, saving much labor and the bloom of the fruit.

DISCUSSIONS.

The company, to the number of three hundred or more, partook of a bountiful lunch at the wine house among the vineyards—testing the excellent wines, which were dispensed freely by Mr. Mottier and his assistants, after which some informal talk was had, until the mid-day heat was past, when the party dispersed through the vineyards and grounds, and at night-fall sought the village, a mile distant, by various routes. In the evening a hall was lighted up and an hour or two passed pleasantly in hearing reports from various persons on the condition of the grape crop in their localities. We give their reports briefly:

Mr. Saunders, Superintendent of the Experimental Grounds at Washington, said the one hundred and twenty varieties in cultivation on those grounds had mildewed. The Delaware ripened well, and the Iona gave great promise. The mildew appeared first on the foliage. There is a species of mildew caused by aridity, which attacks the young fruit, and is the worst enemy to the growth of foreign varieties. The rot made its appearance in wet seasons only at Washington. Mr. S. considered the mildew wholly the result of atmospheric changes, and that sulphur is its antidote. In reference to the hardiness of a grape he remarked the cause must be looked for in the summer; it is because the wood is unripe that vines winter-kill. Mr. S. expressed the opinion that there were no true hybrids. He referred to Rogers' and Allen's hybrids and stated that he had grown hundreds of seedlings from the Golden Chasselas, which in no wise differed in appearance from Allen's hybrid. Speaking of pruning he said the more healthy foliage there is on a plant the more and the better fruit it will bear. Summer pruning should be done by pinching the vine and directing its growth, instead of removing a large quantity of wood at once.

Messrs. Moody and Hoag of Lockport, reported the grape in their localities as very promising. No mildew or rot. Considered the Clinton worthless; regarded the Delaware, Iona, and Israella as successful.

Bronson, Geneva, N. Y., said all varieties cultivated were doing very well. Thought there was a greater tendency to mildew on light soils than heavy. Ionas look well; the bunches of the first crops are a little open, but they improve in this respect as the vines get older.

Champlin of Hammondsport, N. Y., reported the grape crop as promising very finely. Isabellas doing well; also Delawares and Catawbas. Hartford Prolifics began to color on the 17th of August. The foliage of the Iona looked well, and is healthy. It is a good grower; there were 50,000 Ionas growing around Crooked Lake.

Craine, Lockport, thought we should not look for a grape that will suit all localities and do well in all. It was important to find out what grape does best in a locality. With him Delaware and Diana had made double the growth the Iona had.

Bateham, Painesville, Ohio, recounted an experiment to define what he meant by the term locality. He planted two thousand Iona vines, half in his vineyard and the rest in a black, mucky soil, for the sole purpose of propagating from them. The latter mildewed badly.

Brehm, Waterloo, N. Y., said the grape crop was abundant. Delaware had mildew on the leaf and the Concord showed some rot.

Moss, Fredonia, N. Y., reported the winter as being severe on the vines, owing to the previous bad season for maturing the wood.

Knox, Pittsburg, Pa., reported some rot on the Diana and To Kalon, and just enough on the Concord to do necessary thinning.

The condition of the vine along the lake shore and on the Islands was reported by gentlemen from different places.

Bement, Toledo, said the Catawba was a failure. Concord rotted some. Delaware fine.

Mr. Lewis said, on the Islands the Catawba had rotted again, although the season had been very dry and apparently favorable. Rotted most on the black soils, but they were diseased on all soils and under all circumstances. There is more than half a crop left. The Concord does better, though it shows some rot. Mottled Catawba also does well. Mentioned one Iona vine, four or five years old, that mildewed badly and the fruit rotted.

Somers, Vermillion, said there were 250 acres of vineyard in his township. The Catawba rotted some. The Delaware had done remarkably well. On the gravelly clay ridges, three miles from the lake, the Catawbas rotted worse than on the shore, where the soil is black loam. In one vineyard where the rot was bad two years ago not a rotten grape could be found now.

Phillips, Berlin, stated that the Catawbas had rotted a good deal, and the Isabellas but little. Concords were diseased a little in the leaf, but not in the fruit. Delaware somewhat mildewed. Had 25 Iona vines in bearing; noticed some rot, but not like the Catawba kind; the wood and foliage were strong and the fruit began to color by the 15th of August. Israella's color with the Hartford Prolifics.

Dr. Griswold, Elyria, had found great difference in the amount of rot in the vineyards; in some only one per cent., in others ten. The disease began in a deep loamy soil and extended to hard clay, but was not so bad in the latter as in the former.

Mottier, Dover Bay, said there was no sign of rot in his vineyard. Cultivated several varieties. The Clinton mildewed on the leaf.

Spaulding, Cuyahoga Co., had rot among his Catawbas, but none on Concords and Delawares. The leaf of the Iona mildewed some. No disease on Crevelings or Hartford Prolifics.

Sec. Bateham spoke of the vineyards from Cleveland eastward along the Lake Shore. He was convinced that pruning and culture had no influence on the rot, but thought it due to atmospheric changes. There is more disease on sand than on clay soils. Proximity to water made little difference. He did not believe that the rot was owing to any weakness of the vine. Grape growers were too much disheartened; the best varieties were yet doing well. He thought the Catawba had been really a detriment to the grape interests of the Lake Shore, and that it might prove ultimately an advantage to the growers if they are obliged to drop it from cultivation.

THE EXCURSION.

After the brief evening discussions were ended, in company with a friend, we availed ourselves of the generous hospitality of John Dodge, Esq., of Harbor Creek, seven miles west of North East. The following morning we had time to look over some portions of his magnificent farm before the train which bore the excursionists for the Islands arrived at the station. We noted a patch of Wilson strawberries, two acres in extent, which this season—the first of bearing—yielded 200 bushels per acre, the fruit selling for four dollars per bushel. The land was particularly well adapted to strawberries, being so situated that previous to the building of a railroad embankment it had been yearly covered with water, and a deposit of leaves and sand left on it. The soil is gravelly loam. A field of corn that had been subsoiled to the depth of eighteen or twenty inches by an attachment to a common plow, was very fine, having cared well and withstood the drouth much better than other cornfields in the neighborhood that were only ordinarily plowed. It was very apparent in this case that subsoiling was a profitable operation. We also noticed a fine row of locust trees along the road-side, to which a picket fence was attached, the trees serving as posts. Two large bolts, or wood screws, were inserted in each tree, the rails of the fence hung on these in such manner that the action of the wind would not strain the fastenings.

The excursionists reached Put-in-Bay Island by the way of Cleveland and Sandusky, late at night. On the steamer the party tested a variety of still and sparkling wines. Of the latter those contributed for the occasion by Mr. C. D. Champlin, Sec'y of the Pleasant Valley N. Y. Wine Company, were the best met with anywhere on the occasion. The excursionists were well taken care of by Messrs. West & Elder, the gentlemanly proprietors of the popular Put-in-Bay House. The following morning several residents of the Island were on hand with conveyances, and the company was divided into parties for the trip. Our own drove first to the vineyard of Mr. Harmes. There the Hartford Prolifics were already well colored; the Delawares were beginning to turn, but the vines were badly defoliated and infested with thrips that rose in swarms when the leaves were disturbed. The Catawbas were rotting. The cultivation of this vineyard was excellent,—but in consequence of the rot, the thrips, and the falling of the leaves, the vineyard presented an unfavorable appearance, at least to the eyes of the New York vine growers. Mr. Harmes has the reputation of being one of the best wine makers on the Island, and the quality of the Delaware and Catawba juice which his wine cellar afforded the party was excellent. We next visited the vineyard of W. E. Sibley, which presented a more thrifty and healthy appearance. The soil contains more clay. Here were five acres of Delawares, looking very well, although infested with the thrips. These vineyards were trained to stakes. Some vines of the Ives and Concord were very vigorous and healthy. Both these varieties were considerably colored. Several other vineyards were visited, and all told about the same story. The Delawares are tender in foliage, the Catawbas rot, but the dark-skinned grapes yield well and are healthy. The summer has been an exceedingly dry one on the Islands, and they did not fear the rot. The Catawba is the only variety materially injured.

The increase of the land on these Islands in value has been extraordinary since the introduction of grape culture. We were informed that the price would average five hundred dollars per acre on Put-in-Bay Island, which contains seventeen hundred acres. Eight years ago Mr. Vroman purchased one hundred acres on the southwest side of the Island for thirty dollars per acre. Since vine culture began he has sold parcels until he now has forty acres, on which are eight of vineyard. He has been offered one thousand dollars per acre for the forty acres, which he refused. His last sale was that of a five-acre lot for five thousand dollars. For grape growing purposes merely it is better for one to locate on the shore,—for the soil and climate are equally favorable and land can be bought for one hundred dollars per acre. Notwithstanding the rot, thrips, and mildew, it is probable that a fair crop of grapes of good quality will be gathered on the Islands and Lake Shore. Vineyardists can no more reasonably expect exemption from disease and partial failure for their products than can the growers of other standard crops. The business is in good hands and is destined to increase and win abundant success.

Some of the excursionists extended their rambles to other parts of the grape growing district; we were satisfied with having seen a fair portion of it, and business demanded a direct return home.

Horticultural Notes and Queries.

Catalogues, Pamphlets, &c., Received.—Twelve Years' Experience in Black Raspberry Culture, by H. H. Doolittle, Oaks' Corners, N. Y. This contains, in a concise form, the author's directions, with illustrations, for the cultivation of the Doolittle Raspberry. Also notices of the Seneca Black Cap and the Golden Raspberry. Address (enclosing 20 cents,) H. H. Doolittle, Oaks' Corners, N. Y., or Doolittle & Wight, Waterloo.

Alton Horticultural Society.—Report of a meeting held at "Oakwild," the residence of S. B. Johnson. In many respects this Society is a model one.

Wholesale Price List for the fall of 1867 of Bronson, Graves & Selover, Washington-st. Nurseries, Geneva, N. Y.

Lawn Making.—To make a good lawn the ground must be properly graded in such form as the owner may deem proper—a continuous slope or a succession of them. Under-drainage is important in many cases. Deep plowing, liberal manuring, and a complete pulverization of the soil, are pre-requisites to success. The seeding is usually done with a mixture of equal proportions of rye-grass, blue-grass and white clover, pressed into the soil with a light roller. The mowing should be frequent, and a top-dressing of fine manure annually or biennially, as may be necessary. Usually a dressing once in two years will be sufficient.

The Keuka Grape and Flower Picker, advertised in last week's Rural, is worthy the attention of vineyardists. One can pick rapidly and and not handle the fruit. In last week's advertisement read F. M. McDowell, (not McDonnell,) Wayne, Steuben county, N. Y.

The Tap-root of Apple Trees.—It is the opinion of some fruit growers that apple trees set out with the tap-root intact will live longer and produce more [illegible] than those having this root cut off. In setting a young orchard it would be well to test this.

Prolific Apple Tree.—In an orchard in Anderson county, Ky., is an apple tree about two feet in diameter three feet from the ground, and the top branches forty-three in diameter. In the fall of '65 it produced 82 bushels of merchantable apples.

Grape and Fruit Show at Naples.—There will be a grape and fruit show by the "Naples Agricultural Society" at that place on the 7th and 8th of Oct.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Eds. Rural:—Having a deep interest in the "Domestic Economy" of your paper, I send a few choice recipes, which I trust will give entire satisfaction to all:

Cottage Pudding.—1 cup of sugar; 1 do. of sweet milk; ½ do. melted butter; 1 egg; 2 small teaspoons cream tartar; 1 do. of soda; 1 pint lightly sifted flour. Butter a pudding dish and bake three-quarters of an hour. A few currants or raisins would be a nice addition to the pudding.

Foam Sauce for the above.—1 cup of sugar; ⅜ cup butter; 1 tablespoon of flour. Beat to a cream; place it over the fire, and stir in quickly 3 gills of boiling water.

Tapioca Pudding.—Take 1 quart of milk, and put into it 6 tablespoons tapioca; place it on the fire till it boils; then sweeten to taste, and let it simmer for a quarter of an hour; stir frequently that it may not burn; then pour it into a basin and slightly cool; stir into it a lump of fresh butter and 3 eggs well beaten. You may now pour it into a buttered pudding dish and bake an hour. Sauce. Sago pudding may be prepared in the same manner.

White Mountain Jelly Cake.—½ cup butter; 2 cups sugar; 3½ cups flour; 1 cup milk; 2 eggs; 2 teaspoons cream tartar; 1 teaspoon soda. Stir all together without separating the eggs. Put the soda in the milk and stir the cream tartar in the flour. Bake the same as jelly cake, only instead of jelly between each layer put frosting. It is nice. Try it, ladies.

Frosting for the Cake.—Beat the white of 1 egg to a stiff froth; stir into it 7 teaspoons of pulverized white sugar. If desirable, it may be flavored with lemon or vanilla.

Cookies.—1 cup butter; 2 do. sugar; 1 do. milk; 2 teaspoons cream tartar; 1 do. soda; flour to roll out. Roll thin and cut in small cakes.

Sponge Cake.—1 teacup sugar; 1 of flour; 3 eggs. Bake quickly.—L. T., *Greenville*, 1867.

For Children or Invalids.—The following is very much liked by children, and may be given to most persons in delicate health:

Boil a pint of milk, and, when boiling, add as much vermicelli as will make it about the thickness of well-made gruel. It may be served plain, or, if required, it may be seasoned with a bit of cinnamon, or a little orange-flower water and sugar. The flavor may be changed to suit. It may be colored with a few drops of pure carmine for a desert.

New Advertisements.

RICHARDS & LINCOLN'S FRUIT PICKER—See Rural of Aug. 3d, 7th, 10th and 24th.

8,000 PEAR STOCKS—VERY FINE free from blight. 10,000 Honey Locust Hedge Plants. 2,000 Standard Apple Trees 5 to 8 feet. 921-3 W. J. DEVOE, Homer, N. Y.

TO WINE GROWERS!—GRAPE SUGAR Sirup for sale by HARTMANN & LAIST, 47 East 2d St., Cincinnati, Ohio. Pamphlets sent free of charge upon application. 921

80,000 POUNDS WIRE—Second Hand annealed telegraph, in good condition, for Grape Vines and Fencing, in about half mile lengths, weighs 320 lbs. ⅜ mile, for sale cheap, by 921-tf G. BLAKE, 45 Cliff St., New York.

ELM GROVE SMALL FRUIT and PLANT FARM.—Strawberry, Raspberry and Blackberry Plants, in variety; also Grape Vines, Currant Bushes and Asparagus Roots. Catalogues free to all applicants. 921-3t CHAS. COLLINS, Moorestown, N. J.

THE DAVIDSON THORNLESS BLACK-Cap Raspberry, the Doolittle Black-Cap Raspberry, Wilson's Early Blackberry, Concord Grape Vines, and Wilson's Albany Strawberry Plants for sale. Send for Price List. JAS. O. RANSOM, Hammonton, N. J.

GRAPE VINES.—WE OFFER TO THE Fall Trade—10,000 Iona, 10,000 Concord, 2,000 Israella; also Hartford Prolific, Allen's Hybrid, several numbers of Rogers, &c., &c., of excellent quality, at reasonable rates. Send for Price List, free. PETER DE PEW & SON, Nyack, Rockland Co., N. Y. 921-4t

14,000 PEACH TREES for Sale.—$75 per 1,000.
5,000 two-year-old CONCORD VINES, $80 per 1,000.
Two-year-old DELAWARE, $150 per 1,000.
All First Class.
P. BOWEN, East Aurora, N. Y.

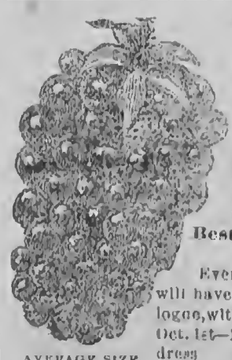
TREES AND SEEDLINGS FOR SALE. 500,000 Plum Seedlings, extra fine; 200,000 two-year old Apple Seedlings, fine; 100,000 Cherry Seedlings, extra; 10,000 Orange Quince; 10,000 Extra No. 1 Peach Trees; 20,000 Standard Cherry Trees, one and two years old; 20,000 Standard Apple Trees, 3 and 4 years; 10,000 Standard and Dwarf Pear, also a fine lot of Plum Trees and a large supply of all the new sorts of Grape Vines, and a fine stock of all the Small Fruits. 921-3t J. H. PLATMAN, Bellona, Yates Co., N. Y.

KITATINNY BLACKBERRY AT THE WEST.—Among the many testimonials received, the following in regard to this splendid berry, on the prairies, may suffice. A gentleman in Fulton Co., Ills., writes:—"The Kitatinny plants got of you in the spring of 1866, fruited this season most abundantly, one week earlier than my Lawton's, on the same ground and location, and the smallest branch withstood the winter without any injury whatever." Price for strong plants, $20 per 100; $150 per 1,000. F. K. PHOENIX, 921-3t Bloomington, McLean Co., Ills.

HUTCHINSON'S PATENT Cider and Wine Mill

With Press, Grinds fine, fast and easy. Large and Small.
BEST CAST CIDER PRESS SCREWS,
Fine thread, very stout and powerful. Grinders and Presses separate. Best and Cheapest Feed Cutter. Gale's Copper Strip—all sizes and length of cut. Send for Illustrated Circular to Peekskill Plow Works, Peekskill, N. Y.

BLOOMINGTON NURSERY—16th Year; 10 Green-Houses; 250 acres Fruit, Ornamental and Nursery Stock, general assortment. 1,000,000 Apple, 1 to 4 yr; 1,000 superb yearlings, $50. 150,000 Pear, Standard and Dwarf. 1,000 splendid two feet Stand. Bartlett, &c., $50; 8 Crab and Dwf Apples, all sizes; 30,000 Cherry, largely Richmond or May, 100, $15 to $35; 30,000 Peach, Hale's Early, &c., 1,000, $15; 300,000 Grape, strong Concord layers 1,000, $35, Hartford, $150, Ives, $150, Rogers, Iona, Creveling and other best; 5,000,000 Osage Orange, 1st class, 100,000 Evergreens, Shrubs, Raspberry and Gooseberry; 30,000 Kittatinny Blackberry, warranted genuine and every way first class, 1,000, $150; 1,000,000 Apple stocks, strong, selected, yearling, 1,000, $2; 50,000 Pear stocks, strong, yearling, 1,000, $20. Also, Quince, Plum, Cherry, Rose, Dwf Apple stock; 10,000 Roses, all classes Marshal Niel, fine plant, $9 doz. Evergreens, immense stock; Tulips, Hyacinths, Crocus, and other hardy Bulbs. Please notice our cheap young stock for distant markets. Send 2 red stamps for Descriptive and Wholesale Lists. F. K. PHOENIX, 921-3t Bloomington, McLean Co., Ill.



AVERAGE SIZE.

HEADQUARTERS FOR ORIGINAL Kittatinny Blackberry Plants.

☞ Pronounced by the highest *disinterested* authorities in the country to be the Best Blackberry Known.

Every wide-awake Rural reader will have it, as prices are low. Catalogue, with this year's testimony, ready Oct. 1st—10 cts. Price list gratis. Address E. & J. C. WILLIAMS, Montclair, N. J.

FRUIT AND ORNAMENTAL TREES.—A large stock for sale at the Niagara Nurseries. For Wholesale, Retail and Descriptive Catalogues address 917-8t E. MOODY & SONS, Lockport, N. Y.

GRAPE VINES.—A VERY LARGE AND superior stock of Iona, Israella, Adirondac, Rogers' Hybrids, Concord, Creveling, Delaware, Diana, Hartford Prolific, Rebecca, Catawba, Clinton, Isabella, and other varieties, by the 100 or 1,000, at low figures. Send for Price List. ELLWANGER & BARRY, 919-3teo Mt. Hope Nurseries, Rochester, N. Y.

MONROE COUNTY NURSERIES, ROCHESTER, N. Y.
We offer for the Fall Trade a general assortment of all kinds of Fruit Trees, both Standard and Dwarf; also, Ornamental Trees, Shrubs, Plants and Vines, and every desirable variety of Small Fruits. Would call special attention to our stock of Roses, on their own roots, consisting of over 300 different sorts. Also, a fine lot of standard Roses. Wholesale Catalogues sent on application. GOULD, BECKWITH & CO., Rochester, N. Y.

Mount Hope Nurseries, Roche[illegible]

Ladies' Department.

LULLABY.

BY GEORGE S. BURLEIGH.

Wink, wink! and peep, peep!
Yes, little baby, go right to sleep;
Mamma has tumbled you all in a heap,
Filled you full, and rolled you in wool
Like a sheep, to keep you from frosty sneap;
Now, little baby, go right to sleep.

I'll do the racket, and baby may rest;
I'll do the looking, and baby may sleep;
I'll do the fussing, kicking and tossing,
The twisting and fisting, the rolling and crossing,
For I am so strong I can do it the best,
And let little baby sleep.

Lay on the shelf, a bit, all you dumb alphabet;
I don't believe you understand half of it;
Take the twist out of your little old face!
Yes, you look knowing; but never mind showing
Your mother-wit yet; it will keep as you sleep,
And come out with a pleasanter grace.

Hush, hush! Whist, whist!
Now are relaxing the fist and the twist,
And baby has gone to sleep;
Happy and simple, in many a dimple
Dreamlets over his features sweep,
And smiles are lighting his baby sleep.

Babes are watching him, little and old,
Ruddy and plump in their years untold;
Airy and fairy-like, filling his dream.
From their shoulders white spring wings of light;
They float, unfluttering, full in his sight.
In his smile I see their gleam.

Written for Moore's Rural New-Yorker.

HAYING TIME.

Early morning — radiant with sunshine — glittering with dew-drops, fragrant with wafting odors, vocal with song. How inspiring out-of-door life, could we only for a brief time rest in it. But higher climbs the sun — the sweetest songs are hushed, the pearls that clustered on grass and flower have vanished, the varied sounds of labor from the meadow proclaim noontime is coming, and our tedious "tramp, tramp" must be resumed in woman's realm — the kitchen — where a *few* dishes must be washed, and a *little* cooking done — and as Bridget and myself are one and the same individual, we can work just as hard, and as fast as we please.

Well! dinner is over. Tired, hungry men are refreshed, and go out strengthened for the afternoon work. Steadily tolling beneath the hot sun, riding upon the mowing-machine—raking, pitching, are not all play; but what a great improvement upon the time when the "mowers' did do all day" with scythe, "cut the grass and hay," and by hand, raked the meadow? O, yes, to be sure; but, dear lord of the field, if you were only a woman, you say, and could shelter yourself indoors from the burning sun, with nothing to do but *housework*, it would be much easier.

Well, try it. Begin in the morning; skim the milk, get the cream in the churn, prepare breakfast, dress the children, wash the dishes, knead the bread, make the pies, lix the fire. If you churn by hand, make the *dasher* fly until you're out of breath, tuck baby under your arm, pick the peas, spend a half hour trying to get him to sleep, think of the pudding—run, see if its burning, tumble over the cat, tear your apron on a corner of the stove-hearth, burn your fingers, heat your face till it glows like a coal, make the beds, do the sweeping, get the meat and vegetables cooking, make the coffee, set the table, jog the cradle every other time you pass, singing, "hush, my dear," lest the little squirming lump within suddenly throws open a pair of eyelids to your serious discomfiture, prepare the salad, the sauce, the gravy, call the men to dinner, have all on the table in order, look the personification of patience, happiness and contentment, and, if you're satisfied, march to the field again, thanking your stars, that when you mow, you don't have to rake, or when raking, pitch and load both—neither toast yourself over a hot stove—but that, out in open field, beneath the blue sky, a stray breeze will occasionally fan you.

I said, "dinner is over." I will stop a moment! From the door I can count one, two three, four "Buckeyes" and a "Clipper;" over the hill hear a "Union." How the tall grass has fallen before them. Ah! the table must be cleared; I wish I had a dish-washer. Well, I ought not to complain. I have an old-fashioned one, and a washing-machine, and a clothes-wringer, and a scouring-machine, and a knitting-machine, all combined,—one that took the first premium of a grand gold medal at the World's Fair when Mother Eve first went to housekeeping. It is getting somewhat "the worse for wear," and I should really like very much to try some of the modern inventions. But, oh, countless conjunctions and interjections are in the way. So nothing remains but to bring a willing hand and heart to the rescue, and trudge on cheerfully as one can. Bell Clinton.

Chenango Co., N. Y., 1867.

A Mystery Explained.—Rev. Mr. —— of Lawrence, is a bachelor. Noticing, early in the season, that one of his members, a married lady, was not at meeting for several Sabbaths, he called to ask the reason. As her reply was somewhat evasive, he surmised that she "had nothing to wear," and said, "you are waiting for your spring bonnet, I suppose." Weeks passed, and still she did not make her appearance. He therefore thought he would call again. Approaching the house, he saw her her sitting at the window, and blandly remarked, "I haven't seen you at church yet; hasn't that bonnet come?" "Yes, sir," she archly replied. "Shall I show it to you?" "If you please," answered the wondering pastor. Holding up a wee bit of a baby, she said, blushing, "This is the spring bonnet I was waiting for; did I do right?"

FICKLE LOVERS—SENSIBLE WORDS.

In its "Notices to Correspondents," the New York Ledger gives the following very sensible and practical advice:

"From the number of communications which we receive from disappointed lovers of both sexes, it would seem as though the majority of those who "vow eternal fidelity," etc., prove recreant to the objects of their first affections and seek consolation in new attachments. There must be some general principle at work to cause such uniformity of results, and we think that the letters of our wailing correspondents betray the secret, to wit: that these disappointed ones *became lovers and plighted their troth at too early an age.* It is the sheerest folly for mere boys and girls to enter into such engagements; and by boys and girls we mean members of the human family under twenty-one years of age, whom the law designates infants and protects against themselves and others by holding all their engagements of every kind violable and subject to their ratification or repudiation after they had arrived at the full age of twenty-one years. The experience of ages has shown that twenty-one is the lowest point at which the line which separates the period of irresponsible boyhood and girlhood from that of responsible manhood and womanhood can be safely drawn. And this is especially so as to marriage engagements. The youth who is about leaving home for college or for any where, is totally unqualified to enter into an engagement of marriage. What man of business would think of then contracting with him for the building of a house, or for any undertaking involving skill and capital? And yet it would not be half so unwise for him then to contract *for* the house in which he intended to pass his future life as it would be to contract *with* the wife on whom his enjoyment of his home is mostly to depend. The *youth* who goes to college is usually a different being from the *man* who returns to the old homestead with his diploma in his pocket; and equally changed does he return who went forth in his boyhood to wrestle with the world for occupation and competence. And so, too, do girls change, in their progress to womanhood, in thoughts, capacity, tastes, notions, and everything else that enters into their mental and spiritual natures. The youth whom the girl of sixteen "adored," she laughs at at twenty-two; and the rosy wreath of juvenile betrothal is almost certain in maturer years to become a clanking chain of intolerable bondage to one or both of the foolish young creatures who so eagerly fastened it upon their lives. The only way, therefore, for the young to avoid these heart-breaking disappointments referred to is not to enter into marriage engagements until they are old enough to make a wise choice and to know their own minds and hearts—about the last knowledge attainable on earth.

A BEAUTIFUL INCIDENT.

William IV. expired about midnight, if we remember right, at Windsor Palace. The Archbishop of Canterbury, with other peers and high functionaries of the kingdom, were in attendance. As soon as the "scepter had departed" with the last breath of the king, the Archbishop quitted Windsor Castle and made his way, with all possible speed to Kensington Palace, the residence at the time of the Princess—already by the law of succession Queen—Victoria. He arrived long before daylight, announced himself and requested an immediate interview with the Princess. She hastily attired herself, and met the venerable prelate in her ante room. He informed her of the death of William, and formally announced to her that she was, in law and right, successor to the deceased monarch. "The sovereignty of the most powful nation lay at the feet of a girl of eighteen." She was, *de jure*, queen of the only realm, in fact or history, "on which the sun never set." She was deeply agitated at "the formidable words, so fraught with blessing or calamity." The first words she was able to utter were these, "I ask your prayers in my behalf."

They kneeled together, and Victoria inaugurated her reign, like the young king of Israel in olden time, by asking from the Highest who ruleth in the kingdoms of men, "an understanding heart to judge so great a people, who could not be numbered nor counted for multitude."

The sequel of her reign has been worthy of such a beginning. Every throne in Europe has tottered since that day. Most of them have been for a time overturned. That of England was never so firmly seated in the loyalty and love of the people as at this hour. Queen Victoria enjoys personal influence, too,—the heartfelt homage paid her as a christian woman—incomparably wider and greater than that of any Monarch now reigning.

From a Cottage to a Throne.—The Empress of Morocco is a native of Chaley, near Dole, in France, where she was born on the 20th of November, 1820, in a poor thatched cottage. Her name was Virginie Laternier. She went with her parents in 1834 to Algeria, and the whole family were taken prisoners by the Moroccans. Her father was killed, and her mother died a short time afterward. The captors, dazzled by the great beauty of Virginie, spared her, and, by a concurrence of romantic circumstances, the Emperor's son fell in love with her and made her his wife. This Empress has since sought out and brought her three sisters to the Moroccan Court, to which they are now attached.

Against Polygamy.—At one of our public schools, the inspector asked the children if they could give any text of Scripture which forbade having two wives. One of the children sagely quoted in reply the text:—"No man can serve two masters."

Choice Miscellany.

Written for Moore's Rural New-Yorker.

KIT AND I.

BY BELL CLINTON.

Long, long ago, we were walking
Down by Hope's silvery tide.
Long, long ago I was asking
When I might call her my bride.
Softly the answer was given;
Then—'neath the moon's mellow light—
Brightly the future was beaming—
Fondly I kissed her good-night.

Long time ago we were parted;
She treads the "Evergreen Shore."
Weary, I wait for the morning
When I shall meet her once more.
Life has its pleasures, and blessings
Oft in my pathway are cast;
But of its pictures the brightest
Are framed in the beautiful Past.

Chenango Co, N. Y., 1867.

A WESTERN WOMAN'S TRIBUTE.

BY MRS. A. T. TERRY.

Many a pleasant hour,
We've spent in days of yore
Over thy bright pages
Replete with useful lore.

With many a pleasing story,
With many a gem of thought,
And many a useful lesson
In every volume wrought.

Of the whole News-paper army
We love the Rural best,
And welcome it most warmly
To our home in the distant West.

Washington, Wis., 1867.

EVERY-DAY THINKING.

We believe there are philosophers who contend that, waking or sleeping, the mind of man is never entirely at rest. Such a proposition can be supported by a tolerable show of argument. Perhaps the healthy reader, whose digestion is excellent, and whose sleep is correspondingly sound, may be inclined to doubt this. So far as such an one knows, sleep is a suspension of the mental, as well as the physical functions. Whatever the workings of his or her mind may be, they never develop into dreaming that is remembered. But there is no proof that the mind really ceases its workings. Anæsthetic agents do not lull it to rest. Take ether, when about to have a tooth extracted, and you do not sense the pain of the operation, but you do some beautiful dreaming. Your physical system is under the influence of a soporific most powerful, but your mental machinery works as actively as ever.

It is not our purpose, however, to indulge in argument for or against the philosophy mentioned. Whether mankind think much during sleep, or not, is of little account any way. Certain it is that in our waking hours we think enough to compensate for any odd moments, if there be such, in which the mental machinery is idle.

This every-day thinking is something very curious, when we stop to consider it. An amusing pastime is entitled, "What is my thought like?" If we could so improve upon the social play as to introduce it in our daily round, and by it determine what the thinking of those we come in contact with is, verily it would be worth the achieving. Coming down to the Rural sanctum, a few moments since, the odd fancy suggested itself, that if we could read the thoughts of the people we were passing, it would be better than a chapter in Vanity Fair. What a strange conglomeration we should discover, to be sure! Looking through each other's eyes, and effecting an interchange of thinking, would open up an exposition scarcely behind the great Paris one in point of variety.

All thought is not labor. And very fortunate for us is it, that it is not. If it were, the wear and tear of the mental machinery would soon render it unfit for use. The mind has its regular play-spells; and sometimes even amid the routine of work it acts the truant, and goes off kite-flying like a careless school-boy. Reveries are to all of us what Saturday is to the children, and Sunday to the toilers. They are our mental rests,—better than sleep, because we are not wholly lost to ourselves,—and they do us good. All individuals interblend them more or less with their every-day thinking. Those of the really practical man may be of a different character from those indulged in by the sentimentalist, but they are none the less reveries. They are not genuine practicalities of thought.

Much of our every-day thinking is intangible, if, indeed, thought may be said to have tangibility at all. It is as though we grasped at something impalpable. It is not reverie, nor dreaming, but thought in embryo. Perhaps it may develop itself, by-and-by. It would, surely, if not hedged in by more definite and material matter. The most beautiful thought of the poet is at the first only a dim, fleeting fancy, caught on the wing; and then expanded into the full beauty of perfection.

The character of one's daily thinking is dependent mainly upon the surrounding circumstances. The mind is the subject of habit. Yet many minds are put under training. A straight jacket, now and then, will be beneficial to many that are never circumscribed to fixed limits. Every-day thinking has its sinning, quite as much as has every-day doing. Indeed we may assert that mental transgressions are largely in the majority over all others. There are "walking sepulchres," and not a few, who outwardly conform to all law, and the usages of good society, whose daily thought is a daily sin, we might almost say a daily crime. Their reveries, if breathed forth, would be blasting in their influence as the simoon itself. If we could but put to every man the question—What is your thought?—and receive a truthful reply, there would be such an unraveling of every-day thinking as would absolutely startle us all!

THE TELEGRAPHER.

This Summer's day is bright and beautiful. The canopy above is clear — not a cloud visible above the horizon — and as far as the eye can reach it rests upon interminable space — reaching far into the calm blue depths of the sky. This, with the landscape beneath, rich with fragrance and beauty, reveals to the delighted eye Nature's unfolding wonders.

To one shut up in an *office* from early morning until "mother" sun has sunk to repose in the west, what a privilege to be free from labor and permitted to partake of the world's pastimes and pleasures — to stroll out in the cool shade of yonder grove and listen to the sweet songs of its feathered inhabitants, and have a good "romp;" or, what would be better, stroll over to "Busy-wild Farm," cultivate the acquaintance of Jennie and the "farm hands," assist to milk the cows, and feed the pigs, chickens and ducks, and then, after partaking of the delicious farmers' breakfast prepared by Jennie's hands, to have a walk with Rose and Frank, away over green pastures and meadows, and "lend a helping hand" to gather in the new-mown hay, and when the cool shades of evening came, to saddle "Doll," "Fan" and "Bill," and have a quiet ride. What a splendid relish for meals! and at night, instead of nervous wakefulness, wouldn't sleep come, refreshing to body and soul, and carry one away to happy dream-land?

But we are compelled to remain indoors and listen to the constant click, click of our instrument, day after day and week after week, except Sunday, and even then the "Telegraph Operator" will, in imagination, hear the click, and his hand will involuntarily move as if to answer a "call." Yet, with all the disadvantages attending the position of an operator, there are many privileges and pleasures that those in other walks of life cannot enjoy. Our workshop is vast, extending far, over and under land and sea, North, South, East and West; and although separated by wide distances from each other, we are in constant and immediate communication — conversing as accurately and readily as though in the hearing of each other's voices. Then, too, we are the constant recipients of varied messages of great loss, and the grief attending it; of the committal of some horrid crime, the escape of the culprit, and then his final arrest. Now, of the safe arrival of some long expected ship, containing all that is dear to a loud mother's heart; now, of trade and the condition of "stocks;" now, of the happy consummation of a long and stormy courtship; then, of the safe arrival of a little stranger in the world; and, finally, of the visitation of the angel of death to some loved ones, bearing them away to their long home.

Night at last relieves us from the toils of one day; for outsiders cannot understand the tension of nerves, the close attention, the ready comprehension demanded of the Telegraph Operator, or the weariness caused thereby. But we catch the wide world's thought and action as they speed past on the lightning's wings, and every click of our instrument is a pulse-beat of civilization, sweeping in its broad tide from Constantinople to the distant Pacific.

Thus, like others, we have our compensations as well as our toils, and can but work on hoping to win a better field. Will.

Conneaut, Ohio, August, 1867.

MUSIC AS A STIMULANT.

Alfieri, often before he wrote, prepared his mind by listening to music:—"Almost all my tragedies were sketched in my mind either in the act of hearing music or a few hours after"—a circumstance which has been recorded of many others. Lord Bacon had music played in the room adjoining his study; Milton listened to his organ for his solemn inspirations; and music was ever necessary to Warburton. The symphonies which awoke in the poet sublime emotions, might have composed the inventive mind of the great critic in the visions of his theoretical mysteries. A celebrated French preacher, Bourdaloue or Massillon, was once found playing on a violin to screw his mind up to the pitch preparatory to his sermon, which within a short interval he was to preach before the Court. Curran's favorite mode of meditation was with his violin in his hand; for hours together he would forget himself, running voluntaries over the strings, while his imagination, in collecting its tones, was opening all his faculties for the coming emergency at the bar.

GEMS OF THOUGHT.

Idleness is the stupidity of the body, and stupidity the idleness of the mind.—*Seume.*

The most happy man is he who knows how to bring into relation the end and beginning of his life.—*Gœthe.*

When a noble mind has prepared old age, it is not the decline that it recalls, but the first day of immortality.—*Madame de Stael.*

He that preaches gratitude pleads the cause both of God and man; for without it we can neither be sociable nor religious.—*Seneca.*

A truth which one has never heard causes the soul surprise at first, which touches it kindly; but when it is accustomed to it, it becomes very insensible there.—*Nicole.*

Run not into debt, either for wares sold, or money borrowed; be content to want things that are not of absolute necessity, rather than to run up the score.—*Sir M. Hale.*

Sabbath Reading.

ASPIRATION.

O, that my feet might seek that spot
Where while on earth the Saviour trod—
When to remove from us the blot
Of sin, He left heaven's fair abode.

O, could I through that garden go,
Where to prepare for Death He went,—
Where with a heart surcharged with woe
A night of agony He spent;

Or view the scenes of Galilee,
Or quench my thirst at Jacob's well,—
Where to Samaria's daughter He
Did of the living water tell;

O, then methinks a holier fire,
A purer love than fills it now,
This worldly heart would then inspire
A nobler life on earth to show.

It may not be, but better far,
Believing Christians yet may find,
The Saviour, by the means of prayer,
Is still as near, as true, as kind.

No need to visit holy land
To feel His precious presence near,
He leads His children by the hand,
In darkest hour the friend most dear.

SHADOWS GATHER 'MID SUNLIGHT.

Are we ever so perfectly happy that there does not a cloud of sorrow obscure the sunlight of existence? I think not; and yet there may be moments when the sky seems serene and cloudless—when our desires and plans appear to be furthered by an invisible hand—when friends are apparently as true as truth itself, and all things are so favorable to our wishes, and so much after our own notion, that we are ready to assert that this is a very good and happy world, and we are well satisfied with it and its inhabitants in general, ourselves not excepted. But even while we are reveling in the bright sunlight of almost perfect happiness, shadows are gathering "in the far off, uncertain dim," which will sooner or later find their way to our hearts, and take the place of the light which so lately illuminated our pathway with its golden glory.

There are various reasons for the shadows gathering. Knowing that one we hold dear by the ties of blood, or of friendship, has gone astray from the path of integrity and honor, for the time being will exclude very much of the sunlight from our hearts, and make us feel that life is hardly worth living for. But Time, the great consoler of all tribulations, will, in its own good season, disperse the heavy clouds, or arrange them in such a way that their silver lining will be visible, as well as the blackness with which it is enshrouded. If a loved one is called from us by death, it is very hard to see the rays of sunlight that are piercing through them in every direction, telling us that "all things work together for good to those who love God," and "He doeth all things well." When our mental and physical abilities are prostrated by illness, and our ambition tells us how much we might accomplish if we only had health and strength, we feel that the shadows are very dense, and are ready to exclaim, "Who could have thought such shadows lay concealed within thy beams, O, Sun?"

But however thick and heavy the clouds may be which occasionally overshadow our path of life, we ought not to repine, for sooner or later the sun will pierce through them, and, scattering them to the four winds of Heaven, leave the sky calm, serene and cloudless.

"Shadows gather 'mid the sunlight
Wander wheresoe'er we may,
Light and darkness intermingled
Ever o'er our pathway play.
Change seems written all around us,
All things earthly fade and die—
But no flower ever faideth
In that home beyond the sky.

May the star of hope e'er guide us
Through life's dark and stormy night,
Till we gain those heavenly portals
And behold unfading light.
Light proceedeth from God's glory,
Light which never groweth dim,
Light which Jesus died to give us,
Light alone is found in Him."

SOUL PICTURES.

Engraven deep upon the tablet of the soul lies some hidden picture, some loved one whose voice no longer thrills us, who has passed on to the unknown shore. Easel and pencil fail to bring out life such as is hidden deep in the recesses of fond, loving hearts. Time cannot erase these pictures; every expression lives, and they often flash across us. Sometimes we read them in the countenances of others, when the soul illumined gives life and animation to the face. It is then that the loved one stands before us, clothed in the flesh. Blessed pictures! You tell us that love is immortal and undying. You point us to the better land. You tell us of re-unions when our earthly work is done. You loosen our hold on earth and give us aspirations after things not perishable.

Log Harbor, August, 1867. Mattie.

They are rare Christians, indeed, who hold their goodness and grow in goodness where wickedness sits on the throne. To be wheat among tares, corn among chaff, pearls among cockles, and roses among thorns, is truly excellent.—*Spurgeon.*

Though true repentance be never too late, yet late repentance is seldom true.

THE WIFE'S RESOLUTION.

[Concluded from page 300, this number.]

MATTIE had felt some regrets for her unkind treatment of her husband, since his departure; and when the hour for dinner arrived and he did not come in as usual, she began to look out towards the gate with an anxious face. Little Pet came in from school, and her first inquiry was for papa; he was always there when she came in at noon, but now she missed him and her accustomed frolic. She ate but little dinner and after waiting for him till nearly schooltime, she went back feeling very sober, for her, being naturally a gay, happy child, with seldom a cloud over her bright young face. If Pet ate but little dinner, her mamma ate still less, and every moment now only increased her anxiety.

"What if I have driven him away from his home? Oh, why was I so willful?" were questions which she often asked herself. Her suspense was just becoming an agony when she saw him coming up the walk leaning on the arm of a neighbor, and looking more like a dead man than a live one, he looked so very white. Her heart seemed for an instant to cease its pulsations. She, however, met them at the door, and to her injuiry of what was the matter, he replied:—"O! MATTIE, I am sick; my head aches almost to bursting; I believe I shall go distracted." She led the way to their sleeping apartment, and as soon as he had lain down she requested the neighbor to go for the physician and then went about bathing his head, and trying to soothe the sufferer. The physician came in very soon; he pronounced his disease a nervous fever brought on by overwork and some mental trouble. O, how MATTIE'S heart misgave her at this announcement, and much more when before morning he became delirious. For two long weary weeks he knew not who bathed his head so constantly, who arranged his pillows, or who watched by his bedside night and day.

How often MATTIE'S heart ached when, in his delirium, he would wish for the happy days to return that they had enjoyed so much in the long ago; then he would seem to go back to those very days, as if some fairy had lent him wings that he might visit the past. In his happiness he would ask her to sing. MATTIE would grant his request and he would remain quiet, seeming to appreciate the sweet warbling melody of her voice as in former days. At other times he would ask her to arrange her dress and go with him upon some visit; and as she had so often refused when he had made the request in health, so now he would imagine she had refused him again,—then in his weakness he would turn his face to the wall, and lay and sob like a child. At other times he would be talking with his sister of their childhood, then of their marriage,—always dwelling on the first year of their wedded life with great pleasure, but upon the later years as being full of disappointments and heart-yearnings.

MATTIE shed many and bitter tears over her past life, and firmly resolved to live more for the happiness of her husband and family in the future,—and for her to resolve was to begin to perform.

The fever had reached its crisis, and CHARLES slept calmly. Ah! with what anxiety she watches every pulsation. "Will he live? O, will he live?" MATTIE asks herself these questions almost continually. How earnestly she puts forth a petition to the Great All-wise Father to give back her husband to her, if it can be consistent with His will. The Doctor sits by the bed, while MATTIE moves silently about the room: *she* cannot sit still while this terrible suspense continues. Now she moves toward the bed; CHARLEY slowly opens his eyes, and O, they beam once more with the light of reason! But there is a look of surprise upon his pale face, as he gazes upon his own MATTIE. The Doctor forbids his speaking; but he feebly puts out his thin, emaciated hand to his wife. He recognizes his darling of former days, with the soft brown curls shading her now pale cheek. She has on a tasty morning robe, with a dainty collar about her neck, and the snowiest of muslin skirts peeps out from the heavy folds of her dress. Yes! this is his own MATTIE, and as she stooped down and imprinted a kiss upon his lips, he felt there were better days in store for them. There was but little need for a physician after this. CHARLEY recovered very rapidly.

Two weeks more passed away. One evening when they were all gathered in the sitting-room, MATTIE said:—"CHARLEY, I shall be ready to go with you to see Sister LUCILLE next week."

He looked somewhat surprised and said, a little sportively, "I thought you did not wish to go."

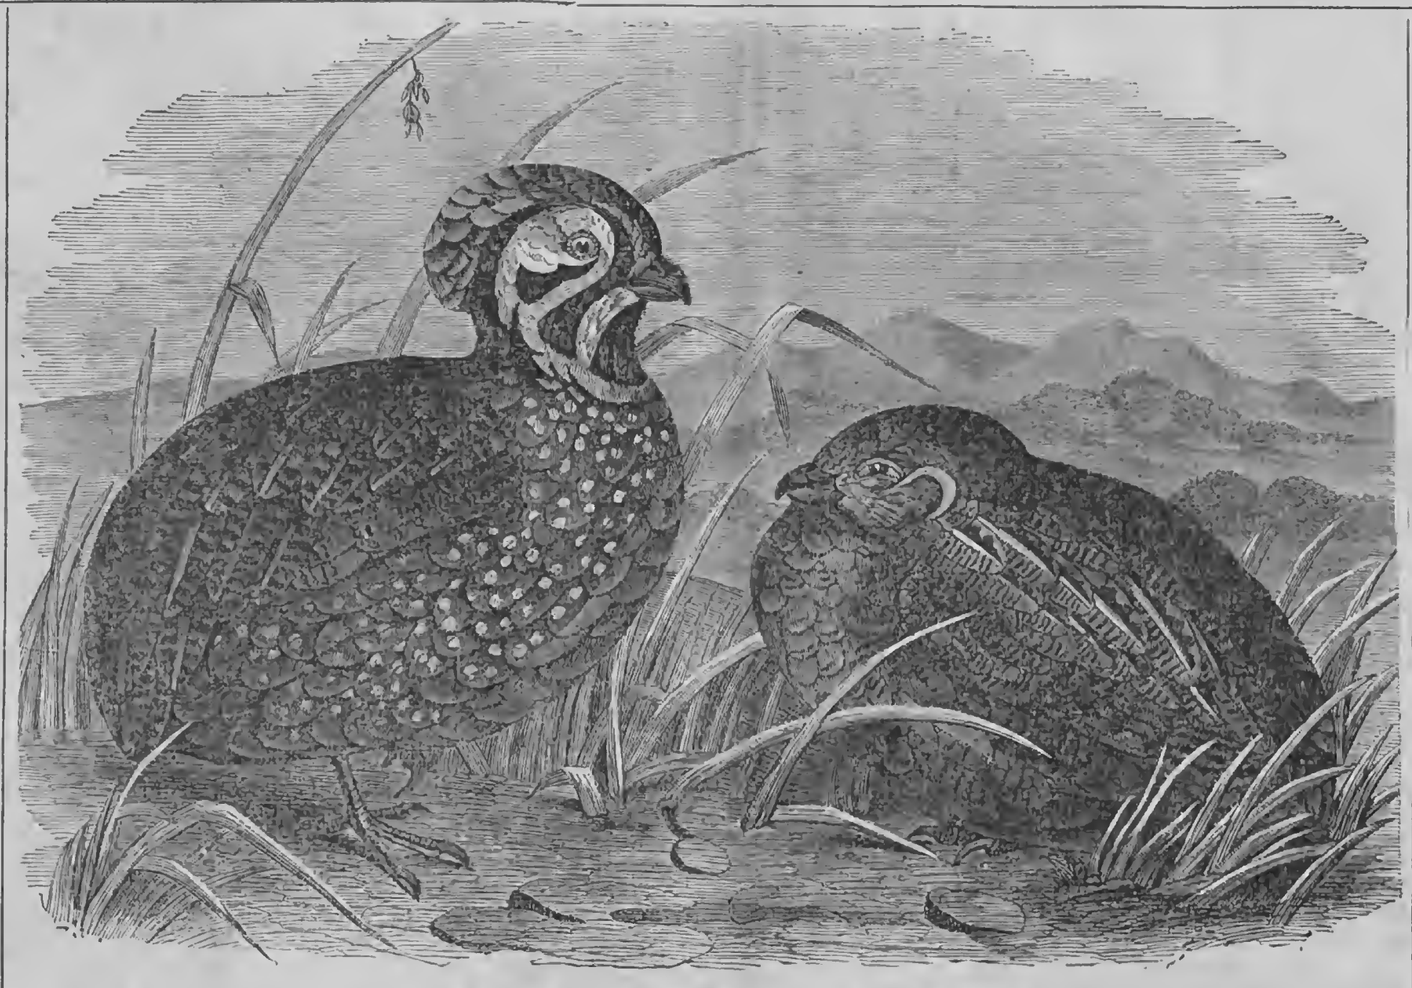
"Well, I have changed my mind since then, and I am willing to go."

"And I have almost come to the conclusion that I am happy enough at home; but if you will be ready I think we will start Monday morning."

They met with a cordial welcome, and although MATTIE felt a little diffident at first, she soon adapted herself to the ways of society, and seemed to enjoy it as intensely as did her husband. When they returned home, MATTIE was often tempted for awhile to go back to her old habits; but the sight of her husband, who seemed so happy, kept her firm in her new resolve. And I believe her mirror flattered her along, for it told her how much younger and better she looked than she had for the past five years. Not long ago she was listening to the children's conversation when they were not aware of her presence, and she heard little Pet remark:—"How much prettier mamma looks in her new morning dress than she did in that old brown one she used always to wear before papa was sick; and how pretty her hair looks now that she wears it in its natural curls; and papa looks so happy too, and it's not lonesome as it used to be, for we have so much more company. Oh! how happy we are."

Would that all mothers might learn from this simple lesson to keep their persons tidy, and their homes in order, thus rendering them pleasant and happy.

Michigan, 1867.



MASSENA PARTRIDGE.—(Cyrtonyx Massena.)

AMONG the game birds of the United States, mentioned by D. G. ELLIOT in a paper supplied to the Agricultural Department, Washington, is the Massena Partridge, as shown in the preceding illustration. This bird, a native of Texas and Mexico, is usually found in covies remote from the cultivated sections of the country. Though thus retiring, the herds are gentle, betraying little fear of the presence of man, presenting, in this respect, a strong contrast to the suspiciousness characteristic of their more northern relatives. The head and crest of the male birds are rendered striking by a singular arrangement of opposing colors bearing a marked resemblance to the painted face of a clown in pantomime. The female is distinguished by a more sedate plumage of reddish brown hue, barred or streaked with yellow, but destitute of the conspicuous markings of the male. These birds are valued for their flesh, and readily secured, in consequence of their comparative tameness.

Various Topics.

Written for Moore's Rural New-Yorker.

ALDERNEY CREAM AND CONSUMPTIVES.

HAS somebody Alderney stock for sale? We fancy so. Hear him expatiate on the healing virtues of cream from Alderney cows. In order to gain an audience, he takes his place in the Country Gentleman—a very respectable medium for advertising. "Have you heard," he inquires, "that cream from Alderney milk was [is] excellent for consumptives? I am told that one of the most celebrated physicians in Edinburg, whose skill in the treatment of consumption is very great, recommends its use as fully equal to cod-liver oil, and much more palatable. If this is a fact, it is worth knowing, and should greatly increase the value of this breed of cattle." Ah! indeed! But what is the fact "worth knowing?" There are two that seem to have been discovered and recommended by "the celebrated physician of Edingburg" to the notice of the world; first, that Alderney cream is fully equal to cod-liver oil for consumptives; and secondly, that it is "more palatable"—a notable discovery, worthy of the "distinguished physician," for which we thank him, making our politest bow, and of which we intend to avail ourselves to-night in connection with our tea and raspberries.

But is it quite as well known as it ought to be that a milk-and-cream diet is most favorable to consumptives? We would not be so nice as to limit this remedial luxury to the few who have an Alderney cow. Any good cow's milk will answer the purpose—though we will not vouch for milk-men's milk, which is manufactured from a chalk quarry with the aid of a hydrant. Doubtless there is a difference between the richness of both cream and milk from different cows; but not enough to make it essential in the question of dietetics. The Alderneys are good; and so are many of our native cows. The prescription of milk and cream for consumptives is not a new thing,—not first known, at least in this country, in connection with Alderney cows. Dr. TIMOTHY CHILDS, pretty well known for many years, as head of the Pittsfield Medical Institution, long ago, before he had ever seen an Alderney, we must believe, substituted cream for cod-liver oil for consumptives. Only last year, a well-known practitioner sent an emaciated invalid up into this region among the valleys formed by the spurs of the Green Mountains, with the express direction to make a free use of milk diet, which he accordingly did, much to his benefit, albeit there are no Alderneys hereabouts. Another from a neighboring city went to New York, that he might receive the best medical advice, which consisted in ordering him to make breakfast and supper on bread and milk alone; and this he followed to the letter, remaining in the city some months to eat bread and what, by courtesy, is called milk. The best evidence of the excellence of milk diet is the fact that the man survived, when he received so little milk and so much of water and other ingredients. The two essential qualities of wholesome milk are purity and cleanliness,—the latter seldom so carefully attended to by milkers as it ought to be. With these qualities milk and cream from any cows will be found equal to cod-liver oil for consumptives, and better than all the nostrums for dyspepsia and nervous prostration.

But to secure this good effect, they must be daily though not sole articles of diet. The consumptive needs variety as well as others in his food. But let him quench thirst with cool milk; eat it with bread, apple pie, berries and, above all, with baked sweet apples the year round if possible. Let him eat cream and sugar, and not some vile compound called gravy, on his puddings. With some, molasses cookies and milk are a favorite dish. Let all his salt fish, if he eats any, be freshened in milk. With a little forethought and ingenuity a great variety of palatable dishes—aye, "more palatable" than cod-liver oil—can be made, in which milk or cream may be a large ingredient. The more cream, of course, the more concentrated and powerful, as a remedial agent, this diet will be.

And now, O country friend, let me tempt your palate by giving a recipe for one dish of this kind. If you have not heard of it before, you will thank me forever and bless your stars that you live in the country where pure milk and good fruit can be easily obtained. I have not seen it in the RURAL, though it is not new. Take good, fair, pound sweet apples—they are the best—one for each of you, mind,—that is enough for tea; pare and core them whole; steam them thoroughly; put them on the table and sprinkle them to your taste with white sugar and milk or cream; then eat them, but not without thanks to the Giver of all good things.

E. M. R.

THE USE OF STIMULANTS.

IT is quite true that after a man has gone through a day of severe and harassing labor—whether in the city, or in seeing patients, or getting up briefs and cases, or in any other way—he feels very much refreshed and restored by the bottle of champagne which he has been recommended to take with his dinner. But the restoration is only for the moment. No process of real enduring reparation takes place. One effect of the temporary exhilaration is a readiness to renew the labor from which he only desisted an hour and a half before. The stimulant supports him for two hours' more work, and the result is that the last state of that man is worse than the first.

There is another way of recruiting the flagging system to which doctors are also very fond of resorting. If you feel wearied at any time, or faint, they say in a sympathetic manner, "Take a little brandy and water." This is more fatal than the other. As the tectotalers say, it makes men a prey to the insidiousness of the demon of alcohol. The interval between the periods of faintness grow small by degrees and beautifully less. The dimensions of the refreshment increase with a proportionate rapidity, and a man becomes a steady, if an unostentatious, tippler before he knows that he has left the domain of the most rigid temperance. Common language misleads him. A man is not called a drinker unless he drinks till he is drunk. Now, the barrister, or merchant, or doctor—for the doctor is no wiser than his own prescription—who thus recruits himself several times a day, never does drink until he is tipsy. He takes a sufficient quantity to make him so, but he takes it with discretion and judgment. He can do an immense amount of work without ever feeling anything like severe exhaustion, and he is naturally confident, therefore, that all is well with him. It is not necessary to trace the gradual source of things after the manner of a tract or an itinerant advocate of total abstinence. Whatever advantages the system of brandy-and-water, taken in small but frequently-repeated doses, may have in helping a weakish man through some period of emergency or pressure, it is conformable both to analogy and experience to believe that in the long run it must be ruinous. No doctors differ as to the ultimate consequences of such a habit if it becomes chronic and settled. Their theory is that it never does become chronic—a theory which reposes on a very thin delusion indeed. It is not the business of a layman to teach the skillful leach the physical deterioration which must ensue from repeated stimulants, however small each one of them may be. A man need not be a very subtle physiologist to discover this. The most important of all these is that it helps an overworked man to overwork himself still more. It facilitates the growth of the very vice whose results it was supposed to mitigate. Instead of soothing a harassed mind, it only increases a man's capacity of bearings to be harassed. Whether this is a kindness to him is not much of a question.

EYESIGHT.

MILTON'S blindness was the result of overwork and dyspepsia. One of the most eminent American divines has for some time been compelled to forego the pleasure of reading, has spent thousands of dollars in vain, and lost years of time in consequence of getting up several hours before day, and studying by artificial light. Multitudes of men and women have made their eyes weak for life by the too free use of the eyesight in reading small print and doing fine sewing.

In view of these things it is well to observe the following rules in the use of the eyes:

Avoid all sudden changes between light and darkness.

Never begin to read, or write, or sew, for several minutes after coming from darkness to a bright light.

Never read by twilight, or moonlight, or of a cloudy day.

Never read or sew directly in front of the light, or window, or door.

It is better to have the light fall from above, obliquely over the left shoulder.

Never sleep so that on first awaking the eyes shall open on the light of a window.

Do not use the eyesight so scant that it requires an effort to discriminate.

Too much light creates a glare, and pains and confuses the sight. The moment you are sensible of an effort to distinguish, that moment cease, and take a walk or ride.

As the sky is blue and the earth green, it would seem that the ceiling should be of a bluish tinge, and the walls of some mellow tint.

The moment you are instinctively prompted to rub the eyes, that moment cease using them.

If the eyelids are glued together on waking up, do not forcibly open them, but apply the saliva with the finger; it is the speediest dilutent in the world. Then wash eyes and face in warm water.—*Hall's Journal of Health.*

INTEMPERANCE.—If all the wealth now sunk in the bottomless pit of intemperance were appropriated to the purchase of libraries, philosophical apparatus, or cabinets of natural history; if all the time, that element of priceless value, which is now worse than lost in the various haunts of dissipation, were devoted to the reading of well-selected books, to lyceum exercises, to music or other social and refining arts, it would give to society a new moral and political sensorium. How can any man witness without pain this great deformity, where there should be beauty and divine grandeur!—*Horace Mann.*

RIDICULE A TWO-EDGED SWORD.—He that indulges himself in ridiculing the little imperfections and weaknesses of his friends will in time find mankind united against him. The man who sees another ridiculed before him, though he may for the present, concur in the general laugh, yet in a cool hour will consider the same trick might be played against himself; but when there is no sense of this danger, the natural pride of human nature rises against him, who, by general censures, lays claim to general superiority.—*Dr. Johnson.*

Reading for the Young.

"WAKE UP, SOLOMON!"

"WAKE up, Solomon. It's time to get up," shouted young Harry to his sluggish brother one fine July morning, as he jumped gaily out of bed, and began dressing himself.

"What time is it?" yawned Solomon.

"Nearly six," replied his brother; and mind, Sol, we start at seven."

It's too early to get up yet," said Solomon. "I'll snooze till a quarter to seven." So the lazy fellow turned round, and was soon fast asleep again. When he awoke his room looked very full of sunshine. The house was very quiet, too, and rubbing his eyes he muttered:

"I wonder if it is seven o'clock yet?"

Crawling out of bed, he dressed himself and went down stairs. There was nobody in the parlor, nobody in the sitting room, nobody in the dining room.

"What can be the matter?" thought Solomon, as he rang the bell for the maid to bring him his breakfast.

"Where are they all?" he asked, as soon as she appeared.

"Gone to the city," replied the maid. "They started two hours ago."

"Why, what time is it?"

"Nine o'clock."

"Nine o'clock! But why didn't they call me?"

"You were called at six o'clock, and wouldn't get up. Your father wouldn't have you called again. He said he would teach you a lesson."

"It's too bad!" cried Solomon, dropping his head upon the table and bursting into tears.

It was too bad that the lazy boy did not learn the lesson of that morning so as to turn over a new leaf in the book of life. I am sorry to say he did not. He loved sleep. He hated work. He was the slave of lazy habits, and is so to this day.

What sort of a man will Solomon Slowcoach be? Well, if he don't die of idleness before he becomes a man, he will be a shiftless, good-for-nothing fellow. He won't have any knowledge, because he is too lazy to study; nor any money, because he is too lazy to work; nor any good character, because he is too lazy to conquer himself.

Wake up, Solomon! Wake up, my dear boy! Shake off the chains that are upon you! Be manly, be wide awake, be something! If you don't wake up you will soon be a lost boy. Wake up, Solomon, wake up! If you don't you will make shipwreck of your life.

HIGH ATTAINMENTS.—If there be any attainment which has seemed to you up till now to be impossible, long after it. If it be any hight of virtue, if it be any excellence of loveliness, or any eminence of grace, let your soul be enlarged.

For Moore's Rural New-Yorker.

ORNITHOLOGICAL ENIGMA.

AN Enigma I give for the wise one's delight,
To determine which, you need use only sight;
After this broad hint we'll proceed to review
My letters, that are in number eighteen and two.
13, 1, 8 is a bird very curious to behold,
And when this is said, enough has been told.
11, 10, 9, 18, upward mounts into azure space on high,
'Till his fast receding form becomes lost to the eye.
20, 16, 3, 18 is as black as your hat,
But is none the worse bird on account of all that.
4, 10, 6, 16, 7, 19, 6 are industrious as mice,
As they scratch for a living, and on table are nice.
6, 12, 2, 14, 15, 2, 14, 11 is in northern regions found,
And where no snow is they seldom abound.
14, 17, 5, 12 is often very familiar with man,
And a very small bird, so guess it if you can.
Now, to learn my whole you will be in doubt,
But don't rack your brain to find it out;
For if at guessing you're a little bit green,
Just look right ahead, and there 'twill be seen.

MISCELLANEOUS ENIGMA.

I AM composed of 24 letters.
My 6, 9, 24, 4 is one of the digits.
My 5, 20, 10, 19, 11, 12 a man's name.
My 3, 14, 1, 8, 4, 24, 16 is what we sometimes wear in winter.
My 9, 19, 18, 24 is a kind of metal.
My 22, 13, 2, 20, 11 is the name of a State.
My 5, 19, 22 is one of our limbs.
My 17 23, 16, 15 is not slow.
My 21, 5, 8, 16 is a kind of grain.
My whole is an old saying.

Brighton, N. Y. BELLA.
